3	253	39,269

The total estimated cost of the proposed project is $160,000, which cost will be financed by revenue bonds issued pursuant to an agreement with the Department of Housing and Urban Development.

On December 13, 1965, Respondent filed an answer to the subject application. Respondent states that service to Applicant will not adversely affect Respondent's gas supply for its existing customers and that Respondent's existing transmission facilities have sufficient capacity to deliver the volumes requested, with no additional construction required other than the interconnection and metering and regulating facilities.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on November 30, 1965 (30 F.R. 14822). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Respondent, Kentucky Gas Transmission Corporation, a Delaware corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of August 10, 1956, in Docket No. G–9689 (16 FPC 437).

(2) Applicant, the City of Brooksville, Kentucky, is a municipal corporation incorporated under the laws of the Commonwealth of Kentucky and is legally empowered to construct and operate natural gas facilities and to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell natural gas to Applicant under a service agreement to be executed by Applicant and Respondent, in accordance with the Commission's Regulations, and to deliver up to 253 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Respondent serve Applicant as hereinafter ordered will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Brooksville, Kentucky, and environs, within one year from the date of issuance of this order.

The Commission orders:

(A) Kentucky Gas Transmission Corporation is directed to establish physican connection of its natural gas transportation system with the proposed facilities of Applicant and to sell up to 253 Mcf of natural gas daily to Applicant and to deliver said gas under a service agreement to be executed by Applicant with Respondent, in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate FPC rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

OTTER TAIL POWER COMPANY, DOCKET NO. E-7262

ORDER ACCEPTING SUPPLEMENTAL RATE SCHEDULE FOR FILING AND TERMINATING PROCEEDING

(Issued April 21, 1966)

This order accepts for filing pursuant to Section 205 of the Federal Power Act a proffered rate schedule submittal of Otter Tail Power Company (Otter Tail) Fergus Falls, Minnesota, continuing that Company's wholesale electric service to the Minnesota Valley Cooperative Light and Power Association (Association) Montevideo, Minnesota.

The matter comes before the Commission upon certification of the proposed supplemental rate schedule pursuant to certification of the Presiding Examiner, William C. Levy, dated March 23, 1966. This proceeding was initiated by order of the Commission on December 22, 1965. It is terminated as hereinafter directed.

Otter Tail's proffered rate schedule designated as Supplement No. 3 and Exhibit A to its Rate Schedule FPC No. 104, provides for a continuation of wheeling arrangements under which the Company furnishes power and energy to the Association as a preference customer of the Bureau of Reclamation, United States Department of the Interior; that service to be continued by the Company until the Association is able to receive power and energy through direct interconnection of its electric transmission facilities with those of the Bureau, on or about July 1, 1966. Various transmission facilities of Otter Tail presently interconnect the Association's electric system with Bureau lines.

Our order of December 22, 1965 suspended a notice of cancellation[1] whereby Otter Tail sought to cancel its then filed rate schedule for service to the Association. That schedule is designated as Otter Tail's Rate Schedule FPC No. 104 and Supplement No. 1 thereto.

In continuing Otter Tail's present wheeling service arrangement, the proffered supplement rate schedule provides for the elimination of a facilities charge by the Association to Otter Tail. As previously agreed to between those parties, the Association was entitled to receive annual payments from the Company as of November 1, 1966 and anniversary dates thereafter;[2] that charge being applied to the Association's costs of operating and maintaining approximately 10 miles of 69 kv transmission facilities which are used by the Association in completing the existing delivery arrangements among Otter Tail, Association and the Bureau.[3]

As referred to in the Presiding Examiner's certification to the Commission, neither the Association nor Commission staff oppose Commission acceptance of the proffered supplemental rate schedule filing of Otter Tail and termination of this proceeding. No other interests appeared before the Examiner during the oral hearing sessions held in this matter on February 3 and March 2, 1964.[4]

---

[1] Supplement No. 2 to Otter Tail's Rate Schedule FPC No. 104.

[2] Under the prior arrangements between Otter Tail and the Association charges due and payable on November 1, 1966 were to accrue starting November 1, 1965.

[3] Another preference customer of the Bureau, The City of Madison, Minnesota, is currently served by means of a direct interconnection with those facilities of the Association; the power and energy being delivered in the first instance to the Association at Otter Tail's 115/69 kv substation located at Marietta, Minnesota. On or about July 1, 1966, following the direct interconnection of the facilities of the Association and the Bureau, the power and energy requirements of Madison will be supplied through the Association's transmission lines to the exclusion of Otter Tail's facilities.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 308 and 309 thereof, and the Commission's Regulations under that Act, that Supplement No. 3 and Exhibit A to Otter Tail's Rate Schedule FPC No. 104 be accepted for filing to become effective as of the date of issuance of this order and the above-entitled proceeding be terminated, all as hereinafter provided.

The Commission orders:

(A) Supplement No. 3 and Exhibit A to Otter Tail's Rate Schedule FPC No. 104 is hereby accepted for filing to become effective as a filed rate schedule of Company as of the date of issuance of this order.

(B) The issuance of this order shall constitute full notice of the filing and publication of the rate schedule in question insofar as its effective date is concerned.

(C) Nothing contained in this order shall be construed as constituting approval by this Commission of any service, rate, charge, classification, or any rule, regulation, contract or practice affecting such service or rate provided for in the supplemental rate schedule, as above designated, nor shall this order be deemed as recognition of any claimed contractual right or obligation affecting or relating to such service or rate. The order is without prejudice to any findings or orders which have been or may hereafter be made by this Commission in any proceeding now pending, or hereafter instituted by or against Otter Tail.

(D) The proceeding initiated by Commission order issued December 22, 1965, in the above-entitled matter is terminated.

---

[4] The Association set forth its position in a telegram dated March 1, 1966 directed to the Presiding Examiner and identified as Exhibit A to Supplement No. 3 to Otter Tail's Rate Schedule FPC No. 104.

OPINION NO. 490

ST. MICHAELS UTILITIES COMMISSION AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E-7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND), AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, E-7117; DELAWARE POWER AND LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, E-7137; CITY OF DOVER, DELAWARE v. OPINION AND ORDER AFFIRMING EXAMINER'S DECISION IN PART AND MODIFYING AND REVERSING EXAMINER'S DECISION IN PART

(Issued April 21, 1966)*

Syllabus

1. Delaware Power System's Tariff Customers and the Cooperatives are members of different wholesale classes and rates for the two groups should be ascertained separately. PP. 595, 619.

---

* Initial decision appears on p. 603. Opinion No. 490–A and order issued June 15, 1966 denying rehearing, 35 FPC 1027. Affirmed, *St. Michael's Utilities Commission* v. *F.P.C.*, 377 F. 2d 912 (CA4–1967).

2. Cooperatives are plainly distinguishable from Tariff Customers with respect to purpose, sparsity of service areas and technical relationship with Power System. P. 595.
3. Rejecting assertion that Congressional intent in passing Federal Power Act of 1935 was to assure municipalities and cooperatives equal treatment as members of a common class, Commission *notes* that had this been so an express provision bracketing the two groups as one could easily have been incorporated into the Act. P. 596.
4. Since Power System has adequate basis for dividing wholesale customers into separate classes for Tariff Customers and Cooperatives, it is permissible to establish different rates for these groups provided differential is not unreasonable or discriminatory. P. 596.
5. Power System's rates to Cooperatives are just and reasonable. PP. 596; 622.
6. To determine whether Delaware Power's rates to Tariff Customers are just and reasonable, Commission must give primary consideration to relationship of these rates to cost of service evidence; additionally, a comparison of these rates with those charged cooperatives is required to determine whether Power System is being unduly discriminatory. P. 596.
7. Demand data for full twelve months of 1962–63 test period should be utilized in allocating cost of service, particularly since summer of 1962 was abnormally cool. PP. 598; 620.
8. A rate of return of 6 percent is fair and reasonable here. P. 598.
9. Delaware Power System's rates to Tariff Customers are not excessive and fall within acceptable zone of reasonableness. P. 598.
10. Contention that Power System is engaged in a long-range program to stifle competition and create a private monopoly and that its contracts are designed to accomplish this result, has no record support. P. 600.
11. Commission *finds* that Delaware Power System has not unduly discriminated against its Tariff Customers by charging rates excessively higher than those charged Cooperatives. P. 600.
12. In a proceeding under Sections 205 and 206 of the Federal Power Act, Commission *finds* that Power Company has not unlawfully discriminated between customers.

Chairman White *not participating.*

Spencer W. Reeder for St. Michaels Utilities Commission, Commissioners of St. Michaels, Maryland and for the City of Dover, Delaware.

W. Edgar Porter for Stockton Light and Power Company of Maryland and Stockton Light and Power Company of Virginia.

John W. T. Webb, Robert E. May and *Francis H. Caskin* for Delaware Power and Light Company and its subsidiaries, The Eastern Shore Public Service Company of Maryland and The Eastern Shore Public Service Company of Virginia.

William C. Wise, Wilbert Merriken, Ralph Baker and *Baxley Tankard* for the Choptank, Delaware and Accomac-Northampton Electric Cooperatives.

Albert Deen and *Wilson Stringer* for the Public Service Commission of Maryland.

Charles W. Smith for Philadelphia Electric Company and Conowingo Power Company.

Drexel D. Journey, Sandra J. Strebel and *Donald M. Malone* for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

This proceeding arises under Sections 205 and 206 of the Federal Power Act and involves the question of whether the rates for electric energy charged by Delaware Power and Light Company (Delaware Power) and its subsidiaries, The Eastern Shore Public Service Company of Maryland (Maryland Eastern Shore), and The Eastern Shore Public Service Company of Virginia (Virginia Eastern Shore), subject to the Commission's jurisdiction, are just and reasonable and not unduly preferential or discriminatory. This proceeding was initiated by complaints filed in July 1963 by the St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland (St. Michaels) in Docket No. E-7114, and by the Stockton Light and Power Company (Stockton) in Docket No. E-7117, alleging that Maryland Eastern Shore was illegally overcharging the complainants, and was discriminating unlawfully against them by granting undue rate preferences to cooperative-owned distribution systems.

The Commission severed the issue of illegal overcharge from that of unlawful discrimination in the St. Michaels Docket No. E-7114, and on May 13, 1964, found that Maryland Eastern Shore had illegally overcharged St. Michaels, and ordered an appropriate rate reduction and refund. See Opinion No. 427, 31 FPC 1161 (1964). Maryland Eastern Shore complied with this order, and made a similar reduction and refund to Stockton.[1]

On the issue of unlawful discrimination, the Commission determined by order dated November 18, 1963, in Docket No. E-7137, 30 FPC 1305, that a general rate investigation of Delaware Power and its subsidiaries (the Delaware Power System) was required, and consolidated with this investigation the complaints of St. Michaels and Stockton. On August 10, 1964, the City of Dover, Delaware (Dover), filed a complaint alleging unlawful discrimination by Delaware Power, and the Commission consolidated Dover's complaint with this proceeding.

Intervention was granted to the following cooperative-owned systems (the Cooperatives): Accomac-Northampton Electric Cooperative (Accomac-Northampton), Choptank Electric Cooperative (Choptank), and Delaware Electric Cooperative (Delaware Cooperative). Intervention was also granted to Philadelphia Electric Company (Philadelphia), Conowingo Power Company (Conowingo), and The Public Service Commission of Maryland (Maryland Commission).

Formal hearings were convened July 20, 1964, before Presiding Examiner Allen C. Lande and were concluded February 9, 1965. On June 1, 1965, Examiner Lande issued an initial decision finding: (1) that the wholesale rates charged by Delaware Power System to the Cooperatives were just and reasonable; (2) that certain Tariff Customers of the Delaware Power System consisting of municipal-owned distribution systems (Municipals), such as St. Michaels, and investor-owned distribution systems (investor-owned), such as Stockton, were not members of the same wholesale rate class as the Cooperatives, and that the rates for the Tariff Customers should be ascertained separately from the rates for the Cooperatives with reference to cost of service and other pertinent evidence; (3) that the rates charged by the Delaware Power System to its Tariff Customers were too high, and should be reduced by about $229,000 annually; and (4) that certain restrictive conditions in the contract between Delaware Power and Dover should be removed or be reconsidered.

---

[1] Delaware Power also made reductions and refunds on the same basis to two of its wholesale customers, the City of Dover and the Town of Middletown.

The proceeding is before the Commission on the examiner's decision, exceptions filed by St. Michaels, Stockton, Dover, Delaware Power and its subsidiaries, and by the staff, and on answers to such exceptions filed by the respective parties and by the Cooperatives. The principal issues presented are whether the examiner was correct in determining that the Tariff Customers did not qualify as members of the same wholesale rate class as the Cooperatives, and whether he was correct in ordering a reduction of about $229,000 annually in the rates for the Tariff Customers. Other questions involve (1) the assertion of St. Michaels and Dover that the Delaware Power System is engaged in a program to stifle competition and create a private monopoly; and (2) the allegations by Delaware Power and its subsidiaries that the examiner erred in adopting the staff's computations as to costs, rate base, rate of return, and allocation of costs. The parties argued the matter orally before the Commission on February 8, 1966.

Background

The Delaware Power System provides wholesale and retail electric service for the Delmarva Peninsula, including all of Delaware, nine counties in Maryland on the east side of the Chesapeake Bay, and Accomac and Northampton Counties in Virginia. Service is rendered in Delaware by Delaware Power, in Maryland by Maryland Eastern Shore, and in Virginia by Virginia Eastern Shore. The three companies treat their system as if it were a single company with respect to operation and planning, and operate a completely integrated electric system in the three states. Delaware Power participates in the Pennsylvania-New Jersey-Maryland Pool, and is connected with Philadelphia Electric Company, Conowingo Power Company, and Atlantic City Electric Company.

The Delaware Power System sells at wholesale to the following distributors: ten Municipals, including Dover and St. Michaels;[2] two investor-owned companies, Stockton and Chestertown Electric Light and Power Company; and three Cooperatives, Delaware Cooperative, Choptank, and Accomac-Northampton. Total purchases of these wholesale customers approximated 350,066,556 kwh a year, with total revenues during a 1962-1963 test period of $3,851,544. Wholesale electric sales during the test period constituted 8.5 percent of total system electric revenues.

The Delaware Power System divides its wholesale purchasers into two rate groups: (1) Tariff Customers, consisting of Municipals and investor-owned companies; and (2) Cooperatives. The Cooperatives are billed under identical schedules at substantially lower rates than the Tariff Customers. According to Delaware Power the computed average rate paid by the Cooperatives during the twelve-month period ending June 30, 1963 was 9.7 mills per kwh as compared with a computed average rate of 11.9 mills paid by the Tariff Customers. The City of Dover purchases energy from Delaware Power under three separate rates.

The Delaware Power System reduced its rates to the Cooperatives by approximately $200,000 annually effective February 1, 1963, because it was confronted with the Cooperatives' proposal to construct competitive generating and transmission facilities. The Delaware Power System later reduced its rates to its Tariff Customers by an estimated $300,000 annually effective May

---

[2] The other eight Municipals are Middletown, Lewes, Clayton, Milford, Smyrna, Newark, New Castle, and Centreville.

1, 1963. The complainants, St. Michaels, Dover, and Stockton all contend that this reduction is inadequate, and that the Tariff Customers should be given further rate reductions which would eliminate any existing preferential rate treatment accorded the Cooperatives.

Section 205 of the Federal Power Act requires that we determine: (a) whether the rates and charges made and received by the Delaware Power System in connection with the transmission or sale of electric energy subject to our jurisdiction are just and reasonable; and (b) whether, with respect to any such transmission or sale, the Delaware Power System is making or granting any undue preference or advantage to any person or subjecting any person to undue prejudice or disadvantage, or is maintaining any unreasonable difference in rates, or in other respects, either as between localities or as between classes of service. In connection with the question of rate discrimination, we pointed out in *Southwestern Public Service Company*, Docket No. E-7038, Opinion No. 451, March 2, 1965, 33 FPC 343 at 346, that "not all differences in rates are prohibited by Section 205, but only those which are unreasonable and which result in undue prejudice or disadvantage, and that differences in rates as between appropriately classified customers are consistent with Section 205 and represent the usual practice in the industry." The first question we therefore shall consider is whether or not Delaware Power's classification of its wholesale customers into two separate groups is appropriate.

Separate Classification of Cooperatives and Tariff Customers

The examiner, relying upon *Southwestern Public Service Company, supra*, held that the evidence of record supported a finding that the Tariff Customers and the Cooperatives are members of different wholesale classes, and he concluded that the rates for these two groups should be ascertained separately. We affirm the examiner's conclusions on these points.

Although the complainants have urged that the Tariff Customers should be considered as members of the same wholesale rate class as the Cooperatives because of alleged similarities in their technical requirements, rural operations, and sales and load percentages, we find that the record shows that the Cooperatives are plainly distinguishable from the Tariff Customers with respect to purpose, sparsity of service areas, and technical relationship with the Delaware Power System.

The Cooperatives, unlike the Tariff Customers, were established by farmers to obtain electric service which they were unable to secure from investor-owned or municipal-owned utilities, and they now provide complete area service in sparsely occupied areas in conformity with the Rural Electrification Act. The Cooperatives constructed hundreds and even thousands of miles of line to serve a relatively small group of customers. They have an average density of only 5 customers per mile of distribution line, as compared with a density of 57.48 customers per mile for Dover, 37.75 customers per mile for St. Michaels, and 12.31 customers per mile for Stockton. The Cooperatives' average investment in distribution plant per customer is $574.85; that of St. Michaels and Stockton is $238.78.[3] The Cooperatives have special problems in that their lines extend over hundreds of miles of difficult terrain, and in that a substantial number of their consumer connections either represent idle services, or are used by seasonal or mobile customers.

Further, because the Cooperatives were organized after the basic lines of the Delaware Power System were laid out, the Cooperatives had to build transmission lines from their load centers to points on the Delaware Power System, whereas the System makes delivery directly to the load centers of most of its Tariff Customers. The Cooperatives thus have more than one-third of a million dollars invested in transmission lines; the Tariff Customers have very little. The Cooperatives provide their own substations, and are required to take service with voltage at 23 kv, 69 kv or "such intermediate voltage as may be standard." In the case of the Tariff Customers, the Delaware Power System normally furnishes the substations, and makes its service available at a voltage mutually agreed upon with the customer. In addition, the Cooperatives as a group (with some variation in the case of Accoma-Northampton) have load characteristics which differ from those of most of the Tariff Customers in that the Cooperatives require less of their peak power demand coincidentally with the total system peak than do most of the Tariff Customers.

---

[3] Despite staff's arguments to the contrary, we think these figures are adequate to show that the Cooperatives have relatively higher costs than the Tariff Customers.

Finally, we have considered the assertion of the Municipals that it was the Congressional intent in passing the Federal Power Act of 1935 to assure municipalities and cooperatives equal treatment under the Act as members of a common class. Support for this assertion, however, cannot be found in any of the explicit provisions of the Act. Plainly, had it been the intention of Congress to treat municipals and cooperatives as members of the same class, an express provision bracketing the two groups into one could easily have been incorporated into the Act. This was not done.

Reasonableness of Delaware Power's Wholesale Rates

In light of our finding that the Delaware Power System has an adequate basis for dividing its wholesale customers into separate classes for the Tariff Customers and for the Cooperatives, it follows that it is permissible for the System to establish different rates for these respective groups, provided that the differential is not unreasonable nor discriminatory. *Southwestern Public Service Company, supra.* Also see the second *Otter Tail Company* case, 8 FPC 393 (1949).

Delaware Power's rates to the Cooperatives were not challenged by any party to this proceeding, and no exception was filed to the examiner's finding that these rates are just and reasonable. Staff estimated that these rates yield the Delaware Power System a return of 4.07 percent on its service to the Cooperatives. Delaware Power and the Cooperatives claimed that according to their cost studies the return is approximately 4.91 percent. On the basis of certain rulings made by the examiner with respect to cost items and allocations of costs, it appears that a return of 4.79 percent could be established for the System's sales to the Cooperatives. In any event, no matter which computation is adopted, it is apparent that these rates adequately cover Delaware Power's costs of providing service to the Cooperatives, and yield Delaware Power a return which not only exceeds the 3.275 percent cost of Delaware Power's senior capital, but is also higher than 3.7 percent return which we approved as reasonable in the *Southwestern* case. We accordingly affirm the examiner's finding as to the reasonableness of these rates.

With respect to Delaware Power's rates to the Tariff Customers, it is our position that in arriving at a determination as to whether these rates are just and reasonable, we must give primary consideration to the relationship of these rates to cost of service evidence. See *South Carolina Generating Company* v. *Federal Power Commission* 261 F. 2d 915, 920 (CA4–1958). In addition, a comparison of these rates with those charged the Cooperatives is required in order to enable a determination to be made as to whether the Delaware Power System is being unduly discriminatory. Compare *Federal Power Commission* v. *Sierra Pacific Power Company,* 350 U.S. 348, 355 (1956).

Cost of service evidence was offered in these proceedings by the Delaware Power System, by the Cooperatives, and by the Commission's staff. The Cooperatives used the staff's studies, but adopted Delaware Power's allocation method and made certain adjustments to specific costs to reflect their own views. Both staff and Delaware Power prepared system-wide or rolled-in cost of service studies, using for the base period the 12-months ended June 30, 1963. According to staff's computations, the rates charged the Tariff Customers yielded the Delaware Power System a return of 6.41 percent. Delaware Power. on the other hand, contended that its rate of return on this service was only 5.34 percent, when computed according to Delaware Power's claimed costs during the base period. The Cooperatives' figures reflected 5.56 and 5.75 percent, depending on the federal income tax rate employed.

The different percentage returns arrived at by staff, Delaware Power and by the Cooperatives are the result of different approaches in allocating the cost of service, and of disagreement as to the specific treatment of wage increases, rate case expense, rate of return, income tax rates, and depreciation.

The most significant disagreement between staff, on the one hand, and Delaware Power and the Cooperatives, on the other, relates to the allocation of capacity costs of generation and high voltage transmission. Delaware Power used an allocation based 50 percent on coincidental and 50 percent on noncoincidental peak demands, asserting that the Cooperatives imposed their highest loads consistently at a time when the rest of the system load was less than its maximum, and that it was less expensive for Delaware Power to handle the Cooperatives' peak demand than that of the Tariff Customers. The Cooperatives also used demand allocation factors based on the average of the coincident and non-coincident peaks divided by the total system peaks. Staff, however, used only non-coincidental demands for allocating costs, and explained that in adopting the system-wide cost method it had diluted the higher costs for providing service in the areas where the Cooperatives were located with the lower costs of the urban areas served by Delaware Power's Northern Division. Staff stated that it would be improper to assign more costs to Tariff Customers by allocating to them the higher costs obtained from the coincident demand method.

Staff utilized the demand data for only the first nine months of the 1962–1963 test period in allocating the total cost of service, and did not use the data for the months of April, May and June 1963. Delaware Power urged that the full twelve-month period should be used, stating that the summer of 1962 was abnormally cool and did not reflect the usual summer peak load, and that the test period peak was reached in June 1963 with 489.4 megawatts, whereas the peak in the nine-month span used by staff was only 433.7 megawatts. Delaware Power recommended that the coincidental demand data of its wholesale customers for the years 1961, 1962, and 1963 should also be considered.

The examiner found that staff's method assigned $129,053 more cost to the Cooperatives and $101,338 less cost to the Tariff Customers than did Delaware Power's method. Utilizing staff's other cost data, Delaware Power's allocation method would show a rate of return on sales to Tariff Customers of only 5.81 percent as contrasted with staff's computation of 6.41 percent. The examiner ruled in favor of Delaware Power's method finding that the record showed that the Cooperatives' load pattern was such that their maximum peak did not coincide with that of the total system, whereas the maximum peak of the Municipals was practically coincident with that of the system as a whole. The examiner found that it was entirely reasonable for Delaware Power to reflect in its rates to the two classes of customers the lower costs involved in supplying service to those customers whose peak load was not coincident with that of the system as a whole, and that Delaware Power's position was clearly within the accepted general practice of public utilities in granting preferential pricing to a class of customers who contributed less, percentagewise, to the system peak than they do to the non-coincidental peak. The examiner also found that staff was incorrect in limiting its allocation data to only the first nine months of the 1962–1963 test period, stating that staff had disregarded material relevant to the test period and as a consequence had understated costs to the Municipal Customers.

We are in general agreement with the examiner's conclusion that Delaware Power's investment in generation and high voltage facilities was prompted in large part by its estimates of the maximum requirements of its customers during periods of system peaks. In this connection we find that the record is inconclusive regarding other factors which may significantly influence investment, such as maintenance schedules, load growth in the areas served and the power pooling relationships involved.[4] Further, although the record indicates that the impact of staff's use of the nine-month test period did not substantially affect the final percentage results, we agree with the examiner that the demand data for the full twelve months of the 1962–1963 test period should be utilized in allocating the total cost of service, particularly since the summer of 1962 was an abnormally cool one.

We have compared the results obtained by Delaware Power's method of allocation with other recognized allocation methods, and on the basis of staff's cost of service, we have ascertained that Delaware Power will show a rate of return on its service to the Tariff Customers of 5.74 percent under the peak hour responsibility method, of 5.87 percent under a twelve-month average peak responsibility method, and of 6.07 percent under the average and excess demand method. We find on the record in this proceeding that a rate of return of 6 percent is fair and reasonable. Accordingly, we conclude that the rates of the Delaware Power System to its Tariff Customers, when considered in relationship to the cost of service data submitted by staff, which is most adverse to the Company, are not excessive and fall within the acceptable zone of reasonableness. See *Southwestern Public Service Company*, Opinion No. 451, March 2, 1965, *supra; Wisconsin Michigan Power Company*, 31 FPC 1445 (1964).

Question of Undue Discrimination

There remains for consideration the question whether Delaware Power's rates to the Tariff Customers, even though reasonable in relation to its cost of service, are nevertheless unduly discriminatory on the basis of a comparison with the rates charged the Cooperatives.

Delaware Power has stated that the computed average rate paid by the Cooperatives during the twelve-month period ending June 30, 1963, was 9.7 mills per kwh as against a computed average rate of 11.9 mills paid by the Tariff Customers. The record shows that the average kwh costs of the smaller Tariff Customers, such as St. Michaels and Stockton, are higher than the group average because of the inability of these smaller customers to take advantage of the tariff discounts for large volume purchases. In great measure the difference in rate structure between the Cooperatives and the Tariff Customers can be accounted for by the actual difference to the Delaware Power System in the costs of serving these two wholesale groups. Thus, Delaware Power's rate of return on its service to the Tariff Customers exceeds its rate of return on its service to the Cooperatives by only 0.89 percent, when computed on the basis of staff's cost of service data, adjusted by the examiner's cost of service and allocation findings.[5] In addition, as the record plainly shows, the lower rates charged the Cooperatives can be attributed to the superior bargaining power which the Cooperatives have demonstrated in their negotiations with the Delaware Power System by reason of their apparent ability to build their own generating and transmission system. We have given weight to this bargaining power in *Southwestern Public Service Company*, Opinion No. 451 (1965).

---

[4] We anticipate that future proceedings will explore more fully the many factors influencing investment so the Commission can better evaluate the various methods of cost allocation.

It is also appropriate to point out that the Tariff Customers have directly benefited from the Cooperatives' ability to negotiate lower rate schedules, since in this matter Delaware Power's rate reduction to the Cooperatives was followed by a substantially similar rate reduction to the Tariff Customers. Moreover, the evidence is persuasive that if Delaware Power is not permitted to continue to supply the Cooperatives with their energy requirements at the rates which have been agreed upon between them, the Cooperatives would then undertake the construction of generation and transmission facilities with funds borrowed by them from the REA. The resulting duplication of facilities would be detrimental to all of Delaware Power's customers. While the Municipals object to the recognition of the Cooperatives' bargaining power as a factor in determining the discrimination issue here, we recognize that this very factor could be advanced to justify rate preferentials granted to other municipal owned distribution systems.

Although the Tariff Customers have alleged that they have been harmed competitively by the differential in the rates charged them and the Cooperatives, the record shows and the examiner so found that there is no competition between the Cooperatives and any of the Tariff Customers. Officers and managers of the Cooperatives have testified that the Cooperatives have never taken or attempted to take any existing or prospective customers from the Tariff Customers, except in a few instances where the ultimate consumers had been offered to the Cooperatives by the Tariff Customers. This testimony was corroborated by witnesses for the Tariff Customers. Further, the record does not show that the Tariff Customers have been significantly impaired in their ability to obtain new customers by reason of this rate differential.

We have considered the specific instances in which the City of Dover has alleged that it was unable to obtain certain large industrial or commercial new accounts because its power rates were not competitive. However, it does not appear that in these instances Dover lost these accounts to a competing Cooperative, but rather that some of the accounts preferred a direct connection with the Delaware Power System, or else preferred a different type of heat or power supply. We have also considered the complaint of St. Michaels that it is threatened with the loss of certain wholesale business which it has been supplying as a middleman to Choptank Electric Cooperative, because the extension of the lines of the Delaware Power System now makes it possible for Choptank to buy directly from Maryland Eastern Shore rather than through St. Michaels. Choptank's desire in this case to purchase directly from the Delaware Power System and not through a middleman poses a *Shrewsbury* situation,[6] and it does not appear that any reduction of the rate differential now existing between the Tariff Customers and the Cooperatives will alleviate this situation so long as St. Michaels' markup of about 4.0 mills per kwh over its own costs exceeds the mill per kwh cost which Choptank will sustain by making a direct connection.

---

[5] The rate of return as computed according to these adjustments is 4.79 percent for the Cooperatives and 5.68 percent for the Tariff Customers. On the basis of a twelve-month average peak responsibility allocation, and using staff's cost of service data, the rate of return works out to 5.33 percent for the Cooperatives and 5.87 percent for the Tariff Customers.

[6] *Shrewsbury Municipal Light Department* v. *New England Power Company*, 32 FPC 373 (1964), affirmed in *New England Power Company* v. *Federal Power Commission*, 349 F. 2d 258 (CA1–1965).

The complaints of Stockton with respect to its inferior competitive position are not substantiated by any showing of a loss of existing or prospective consumers to its Cooperative neighbors. Furthermore, the operations of Stockton are so much smaller than those of the Cooperatives,[7] as to indicate that Stockton's relatively higher average charges are due essentially to the small scale of its purchases rather than to its classification as a Tariff Customer.[8]

The complainants have urged that the Delaware Power System is engaged in a long-range program to stifle competition and create a private monopoly, and that its contracts with the Cooperatives and with the Tariff Customers are all designed to accomplish this result. We find no support for this contention in the record. To the contrary, we find instances where Delaware Power cooperated with the City of Dover in making energy available to large industrial and large military installations served by the City. Moreover, the Delaware Power System followed the rate reduction of approximately $200,000 per year which it made to the Cooperatives effective February 1, 1963, with a rate reduction aggregating approximately $300,000 per year to the Tariff Customers effective May 1, 1963. Delaware Power is making energy available to the City of Dover at a price far lower than Dover's own cost for the energy which it generates itself.[9] Further, the rates which Delaware Power has charged the Tariff Customers have enabled Stockton, St. Michaels, and Dover to reap at least satisfactory margin of revenues over costs from their distribution operations, with a rate of return of from 12 to 15 percent for Stockton, and of 12 percent for St. Michaels.

At the oral argument the complainants offered in evidence charts showing that the rates charged by the Delaware Power System to its small Tariff Customers exceeded Delaware Power's rates for direct sales to its own industrial and other large consumers. Apart from the untimeliness of this proffer, it does not appear that any proper groundwork for this showing was laid by the complainants.

We accordingly find that the record in this proceeding does not support the charge that the Delaware Power System has unduly discriminated against its Tariff Customers by charging them rates which are excessively higher than those charged the Cooperatives. We further find, contrary to the examiner's holding, that any general narrowing of the differential between the rates charged the Tariff Customers and those charged the Cooperatives is not at this time required.

Other Issues

Apart from the discrimination and rate level questions, the following issues remain regarding the propriety of certain features of Delaware Power's rate schedules applicable to Dover:

---

[7] According to information submitted by the Cooperatives, Stockton serves only 862 consumers, whereas Delaware Electric Cooperative serves 10,530, Choptank Electric Cooperative serves 13,424, and Accomac-Northampton Electric Cooperative serves 5,113.

[8] Stockton's average rate of 13.93 mills per kwh contrasts with the comparatively low average rate of 11.59 mills per kwh charged another investor-owned customer, Chestertown Electric Light & Power Co., whose purchases from the Delaware Power System are substantially larger than Stockton's.

[9] A witness for Dover testified at the hearings that the energy which Dover purchased from Delaware Power averaged out at a cost of 12.437 mills per kwh, whereas the energy which it generated itself cost 19.797 mills per kwh (computed on the basis of unit production expense of 11.308 mills plus unit debt service of 8.489 mills).

(1) The provision in Article XV of Rate Schedule FPC No. 31 which requires Dover to retain and maintain certain facilities solely for the use of the General Foods Plant if Dover elects to purchase these facilities.

(2) The provision in Rate Schedule FPC No. 32 upon which sales to Dover do not reflect the reserve capacity presently provided by Dover.

(3) The provision in Rate Schedule FPC Nos. 28 and 31 which prohibits Dover from operating the facilities used in making the sale to Dover Air Base in parallel with the remainder of its system.

We have reviewed the examiner's decision on these issues in the light of the exceptions and approve and adopt his findings. However, with respect to item 2, we shall also order Delaware to file an appropriate change to its rate schedule consistent with our opinion.

We also adopt the examiner's decision dealing with the power supply agreements involving Delaware Power and the proper method of computing the tax factor percentage used in the Power Supply Agreement.[10] No exception was taken to his findings on these issues.

This leaves one final issue. The Delaware Power System's wholesale rate schedules contain a fuel adjustment clause which changes the energy price according to changes in the price of coal at the System's steam plants at Edge Moor, Indian River and Vienna. During the test period, 20 percent of the total system energy was produced by Unit No. Three of the Delaware City Steam Plant, which is devoted entirely to production of energy for general system use. This plant is not included in the list of plants which determine the cost of fuel for purposes of fuel clause application and staff excepted to its exclusion. Delaware Power said that this is immaterial because the cost of fuel for all three units of the plant is based upon Delaware's system average cost of fuel. Thus, according to Delaware Power, inclusion of this plant would not affect rates. However, it is our understanding that the fuel adjustment factor for the plant is not based on the fuel costs of all other plants on the system, but only certain ones. Thus, inclusion of this plant could make a difference and we shall order its inclusion in the fuel adjustment clause. Even if Delaware Power is correct in its position, inclusion of this plant could not prejudice it.

The Commission further finds that:

(1) Delaware Power and Light Company, a corporation organized and existing pursuant to the laws of the State of Delaware, The Eastern Shore Public Service Company of Maryland, a corporation organized and existing pursuant to the laws of the State of Maryland, and The Eastern Shore Public Service Company of Virginia, a corporation organized and existing pursuant to the laws of the State of Virginia, own and operate facilities, among others, for the transmission and sale at wholesale of electric energy transmitted from points of generation in the States of Delaware, Maryland and Virginia, among others, to points of consumption outside the State in which it is generated, which facilities are in addition to, and do not include, facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Delaware Power and Light Company, The Eastern Shore Public Service Company of Maryland and The Eastern Shore Public Service Company of Virginia are, therefore, public utilities within the meaning of that term as used in Section 201 of the Federal Power Act and subject to the jurisdiction of the Commission.

---

[10] Examiner's Initial Decision, pp. 625, 626.

(2) Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore (collectively known as the Delaware Power System), in making each of the sales of electric energy at wholesale under the rate schedules referred to in the Commission's order issued November 18, 1963, as amended, transmit and sell electric energy at wholesale in interstate commerce for resale within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(3) The Tariff Customers of the Delaware Power System constitute a class of wholesale purchasers separate and distinct from the Cooperative Customers.

(4) A reasonable rate of return for use in the determination of the Delaware Power System's cost of service for the period adopted as the test year in this proceeding is 6 percent per annum.

(5) The rates and charges made, demanded and received by Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore for and in connection with the transmission and sale of electric energy transmitted, sold and delivered to the Cooperative Customers under and pursuant to the rate schedules referred to in the Commission's order of November 18, 1963, as amended, are just, reasonable and lawful; and the disparity between such rates and those hereinafter found to be just and reasonable for the services which the Delaware Power System renders to its Tariff Customers under the rate schedules referred to in the Commission's order of November 18, 1963, as amended, is not unreasonable and does not subject any person to undue prejudice or disadvantage within the meaning of Section 205(b) of the Federal Power Act.

(6) The rates and charges made, demanded and received by Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore for and in connection with the transmission and sale of electric energy transmitted, sold and delivered by these companies to the Tariff Customers under and pursuant to the rate schedules referred to in the Commission's order of November 18, 1963, as amended, are except as specifically modified below, just, reasonable and lawful.

(7) The evidence of record does not support the allegation of the Tariff Customers that the Delaware Power System is engaged in a long-range program to stifle competition and create a private monopoly.

(8) The provision in Article XV of Delaware Power's Rate Schedule FPC No. 31 with the City of Dover, requiring Dover to retain and maintain solely for the use of the General Foods plant certain facilities of Delaware Power in the event Dover elects to purchase such facilities, is unduly restrictive and should be deleted from the Schedule.

(9) Delaware Power should reconsider Rate Schedule FPC No. 32 as applicable to standby service to the City of Dover in light of current circumstances, and should report to the Commission for approval properly adjusted charges before they are submitted for filing as a rate change.

(10) Dover's complaint alleging undue restriction by Delaware Power of parallel operations in Rate Schedules FPC Nos. 28 and 31 should be dismissed without prejudice.

(11) Delaware City Steam Plant Unit No. Three should be included in the list of plants of the Delaware Power System which determine the cost of fuel for purposes of fuel clause application in the Delaware Power System's wholesale rate schedules.

(12) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) The complaints of St. Michaels in Docket No. E-7114 and of Stockton in Docket No. E-7117, alleging unlawful discrimination in the rates charged by the Delaware Power System, are dismissed.

(B) With respect to the complaint of Dover against Delaware Power in Docket No. E-7175, it is ordered:

(1) Delaware Power shall delete the provision in Article XV of its Rate Schedule FPC No. 31 requiring Dover to retain and maintain solely for the use of the General Foods plant certain facilities of Delaware Power in the event Dover elects to purchase such facilities.

(2) Delaware Power shall reconsider Rate Schedule FPC No. 32 as applicable to standby service to Dover in light of current circumstances, and shall report to the Commission for approval of properly adjusted charges before they are submitted for filing as a rate change, or if no adjustments are deemed appropriate, Delaware Power shall submit to the Commission data supporting such conclusion.

(3) The complaint of Dover alleging undue restriction by Delaware Power to parallel operations in Rate Schedules FPC Nos. 28 and 31 is dismissed without prejudice.

(4) In all other respects the complaint of Dover alleging unlawful discrimination in the rates charged by Delaware Power is dismissed.

(C) The Delaware Power System shall include its Delaware City Steam Plant Unit No. Three in the list of plants which determine the cost of fuel for purposes of fuel clause application in its wholesale rate schedules.

(D) The Power Supply Agreement, Delaware Power's Rate Schedule FPC No. 33 and Supplement, shall be modified to reflect the prior finding in this opinion and order approving the staff's method of computation based on a six percent rate of return and cost of service determination reflecting the associated taxes.

(E) Upon compliance by the Delaware Power System with all provisions as set forth above, the rate schedules and supplements thereto referred to above shall be determined to have been found just, reasonable, and not unduly discriminatory or preferential or otherwise unlawful within the meaning of the Federal Power Act, and thereafter this proceeding shall be terminated.

(F) The examiner's decision issued June 1, 1965, herein to the extent consistent herewith, is adopted as part of this opinion and order.

(G) Exceptions not granted herein are denied.

Chairman White *not participating.*

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON COMPLAINTS ABOUT LEVEL OF WHOLESALE RATES FOR ELECTRICITY

(Issued June 1, 1965)

LANDE, *Presiding Examiner:* This proceeding arises under Sections 205 and 206 of the Federal Power Act and involves the question whether the rates charged by Delaware Power and Light Company and its subsidiary companies (Delaware Power or Respondents) which are subject to the jurisdiction of the Federal Power Commission, are just and reasonable and not unduly preferential or discriminatory. As will be detailed in the next chapter, certain Municipal Customers (Tariff Customers or Complainants), accounting for about five percent of Delaware Power's revenues, seek a reduction in their wholesale rates to a level of charges to Cooperatives who allegedly belong to the same rate class of wholesale customers. It appears that in order to discourage the construction of new generating facilities Delaware Power reduced the rates for the Cooperatives to a level covering the cost of service and yielding only about ⅔ of the system's overall rate of return. The principal issue is whether the Municipal Customers are entitled to the same rate reduction, because they allegedly possess sufficient economic, technical and social characteristics to qualify for rates of the same "class of customers" under Section 205 of the Act.

Should it be found that the Municipal Electric Customers do possess many but not sufficient characteristics to qualify for the Cooperative Customers rate class, what would be a "reasonable difference" in their respective electric rates. In other words, what is the "just and reasonable" electric rate for the Municipal Customers under Section 206 of the Act.

PROCEDURAL DEVELOPMENTS

On July 12, 1963, the St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland (St. Michaels) filed a formal complaint against the Eastern Shore Public Service Company of Maryland (Maryland Company), a subsidiary of Delaware Power and Light Company, which was assigned Docket No. E-7114. This complaint alleged that the Maryland Company had "illegally overcharged" St. Michaels for sales of electric energy on and after May 1, 1963. The complaint also charged the Maryland Company with "unlawful discrimination."

By its order issued October 25, 1963, the Commission granted St. Michaels' motion to sever issues, directed that a hearing be held upon the "illegal overcharge" of unlawful discrimination. Pursuant to this order a hearing was held on November 18, 1963. Thereafter, the Commission, by its Opinion No. 427 and order issued May 13, 1964, 31 FPC 1161, sustained St. Michaels' allegation of "illegal overcharge" and required rate reductions and refunds to be made by the Maryland Company. The Maryland Company complied with the provisions of the Commission's order. Thereafter, similar reductions and refunds were made by the Maryland Company to Stockton Light and Power Company. Moreover, Delaware Power also made reductions and refunds on the same basis to two of its Delaware wholesale customers, the City of Dover, and the town of Middletown.

The complaint of Stockton Light and Power Company (Stockton) against the Maryland Company, filed on July 25, 1963, and assigned Docket No. E-7117, contained substantially the same allegations as the complaint filed by St. Michaels.

After the filing of the complaints by St. Michaels and Stockton, the Commission, by its order issued November 18, 1963, 30 FPC 1305, instituted a general rate investigation of the Delaware Power and Light Company, and its two subsidiaries, The Eastern Shore Public Service Company of Maryland and The Eastern Shore Public Service Company of Virginia, in Docket No. E-7137, consolidated this investigation proceeding with the complaint cases in Docket Nos. E-7114 and E-7117. The Commission order directed that a general investigation and hearing be held pursuant to Sections 205 and 206 concerning the lawfulness of all the wholesale electric rates and charges of Delaware Power on file with the Commission, including Delaware Power's Rate Schedule FPC Nos. 2, 8, 12, 17, 19, 22, 23, 28, 29, and 31, and FPC Electric Tariff Resale Service Schedule No. 1, Maryland Eastern Shore Rate Schedule Nos. 2, 4, 7, and 8, FPC Electric Power Tariff Resale Service Schedule No. 1, and Virginia Eastern Shore Rate Schedule FPC Nos. 2 and 4.

Intervention was granted to Accomac-Northampton Electric Cooperative, Choptank Electric Cooperative, and Delaware Electric Cooperative (Cooperatives), and to Philadelphia Electric Company and Conowingo Power Company.

The initial prehearing conference was held on January 15, 1964. At that time, the Commission's Staff had not completed its field investigation, nor had the companies as yet undertaken a cost of service study. Accordingly, various procedural dates have been set. The complaint of the City of Dover, Delaware, against Delaware Power, which was assigned Docket No. E-7175, was filed on August 10, 1964. Dover complained of certain contract provisions and of alleged unlawful discrimination. The Dover complaint was consolidated with the other cases by Commission order issued August 26, 1964.

The hearing sessions before the Examiner were continued several times in order to allow the parties to revise exhibits and to prepare rebuttal testimony. The hearing lasted 28 days, and was concluded on February 9, 1965. The hearing record, including the testimony and cross-examination of 21 witnesses, consists of 21 volumes, 3820 pages of transcript, 96 exhibits, and 21 items by reference. Opening briefs were duly filed by the Staff, St. Michaels, Dover, Stockton, Delaware Power, and the Cooperatives. Reply briefs were received on May 10, 1965.

THE ISSUES

The principal issues can be stated as follows:

(a) Are Delaware Power's wholesale electric rates applicable to the Cooperatives "just and reasonable," though they yield less profit than the other services of the system.

(b) If said rates are proper, must they also be applied to all Municipal Tariff Customers. In other words, are the Cooperatives and Municipal Customers members of the same rate class.

(c) If not, how close to the Cooperative electric rate level must the rates applicable to the Municipal Customers be in order to constitute "just and reasonable" rates.

(d) Subsidiary issues include proper classification of wholesale services, allocation of costs, treatment of deferred taxes and Federal income taxes.

STATEMENT OF FACTS

Delaware Power's wholesale rate schedules in issue here are on file with the Commission pursuant to Section 205 of the Act and Part 35 of the Commission's Regulations under the Act, 18 CFR Part 35.

The Commission's jurisdiction over the wholesale rates of Delaware Power was not contested by the parties herein. Furthermore, the parties concede that the wholesale rates applicable to the Cooperatives are lower than the wholesale rates to St. Michaels, Dover and Stockton. The controversy is whether these wholesale rates may properly be tested on a comparative sale basis; on a value of service basis, or, if the rates are to be tested on a cost of service basis, is it just and reasonable to allow a higher rate of return for service to Municipal Customers than for service to Cooperatives. Competitive considerations are paramount in this controversy. This makes it necessary to detail the individual technical and economic features of the various companies so that the alleged "undue discrimination" aspects can be weighed properly.

Operations of Delaware Power

Staff Counsel's comprehensive presentation shows that Delaware Power provides wholesale and retail electric service in the State of Delaware and portions of Maryland and Virginia. The service area of the combined electric system extends from the northern extremity of the State of Delaware through the State of Maryland and to the southern tip of the Delmarva Peninsula in Virginia. The area includes the entire State of Delaware; nine counties in Maryland on the east side of the Chesapeake Bay; and Accomac and Northampton Counties in Virginia. The electric service is rendered in Delaware by Delaware Power, in Maryland by Maryland Eastern Shore and in Virginia by Virginia Eastern Shore. Delaware Power also provides gas utility service in and around Wilmington, Delaware. Delaware Power's intrastate operations are subject to the regulatory jurisdictions of the Delaware Public Service Commission, the Public Service Commission of Maryland and the Virginia Corporation Commission.

Delaware Power is connected with Philadelphia's system in the north by three 69 kv lines with a total capacity of 230 mw, and it is connected in the east with Atlantic City Electric Company (New Jersey) by means of submarine cables crossing the Delaware River. In addition, Delaware Power transfers power through its system for Philadelphia to Conowingo at three locations on the Maryland-Delaware boundary, and also has an agreement with Conowingo for exchange of energy. Through the Philadelphia and Atlantic City connections, by means of an agreement with Philadelphia, Delaware Power participates in the Pennsylvania-New Jersey-Maryland Pool. The system operates its generating plants in full cooperation with the PJM Pool and considerable interchange of economy energy flows through both the northern and eastern interconnections, all of which is accounted for under the agreement with Philadelphia.

Delaware Power is connected at numerous points to the south and west with Maryland Eastern Shore. The electric facilities of Maryland Eastern Shore are connected in the south with Virginia Eastern Shore. The three companies treat their systems as if it were a single company, with respect to both operation and planning, and operate a completely integrated electric system in the three-state service area. Hour by hour dispatching of generation for the entire system is handled in Wilmington.

The major generating stations are located in Delaware and consist of the Edge Moor plant, located just outside of Wilmington. Indian River plant is located in southern Delaware; Delaware City plant is located a few miles south of Wilmington.

Maryland Eastern Shore owns and operates the 87 mw Vienna plant consisting of a number of smaller units of which the most recent is a 30 mw unit installed in 1951. Diesel units with a capacity of 3 mw owned by the town of Centreville are available to and operated at the request of Maryland Eastern Shore. Virginia Eastern Shore owns and operates a 10 mw diesel plant placed in service at the southern tip of the Delmarva Peninsula. Also available are 2 mw of diesel generating capacity owned by Accomac-Northampton and operated at the request of Virginia Eastern Shore.

The next major unit planned on the system is the fourth generating unit at the Edge Moor Power Station. This 167 mw unit will add about 25% to the aggregate electric generating capacity in 1966.

These generating sources are interconnected by a major 138 kv line and several parallel 69 kv transmission lines. The 69 kv system extends from the northernmost part of the system in Delaware to the southern end of Virginia. Subtransmission in the suburban Wilmington area is provided by a 34.5 kv system which serves the highly industrialized area to the north and west of Wilmington. Service throughout the remaining area of Delaware Power's Northern Division, which is comprised of New Castle County, is 12 kv. Subtransmission in the remaining area of the system is provided largely by 22 kv lines, with the exception of limited localities where 44 kv is used.

During the test period the net energy available for total system use was 2,563,132 mwh at generation, which includes a net power interchange of 110,058 mwh with Philadelphia.

Delaware Power provides firm wholesale for resale electric service to ten municipally-owned customers, two small investor-owned customers and three cooperatively-owned customers. The municipally-owned customers are: Middletown, Dover, Lewes, Clayton, Milford, Smyrna, Newark, and New Castle, all in Delaware; and St. Michaels and Centreville, Maryland. Chestertown Electric Light and Power Company, Maryland, and Stockton Light and Power Company, which operates in Maryland and Virginia, are the investor-owned customers. The cooperatively-owned customers are Choptank in Maryland, Delaware Coop., and Accomac-Northampton, a Virginia organization.

In the aggregate, Delaware Power's wholesale customers purchase approximately 350,066,556 kwh a year. During the test period the System's total electric revenues from all wholesale services amounted to $3,851,544. Wholesale electric sales during the test period referred to generation were 14.4 percent of total system kwh sales referred to generation and 8.5 percent of total system electric revenues.

With the exception of the rate schedules of Dover's emergency service and service to General Foods, the municipalities and investor-owned customers of the Delaware Power System are billed according to a tariff rate. Delaware Power's FPC Electric Tariff, Original Volume No. 1, and Maryland Eastern Shore's FPC Electric Tariff, Original Volume No. 1. The cooperatives are billed according to Virginia Eastern Shore's Rate Schedule FPC No. 4 (Accomac-Northampton), Maryland Eastern Shore's Rate Schedule FPC No. 8 (Choptank), and Delaware Power's Rate Schedule FPC No. 29 (Delaware Coop.), which are all identical, and which are considerably lower than the tariff rate. The same fuel adjustment is contained in both the tariff and the Cooperative rate schedules.

The Town of Centreville receives a power plant credit of $3.20 per kw of firm capacity, which amounted to $6,368 during 1962. The City of Dover purchases energy from Delaware Power under three separate rates: The tariff rate for energy for resale to Dover Air Force Base and to certain ultimate consumers in the vicinity of the Air Base; Rate Schedule FPC No. 31(b) for energy resale to the General Foods Cooperation, a rate substantially lower than the tariff rate and slightly higher than the cooperative rate; and Rate Schedule FPC No. 32 providing for emergency and breakdown service. No revenues were recorded during the test period under rates 31(b) and 32.

Operations of St. Michaels

St. Michaels is a town of about 1500. It is located on the Miles River, in Talbot County, Maryland. St. Michaels owns and operates an electric distribution system, which furnishes electricity to 600 ultimate consumers inside its corporate limits, and to 900 ultimate consumers outside its corporate limits in wholly unincorporated territory. St. Michaels also sells electricity at wholesale to Intervenor, Choptank Electric Cooperative, Inc. for resale to about 200 rural consumers in Choptank's Royal Oak Division, which is also located in Talbot County, Maryland, immediately adjacent to St. Michaels' lines. St. Michaels thus supplies electric energy directly to 1500 rural ultimate consumers, indirectly at wholesale to 200 rural consumers, and in total at wholesale and retail to 1700 rural ultimate consumers on Maryland's Eastern Shore.

St. Michaels buys wholesale power from Delaware Power for resale at both wholesale and retail to rural ultimate consumers.

Operations of Dover

The City of Dover, Delaware, covers approximately 8 square miles. Dover owns and operates a municipal electric distribution system which serves retail electricity in an area of approximately 88 square miles. Dover's distribution system is divided for purposes of rates and operations into three segregated and separate compartments by the terms of the three contracts under which Dover purchases electricity at wholesale from Delaware Power. Dover buys wholesale power from the Delaware Power for resale under one contract to rural retail ultimate consumers only, under one contract for resale to one urban industrial consumer only, and under a third contract for emergency resale to Dover's own generating plant's ultimate consumers at retail only.

Operations of Stockton

Stockton is located in the general area of Girdletree, Stockton and Welbourne in Worcester County, Maryland, and its Virginia lines in the general area of Franklin City, Greenbackville, Sinnickson and Silva in Accomac County, which are contiguous and embrace about 70 miles of lines. Stockton serves 862 electrical retail accounts at 862 delivery points to 679 customers. Delaware Power has transmission but no distribution lines in Stockton's territory. Stockton doesn't own a substation, but it owns 2400 volt transmission lines that sub-transmits from the Seller's substation to a point where Stockton splits and distributes through three major trunk feeders. Stockton has a small capital base with only 35 shares issued and owned by Mr. Porter. While its rate of return in 1963 was about 13 percent the total net profit amounts to about $6,000 annually. Stockton has never paid a dividend but the net profits have gone back into improving its plant.

Operations of the Cooperatives

Choptank Electric Cooperative is now serving from the Bohemia River in Cecil County, down to the Virginia line, and from the Chesapeake Bay to the Atlantic Ocean. This includes nine counties. Choptank has over 3000 miles of lines, and is serving approximately 1400 members. Choptank borrowed about ten million dollars from REA to construct its facilities.

Delaware Electric Cooperative has over 2000 miles of line and 12,400 members. It borrowed eight million dollars from REA. Delaware has five small commercial accounts. It serves some small processing industries and a small electronics manufacturing plant.

Accomac-Northampton Electric Cooperative serves along the eastern and western parts of Accomac and Northampton Counties. The territory is approximately 70 miles long and 6 miles wide. Some of the territory is inaccessible by vehicles from the road. Accomac serves 5400 customer members.

Each of the Cooperatives was organized by farmers to obtain electric service which they had been unable to obtain from either investor-owned or municipal electric utilities. Persons who are served with electricity by the Cooperatives may become members. Any revenues received by the Cooperatives for electric service in excess of the cost of furnishing such service is returned to the persons served as capital credits on the basis of the amount of energy purchased.

The Delaware Power's transmission system is so located that in almost each instance delivery is made to the Tariff Customers at their respective load centers. By contrast, since their loads developed after the basic transmission system of Delaware Power had been constructed, the Cooperatives are forced to build lines from their load centers to the points on Delaware Power's lines in order to obtain service. Likewise, the Cooperatives provide their own substations, whereas in the normal case Delaware Power furnishes the substations required for delivery to the Tariff Customers.

THE PLEADINGS

Position of St. Michaels and Dover

The rates charged by Delaware Power to the Cooperatives since February 1, 1963, are admittedly just and reasonable. The testimony of Respondents is that the lower rates charged by Delaware Power to the Cooperatives approximately equals the Cooperatives' estimated cost of proposed generation and transmission facilities. The testimony of Delaware Power shows that its wholesale rate reduction to the Cooperatives, effective February 1, 1963, was necessary to prevent the loss of these wholesale customers to self-generation and transmission. The rates presently charged by Delaware Power to its municipally-owned complainant wholesale customers are "unlawfully discriminatory and subject the municipalities to undue prejudice and disadvantage in favor of the defendant company." Delaware Power should be ordered to charge to Complainants the same rates which it has admitted to be just and reasonable for its Cooperative Customers. Respondents should be further ordered to eliminate the alleged discriminatory and unreasonable conditions from its contracts with the City of Dover. The Congressional intent in passing the Federal Power Act of 1935 was to assure municipalities and cooperatives as publicly owned or non-profit agencies, equal treatment as members of a common class. St. Michaels and Dover submit that the record shows that the Complainants are entitled to equal treatment with the Cooperatives as members of a common rate class of publicly-owned or non-profit wholesale customers. Delaware Power, having voluntarily filed the rates with the FPC which it has charged to the Cooperatives since February 1, 1963, should be ordered forthwith to charge the same rates to the municipal complainants, St. Michaels and Dover, as members of a common class of publicly-owned or non-profit wholesale customers, as the lowest reasonable rates, measured by the value of the service and the defendants alleged own admission of their reasonableness.

Position of Stockton

Stockton has paid and continues to pay more for energy it purchases than do the Cooperatives. Stockton's retail customers therefore have paid and continue to pay higher rates for energy than rates paid by customers of the Cooperatives in Stockton's competing general area. The Cooperatives are able to sell to their resale customers in Stockton's area at rates lower than Stockton can sell to its customers, thus producing unfair competition. Delaware Power and affiliates are able to sell at lower rates to retail customers than Stockton can sell to its customers directly because of higher wholesale power costs. Stockton has lost and will continue to lose customers and customers' good will and to receive undue complaints from customers. Stockton's normal customer increase has been and is being funnelled to competing Cooperatives. "Stockton is unable to get its fair share in the next two decades of the rapidly expanding market that is developing because of the new Chesapeake Bay Bridge Tunnel, the new Delaware-New Jersey Ferry from Cape May, and the new Delaware-New Jersey Bridge near Wilmington." Stockton has been prevented and is kept from being able to spread its overhead and other fixed charges—admittedly higher due to the smallness of Stockton's operation than the overhead of Delaware Power—over a larger customer load that will naturally result in reduction of that overhead ratio.

Position of the Cooperatives

The determination of the issues here presented is controlled by the recent holding of the Commission in *Southwestern Public Service Company*, Opinion No. 451, issued March 2, 1965, 33 FPC 343, approving lower rates to the Cooperatives. Relevant circumstances and conditions reflected in this record are indistinguishable from those on which *Southwestern* opinion was grounded. Cooperatives are carrying out the congressional program promulgated in the Rural Electrification Act of 1936. Cooperatives are providing complete area service in sparsely occupied areas. All of Delaware Power's customers have benefited from the sales to Cooperatives. Delaware Power would lose Cooperative business to the detriment of all customers if rates to Cooperatives were increased. There are substantial differences in nature of service rendered by Cooperatives from that provided by Tariff Customers. No competitive business relations exist between Cooperatives and Tariff Customers. The Commission's holding in *Southwestern* that Cooperatives represent a separate resale customer classification entitled to lower rate reflects decision of numerous courts and commissions. Differences in rates are not necessarily unreasonable. Threat of loss of business justifies a special rate. Historically, Delaware Power has treated Cooperatives as separate class and sold to them at lower rates than to Tariff Customers. This practice is consistent with the national pattern. Lower rates to Cooperatives are particularly justified because Delaware Power usually delivers to Tariff Customers' load centers whereas Cooperatives must build to companies' lines to obtain service. Cooperatives' loads place lesser burden than Tariff Customers' loads on Delaware Power's system.

Position of Delaware Power

St. Michaels, Dover, and the Staff are wrong in contending that because Delaware Power gave a rate to the Cooperatives, the same rate must be extended to the Tariff Customers. To the extent that this argument is based upon an assumption that Delaware Power is bound to the same rate of return from Tariff Customers as that yielded by the rate negotiated with the Cooperatives, this is directly contradictory to the holding of the Commission in the *Southwestern* case. Actually, this is a stronger case than *Southwestern*, since here Delaware Power was confronted with the reality of a newly proposed competitive generating and transmission facility when it negotiated the Cooperatives' contracts. And the Commission flatly held in the *Southwestern* case that there could be two rates of return, and a negotiated rate as to one class of jurisdictional customer did not establish a "just and reasonable" rate of return for rate-making purposes for the other. The claim for a further reduction in rates made here follows by only two years after the substantial reductions which Delaware Power has previously made in their wholesale rates. It offered a substantial reduction to the Tariff Customers when it filed a tariff with the Commission, which became effective May 1, 1963. The reduction to Tariff Customers amounted in the aggregate to approximately $300,000 annually, effective May 1, 1963. Furthermore, a reduction of approximately $200,000 annually was made to the Cooperatives in 1963, after the new contracts were entered into, which was approved by the Commission's order issued March 15, 1963. Thus, Delaware Power has, within the last two years, made reductions in their wholesale rates aggregating approximately $500,000 annually. Any further reduction would be wholly unjustified, contrary to the record evidence, and contrary to Commission precedents. Delaware Power submits that notwithstanding the allegations in their complaints, the record here shows that the Complainants have been and are enjoying exceptionally large profits from their distribution operations based upon the wholesale rates being paid to Delaware Power. Thus, Mr. Porter for Stockton testified that the rate of return earned by his company was in the range of from 12 to 15 percent. Mr. Fairbanks for St. Michaels testified that the rate of return realized by that municipality on its electric business was "probably in the neighborhood of 12 percent" at this time and prior to the rate reduction made in June 1963. The record also shows for the City of Dover that for the four years prior to 1962, before the City was required to meet its obligations under the revenue bonds, the City's electric operations were so successful that it was able to transfer about $500,000 in each year to the City's general funds. The record also shows that the City of Dover has no investment in the facilities necessary to serve General Foods, and yet it realizes from it a profit of approximately $70,000 annually. Similarly, Dover realizes $32,000 annually from sales to the Dover Air Force Base.

Delaware Power submits that Complainants and the Commission's Staff have not sustained the burden of proof which is upon them to show that the rates and charges involved are either unjust, unduly discriminatory or unduly preferential. Complainant City of Dover has not shown that any of the provisions of its existing contracts are in any respect unreasonable. The complaint proceedings in Docket Nos. E-7114, E-7117, and E-7175 should be dismissed and the investigation proceeding in Docket No. E-7137 should be terminated. The Power Supply Agreement, as amended by the First Supplemental Agreement, filed as Exhibit 96, and the Joint Use Agreement, should be approved and the companies be ordered to execute the same.

Position of Staff Counsel

There is no substantial difference between the service rendered by Delaware Power to the three Cooperatives and that rendered by the system to the municipalities and private companies. These customers all receive three-phase service from supply systems whose voltages range from 69 kv to 12 kv. Some customers from both groups take service from the 69 kv power supply network, and some customers in those groups receive service from the transmission network. The Cooperatives all have multiple delivery points whereas the Tariff Customers, except for Newark and Dover, have single delivery points. The president of Delaware Power conceded that the quality of service to all wholesale customers is substantially equal.

Staff Counsel submits that Delaware Power and the Cooperatives erroneously rely on the *Southwestern* case to support their position on the discrimination issue in this case. In the present case the alleged discrimination is against ten municipally-owned electric systems and two small privately-owned utilities. Four of the ten municipalities presently served at wholesale for resale by Delaware Power were "rural areas" under the definition of the Rural Electrification Act. The other six cities all had populations of less than 5,000. The investment per customer of the Cooperatives in the instant case is only slightly more than half the investment per customer cited by the Commission for the Cooperatives in the *Southwestern* case.

In the *Southwestern* Opinion, the Commission pointed out that the Cooperatives there represented 15.8 percent of the company's total electric sales in the test year, and sales to its other wholesale customers were 6.4 percent of its total sales for that year. The situation in the instant case is significantly different. Here sales to the Cooperatives (adjusted to Power Supply) represent only 6.01 percent of the Delaware Power's total electric sales (adjusted to Power Supply) for the test year, while sales to the Tariff Customers (adjusted to Power Supply) represent 8.35 percent. The Cooperatives' load of 25 mw in this case is only 5 percent of the total system load, while Tariff Customers' load represents 8 percent of total load. The differences are not sufficient to justify separate service classifications for Cooperatives and for municipally-owned and investor-owned resale customers in the instant proceeding. Delaware Power has voluntarily agreed to serve three of its wholesale for resale customers at rates returning 4.07 percent. Therefore, in the absence of a showing that there is actual injury to the Delaware Power by reason of the level of these rates, a rate of return of 4.07 percent for wholesale business must be considered to be fair. Application to the Tariff Customers of the rates now charged the

Cooperatives, with an allowance for substation costs, would return 4.07 percent to the Company. Even if this may be the lower limit of the zone of reasonableness, it is still within that zone. The Staff contends that the upper limit of the zone of reasonableness in this case is 6 percent, though Delaware Power claimed that 6⅛ percent rate of return is justified for the Company. The Staff recommends that the rate presently offered to the Cooperatives by the Delaware Power system be extended to all firm wholesale for resale customers (including service to Dover for resale to General Foods) with an appropriate substation charge for those customers for which the Company provides a substation, that charge to be calculated so as to provide the Company with a 4.07 percent return on its substation investment. This will result in a fair return to the system of 4.07 percent on all firm sales of electricity at wholesale for resale, and will eliminate the alleged undue discrimination among customers of the wholesale class.

THE CONTROVERSIAL RATE REDUCTION

The record shows that Delaware Power was actually faced with an imminent proposal by the Cooperatives to construct their own generation and transmission facilities before they entered into the latest contracts with them establishing the existing rate level. Mr. Gardner, President of Delaware Power, described the background of negotiations which resulted in the various contracts with the three intervenor Cooperatives here involved. He testified that the Cooperatives had always bought all their power requirements from Delaware Power. At first they negotiated separately. About ten years ago they joined together to form the "Delaware Public Committee" and then insisted upon negotiation of rate and contract matters through this Committee. Although some prior reductions sought by them were not successful, in 1961 new contracts were negotiated with them, which ran for a period of five years from that date, and which made a reduction in charges of approximately 8 percent.

Mr. Gardner further testified that thereafter, during early 1962, his associates heard that the Cooperatives had engaged consulting engineers to conduct a feasibility study for construction of their own generating plant and transmission system. On July 19, 1962, a news story appeared in which the three Cooperatives announced the formation of a new Cooperative, called "Delmarva Electric Cooperative," to generate and deliver power to the three Cooperatives, and also announced plans to build a generating plant at Blades, Delaware, all to be financed with a loan from the Rural Electrification Administration.

After confirmation from representatives of the Cooperatives of their plans as announced in the newspapers, a series of meetings were held, and the contracts which are now effective resulted from these meetings and negotiations.

As to the considerations underlying the offer made by Delaware Power, Mr. Gardner testified that they had been informed by the representatives of the Cooperatives that the feasibility study was substantially complete and that there had been informal discussions with the Rural Electrification Administration as to the availability of necessary funds to construct the generating and transmission system; that Delaware Power knew they were competing with 2 percent money and zero income taxes, and that the resulting financial savings could offset substantially lower economic efficiency in generating and transmitting electric energy; and that if the Cooperative load were lost there would be a substantial amount of cost burden shifted to other customers and ultimately there would be the adverse economic situation of duplicating utility systems with ultimate higher costs for all consumers.

Mr. Gardner testified that Delaware Power decided to offer a reduction in rates to the Cooperatives of approximately $200,000 a year. After extended discussions, the Cooperatives accepted the reduced rate, with assurance from the Cooperatives that they would not file an application for a loan to construct duplicating generating and transmission facilities for five years after the effective date of the contract. The contracts are on a year-to-year basis after five years. On cross-examination Mr. Gardner testified that he was reliably informed that the Cooperatives' feasibility study was substantially complete; that Delaware Power felt that it had to give the Cooperatives "a rate which was approximately as good, at least, as their estimated costs of generation and transmission with their own system." Mr. Gardner said that in other areas of the country electric companies had lost Cooperative loads when the rate offered was not low enough. Mr. Gardner was corroborated by the testimony of the Cooperative witnesses, particularly Mr. Paris C. Kirby, President of Delaware Electric Cooperative, Inc.

The Statement of Position of the REA Administrator, submitted herein, narrates the history of rate negotiations between rural electric cooperatives and their wholesale power suppliers since 1935, when the rural electrification program was instituted. It states that by 1937 negotiations with operating utilities had resulted in the filing of special wholesale rates for cooperatives in more than 20 states. State commissions approved special classifications and rates for service to rural electric cooperatives at an early date. The practice has continued to date and is allegedly prevalent throughout a large part of the electric utility industry.

The Commission has already recognized in prior cases that competitive conditions justify special rates in certain circumstances without such rates being unduly discriminatory. *Natural Gas Pipeline Company of America*, 28 FPC 731. Another case in which the Commission went along with a special competitive rate was *Southern Natural Gas Company*, 29 FPC 323 at 353.

Staff Counsel concedes that if one member of a class has superior bargaining power he has every right to bargain for as low a rate as he can get. However, Staff Counsel argues that once a lower rate is offered these matters cannot thereafter be ignored when dealing with other members of the wholesale class.

The flaw in this contention goes to the evidence adduced in this proceeding, which does not support Staff Counsel's conclusion that Complainants and the Cooperatives are truly members of the same wholesale rate class within the meaning of Section 205 of the Act.

Interestingly, Counsel for St. Michaels and Dover have incorporated an electric cooperative corporation, the Marvadel Electric Cooperative, Inc. The city councils of St. Michaels and Dover have passed resolutions authorizing their membership in that corporation. However, thus far this action failed to convince Delaware Power that Municipalities have bargaining power similar to that of the Cooperatives. If and when Marvadel reaches the stage of preparedness for ordering a feasibility study of duplicate generating facilities and also of securing an advantageous REA construction loan, Delaware Power will undoubtedly do its utmost to avoid competition by voluntarily accepting leaner profits in the lower zone of a just and reasonable rate. However, it seems improper to order a rate reduction designed to yield a 4.07 percent rate of return. Particularly when consideration is given to the valid differences of opinion about the certain allocations and adjustments proposed by the Staff and discussed in subsequent sections herein. Such action would be contrary to the seller's position and is not warranted under the *Southwestern* case.

A great effort was made during the course of the hearing by St. Michaels, Stockton and Dover to demonstrate that basically they and other Tariff Customers rendered service in the same type of area and were faced with the same type of burdensome service problems as were the Cooperatives. Likewise in their respective briefs and in Staff's brief and reply briefs filed in this case, argument is labored that Stockton and St. Michaels operate exclusively in rural areas.

To the extent that the Tariff Customers operate in sparsely occupied areas, their problems are, of course, the same as those of the Cooperatives. However, none of them have very many miles in truly sparse rural areas. Only the Cooperatives have been willing to go into the low consumer density areas on a large scale. A good example is the Accomac-Northampton Electric Cooperative. Many marshy areas are traversed by Accomac's lines which create both construction and maintenance problems. Of its approximately 5,400 consumers there are roughly 500 idle services, and about one-half of the members are farm labor or other marginal consumers not having a regular income for the whole year. A glaring contrast are the 3,276 rural consumers shown for the City of Dover. One of these counted as a rural customer because it is outside of the corporate limits of the city is the Dover Air Base. Although the air base is counted as only one customer, actually it takes through one meter electricity for hundreds of facilities for air base personnel housing. The terrific building boom which has resulted from the location of the air base and the General Foods plant in the Dover area has caused the areas outside of Dover to become urban in nature. Incidentally, the lines extend for a distance of not more than six miles from the corporate limits of the city.

To serve the 3,276 rural consumers outside of the city limits, Dover has 75 miles of line. This is probably a greater consumer density than Delaware has in its entire system. In this connection, the extension policy of Stockton is that "The Company will at its own expense make the service extension where the distance does not exceed 150 feet." This policy became effective on May 1, 1931. Obviously, area coverage was not pressed vigorously by a utility company so restricted.

In the case of St. Michaels, the customer must pay for all lines built on private property. In addition, the rural customers have an extra charge of 50 cents per month imposed upon them. This likewise is obviously not conducive to complete area coverage.

Dover also formerly required customers to advance the entire cost of construction. This is no longer a factor since the entire area is now covered with lines. In contrast to this was the experience of the Delaware Cooperative, which built one and one-half miles of line to serve one customer. The customer was required merely to take out a membership in the Cooperative and pay a $5.00 membership fee.

COMPETITION

In *Southwestern* the Commission considered whether the difference in wholesale rates would seriously prejudice the competitive business relations between the parties. Here, there is no true competition between the Cooperatives and any of the Tariff Customers. The President of Choptank testified that Choptank had never taken or attempted to take a customer away from St. Michaels. The manager of St. Michaels conceded that Choptank had never taken a customer of St. Michaels but the latter had given five or six of its customers to Choptank to start the line to Royal Oak. The two witnesses for the City of Dover stated that there has been no competition for customers between the Delaware Cooperative and Dover. The manager for Delaware Cooperative testified that his enterprise had never been in competition with Dover or anyone else.

Similarly, there has been no real competition between Choptank and Stockton. The Stockton manager said that no other company has lines in his area.

In the instance of the cooperative serving in an area adjoining Stockton, the cooperative had extended the service with the agreement of Stockton's predecessor. The present manager stated that he would have liked to be serving these few customers. Accordingly, the Examiner finds that no truly competitive relation exists between the Cooperatives and the Complainants.

BENEFIT TO CONSUMERS

All rate reductions received by Cooperatives for electric service are eventually refunded to the very persons served on the basis of energy purchased. This is not quite so in case of the Tariff Customers participating in this proceeding. As stated before, St. Michaels furnishes electricity to 600 customers inside its corporate limits and to 900 customers outside the incorporated territory. Similarly, Dover serves the Air Force Base and 3000 rural customers. So far the benefits from the rate reductions went primarily to the respective towns. The rural customers who live outside the towns benefit only indirectly and to a lesser extent. In case of Stockton, the rate reduction is invested in a privately owned plant. The customers only have the advantage of being served by a more dependable plant. In summary, the record reveals certain distinctly different socio-economic characteristics between the Cooperatives and the Municipal Tariff Customers. If and when the municipalities do organize as cooperatives, the benefits to their rural customers still remain uncertain.

Therefore, and because of the additional reasons outlined in prior chapters, the Examiner concludes that the Tariff Customers do not qualify as members of the wholesale electric rate class of the Cooperatives. Their rates should be ascertained separately and with reference to cost of service and all other pertinent evidence developed in this record.

COST OF SERVICE

Cost of service evidence was offered in these proceedings by the Commission's Staff, by the Respondents, and by the Cooperatives. No other party or parties offered cost of service evidence. The Staff offered three witnesses on cost of service, Mr. Bruce M. Hurt, an Accountant; Mr. I. E. Ball, an Engineer; and Mr. John J. McGrath, a Financial Analyst. Messrs. Hurt and Ball conducted the field investigation and jointly sponsored certain of the Staff exhibits. Mr. Hurt took primary responsibility for cost of service other than allocation of costs and rate of return; Mr. Ball took primary responsibility for allocation of costs and studies of certain rate schedules and Mr. McGrath took sole responsibility for rate of return. The three Respondents employed the firm of H. Zinder & Associates to prepare and make their cost of service presentation. This presentation was made by Mr. Herman Green, an Accountant; Mr. Allan J. Schultz, an Engineer; and Mr. Phillip R. Friend, an Engineer and Financial Expert. Mr. Green took primary responsibility for cost of service other than allocation of costs and rate of return; Mr. Schultz took primary responsibility for allocation of costs; and Mr. Friend took sole responsibility for rate of return.

The REA Cooperatives offered one witness on cost of service, Mr. T. Foley Treadway, Jr., an Engineer. Mr. Treadway testified that he did not prepare a cost of service study himself; that he used the Staff's study even though there "are a number of assumptions made and conclusions reached in that study with which we do not necessarily agree." Mr. Treadway disagreed with the Staff's cost allocation method which he therefore "adjusted to properly allocate the costs among the several classifications of customers."

Both Delaware Power and Staff prepared system-wide cost of service studies, using for the base period the 12-months ended June 30, 1963. Delaware Power's study before any allocation of costs totalled $44,601,279 (Exh. 21, Sch. 1), while that of the Staff totalled $42,895,229 (Exh. 1, Revised, Sch. 1). The difference of $1,706,050 is attributable to differences in treatment accorded the following cost of service components:

	Differences, Delaware Power over (under) staff	Per Delaware Power	Staff
Wage adjustments (operating expenses)	$421, 225	$21, 169, 973	$20, 748, 748
Federal income tax allowance	795, 166	5, 219, 006	4, 423, 840
State income tax allowance	(164)	363, 565	363, 729
Return	431, 283	9, 801, 563	9, 370, 280
Adjustment for taxes based on gross receipts	8, 540	23, 057	14, 517
Rate case expense	50, 000	50, 000	
Total	1, 706, 050		

Of the $1,706,050 of Delaware Power's costs in excess of those arrived at by the Staff, only $163,643, or 9.6%, is applicable to the jurisdictional business, leaving $1,542,408, or 90.4%, related to nonjurisdictional business.

The net difference of $163,643 to wholesale or jurisdictional customers as calculated by the Delaware Power and the Staff is shown in Exhibit 86, Schedule 2.2, and is tabulated below in summary form:

Difference in principle used in computing cost of service	Difference on cost of service to wholesale customer classes—companies over (under) staff	
	REA cooperatives	Tariff customers
(1) Subfunctionalization	($2, 159)	$11, 065
(2) Allocation	(129, 053)	101, 338
(3) Wage adjustments	8, 468	15, 088
(4) Rate of return—6⅛ percent versus 6 percent	12, 001	16, 626
(5) Federal tax rate—50 percent versus 48 percent	19, 481	26, 791
(6) Treatment of liberalized depreciation	8, 894	14, 397
(7) Adjustment for gross receipts taxes	255	489
(8) Rate case expenses	19, 436	30, 564
(9) Tax adjustments	3, 861	6, 101
Total	(58, 816)	222, 459

Because there is only $163,642 of difference between Delaware Power and Staff as related to the jurisdictional resale business, the Examiner finds, after an examination of the controversial cost of service issues, that it is sufficient to provide only brief comments regarding these items comprising the $1,706,050 of differences. As a matter of convenience, and for ease of reference, the Examiner will use the Staff's system-wide cost of service totalling $42,895,229 for purposes of arriving at allowable revenues for the resale service.

The wage adjustments totalling $421,225, represented as wage increases annualized for the base period in the amount of $85,367, and for the eight months' period following the end of that period in the amount of $335,858, appear to be legitimate and justified costs for inclusion in the cost of service. Delaware Power indicates the wage increases are known and measurable and cites several Commission decisions in support of its position on this issue. *Mississippi River Fuel Corp.*, Docket No. G–1641, 11 FPC 288 at p. 306; *El Paso Natural Gas Co.*, Docket No. G–4769, 28 FPC 688; *Otter Tail Power Co.*, 8 FPC 393 at p. 402, and others.

Delaware Power's claim for a greater, by $795,166, Federal Income Tax allowance than that of the Staff has its origin in three items, namely: The FIT rate, Delaware Power 50%, Staff 48% (47.483% effective rate); Rate of return, Delaware Power 6⅛%, Staff 6%; and the rate base, Delaware Power $160,025,512, Staff $156,171,325. As subsequently discussed, the Examiner would adopt the position of the Staff on each one of the above three items, which are supported in the main by recent Commission decisions. *Southwestern Public Service Company*, Opinion No. 451, 33 FPC 343; *Alabama-Tennessee Natural Gas Co.*, Opinion No. 417, 31 FPC 208 at pp. 220, 221; and *Kansas-Nebraska Natural Gas Co., Inc.*, 25 FPC 448 at p. 451.

Delaware Power's claim for return of $431,283 in excess of that shown to be sufficient by the Staff is due to the Delaware Power's use of (1) a higher rate of return—6⅛%—while the Staff used 6%, and (2) Delaware Power's application of its higher rate to a larger rate base of $160,025,512, while the Staff applied its 6% rate to a rate base of $156,171,325.

The difference of $3,854,187 between the two rate bases is largely attributable to one item of $4,198,086, representing the amount of the Average Accumulated Deferred Taxes—Liberalized Depreciation, in Account 282, as of June 30, 1963. The Staff deducted this accumulated deferred tax amount from the rate base in accordance with the treatment of this item in the Commission's Opinion in *Alabama-Tennessee Natural Gas Company, supra*, and again in its Opinion in *Southwestern Public Service Co., supra*.

The remaining item of significance, accounting for differences in the rate bases of Delaware Power and Staff, is the amount of $344,930 relating to Working Capital. The Staff has computed a larger amount of Working Capital —$4,794,825—than Delaware Power—$4,449,895. The difference of $344,930 is caused by differing base amounts outside the working capital calculation, but affecting its determination, such as operating expenses and the amount of Federal Income Taxes. Both parties used 50% of the FIT allowance as a deduction from working capital. There was a difference of $1,031 in the Average Electric Plant in Service, and no difference in the average Accumulated Provisions for Depreciation, as shown in Delaware Power's and Staff's rate base studies.

Turning to the rate of return, the Staff argues that the upper limit of the zone of reasonableness in this case is 6%, whereas Delaware Power's witness sponsors a rate of 6⅛%. The Commission has used 6% as the rate it considers fair and reasonable in several of its recent electric cases. *Wisconsin Michigan* and *Southwestern, supra*. Both Delaware Power and Staff witness prepared and testified to their respective capitalization calculations predicated on the date of December 31, 1963. Both witnesses agreed on the cost of debt and preferred stock, but the Staff, following the *Wisconsin Michigan* case included as part of its capitalization the amount of $7,028,093 of Accumulated Deferred Tax—Accelerated Amortization, in Account 281, and assigned a cost of 1.50% as being related to it. The Staff indicates that its calculation based on allowing a 6% rate of return on the rate base produces an allowance of 10.93% on common equity, to which if the deferred tax allowance is added produces an allowance of 11.08% on common equity.

Delaware Power was opposed to including the deferred taxes in Account 281 as one of its capitalization components. Delaware Power's brief offered many refutations to Staff's rate of return presentation and contends for a rate within a zone of reasonableness up to 6.5% as being fair and proper. Its calculations, using a 6⅛% rate of return, produces an allowance of 10.81% for common equity.

There were considerable differences in viewpoint between the parties as to the appropriate FIT rates to be used in the tax calculations of this proceeding. Delaware Power used a 50% FIT rate which was in effect during 1964 whereas the Staff used 48% (47.483 effective rate), the rate for corporations beginning January 1, 1965.

While the proper rate for the base period ended June 30, 1963, was 52%, there appears to have been good reason for departing from it—looking to the setting of future rates. Delaware Power's witness selected the 50% rate with the Commission's filing requirements in mind because the test period of the case extended into 1964. Because it was in effect for the year 1964 only, it cannot be considered more than applicable to an interim period and not proper for adjusting FIT in future rates. The Staff reasoned in terms of fixing rates for the future, going well beyond the test period in this particular instance in its determination of appropriate costs. The Staff also determined and applied in its calculations a consolidated companies' return effective rate of 47.483%, which is predicated on the 48% rate for 1965 and thereafter.

Both Delaware Power and Staff made an adjustment for taxes to reflect revenues for the test period equal to their cost of service determinations. This is a normal adjustment to be made in cost of service rate proceedings. The difference or excess of $8,540 of Delaware Power's adjustment over that of the Staff was due to the Staff's lower cost of service total.

Delaware Power has claimed an allowance of $50,000 in the base period cost of service for rate case expense. It estimated rate case expense at $150,000 to be amortized over a three year period. The Staff excluded any claim for rate case expense mainly because the Delaware Power's records showed $8,408 in total for a ten year period. Staff says it is a non-recurring expense.

It is believed that Delaware Power should be permitted to recoup its present estimated expenses of $150,000, but over a much longer period than three years. Based in part on the companies' past experience, the $150,000 should be amortized over a ten-year period. The base period cost would be $15,000 under this arrangement, instead of $50,000.

The following tabulation summarizes the position of the Examiner regarding the $1,706,050 (less $35,000 of rate case expense) of differences in the cost of service between Delaware Power and Staff:

	Delaware Power	Staff
Wage adjustments (operating expense)	$421, 225	
Federal income tax allowance		$795, 166
State income tax allowance		(164)
Return		431, 283
Adjustment for taxes based on gross receipts		8, 540
Rate case expense ($50,000 less $35,000)	15, 000	
Total	436, 225	1, 234, 825

From the above it can be seen that roughly three-fourths of the adjustments comprising the difference between the parties as related to the system-wide cost of service would be eliminated by the Examiner. To reiterate the Examiner's previous statement, because the differences are so small when allocated to the jurisdictional customers the Staff's system-wide cost of service will be adopted without change for the purpose of determining revenues applicable to the resale service.

Allocation of Costs

The most important individual item of controversy between the parties to this proceeding is that of cost allocation. However, as properly pointed out by

Staff Counsel, it is by no means the most important item in this proceeding. This controversy had the effect of expanding its apparent importance far out of proportion to its relationship to the total cost of service. The record shows that the procedures followed in allocating costs reflect the extent of the differential in cost of service between the two classes of wholesale customers and, further, whether the companies are earning revenues in excess of their cost of service to the two classes of wholesale customers.

The fundamental difference between the method of allocation advocated by the Staff and that by the companies lies in the relative costs attributed to off-peak loads in allocating costs of generation and high voltage transmission. Staff witness Ball used only non-coincidental demands for allocating costs and rejected the use of coincidental demands. On the other hand, the companies' allocation method is based on the use of both coincidental and non-coincidental peak demands.

The effect of the different methods of cost allocation in this proceeding is that the Staff's method assigns $129,053 more cost to the Cooperatives and $101,338 less cost to the Tariff Customers than under the Delaware Power's method, which was supported by the Cooperatives.

Diversity Factors

Allocation of costs of an electric utility between the several classes of customers and the resulting determination of appropriate rate levels is difficult at best. The problems that arise concern the proper use of diversity as a factor in determining the total costs to be recovered from different classes of service. The case at hand is a good example where the Delaware Power has established a resale rate applicable to municipalities and a separate rate containing lesser rate charges for Cooperatives.

The record shows that the load curve pattern of the use of electricity by the Cooperatives is such that their maximum peak does not coincide with that of the total system, whereas the maximum peak of the municipalities is practically coincident with that of the total system (Exh. 24). Where such significant differences exist among classes of customers, it is entirely reasonable and proper to have separate rates designed to meet those differences and to reflect the lower costs involved in supplying service to the customers whose peak load is not coincident with that of the system as a whole. Therefore, Delaware Power's position is clearly within the accepted general practice of public utilities granting preferential pricing to a class of customers who contribute less, percentagewise, to the system peak than they do to the non-coincident peak. The Cooperatives, of course, support the position taken by Delaware Power. The Staff and the municipal group contend that the rates to the two groups should be at the same level.

The Respondents' investment in generation and high voltage facilities is dictated by its calculations of the maximum requirements its customers will place upon the system at any one time. An investment made by a utility to supply the non-coincident peaks of its customers where diversity is known to exist in substantial amount would be an imprudent expenditure of funds and could not be held consistent with public interest. In effect, the Staff overlooks the actuality of diversity by allocating fixed costs of generation and high voltage transmission among the several classes of service upon the basis of their non-coincidental demand responsibility. It is, therefore, improper to accept the Staff allocation procedure of using non-coincident demands to distribute the fixed costs.

The Staff allocation procedure has other infirmities which cast additional doubt upon the validity of the position that the rates to the two resale classes of customers should be of the same level. The test year adopted by all the parties consists of the twelve months ended June 30, 1963, a period which included an unusually cool period during the summer months of 1962. However, in selecting the period from which demand data would be taken for use in allocating the total cost of service the Staff used only the first nine months of the test period despite the fact demonstrated at the hearing, that since the year 1956 Respondents' summer peaks have exceeded those that were established in the following winter months by a considerable margin in every year excepting the years 1958 and 1962. Furthermore, by excluding from consideration the months of April, May and June 1963, the Staff disregarded material relevant to the test period, including a system peak hour load in June of 1963 of 489.4 megawatts or some 12.8% higher than the highest peak recorded in the nine month span the Staff used for its peak determination. If the company had investment and operating costs associated with delivering a total test period of 489.4 megawatts it is accepted practice to distribute such costs in proportion to the use of the facilities. The Staff's failure to use a normal test year demand factor for allocation purposes results in understating costs to the Municipal Customers.

For the reasons stated above, and for other reasons given in the prior sections, the Examiner concludes that reasonable rate differential for wholesale energy to Cooperatives as compared to the wholesale energy to the Tariff Customers is adequately supported.

VALUE OF SERVICE

Complainants did not offer cost of service evidence. Instead, they rely conclusively on value of service arguments. Councel for St. Michaels and Dover urges in his reply brief that "* * * the Commission accept the value of service rate fixed by the 'yard stick' of potential Federally-financed competition as the measure of just and reasonable rate to all of the Defendants community-owned customers, which include both municipals and cooperatives." He proposes:

> * * * Assume the municipals alone put together a generating and transmission project either coal-fired or atomic fired, with or without water desalinization, but exempt from the Federal income tax on its financing, which will deliver power at 3.5 or 4 mills per kilowatt hour, thereby acquiring greater bargaining power than the Co-ops, and assume further that the municipals thereby obtain a rate from the Company which is lower than the present rate to the Co-ops, will we have to go thru another cost-of-service witch dance for 2 years before the Co-ops get the same value of the service rate as the municipals?

A prolonged discussion about the above presentation is not warranted herein. Complainants' presentation is conjectural and makes reference to news items, fragmentary press releases issued after the close of the hearing, and documents outside of the record in this proceeding, matter which cannot properly be considered herein. Furthermore, the value of service concept frequently causes fruitless debates[1] and at best can be used only as an ancillary standard.[2] Complex cost allocation problems in the instant proceeding make it impossible to determine the true effect of value of service on the rate structures of the litigants as distinguished from the other electricity customers who account for nearly 90 percent of Delaware Power's revenues. Accordingly, the Examiner will utilize the value of service concept in this proceeding only as an assist to influence his informed judgment in the direction of rate differentials not completely supported by cost differentials.[3]

---

[1] Professor Robert L. Hale, after a study of the language of commissioners and judges in rate cases, concluded that the term has been used to refer to any noncost criterion of rate making. *"Non-Cost Standard in Rate Making,"* 36 Yale Law Journal 56–67 (1926) *I.e.,* What is the value of service of water?

[2] *Bonbright,* Principles of Public Utility Rates 1961 "Value of Service as an Ancillary Standard," pp. 82–92.

PREFERENTIAL TREATMENT

Complainants argue that provisions in the Federal Power Act, particularly those which provide that in issuing licenses the Commission shall give preference to states and municipalities, merit special consideration. They contend "that the Congressional intent in passing the Federal Power Act of 1935 was to assure municipalities as public-owned or nonprofit agencies at least equal treatment with co-ops or members of a common class of wholesale customers."

As to the claim that these municipalities are "nonprofit" within the meaning of the Federal Power Act, the Commission, in assessing annual charges, has decided to the contrary and has been upheld in the courts. Thus, in *Power Authority of the State of New York*, Opinion No. 415, issued January 13, 1964, 31 FPC 93, among other things, the Commission stated:

> * * * Section 10(e) of the Act provides that States or municipalities shall be exempt to the extent that power "is sold to the public without profit." It has long been established that whether power was or was not sold at a profit is determined by whether revenues exceed costs, and the determination is made on the basis of the figures for each individual year * * *. (pages 96–97)

This finding of the Commission was upheld on appeal in *Power Authority of the State of New York* v. *Federal Power Commission*, 339 F. 2d 269.

In view of the profits enjoyed by both St. Michaels and Dover on their purchases of energy from Delaware Power, the claim that they are "nonprofit agencies" is inconsistent with the cases cited above.

The argument advanced here is also contrary to the second decision in the *Otter Tail Power Co.*, 8 FPC 393, where the Commission dealt specifically with the question of whether a differential in rates as between municipalities and cooperatives was justified and found that it was. Nor is there anything in either the *Wisconsin Michigan*[4] or *Southwestern*[5] cases to the contrary. In the former case, the Commission found that it had an inadequate record to determine the question of separate classification as between municipalities and cooperatives. In the latter case, while the Commission dealt with the question of whether a separate classification was justified as between the cooperatives and an investor-owned utility, the reasoning and grounds for its decision in sanctioning the separate classification are distinguishable here. This case involves both municipalities and investor-owned utilities as a separate class from the Cooperatives, and the principles followed in *Otter Tail* and *Southwestern* apply with equal force and effect here.

JUST AND REASONABLE RATES

Delaware Power's rate discount for service to the Cooperatives is not being challenged by any party to this proceeding. On the basis of the evidence discussed in the section dealing with cost of service, the Examiner finds that the current wholesale charges to the Cooperatives are just and reasonable. There appears tacit consent among the parties herein that the rate of return from wholesale business should be lower than from the retail electric service business. However, no party herein suggested a difference in rate of return from service to the Cooperatives as distinguished from service to the Tariff Customers. Delaware Power favors the *status quo*, while Complainants insist that they are entitled to the same rate as the Cooperatives. Finding that a difference in these wholesale rates is warranted, the remaining question is what is the just and reasonable rate for the Tariff Customers. The Examiner concludes that it must be a rate consistent with the cost of service evidence and also fair and equitable when compared with the current rates for the Cooperatives. As discussed later, neither the Cooperatives nor the Tariff Customers are entitled to preferential rates because of socio-economic reasons.[6] The Municipalities can, of course, pursue their latest attempt to achieve the so-called status of the Cooperatives and perhaps eventually obtain assistance and low cost financing from the REA. Although a customer's threat to provide its own generating facilities is a legitimate business bargaining device, it is not a proper basis for qualifying in a particular rate class under Section 205 of the Act. Accordingly, the just and reasonable rates must be determined herein solely on the basis of the record in this proceeding.

---

[3] *Cf. F.P.C.* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, where the Supreme Court held that the Commission was not bound to the use of any single formula or combination of formulae in determining rates. Its rate-making function, moreover, involves the making of "pragmatic adjustments."

[4] Opinion No. 432, issued June 9, 1964, 31 FPC 1445.

[5] Opinion No. 451, issued March 2, 1965, *supra*.

In the *Southwestern* case, the Commission emphasized "that the rates we are sustaining are proffered and advocated by the company; they are not being imposed over the company's objection; and we intimate no conclusion as to the result if the situation were otherwise." The same situation exists here, because continuance of the existing rates to the Cooperatives during the terms of these contracts has the express consent of Delaware Power.

As stated previously, the Municipal wholesalers do have many of the characteristics of the Cooperatives. However, the type of service rendered is not quite the same. Furthermore, the cost of service to the Cooperatives is lower than to the Municipal customers. Under the present rate set-up the Cooperatives as well as the Municipalities cover all cost of rendering the service, and also make a contribution towards profits, while Delaware Power's financial well-being depends largely on service to its other and more numerous customers. Delaware Power implies that lower rates to Cooperatives are not at the expense of the Municipalities, but at that of the stockholders and perhaps the other than resale customers who did not participate in this proceeding.

The Examiner rejects Complainants' general contention that the Municipal Tariff Customers as a group are entitled to an "equalizer" rate reduction, because their loads are predominantly rural. Neither the Municipalities nor the Cooperatives are automatically entitled to such an "equalizer."[7]

In the *Southwestern* case the Commission did not accept the Cooperatives' broad contention about belonging to a privileged rate class because of socio-economic reasons. However, the Commission paid special tribute to the contributions made by the Cooperatives in serving more remote and less profitable rural areas because of technical aspects of the service rendered to the Cooperatives. At the same time said decision also narrowed the gap between the rates of the Cooperatives and the other wholesale customers. The Commission achieved the desired result by making broad adjustments in different rates of return[8] to the different types of customers.

---

[6] Carriers may not adjust rates with the motive of aiding a locality. *Texas & Pacific Railway Co.* v. *United States*, 289 U.S. 627, 637.

[7] The legislative history shows that Section 205(b) of the Federal Power Act was derived from 3(1) of the Interstate Commerce Act. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 584. "* * * where provisions of one statute have been adopted by another, the interpretation which has been authoritatively placed upon the former applies to the latter also." *Hope Natural Gas Co.* v. *Federal Power Commission*, 196 F. 2d 803, 807 (CA4).

As has often been noted in Commission decisions, rate of return is one of the most difficult and at the same time basic of our pending issues. Strictness in scrutinizing cost can be ameliorated with a more generous rate of return. As indicated in the *Bluefield* and *Hope* cases,[9] rates of return should generally be equal to that on investment in other businesses with corresponding risk, must be sufficient to insure the financial soundness of the utility and adequate to maintain credit and enable the raising of money. Extensive rate of return studies were presented in evidence by the Staff and Delaware Power.

In response to a question by Staff Counsel, Delaware Power's rate of return witness stated:

> I don't think that any one company is exactly comparable to 24 or 5 others. This is merely a guide. I think a good deal of judgment has to be made, and that is where a particular number change isn't going to change the judgment, I don't believe.

The foregoing is consistent with the statement, repeatedly made by the Commission, that the rate of return is not determined by a mathematical formula.[10] The Examiner, although approving in general the approach of the Staff, concludes that the proposed 4.07 percent rate of return is too close to the bottom of the zone reasonableness. Since none of the parties suggested a precise method of narrowing the gap between the charges to Complainants and the Cooperatives, the Examiner must reach the proper determination by exercising his own judgment in comparing and weighing the various opposing contentions of the parties.

Complainants contend that they belong to the same rate class as the Cooperatives and that therefore they are entitled to the same tariff reduction granted to the Cooperatives. Respondents insist that the Municipal wholesalers should be subject to tariffs yielding a higher rate of return than the 4.07 percent advocated by the Staff. Furthermore, Respondents demonstrated that the adjustments proposed by the Staff are rather strict. (See prior discussion on cost of service and diversity factors.) A rate of return of 4.07 percent hits a rather low level in the range of just and reasonable rates of return for this type of business. The Examiner feels that the Tariff Customers, while not *ipso facto* members of the Cooperatives wholesale rate class under Section 205 of the Act, do possess sufficient operating and size characteristics that bring them close to the bounds of said rate class. Granted that any such classification tends to be arbitrary, since a large group including a wide range of customers, can readily be split into separate classes, while as a matter of billing and administrative convenience sundry groups are sometimes lumped into one rate class. The ultimate rural electric customers of the parties herein come close to forming a single rate class. However, their wholesale suppliers, the Cooperatives and the Tariff Customers don't necessarily qualify for a single rate class. Their service demands and the cost of supplying it vary. Furthermore, as pointed out previously, a rate reduction to a Cooperative wholesaler results in a direct benefit to the ultimate rural user of the electricity. A similar reduction to a Municipal tariff wholesaler may not necessarily result in a corresponding benefit to their rural customer. This is particularly so when the interstate wholesale rates are regulated by the Commission, while the intrastate retail electric rates are subject to the various state jurisdictions. However, broad equity considerations warrant the establishment of similar wholesale rate for services eventually rendered to neighboring rural customers. The evidence in this record does not support a substantial difference in the tariffs, but does warrant narrowing the gap between charges to the various types of wholesale customers of Delaware Power.

---

[8] It is axiomatic that the determination of a fair rate of return for utilities subject to our jurisdiction is not to be determined by the mechanical application of a mathematical formula. The determination we must make requires the exercise of our informed judgment on the whole of the relevant evidence in the particular case.

* * * * * * *

We are further aware that there is no precise answer to the question of a rate of return but rather that there is a zone of reasonableness within which the Commission is free to fix a rate. We feel free within the ambit of our statutory authority and the standards of due process to make the pragmatic adjustments which are called for in each particular case. (*cf. F.P.C.* v. *Natural Gas Pipeline,* 315 U.S. 575, 585–586). We think this is a case which peculiarly requires such adjustments. *Southwestern,* Opinion No. 451, issued March 2, 1965, 33 FPC at p. 354.

[9] *Bluefield Waterworks and Improvement Co.* v. *P.S.C. of West Virginia,* 262 U.S. 679; *F.P.C.* v. *Hope Natural Gas Co.,* 320 U.S. 591.

[10] *Southwestern Public Service Company,* Opinion No. 451, 33 FPC 343 at p. 346; *Midwestern Gas Transmission Company,* Opinion No. 444, 32 FPC 993 at p. 1000; *El Paso Natural Gas Company,* Opinion No. 366, 28 FPC 688 at p. 691.

In accordance with the prior discussions, including consideration of certain cost adjustments proposed by the Staff, but not fully accepted herein, giving weight to the diversity factors presentation by Respondents, and on the basis of the entire record, the Examiner finds that a proper rate balance can be achieved in this proceeding by ordering a reduction of about $229,000 annually in the rates applicable to the Tariff Customers. This reduction makes no specific allowance for the so-called socio-economic features of the rural customers. As demonstrated in Appendix B, on the basis of the Staff's cost of service computations a reduction of $229,000 annually produces a rate of return of 5.07 percent on the Delaware Power's sales to the Tariff Customers. This compares with the $400,509 reduction designed to produce a 4.07 percent rate of return, advocated by the Staff and shown in Appendix A. The reduction ordered herein will reduce the rate of return of Delaware Power's total operations from 6.70 percent to 6.63 percent, while the rate of return from "Other than Resale Service" would remain at 6.84 percent. The Examiner reaches this rate reduction as a matter of informed judgment and on the basis of all the relevant evidence in this proceeding, including cost and allocation adjustments, value of service and the diversity factor methods, advocated by the Staff and contested by Delaware Power.

Restrictive Provision for Service to the City of Dover Ordered Removed

Article XV of Delaware Power Rate Schedule FPC No. 31 provides: "Dover agrees that, if it elects to purchase such facilities, it will retain and maintain them solely for service to consumer." The consumer referred to is the General Foods plant.

The Staff submits that there is no need for Delaware Power to oversee the relationship between Dover and General Foods, which, after all, is a customer of the City not of the Company. This restriction may well affect unfavorably the cost to Dover of providing adequate electric service in the area surrounding the General Foods plant, or limit the quality of service the City could provide to others. The Examiner finds in favor of Staff's recommendation to remove the quoted portion of Article XV from FPC No. 31 as being unduly restrictive to Dover.

Delaware Power Ordered to Reconsider Rate for Standby Service to Dover

As the Company brief shows, Delaware FPC No. 32 was negotiated in early 1964 under the threat of the incipient loss of one or both of Dover's units prior to correction of certain deficiencies. At that time, Dover's full load might have been imposed on Delaware's own load at the time of the Company's annual peak. This condition of Dover's units no longer exists. Dover's units are now about to carry 16.5 mw each. Dover schedules maintenance of its units in off-peak months. The only load that Delaware Power can now expect to have imposed upon its annual peak will be the excess of Dover's load at time of Delaware's annual peak over the capacity of the single remaining Dover unit. Inasmuch as Dover's peak load was 16.9 mw in 1964, whereas its firm capacity was 16.5 mw, Delaware's cost incurrence would have been limited to 0.4 mw.

Again, the Examiner finds in favor of Staff's recommendation that Delaware Power be ordered to reconsider these charges in light of the new circumstances, make appropriate adjustments in the rate provisions, and report to the Commission for approval of these charges before they are submitted for filing as a rate schedule charge.

Restrictions of Parallel Operations Sustained Without Prejudice

Staff has not taken a position on the contentions raised by Dover with reference to the alleged restrictive contract provisions in Delaware Power's FPC Rate Schedule Nos. 28 and 31, under which Dover receives service, namely, those provisions which prohibit Dover from interconnecting the part of its system served by Delaware Power with the part of its system served from its own generators. The effect of this restriction is to assure that only customers in rural areas are served by Dover with power purchased from Delaware Power under Rate Schedule FPC No. 28. The Examiner finds that the record in this proceeding was not sufficiently developed with respect to these questions to permit a determination on issues of this scope and magnitude. Since Dover failed to adequately pursue the matter, and in order to expedite this proceeding, the Examiner is dismissing without prejudice Dover's applicable complaint. Dover should be given another opportunity to have the matter developed *de novo.*

Power Supply Agreement Modified

The controversy between the Staff and the Companies regarding the proper method of computing the tax factor percentage used in the Power Supply Agreement (Exh. 96) is a matter of basic principle. The Staff contends that its method of calculation correctly reflects the effect on Federal income taxes of the excess of tax over book depreciation.

Delaware Power admits in its brief the correctness of this approach in determining the cost of service, but claims that the tax factor percentage for use in the Power Supply Agreement "* * * is a horse of a very different color, and, in fact, a different animal." The Delaware Power brief explains further that the three affiliated companies "* * * are seeking to recover dollars in charges, not to set up a formula whereby an even 6 percent rate of return is received, with flow through, after tax deductions and adjustments, as in a strict cost of service approach." The Examiner holds that this power supply arrangement should be based on a cost of service determination, including an acceptable return and associated taxes, because once this agreement becomes effective, the return and taxes passed back and forth among the three companies become a part of purchased power charges or credits to production expense for each of the companies, and may be beyond the reach of state regulatory agencies.

Contracts With Philadelphia and Conowingo

Delaware Power Rate Schedule FPC No. 2 provides for the sale of electricity by either Delaware Power or Philadelphia at points along the boundary between the two systems where it is more economical for one to serve retail customers from the distribution system of the other company. Rate Schedule FPC No. 8 is a similar agreement with Conowingo. These are "border-line" agreements, the charges for which reflect local distribution investment only.

Delaware Power Rate Schedule FPC No. 22 is likewise a cost-of-service type of agreement with Conowingo for the delivery to Conowingo by Delaware Power of 21 mw received from Philadelphia. The annual charge of $55,808 is a reasonable rate for this service, and has been credited to the cost of power supply as determined in the Staff's cost study.

Delaware Power Rate Schedule FPC No. 19 is an agreement with Philadelphia providing for coordinated planning and operation of Delaware's generation and transmission facilities with Philadelphia, and thus with the PJM Pool. Transactions thereunder for the exchange of capacity and energy are typical of many arrangements elsewhere in the industry. Charges for specific facilities appear to be reasonable for the use made of them by the parties during the test period.

Staff study of the above rate schedule was directed primarily to a disclosure of their effect on the determination of the cost of service to wholesale customers. The Examiner adopts the Staff's conclusion that the charges and revenues contained in these schedules do not have any adverse effect on the rates for firm power sales by the System to its wholesale for resale customers.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced, and the briefs filed, it has been found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Delaware Power and Light Company, a corporation organized and existing pursuant to the laws of the State of Delaware, The Eastern Shore Public Service Company of Maryland, a corporation organized and existing pursuant to the laws of the State of Maryland, and The Eastern Shore Public Service Company of Virginia, a corporation organized and existing pursuant to the laws of the State of Virginia, own and operate facilities, among others, for the transmission and sale at wholesale of electric energy transmitted from points of generation in the States of Delaware, Maryland and Virginia, among others, to points of consumption outside the State in which it is generated, which facilities are in addition to, and do not include, facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Delaware Power and Light Company, The Eastern Shore Public Service Company of Maryland and The Eastern Shore Public Service Company of Virginia are, therefore, public utilities within the meaning of that term as used in Section 201 of the Federal Power Act and subject to the jurisdiction of the Commission.

(2) Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore, in effecting each of the sales of electric energy at wholesale under the rate schedules referred to in the Commission's order issued November 18, 1963, as amended, transmit and sell electric energy at wholesale in interstate com-

merce for resale within the meaning of Sections 201, 205 and 206 of the Federal Power Act.

(3) The rates the Delaware Power and Light System charges its cooperatively-owned wholesale for resale customers are lower than the rates it charges its municipally-owned and investor-owned wholesale for resale customers.

(4) The services that Delaware Power and Light System renders to its municipally-owned and investor-owned wholesale for resale customers are similar though not fully comparable to those services rendered to its cooperatively-owned wholesale for resale customers. The Tariff Customers and the Cooperative Customers of the Delaware Power and Light System compose two distinctly separate classes of service commanding separate rates that are reasonably close.

(5) A 5.07 percent is a just and reasonable rate of return to the Delaware Power and Light System from its Municipal Tariff Customers and a 4.07 percent is a just and reasonable rate of return from its Cooperative Customers.

ORDER

WHEREFORE, *It Is Ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided by its Rules of Practice and Procedure, that:

A. Delaware Power and Light System Companies are to file within 60 days:

(1) Rate schedule supplements to their rate schedules for wholesale firm service to Middletown, Dover (Rate Schedule Nos. 28, 31), Lewes, Clayton, Milford, Smyrna, Newark, New Castle, St. Michaels, Centreville, Chestertown Electric Light and Power Company, and Stockton Light and Power Company, superseding their present rates and charges for service to those customers with the rates and charges designed to reduce by $229,026 annually the revenues from said Tariff Customers on the basis of operations during the 12-month test period ended June 30, 1963.

(2) The above reduction is also applicable to service to Dover for resale to General Foods.

B. Delaware Power and Light System may make an appropriate substation charge for those customers for which it provides a substation.

C. The provision "Dover agrees that if it elects to purchase such facilities, it will retain and maintain them solely for service to consumer" be removed from Delaware Power's Rate Schedule FPC No. 31.

D. Delaware Power System Companies should reconsider Rate Schedule FPC No. 32 as applicable to standby service to Dover in light of the new circumstances, and report to the Commission for approval of properly adjusted charges before they are submitted for filing as a rate charge, or if no adjustments are deemed appropriate, submit to the Commission data supporting such conclusion.

E. The Power Supply Agreement, Delaware's Rate Schedule FPC No. 33 and Supplement, should be modified to reflect the prior finding in this decision approving the Staff's method of computation based on a six percent rate of return and cost of service determination reflecting the associated taxes.

F. Upon compliance by Delaware Power and Light System Companies with all provisions as set forth above, their rate schedules and supplements thereto referred to above be determined to have been found just, reasonable and not unduly discriminatory or preferential or otherwise unlawful within the meaning of the Federal Power Act, and thereafter this proceeding be terminated.

ALLEN C. LANDE,
Presiding Examiner.

APPENDIX A

DOCKET NO. E-7114, ET AL.

Delaware Power and Light Co. and subsidiaries

[Annual reduction in resale revenues to produce 4.07 percent rate of return [1] using 48 percent FIT rate (47.483 percent effective rate), 12 months' period ended June 30, 1963]

	Resale service				
	Total	Total resale service	Tariff customers	REA co-ops	Other than resale service
(1) Revenues required to produce 4.07 percent return on resale service	$44, 676, 153	$3, 451, 035	$2, 009, 775	$1, 441, 260	[2] $41, 225, 118
(2) Less: cost of service, 48 percent FIT rate	42, 895, 229	4, 029, 607	2, 340, 625	1, 688, 982	38, 865, 622

CRISP COUNTY POWER COMMISSION v. GEORGIA POWER COMPANY, DOCKET NO. E-7120 AND GEORGIA POWER COMPANY, DOCKET NO. E-7288

ORDER PROVIDING FOR FILING OF BRIEFS ON SETTLEMENT PROPOSAL; AND DIRECTING IMMEDIATE TEMPORARY EMERGENCY INTERCONNECTION AND SERVICE

(Issued April 22, 1966)

This order directs that briefs respecting a settlement proposal tendered in Docket No. E-7120 be filed by all parties within two weeks. The order also provides (in Docket No. E-7288) that, pending further consideration of the settlement proposal or other resolution of the merits of the proceeding, and in the light of information indicating the urgent need for an immediate temporary connection of electric facilities and rendition of emergency service by Georgia Power Company (Georgia Power) to Crisp County Power Com-

mission (Crisp County), Georgia Power be directed to institute such connection and service in the manner hereinafter provided.

On August 8, 1963, Crisp County filed a complaint with the Commission under Section 202(b) of the Federal Power Act in Docket No. E-7120 requesting the Commission to direct Georgia Power to interconnect with and sell and exchange energy with Crisp County. Crisp County presently operates in electrical isolation. Hearings on the complaint have been held and the issues have been briefed to the Presiding Examiner. On April 13, 1966, the Presiding Examiner certified to the Commission for its consideration a settlement proposal which had been filed on April 11, 1966, by Georgia Power and Crisp County.

Crisp County has not asked Commission permission for withdrawal of its complaint. Instead the letter accompanying the tender of the settlement proposal asks on behalf of Crisp County and Georgia Power that the Commission approve and adopt the settlement proposal by an appropriate order in Docket No. E-7120.

On April 15, 1966, the Commission staff filed a motion urging that we fix a period of 20 days for comment by all parties upon the merits of the settlement. The staff points out that in submitting the proposal, neither Georgia Power nor Crisp County had purported to show why its terms constituted an appropriate resolution of the issues in the proceeding and that the staff, itself, had not participated in the settlement conferences, and had not had time within the brief period subsequent to the filing of the proposal to evaluate the merits of the complex agreement in the light of the facts of record.

We believe that under the circumstances, it is both necessary and appropriate to provide an opportunity for preparation and filing of briefs by all parties on the merits of the settlement agreement before the Commission determines whether its approval and adoption would be a reasonable resolution of the proceeding instituted by Crisp County which has been already heard and briefed. We shall accordingly defer action upon the settlement proposal (as well as the ancillary motion of the staff to waive intermediate decision by the Examiner, which would be moot should we approve the settlement) until we can consider these further pleadings. However, we believe two weeks from the date of this order should be sufficient in which to prepare and file such briefs.

Reliable information coming to the Commission's attention[1] indicated that in the past year there have been seven outages on the Crisp County system resulting in loss of service to some or all customers served. Five of these outages lasted over an hour and one of those five lasted for over five hours. Two outages of 27 and 6 minute durations resulted in loss of service to the entire system. The five others all of which lasted over an hour deprived 500 to 2,000 customers of service.

We find that on the basis of the numerous service interruptions on the Crisp County system due to inadequate generating facilities under isolated operation, an emergency situation exists with respect to electric service to the customers of Crisp County. Available information indicates two alternative means of establishing such temporary interconnection: closure of existing switching facilities of Georgia Power Company at Cordele, Georgia, which are fed by the 66-mile Americus-Perry 46 kv circuit of Georgia Power,[2] or a temporary back-up service from Georgia Power's 46 kv Flint River circuit. The Commission believes that Georgia Power and Crisp County should be offered the opportunity in the first instance to determine if these or other alternative connections will best meet the emergency situation and to agree upon terms of the financial and operating agreement between them in effecting the temporary emergency interconnection and service hereinafter directed.

---

[1] Outages on May 10, June 3 and August 18, 1965, are indicated by the record in Docket No. E-7120 (Tr. 100, 102 and 99). An engineer in the employ of Crisp County has advised the Commission staff of four other outages which occurred subsequent to the closing of the record on February 5, March 7, 25 and 28, 1966. For more details on these seven outages see Appendix A to the Staff Comment and Motion filed April 15, 1966, in Docket No. E-7120.

Nothing contained herein shall be construed as passing upon the issues raised in the pending proceeding in Docket No. E-7120 initiated by Crisp County against Georgia Power pursuant to Section 202(b) of the Federal Power Act. The temporary emergency interconnection directed herein in Docket No. E-7288, may be modified or removed after the Commission has resolved the issues pending in Docket No. E-7120.

The Commission finds:

(1) An immediate temporary emergency interconnection between Crisp County and Georgia Power at Cordele, Georgia, or from the 46 kv Flint River circuit is necessary and appropriate and in the public interest for the purposes of the Federal Power Act, particularly Section 202(c), to assure adequate electric service to Crisp County's customers.

(2) The settlement proposal in Docket No. E-7120 is so complex that the Commission deems it advisable to defer passing thereon until after a period elapses for preparation of briefs and Commission consideration of such briefs.

The Commission orders:

(A) Georgia Power shall within seven days hereafter establish temporary emergency interconnection of its electric facilities with those of Crisp County so as to provide emergency back-up service capacity to the Crisp County system until further order of the Commission.

(B) Georgia Power shall notify this Commission when the temporary interconnection ordered herein is established and operative.

(C) This temporary interconnection and emergency service shall be rendered in accordance with the terms and conditions as shall be agreed to between Georgia Power and Crisp County. If no agreement is reached, the temporary interconnection and service shall be subject to such terms and conditions as may be fixed by supplemental order of the Commission pursuant to Section 202(c) of the Federal Power Act.

(D) All parties shall file with this Commission within two weeks from the issuance of this order their briefs with respect to the settlement proposal certified to the Commission by the Presiding Examiner on April 13, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EMPIRE DISTRICT ELECTRIC COMPANY, DOCKET NO. E-6711

DETERMINATION OF ANNUAL CHARGES FOR HEADWATER BENEFITS

(Issued April 25, 1966)

This order, issued under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)), determines that the United States' Beaver and Table Rock headwater improvements in the White River basin in Missouri did not provide benefits to the Empire District Electric Company's Ozark Beach hydroelectric development, Project No. 2221, during calendar year 1965.

---

[2] There had been an interconnection between Georgia Power and Crisp County at Cordele prior to January 1961. There is no record of any power supply failure prior to the discontinuance of this interconnection.

The Commission has determined Empire District's headwater benefits payments to the United States for the period of September 24, 1960 (when it is estimated that the Ozark Beach development first received benefits from the Table Rock project), through December 31, 1964. By order of April 30, 1965, the Commission determined that Empire District's payment for the period through December 31, 1963, to be $123,110 (33 FPC 911). By order of September 16, 1965, 34 FPC 858, the Commission determined that because of the filling of the Beaver reservoir, the Federal headwater improvements did not provide benefits to the Ozark Beach development for calendar year 1964.

Studies indicate that average annual generation of the Ozark Beach development without upstream regulation would be about 58.4 million kilowatt-hours. Empire District has accepted this figure for a base on which to estimate energy gains in 1965 and subsequent years and has stated this acceptance in a letter dated March 16, 1965. Empire District will pay for benefits estimated by subtracting 58.4 million kilowatt-hours from the actual generation produced during the year in question. When this difference is negative, it will be carried over as an offset against positive amounts in subsequent years. Over a period of years, it is anticipated that the payments to the United States will, on the average, be the same as if based on the staff's estimate of average annual energy gains resulting from upstream regulation, which is about 31 million kilowatt-hours.

The Ozark Beach development generated 55.846 million kilowatt-hours in calendar year 1965. Hence, 2.554 million kilowatt-hours (58.400 million less 55.846 million) will be carried over as an offset against future gains. It is noted that without the continued filling of the Beaver development, the Ozark Beach development would have produced an additional 20 million kilowatt-hours. The gain, in that case, would have been about 17.4 million kilowatt-hours (75.8 million minus 58.4 million).

The Commission determines:

The United States Beaver and Table Rock headwater improvements in the White River basin in Missouri did not provide benefits to the Empire District Electric Company's Ozark Beach hydroelectric development, Project No. 2221, during calendar year 1965.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP66-281

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 26, 1966)

On March 4, 1966, Eastern Shore Natural Gas Company (Applicant), filed in Docket No. CP66-281 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of metering, regulating and connecting facilities for the transportation and delivery of gas on an interruptible basis to Standard Bitulithic Company (Standard), all as more fully set forth in the application.

Applicant proposes to tap its 6-inch pipeline at Mt. Pleasant, Delaware, and provide a metering and regulating station for the transportation and delivery of gas on an interruptible basis to Standard for use in the processing of asphalt paving. The proposed delivery point will make connection with a 2-inch pipeline to be constructed at the expense of Standard in order to connect the gas supply to its plant located approximately 1400 feet from Applicant's 6-inch line.

The use of gas by Standard will be limited to the summer and fall months of the year. During these periods the maximum daily volume of gas to be consumed by Standard is estimated at 500 Mcf, while the total annual consumption is estimated at 22,500 Mcf. The application states that authorization for the proposed service will not affect Applicant's ability to supply service to its remaining customers.

The total estimated cost of Applicant's proposed meter and regulating facilities is $2,150, which cost will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G-12059, *et al.* (18 FPC 710).

(2) The proposed construction and operation of facilities and transportation and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b) (c)(1), (c)(3), (c)(4), (e), and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the construction and operation of facilities and the transportation and delivery of natural gas as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

(D) The certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66-287

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 26, 1966)

On March 9, 1966, El Paso Natural Gas Company (Applicant) filed in Docket No. CP66-287 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring and regulating station to provide a supplemental delivery point for the direct sale and delivery of natural gas to Phelps Dodge Corporation (Phelps Dodge), an existing industrial customer, as more fully set forth in the application.

Pursuant to a Gas Sales Contract dated December 4, 1961, Applicant presently sells and delivers up to 24,277 Mcf per day of natural gas on a firm basis to Phelps Dodge for use in the latter's mining and related operations near Morenci, Arizona. Phelps Dodge's estimated peak day and annual requirements for the new installation are estimated to be 43 Mcf and 6,600 Mcf, respectively. There will be no increase in the contract demand.

The proposed new delivery point is to provide service to Phelps Dodge's new administration building located approximately 0.4 miles upstream from the existing delivery point. Phelps Dodge has requested the additional point of delivery since to utilize the existing one would require Phelps Dodge to construct a pipeline either across or round slag and tailing dumps to connect the administration building to existing facilities.

The estimated cost of construction is $4,557, which will be financed from current working funds.

Due notice of the filing of the application was published in the Federal Register on March 25, 1966 (31 F.R. 4978). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on April 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof, and the transportation of natural gas proposed, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e), and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, El Paso Natural Gas Company, authorizing the construction and operation of facilities and the transportation of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e), and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

(D) The certificate issued by paragraph (A) above shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet future increases in their requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LUCY G. MOSES, DOCKET NO. CS66-6; HENRY AND LUCY MOSES FOUNDATION TRUST, CS66-7; BANKERS TRUST COMPANY AS TRUSTEE OF WILLIAM L. HERNSTADT 1950 TRUSTS, CS66-8; ESTATE OF WILLIAM L. HERNSTADT, DECEASED, CS66-9

ORDER DENYING REHEARING

(Issued April 26, 1966)

On April 4, 1966, Hunt Oil Company (Hunt) filed its application for rehearing and reconsideration of the Commission order of March 4, 1966, 35 FPC 331, which denied Hunt's petition for leave to intervene to protest the granting of small producer certificates in the proceedings listed in the caption. Said order stated that the facts were not as stated in Hunt's petition to intervene, nor was Hunt pursuing the proper remedy.

In its application for rehearing and reconsideration Hunt has introduced no new arguments or new facts which would affect in any way the determination set forth in the order of March 4, 1966. The only additional facts alleged have to do with Hunt's cost of processing, and that is not relevant in this proceeding. The motion for rehearing and reconsideration is denied.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing and reconsideration filed by Hunt Oil Company present no facts or legal principles which would warrant any change or modification in the Commission's order of March 4, 1966.

The Commission orders:

The application of Hunt Oil Company for rehearing and reconsideration of the order of March 4, 1966 is hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-210

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 26, 1966)

On February 15, 1966, Northern Natural Gas Company (Petitioner) filed in Docket No. CP65-210 a petition to amend the certificate of public convenience and necessity issued in said docket on May 25, 1965, 33 FPC 1071, by deleting authorization to construct and operate measuring and regulating facilities authorized for the delivery of natural gas to the Golden West Grain Company (Golden West), Rogers, Nebraska, as more fully set forth in the petition to amend.

In the certificate issued May 25, 1965, Petitioner was authorized to construct and operate facilities to establish five new delivery points for the sale of natural gas to American Gas Company and Petitioner's Peoples Natural Gas Division (Peoples) for resale. Four of the five delivery points authorized by the certificate have been completed.

Construction of the delivery point for Golden West has not been commenced. Peoples has advised Petitioner that Golden West has not installed the fuel line and burner facilities which are necessary to commence natural gas service. Peoples is uncertain when or whether these facilities will be constructed. Petitioner therefore asks that the facilities for the delivery point for Golden West be deleted from the authorization in this docket.

Petitioner states that if Golden West installs its required facilities during 1966, then Petitioner will construct and operate measuring and regulating facilities for service to Golden West pursuant to the 1966 "budget-type" certificate issued to Petitioner in Docket No. CP66-98 on December 13, 1965, 34 FPC 1454.

Due notice of the filing of the petition to amend was published in the Federal Register on March 4, 1966 (31 F.R. 3434). No protest, petition to intervene, notice of intervention, or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued on May 25, 1965, in Docket No. CP65-210 be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Northern Natural Gas Company in Docket No. CP65-210 on May 25, 1965, is amended by deleting therefrom the authorization for the construction and operation of the measuring and regulating facilities for the delivery point to Golden West Grain Company, Rogers, Nebraska, as described above and as more fully described in the petition to amend.

(B) In all other respects the certificate, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBUS AND SOUTHERN OHIO ELECTRIC COMPANY, PROJECT NO. 2393

ORDER EXTENDING PERIOD OF PRELIMINARY PERMIT

(Issued April 28, 1966)

Application was filed on April 4, 1966 by Columbus and Southern Ohio Electric Company, permittee for proposed Project No. 2393, for a six-month extension of the period of the permit. The preliminary permit was issued by the Commission on May 11, 1964, 31 FPC 1147, for a period of 24 months, effective as of May 1, 1964.

In support of its application, the permittee advises that such an extension would enable its consulting engineers to complete plans for a new layout based on a new study suggested by the Corps of Engineers and would provide additional time within which to conduct a full scale test at the site of the effect of ponding on pollution and possible reduction in reaeration due to the installation of the generating facilities.

The Commission finds:

It is not inconsistent with the public interest to extend the period of the preliminary permit as applied for.

The Commission orders:

The period of the preliminary permit for proposed Project No. 2393, is hereby extended for a period of six months through October 31, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G–11217, G–13734, G–14115, G–15314, G–15315, G–18206, G–18207, G–18215, G–18417 AND G–18418

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued April 28, 1966)

On March 29, 1966, Phillips Petroleum Company (Phillips) filed a document styled an Application For Rehearing[1] of the Commission's order herein of March 1, 1966, 35 FPC 305, denying Phillips' petition for consolidation of proceedings, termination of proceeding and termination of proceedings in part. Phillips requests reconsideration of said order only insofar as it denies termination of the proceeding in Docket No. G–11217 and termination in part of the other above-docketed proceedings.[2] These proceedings relate to spiral escalation and favored-nation rate increases[3] filed by Phillips for sales of natural gas to El Paso Natural Gas Company (El Paso), and were based on El Paso's increased rates. Upon settlement of El Paso's rate proceedings, Phillips filed recomputed rates reflecting the downward spiral effect of El Paso's reduced rates and these rates were accepted subject to further order of the Commission, 31 FPC 774. On March 1, 1966, we approved a settlement proposal of other producers whose increased rates were filed under favored-nation clauses and were based directly or indirectly on Phillips' spiral increases. *Amerada Petroleum Corporation, et al.*, Docket No. G–16117, *et al.* Phillips requests reconsideration of the order of March 1, 1966, herein denying termination of the contractual issues in these proceedings as a part of the Amerada, *et al.* settlement.

Phillips asserts two grounds for termination of the contractual issues in these proceedings. It states that refunds to El Paso are flowed through to its customers without the filing of decreased rates by El Paso and therefore there is no basis for a further reduction of Phillips' rates under the downward spiral theory. Second, Phillips asserts that the Amerada settlement established rate levels which are in excess of Phillips recomputed rates and contractually justify Phillips' rates under favored-nation clauses in its contracts.

We deem it inappropriate to consider Phillips' contentions in the context of a settlement proposal of other respondents where the parties did not consider Phillips' current assertions. We shall afford Phillips a hearing at which it may adduce evidence and make the legal arguments which it states will require termination of the contractual issues, or if it so desires, a settlement conference of the parties may be convened to consider Phillips' contentions.

---

[1] An application for rehearing with respect to Commission action on an interlocutory order, such as involved here may not properly be filed (Section 1.30(e) of the Rules of Practice and Procedure (18 CFR 1.30(e)). The instant filing has been considered as a motion for reconsideration pursuant to Section 1.12 of the Commission's Rules of Practice and Procedure.

[2] Aside from the contractual question, Phillips' rates are also subject to a determination of their justness and reasonableness under Section 4(e) of the Natural Gas Act, with the exception of those involved in Docket No. G–11217.

[3] The favored-nation increases involve a very small portion of the total amount involved here.

The Commission orders:

For the reasons set forth above, Phillips' motion for reconsideration is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER EXTENDING TIME FOR CONSIDERATION OF QUALITY STATEMENTS

(Issued April 29, 1966)

The Commission in paragraph (F)(1) of Opinion No. 468, as amended by Opinion No. 468-A, 34 FPC 159, 1068, required the producer respondents therein to submit a quality statement with respect to each rate schedule pertaining to sales of gas from the areas covered by that decision. The time period for filing these quality statements was extended to March 21, 1966, by the Tenth Circuit in its stay order issued January 20, 1966 in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*). A similar time extension was granted to any producer respondent which had not obtained a court stay of the Permian Opinion by the Commission in its February 11, 1966 order, 35 FPC 211. It was also provided in paragraph (F)(2) of the opinion that where the quality statement reflected full agreement between seller and purchaser, it was to be deemed accepted unless the Commission within 60 days after such filing ordered otherwise.

In passing on the propriety of the quality statements it is important to examine and compare the underlying principles and methods utilized in arriving at the various agreed upon adjustments. We need additional time to consider these matters, particularly with respect to those quality statements filed in advance of the March 21 deadline. For this reason we are extending the period of time for consideration of the quality statements thus far submitted to June 30, 1966.

The Commission orders:

The time for consideration by the Commission of quality statements heretofore filed by producer respondents in this proceeding is extended to June 30, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP66-253

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 29, 1966)

On February 3, 1966, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP66-253 an application pursuant to Section 7(c) of the Natural

Gas Act, as implemented by Section 157.7(c) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the period extending from April 1, 1966, through March 31, 1967, and the operation of certain natural gas facilities for the sale of natural gas to existing distributors for resale and for miscellaneous rearrangements not resulting in any change of service rendered by means of the facilities involved. all as more fully set forth in the application in this proceeding.

Applicant proposes to construct a maximum of twenty new meter stations and main line and lateral taps at new delivery points in order to transport and sell natural gas previously authorized under certificates for transportation or sale to existing distributors at rates on file with the Commission. Further, Applicant proposes to construct facilities necessary for a maximum of five miscellaneous rearrangements; pipe utilized for such rearrangements will not exceed a diameter of 26-inches and a length of five miles.

The total cost of facilities proposed under this application will not exceed a maximum of $500,000 and the total deliveries to any one distributor will not exceed a maximum of 100,000 Mcf of natural gas per year.

Applicant request waiver of the provisions of Section 157.7(c)(3)(i) of the Regulations which restricts the total estimated cost of the gas-sales or transportation facilities proposed in an application filed pursuant to Section 157.7(c) to $300,000.

Applicant states that one of the contemplated rearrangements involves a portion of its North Denver lateral at an estimated cost of $240,000. The rearrangement is necessary because of the residential development of an area traversed by said lateral. Such estimated cost is 48 percent of the total estimated cost of the proposals in the subject application. Accordingly, Applicant requests waiver of the provisions of the above-described section of the Regulations in order to be able to expend funds (estimated at $500,000) sufficient to construct the maximum facilities proposed herein.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(6) The authorization hereinafter granted should be limited to the period extending from April 1, 1966, through March 31, 1967, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with the total deliveries to any one distributor not to exceed a maximum of 100,000 Mcf of natural gas per year.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(8) The certificate issued hereinafter is granted on the express conditions that any interruptible service authorized should be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(9) Good cause has been shown for waiver of the provisions of Section 157.7(c)(3)(i) of the Commission's Regulations under the Act.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Colorado Interstate Gas Company, to construct during the period extending from April 1, 1966, through March 31, 1967, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities for miscellaneous rearrangements and to sell natural gas to distributors for resale as hereinafter provided.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) The authorization granted in paragraph (A) above is limited to construction during the period extending from April 1, 1966, through March 31, 1967, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $500,000, with the total deliveries to any one distributor limited to a maximum of 100,000 Mcf of natural gas per year.

(D) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(c)(8) of the Commission's Regulations under the Natural Gas Act.

(E) The certificate issued is granted on the express condition that any interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

(F) Applicant's request for waiver of the provisions of Section 157.7(c)(3)(i) of the Commission's Regulations is granted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr.. Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP65-102; ATLANTIC SEABOARD CORPORATION, CP65-122; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP65-181; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, UNITED NATURAL GAS COMPANY, AND NORTH PENN GAS COMPANY, CP65-182; UNITED FUEL GAS COMPANY, CP65-198

ORDER PERMITTING INTERVENTION, SEVERING PROCEEDINGS, AND SETTING DATES FOR FILING OF EVIDENCE AND HEARINGS

(Issued April 29, 1966)

On March 25, 1966 the United States Department of Health, Education, and Welfare filed a motion for leave to intervene out of time and a petition to intervene in the above-entitled proceedings along with a proposed brief. Answers to the motion and petition to intervene were filed by Fuels Research Council, Inc., National Coal Association and United Mine Workers of America (coal interests) and by the staff of this Commission.

The Department states that its interests and the public would be served by its intervention to insure that its views are fully and accurately before the Commission. The Department does not request that the record be reopened but states that it seeks participation limited to the right to file briefs with the Presiding Examiner, to take exceptions to the Examiner's Decision, to file replies to exceptions, and to participate in oral argument, if any, before the Commission. Coal interests and the staff both oppose the motion for leave to intervene because it was filed out of time and allege that no justification has been shown for the Department's failure to intervene in a timely manner. The staff suggests, however, that the Department be permitted to appear as *amicus curiae* in this proceeding drawing a parallel to the Commission's action in permitting *amicus curiae* participation by the Department in *Transwestern Pipeline Co., et al.*, Docket No. CP63-204, *et al.*, 35 FPC 334 (order issued March 4, 1966).

Section 1.8(d) of the Commission's Rules provides that petitions to intervene must be filed no later than the date fixed for the filings of petitions to intervene in an order or notice unless in extraordinary circumstances for good cause shown. On May 14, 1965 the Commission issued a notice of supplements and amendments to applications in these proceedings providing that petitions to intervene be filed on or before June 3, 1965. Hearings were held and the record was closed February 4, 1966. Initial briefs before the Presiding Examiner were filed March 18, 1966 and reply briefs were filed April 11, 1966. The Department has not alleged that it was not on notice of these proceedings in order to have filed a timely petition to intervene. Nonetheless, for the reasons stated below, it appears appropriate to permit the Department's intervention provided that it present evidence to support its position.

The issue to which the Department addresses itself is the air pollution issue related to that portion of the application of Transcontinental Gas Pipe Line Corporation (Transco) in Docket No. CP65-181 in which Transco proposes to deliver to Consolidated Edison Company of New York, Inc. (Con Ed) 55,000 Mcf per day of gas under Transco's CD-3 Rate Schedule in substitution for 55,000 Mcf per day of storage service presently being rendered under its GSS rate schedule. That service is presently being rendered under temporary authority issued March 1, 1966, 35 FPC 306. In the order issuing such temporary authority the Commission observed that it was Transco's position that the proposed service to Con Ed was unrelated to the other issues in the consolidated proceedings.[1] Because of the fact that the proposed service to Con Ed is unrelated to the other issues, severance of that question would not delay a decision on the competitive question and other questions involved in the consolidated proceeding. Since the service to Con Ed will be rendered until March 31, 1967 under temporary authority there is no pressing need for an early decision on that aspect of the proceeding. Accordingly, any delay in an ultimate decision on that aspect caused by the further hearing prescribed herein will not affect deliveries to Con Ed and, because of the severance ordered herein, will not delay consideration of the other aspects of the proceeding.

Presentation of evidence by the Department may assist the Examiner and the Commission in evaluating the proposal of Transco to render additional service to Con Ed. The Department in its brief states:

> While we believe that, on the record of this proceeding, there would be a beneficial effect for air pollution control as a consequence of the proposed gas use, we are not persuaded *** that such use would constitute the most effective use for air pollution control purposes. (footnote omitted)
>
> * * * * * * *
>
> The proposed additional 55,000 Mcf/d could make a significant reduction in SO_2 pollution in the amount of 25,000 tons/year. We have reservations, however, that the proposed use of the gas, as outlined by Con Ed, in units 1 and 2, is the most effective use of this fuel by Con Ed for alleviation of air pollution, already at an undesirable level in New York City. Consequently, although we in general favor any reasonable steps that may be taken to alleviate the air pollution problem in New York City, we would suggest that, insofar as the granting of this application turns on the air pollution problem, the proposed additional supply of gas under this application be approved only if suitable assurances are obtained that it will be used by Con Ed in the most productive way to alleviate the air pollution problem in New York City

We desire that the Department present evidence to support its position that the use of natural gas would not only be beneficial for air pollution control but also that approval of the proposed service to Con Ed should be granted only if suitable assurances are obtained that the additional gas will be used by Con Ed in the way best designed to alleviate New York City's air pollution problem.

In order that a complete record will be before the Presiding Examiner and the Commission with regard to the Department's position that natural gas should be used in a manner other than that proposed by Con Ed, it is necessary that the Department's motion for leave to intervene out of time be granted, that its petition to intervene be granted, that the proceedings be reopened and further hearing be held so as to enable the Department to present evidence to support its position in this proceeding.

The Commission finds:

(1) Although the petition to intervene filed March 25, 1966 by the U.S. Department of Health, Education, and Welfare was not filed within the time

---

[1] In addition to the service proposed to Con Ed, Transco proposes additional natural gas service in Docket No. CP65–181 to other existing customers and to two new customers, Commonwealth Natural Gas Company and Washington Gas Light Company, both of whom presently purchase natural gas solely from Atlantic Seaboard Corporation. Atlantic Seaboard proposes competitive service to those customers in Docket No. CP65–122, consolidated herein.

required by Section 1.8(d) of the Commission's Rules of Practice and Procedure (18 CFR 1.8(d)), good cause exists to permit the late filing.

(2) It is desirable and in the public interest to allow the above-named petitioner to intervene in these proceedings in order that petitioner may establish the facts and the law from which the nature and validity of alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) The above-named petitioner is hereby permitted to become an intervener in these proceedings subject to the rules and regulations of the Commission: *Provided, however,* that the participation of such intervener shall be limited to matters affecting asserted rights and interests as specifically set forth in its petition to intervene; and *provided, further,* that the admission of such intervener shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in this proceeding, and also *provided* that petitioners shall file evidence as ordered herein.

(B) That portion of the application of Transcontinental Gas Pipe Line Corporation in Docket No. CP65–181 related to the proposed substitution of 55,000 Mcf per day of CD–3 service to Consolidated Edison Company of New York, Inc. for a like amount of GSS service presently authorized is hereby denominated Phase II of such application.

(C) To the extent possible, the Presiding Examiner is directed to issue an initial decision on the remaining issues in this consolidated proceeding which are unrelated to those matters to be considered in the Phase II proceeding prior to an initial decision in the Phase II proceeding.

(D) The evidence heretofore submitted relating to the proposed substitution of service to Consolidated Edison Company of New York, Inc. shall be considered part of the record in the Phase II proceeding.

(E) On or before May 16, 1966, the United States Department of Health, Education, and Welfare shall file and serve upon all parties direct evidence to support its position and contentions in this proceeding. Any other parties desiring to present direct evidence in this Phase II proceeding shall also file and serve evidence on or before that date. Presentation of answering evidence shall be at such time as may be specified by the Presiding Examiner.

(F) Pursuant to the authority conferred on the Federal Power Commission by the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held May 23, 1966, at 10:00 a.m. (EDST) in a Hearing Room of the Federal Power Commission, 441 G Street NW., Washington, D.C., respecting the matters set forth in the instant order or any further order issued in the instant proceedings prior to said note of hearing.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COMMUNITY PUBLIC SERVICE COMPANY, DOCKET NO. E–7274

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued April 29, 1966)

Community Public Service Company (Applicant), a public utility incorporated under the laws of the State of Texas and doing business in the States of New Mexico and Texas, filed an application on February 28, 1966, seeking authority pursuant to Section 204 of the Federal Power Act to issue $5,000,000 principal amount of First Mortgage Bonds.

Applicant proposes to offer the bonds for sale in accordance with the competitive bidding requirements of the Commission's Rules and Regulations. The interest rate, the price received and the costs of money will be determined by the most favorable bid received and accepted. The Bonds are to be dated as of May 1, 1966 and are to mature on May 1, 1996.

The new Bonds are to be issued as a new series of First Mortgage Bonds under and secured by an Indenture of Mortgage and Deed of Trust dated as of November 1, 1944, as amended and supplemented and to be further amended by a Tenth Supplemental Indenture, to be dated as of May 1, 1966, creating the new Bonds, between the Applicant and Continental Illinois National Bank and Trust Company of Chicago, Trustee.

According to the application the Bonds are to be issued to provide funds for the payment of short-term bank notes which at the time of the filing of the application totaled approximately $2,000,000, and for payment of $500,000 of additional short-term notes which Applicant expects to issue prior to the sale of the new Bonds. Proceeds from the sale of the Bonds will also be used to provide for a partial payment on the Applicant's 1966 construction program which will require an estimated expenditure of $8,875,000. The principal item in the Applicant's program is the installation of a 22 megawatt steam electric generating unit in the Applicant's power plant at Lordsville, New Mexico, which will require a total estimated expenditure of $4.2 million.

The Applicant intends on or about May 4, 1966, to invite sealed, written bids for the purchase of the $5,000,000 new Bonds. The Public Invitation for Bids will contain the following principal provisions:

> Each bid, which may be made by a single bidder or by a group of bidders, must be for the purchase of all the Bonds. Bids must be presented to the Applicant at 1 Chase Manhattan Plaza, Room 2414, New York, N.Y., before 11:00 A.M., New York Time, on May 11, 1966, and must be accompanied by deposits of $150,000.
>
> Each bid shall specify (a) the coupon rate of the Bonds, which rate shall be a multiple of ⅛ of 1%; and (b) the price (expressed as a percentage of the principal amount, exclusive of accrued interest) to be paid to the Applicant for the Bonds, which price shall not be less than 100% or more than 102¾ of the principal amount of the Bonds, and that accrued interest on the Bonds from May 1, 1966 to the date of payment therefor and delivery thereof will be paid to the Applicant by the purchaser or purchasers of the Bonds.
>
> Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Public Invitation for Bids, it will accept the bid which provides for the lowest cost of money.

Written notice of the application has been given to the Texas Railroad Commission, New Mexico Public Service Commission and to the Governors of those States. Notice has also been published in the Federal Register on March 12, 1966 (31 F.R. 4363), stating that any person desiring to be heard or to make any protest with reference to the application shall file petitions or protests on or before March 25, 1966 with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a Texas corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the

Commission's order issued April 24, 1963, *Community Public Service Company* (29 FPC 829).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given on this application is reasonable.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

VILLAGE OF ENFIELD, ILLINOIS AND TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-272

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 29, 1966)

On February 21, 1966, the Village of Enfield, Illinois (Applicant) filed in Docket No. CP66-272 an application pursuant to Section 7(a) of the Natural

Gas Act for an order directing Texas Eastern Transmission Corporation (Respondent) to establish physical connection of its facilities with the facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the village and vicinity, all as more fully described in the application.

Specifically, Applicant proposes an interconnection between its proposed 3-inch pipeline and Respondent's transmission pipeline at a point approximately seven miles south of Applicant's proposed town border station. Applicant will also construct and operate a distribution system to serve all natural gas customers in the village and vicinity and along the proposed 3-inch pipeline lateral

The total estimated volumes of natural gas required to meet Applicant's annual and peak day sales for the initial three year period of proposed operations are as follows:

Mcf	First year	Second year	Third year
Annual	43,518	52,379	61,240
Peak day	504	631	758

The total estimated cost of the pipeline lateral and distribution facilities to be constructed by Applicant is $280,000, which is to be financed by the sale of gas revenue certificates.

The appropriate ordinance authorizing the village to acquire, construct, own and operate a municipal gas utility was passed by the village electorate on October 30, 1965.

Applicant proposes to purchase its natural gas requirements under Respondent's FPC SGS–B Rate Schedule.

Respondent filed an answer to the application on March 28, 1966, indicating no objection to rendition of the proposed service.

Due notice of the filing of the application was published in the Federal Register on March 9, 1966 (31 F.R. 4177). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued on March 30, 1949, in Docket No. G–1089 (8 FPC 228).

(2) Applicant is a municipal corporation in the State of Illinois and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 758 Mcf of natural gas per day to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 758 Mcf of natural gas per day to Applicant under Respondent's FPC SGS-B Rate Schedule, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY AND TRUNKLINE GAS COMPANY, DOCKET NO. CP66-270

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued April 29, 1966)

On February 18, 1966, Illinois Power Company (Applicant), filed in Docket No. CP66-270 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Trunkline Gas Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Village of Royal and environs, Champaign County, Illinois, all as more fully set forth in the application.

Applicant proposes to construct a distribution system in the community of Royal and a 2-inch lateral pipeline, 2.9 miles in length, extending in a westerly direction from Respondent's transmission line to said distribution system. Applicant also proposes that Respondent construct a sales meter station to service the proposed interconnection of facilities.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

Mcf	First year	Second year	Third year
Annual	7,220	9,426	11,719
Peak day	75	100	127

The total estimated cost of Applicant's proposed transmission and distribution systems is $63,350, which cost will be financed with funds on hand.

On March 21, 1966, Respondent filed an answer to the application which indicated Respondent had no objection to rendering service and requesting that Applicant be required to be prepared to receive service within 9 months of the date of the order. The application states that Applicant expects to have its facilities constructed within 8 months of the date of issuance of the order.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on March 9, 1966 (31 F.R. 4174). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Trunkline Gas Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 29, 1949, in Docket No. G-882 (8 FPC 250).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 127 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Respondent serve Applicant as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the Village of Royal, Illinois, and environs, within nine months from the date of issuance of this order.

The Commission orders:

(A) Trunkline Gas Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell up to 127 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Trunkline in accordance with the Commission's Regulations, for distribution and resale as hereinbefore described and as more fully described in the application in the proceeding. Such service shall be rendered pursuant to Trunkline's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within nine months from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

KANSAS GAS AND ELECTRIC COMPANY, DOCKET NO. E-7279

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued April 29, 1966)

Kansas Gas and Electric Company (Applicant), filed an application on March 22, 1966, seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue $16,000,000 principal amount of First Mortgage Bonds.

Applicant is incorporated under the laws of the State of West Virginia and is engaged in the generation, purchase, transmission, distribution and sale at wholesale for resale of electric energy in an area of approximately 8,100 square miles in southeastern Kansas.

The Applicant proposes to offer the Bonds at competitive bidding in accordance with the Commission's Rules and Regulations. The interest rate, the price received, and the cost of money will be determined by the most favorable bid received and accepted. The Bonds which are to be dated as of May 1, 1966 and are to mature on May 1, 1966, are to be issued under a Mortgage and Deed of Trust dated as of April 1, 1940 with Guaranty Trust Company of New York (now Morgan Guaranty Trust Company of New York) and Wesley L. Baker as Trustee, as supplemented by eight supplemental indentures and to be further supplemented by the Ninth Supplemental Indenture dated as of May 1 1966.

The Applicant intends on or about May 2, 1966, to invite sealed, written bids for purchase of the $16,000,000 new Bonds. The Statement of Terms and Conditions Relating to Bids contains the following principal provisions:

> Each bid must be for the purchase of all the Bonds and may be made by a single bidder or by a group of bidders. No bidder may submit or participate in more than one bid. Each bid must be delivered to the Applicant at Room 2033, Two Rector Street, New York, N.Y., before 11:00 A.M., New York Time, on May 10, 1966, and be accompanied by a deposit of $480,000.
>
> Each bid shall specify the interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛th of 1%; and shall also specify the price to be paid to the Applicant, which price shall not be less than the principal amount of the Bonds and not more than 102¾% of such principal amount. Each bid shall provide that the purchaser or purchasers of the Bonds shall pay to the Applicant accrued interest on the Bonds from May 1, 1966, to the date of payment therefor and delivery thereof.
>
> Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Statement of Terms and Conditions, it will accept the bid which provides for the lowest cost of money.

According to the application the proceeds from the issuance and sale of the Bonds will be used to pay off approximately $1.5 million in bank loans and to finance in part Applicant's construction program for 1966 and 1967 which is presently estimated at $40,000,000. The principal item in this program is the addition of a 380 mw unit at Applicant's Gordon Evans plant which will require an expenditure of $25.5 million. Other items in this program include $11.8 million for transmission facilities and $8.3 million for distribution facilities.

Written notice of the application has been given to the Kansas State Corporation Commission and the Governor of that State. Notice has also been published in the Federal Register on April 1, 1966 (31 F.R. 5271), stating that any person desiring to be heard or to make any protest with reference to the application shall file petitions or protests on or before April 21, 1966 with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued December 31, 1959, *In the Matter of Kansas Gas and Electric Company*, Docket No. E-6914 (22 FPC 1191).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of

which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66–125

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 29, 1966)

On October 22, 1965, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66–125 an application[1] pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas in interstate commerce and the construction of certain facilities in connection with a proposed interruptible sale to Marathon Oil Company (Marathon), all as more fully set forth in the application.

Applicant proposes to construct and operate a measuring and regulating station to be located in Miami County, Kansas, to serve Marathon pursuant to a contract between Applicant and Marathon dated July 1, 1965. Under the contract, Applicant is not obligated to deliver in excess of 800 Mcf of natural gas per day.

---

[1] Supplement to the application filed February 3, 1966.

Marathon proposes to use the gas in the secondary recovery of oil. The process involves the injection of an air-oil mixture into old oil wells. The air-oil mixture is ignited, heating the formation and driving the oil to the pumping wells. Marathon will use the natural gas for inspection of the inflammable mixture into the formation.

The estimated cost of the proposed facilities is $6,100, which will be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The proposed construction and operation of facilities and transportation of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and transportation of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e), and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding authorizing the construction and operation of facilities and the transportation of natural gas, as hereinbefore described and as more fully described in the application, as supplemented, and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e), and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-228

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 29, 1966)

On January 17, 1966, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP66-228 an application, supplemented on March 28, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a supply pipeline extending from Applicant's existing Western Oklahoma Supply Line (the Elk City Line) approximately 73.3 miles through Dewey and Roger Mills Counties, Oklahoma, to the eastern portion of Hemphill County, Texas, as more fully set forth in the application.

Applicant has entered into certain gas purchase contracts which are described as follows:

Producer	Date of contract	Location	Producer application
Phillips Petroleum Co	Nov. 11, 1965	Hemphill County, Tex	CI66-559.
Sun Oil Co	Jan. 8, 1966	Ellis County, Okla	CI66-720.
Shell Oil Co	Jan. 20, 1966	Hemphill County, Tex., and Ellis County, Okla.	CI66-988.

Applicant proposes to construct and operate a total of approximately 73.3 miles of pipeline which will consist of 16-inch to 24-inch pipeline extending in a westerly direction through Dewey and Roger Mills Counties, Oklahoma, from the Elk City Line and a Y of 8-inch and 10-inch pipeline in Hemphill County, Texas.

Applicant has entered into certain gas purchase contracts which are described under the contracts described above. Applicant also anticipates that a rapid build-up of additional supplies from independent producers along the route of the proposed supply pipeline will occur. Applicant states that this expectation is based upon extensive exploration and development activity now being carried on which Applicant anticipates will be stimulated by the proposed pipeline.

The estimated cost of the pipeline to be constructed by Applicant is $4,810,000, which will be financed from general sources available to Applicant. No new permanent financing is anticipated.

Due notice of the filing of the application was published in the Federal Register on January 29, 1966 (31 F.R. 1219). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation with its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued September 23, 1942, Docket No. G-200 and G-207 (3 FPC 273).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Panhandle Eastern Pipe Line Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation as authorized in paragraph (A) above, as provided in paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ROCKY MOUNTAIN POWER COMPANY, PROJECT NO. 2289

ORDER VACATING PRESIDING EXAMINER'S RULING AND GRANTING MOTION TO STRIKE

(Issued April 29, 1966)

On April 14, 1966, Commission Staff Counsel filed a motion to reverse the ruling of the Presiding Examiner denying staff motion filed March 18, 1966, to strike certain material submitted as exhibits in this proceeding. The Commission's order of August 19, 1965, 34 FPC 539, fixing hearing and prescribing procedure provides in subparagraph 6 of paragraph B that "no exhibits, except those of which official notice may properly be taken shall contain narrative material other than brief explanatory notes". The filings submitted by Rocky Mountain Power Company (Applicant) on March 1, 1966, contain narrative material submitted as part of its exhibits in violation of the Commission's procedural order. The procedural order also provides that all of the testimony except exhibits shall be in question and answer form.

The procedure prescribed by the Commission's order of August 19, 1965, is intended to eliminate any cause which might otherwise exist for a protracted hearing by requiring all parties to submit a full and complete direct case in writing as clearly as possible and in advance of the hearing in order to eliminate the need for recesses and extensive cross-examination. The situation presented by Staff's motion, and by the Interveners which have joined in that motion, shows the need for the procedure prescribed by the Commission.

The Applicant indicated at the prehearing conference (Tr. 60) and in its response filed April 25, 1966, that it is prepared and is willing to resubmit its direct case pursuant to the Commission's procedural order.

The Commission finds:

It is appropriate and in the public interest in carrying out the provisions of the Federal Power Act that the aforesaid motion to strike be granted, and that the Applicant be granted a reasonable period to resubmit its direct case.

The Commission orders:

(A) The aforesaid motions to reverse ruling of presiding examiner and to strike certain material submitted as exhibits by the Applicant as part of the direct case, are granted.

(B) The Applicant is given until May 23, 1966, to resubmit his direct case in accordance with the aforesaid procedure.

(C) The Interveners and Commission Staff are given until June 13, 1966, to file their direct cases in accordance with the aforesaid procedure.

(D) Motions to strike shall be filed with the Presiding Examiner by June 20, 1966, with replies to such motions to be filed by June 27, 1966.

(E) The hearing be held beginning on July 6, 1966.

Chairman White *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP66-43

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 29, 1966)

On August 9, 1965, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP66-43 an application, as supplemented on November 15, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, including facilities for liquefaction, storage and vaporization of natural gas, and storage service to certain of its customers under Applicant's proposed FPC Storage Service Rate Schedule, all as more fully set forth in the application, as supplemented, in this proceeding.

Specifically, Applicant proposes to construct and operate the following facilities during a four year period ending in 1969:

1. A total of 19.33 miles of 30 and 36-inch mainline pipeline loops between Connellsville, Pennsylvania, and Lambertville, New Jersey.
2. An additional 8-inch meter run in the existing metering and regulating station for deliveries of natural gas to Algonquin Gas Transmission Company in Morris County, New Jersey.

3. Change impellers in the centrifugal compressors at the Armagh and Entriken compressor stations in Pennsylvania.

4. Facilities for additional development of the Accident Storage Field in Garrett County, Maryland, including 30 new wells, 22 miles of 4- to 8-inch gathering lines and 5,500 compression horsepower.

5. A liquefied natural gas (LNG) facility having a liquefication capability of 7,650 Mcf per day, a storage capacity of 2,040,000 liquefied Mcf and a vaporization capability of approximately 199,000 Mcf per day. Said facility will be located near the terminus of Applicant's existing pipeline system on Staten Island, New York.

Applicant proposes to utilize the subject facilities to provide service to the following customers under its proposed Storage Service Rate Schedule and to store for and deliver to them the following quantities of natural gas in accordance with the provisions of that rate schedule:

Customer	Volumes in Mcf at 14.73 psia	
	Maximum daily quantity	Storage volume
Algonquin Gas Transmission Co	38, 131	2, 669, 151
The Brooklyn Union Gas Co	51, 001	3, 570, 095
New Jersey Natural Gas Co	6, 120	428, 412
Public Service Electric and Gas Co	20, 401	1, 428, 038
Total	115, 653	8, 095, 696

The application indicates that gas will be injected into both the Accident Field and the LNG facility during off peak periods and withdrawn (and vaporized in the case of LNG) and delivered to customers during peak periods. Beginning in 1969, the estimated 153,000 Mcf proposed peak day storage service requirements will be met by 102,000 Mcf from LNG and 51,000 Mcf from the Accident Field. The proposed storage service will ultimately require annual deliveries of an estimated 1,122,000 Mcf from the LNG facility and an estimated 9,588,000 Mcf from the Accident Field.

Service under the proposed Storage Service Rate Schedule will be at the following three part rate:

MDQ charge: $1.35 per month per Mcf of MDQ.
Space charge: 1 cent per month per Mcf of Storage Volume.
Delivery charge: 2.5 cents per Mcf of Storage Service gas delivered.

The total estimated cost of the proposed facilities is $31,286,000, which cost will be financed initially by short-term revolving credit to be replaced later by long term debt or equity financing.

A number of petitions to intervene and a notice of intervention, as amended, have been filed herein. No request for formal hearing has been made in any of these filings, as amended, and no objection has been made to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on the various petitions and the notice, as amended, appears necessary.

After due notice, no other petition to intervene, other notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, supplement and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 10, 1947, in Docket No. G-880 (6 FPC 148).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed storage service by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Texas Eastern Transmission Corporation, to construct and operate the proposed facilities and to render the proposed storage service as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the proposed storage service authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, in accordance with the schedule therefor as set forth in the application.

(D) Applicant shall submit in a form acceptable to the Commission annual reports showing the pertinent operating data and the experienced associated costs covering the facilities and service authorized for each of the first three full years of service.

(E) Applicant prior to commencement of construction of the LNG plant authorized hereby shall submit to the Commission for its approval, the detailed plans and specifications for the construction of said plant. Prior to the commencement operation of the plant, the Applicant shall submit to the Commission a statement attesting to the fact that the plant has been constructed in accordance with the detailed plans or specifications therefore approved.

(F) That in any rate proceeding commencing after the facilities proposed herein to be assigned to Storage Service deliveries have been certificated and transferred to gas plant in service, should the "test period" or any part thereof fall prior to the commencement of full utilization of such facilities, Applicant shall reflect revenues and costs based upon such full utilization.

(G) That Applicant shall not, in any rate proceeding, assess against any other class of service any deficiency in revenues under its Storage Service Rate Schedule below the cost of service associated with (i) the facilities proposed herein to be assigned to Storage Service deliveries, plus (ii) any additional facilities which may be required to provide the Storage Service deliveries.

(H) That appropriate costs of all Accident Field storage facilities properly allocable to Storage Service deliveries shall be subject to investigation and determination in a rate case or rate determination proceeding.

(I) The Accident Field maximum reservoir inventory shall not exceed 61,978,000 Mcf (@ 14.73 psia) of natural gas without further Commission authorization. Applicant shall continue to file such reports on the operation of this field as may now be required.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66–136

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 29, 1966)

On October 29, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66–136 an application as supplemented December 7, 1965 and February 3, 9, and 23, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, acquisition and operation of facilities for the development and operation of an underground natural gas storage reservoir located in Bienville and Bossier Parishes, Louisiana, and related facilities, all as more fully set forth in the appendix hereto and in the application.

Due to the declining local supply of gas available to Applicant in its Northern Area, consisting of its Tyler District and North Louisiana Area, it has become necessary for Applicant to make additional gas available in the Northern Area in the immediate future in order to meet its customer requirements. Applicant's study of this problem has caused it to conclude that the development and operation of the proposed storage reservoir would be the most efficient and economical way to make additional gas available to Applicant's Northern Area.

The Bistineau Gas Storage Field, which is the proposed storage area, is centrally located in Applicant's Northern Area and is near Applicant's Carthage-Sterlington 20-inch and 24-inch lines, which form a part of Applicant's high pressure interstate transmission system.

Applicant proposes to acquire the remaining gas reserves in the old, near-depleted Lake Bistineau Field for use as native cushion gas. Reserves were estimated on January 1, 1965, to be 4,945 MMcf recoverable out of 20,000 MMcf in place, both at 14.9 psia. In addition to acquiring the remaining gas reserves Applicant will also acquire certain facilities from the producers in the field. In its application United also proposes certain accounting for claimed costs of property and "Storage Rights" to be acquired. We are reserving determination of this proposed accounting to a later date. An order permitting and approving abandonment of service and facilities by the producers in the Lake Bistineau Field, Docket No. G-13633, *et al.*, is being issued concurrently herewith.

Beginning in 1966, Applicant proposes to inject gas annually during the period April through October. Applicant states that this would permit daily withdrawals from the storage field during the period November through March, through the 1969-1970 heating season, as follows:

Heating season:		*Withdrawals*
1967-68	Mcf	300, 000
1968-69	do	400, 000
1969-70	do	500, 000

The facilities to be constructed in connection with the development and operation of the project will be done in three phases during the years 1966 through 1969 and are described in the appendix hereto.

The total cost of Applicant's proposed project is approximately $30,782,000, which will be financed by retained earnings and by depreciation and amortization accruals and, to the extent necessary, from the sale of additional securities of Applicant to United Gas Corporation, its parent.

After due notice published in the Federal Register on November 17, 1965 (30 F.R. 14390), petitions for leave to intervene were filed by the Philadelphia Gas Works Division of The United Gas Improvement Company and by Natural Gas Pipeline Company of America on December 1, 1965. Neither petitioner opposes Applicant's proposals. A petition for leave to intervene filed by Memphis Light, Gas & Water Division, an agency of the City of Memphis, Tennessee on November 30, 1965, was withdrawn by letter dated March 11, 1966, on the condition that issuance of a certificate does not imply Commission approval of any method or procedure in the allocation of storage costs (agreed to by Applicant's letter of March 14, 1966). No notices of intervention, other petitions to intervene or protests to the granting of the application have been filed.

During the pendency of Memphis' petition for leave to intervene Applicant on December 7, 1965, filed an application for a temporary certificate * * * in order to permit it timely to construct and place in operation the facilities outlined in Phase I of the original application for construction and operation in the years 1966 and 1967 * * * to permit the timely injection of gas necessary for the projected withdrawal of gas in the 1967-1968 heating season". In view of our action herein on the certificate, itself, consideration of issuance of a temporary certificate is unnecessary.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities hereinbefore described and more fully described in the application in this proceeding and in the appendix hereto will be used in the transportation of natural gas in interstate commerce subject to the jurisdiction

of the Commission, and the construction, acquisition and operation thereof and the transportation of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction, acquisition and operation of facilities and transportation of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), (d), and (e) of Section 157.20 of such Regulations.

(6) The issuance of the certificate herein should not constitute or imply a finding that the Bistineau Gas Storage Field and related facilities should be treated in any specific manner in any of Applicant's further rate proceedings.

(7) The maximum inventory of gas to be stored should not exceed 102,343 MMcf at 14.9 psia.

(8) Applicant should be required to file reports on the development of the Bistineau Gas Storage Field as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant authorizing the construction, acquisition and operation of facilities, including the acquisition of leases, all as hereinbefore described and as more fully described in the application and in the appendix hereto, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), (d), and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations in accordance with the time schedule set out in the application, *i.e.* Phase I by October 31, 1967, Phase II by October 31, 1968 and Phase III by October 31, 1969.

(D) The certificate issued by paragraph (A) above is conditioned upon Applicant's compliance with the following:

(1) The maximum inventory of natural gas stored shall not exceed 102,343 MMcf at 14.9 psia.

(2) Applicant shall submit semi-annual reports (to coincide with the termination of the injection and withdrawal cycles) containing the following information:

(a) The volumes of natural gas injected and withdrawn in each month of the cycle,

(b) The volume of natural gas in the storage reservoir at the end of the cycle,

(c) The maximum daily injection and withdrawal rates experienced during the cycle,

(d) The shut-in wellhead pressure of each well in the storage field and the average of such pressures, and

(e) A map of the storage field showing the shut-in wellhead pressures at all storage wells and at all other wells in the area immediately adjacent to the storage field.

(f) Reports shall continue to be filed semi-annually until the maximum reservoir content has reached or closely approximates the maximum reservoir content permitted in the Commission's order, and thereafter until two additional injection-withdrawal cycles have been completed. Upon completion of those two additional cycles the filing of reports shall be discontinued unless otherwise ordered by the Commission.

(E) The foregoing authorization does not constitute or imply a finding that storage facilities herein authorized or any other facilities should be treated in any specific manner for cost allocation purposes in any future rate proceedings of United Gas Pipe Line Company.

(F) The determination on United's proposed accounting for claimed costs of property and "Storage Rights" to be acquired is hereby reserved subject to further order.

APPENDIX

PROPOSED FACILITIES

Phase I, for construction in 1966:

a. Recondition 22 plugged and existing old wells for use as injection-withdrawal wells and observation wells;

b. 20 wells to be drilled for injection-withdrawal wells;

c. Approximately 10.3 miles of gathering lines;

d. 12,000 horsepower compressor station at the storage field;

e. Dehydration and miscellaneous appurtenant facilities at the storage field;

f. Approximately 10.35 miles of 30-inch transmission lines from the storage field to the Carthage to Sterlington line;

g. 4,000 horsepower compressor station and appurtenant facilities to be located on United's existing offshore to Napoleonville line;

h. Approximately 0.45 mile of 30-inch pipeline and connections to extend from the above compressor station to United's Bayou Sale Junction; and

i. Approximately 1.95 miles of 30-inch pipeline and connections to be installed near United's West Monroe Junction as its Calhoun tie-over.

Phase II, for construction in 1968:

a. 5 wells to be drilled for injection-withdrawal wells;

b. Approximately 0.5 mile of gathering lines; and

c. Measuring and regulating stations and cathodic protection facilities.

Phase III, for construction in 1969:

a. 5 wells to be drilled for injection-withdrawal wells;

b. Approximately 1.7 miles of gathering lines;

c. 2,000 horsepower compressor to compressor station; and

d. Measuring and regulating stations and cathodic protection facilities.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-249

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued April 29, 1966)

On February 1, 1966, United Gas Pipe Line Company (Applicant), filed in Docket No. CP66-249 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon by sale certain natural gas facilities now being used to deliver natural gas to Louisiana Gas Service Company, all as more fully set forth in the application.

Specifically, Applicant seeks permission and approval to abandon by sale the following facilities, all of which are located in the State of Louisiana: (1) 0.4 mile of 4-inch pipeline downstream from its Amite town border station in Tangipahoa Parish, (2) 0.2 mile of 4-inch pipeline downstream from its Covington town border station in St. Tammany Parish, (3) 0.04 mile of 4-inch pipeline downstream from its Ponchatoula town border station in Tangipahoa Parish, (4) 0.1 mile of 4-inch pipeline downstream from its Independence town border station in Tangipahoa Parish, (5) 0.1 mile of 4-inch pipeline and 0.1 mile of 6-inch pipeline downstream from its Hammond-Natalbany town border station No. 1 in Tangipahoa Parish, (6) 0.1 mile of 4-inch pipeline downstream from its Slidell town border station in St. Tammany Parish, (7) 0.1 mile of 4-inch pipeline downstream from its Mandeville town border station in St. Tammany Parish, and 2.7 miles of 2-inch pipeline beginning at and running upstream from its Mandeville town border station in St. Tammany Parish, (8) 0.5 mile of 4-inch pipeline downstream from the Delhi town border station in Richland Parish, (9) 0.6 mile of the 4-inch Rayville-Winnsboro pipeline from Milepost 1.67 to Milepost 2.34 around the town of Archibald, in Richland Parish, (10) 0.7 mile of the 4-inch Rayville-Winnsboro pipeline from Milepost 4.44 to Milepost 5.29 around the town of Mangham, in Richland Parish, (11) 0.4 mile of 3-inch pipeline lying between United Gas Pipe Line Company's Collinston measuring station and Louisiana Gas Service Company's regulator station, all located in Morehouse Parish, (12) 0.4 mile of 4-inch pipeline downstream from its Epps town border station in West Carroll Parish and (13) 1.0 mile of 4½-inch pipeline running west from Milepost 5.05 on the Rayville-Winnsboro pipeline in Richland Parish.

Under an agreement dated November 19, 1965, Louisiana Gas Service Company has agreed to acquire the above described facilities from Applicant and will after acquisition integrate the same into its distribution systems. There will be no abandonment of sales or service.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found

by the Commission in its order issued November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities proposed to be abandoned by sale to Louisiana Gas Service Company as hereinbefore described and as more fully described in the application herein, are used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described by sale to Louisiana Gas Service Company, as more fully described in the application in this proceeding, are granted to Applicant, United Gas Pipe Line Company.

(B) Upon completion of the abandonment and sale Applicant shall within 10 days advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above, filing with the Commission in writing and under oath, an original and four conformed copies of the notice of abandonment and sale showing the date thereof.

(C) The abandonment and sale of the facilities shall be completed within one year of the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-154

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 2, 1966)

On March 7, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP62-154 a petition to amend the certificate of public convenience and necessity issued on October 17, 1962, 28 FPC 614, and later amended on August 31, 1964, 32 FPC 674, and December 28, 1965, 34 FPC 1563, by authorizing a change in the volumetric limitation on its natural gas service to Southern California Gas Company and Southern Counties Gas Company of California (known jointly as "Southern") under its FPC Rate Schedule G-X-2 to an annual maximum of 63,725,000 Mcf[1] of gas in lieu of the presently authorized daily maximum of 174,680 Mcf, as more fully set forth in the petition to amend.

In the certificate issued October 17, 1962, Petitioner was authorized to sell and deliver up to 26,000,000 Mcf of natural gas during the year 1962 on an interruptible, "best efforts" basis, under Petitioner's Rate Schedule G-X-2. Petitioner was authorized, on a temporary basis, to continue the deliveries during 1963 and 1964. Service under Rate Schedule G-X-2 for a period commencing August 31, 1964, continuing through December 1965, was authorized by the certificate amendment issued in this docket on August 31, 1964. The period January 1, 1966, through December 31, 1966, is currently covered by the amendment issued herein on December 28, 1965, which amendment authorized the sale and delivery of a maximum of 174,680 Mcf per day to Southern.

Petitioner now requests a change in the volumetric limitation of 174,680 Mcf per day to an annual maximum of 63,725,000 Mcf with no other changes in terms or conditions of the service as presently authorized. Petitioner states that it has recently had available excess gas which could have been delivered to Southern, except for the present volumetric limitation. Southern has advised Petitioner that its system can accommodate additional deliveries in excess of the daily limitations and that such additional deliveries will help reduce its curtailment of industrial sales during the colder months of 1966 and will enable Southern to refill its storage reservoirs after winter withdrawals. Southern also states that none of its other suppliers will be affected by removal of the daily maximum limitations as proposed.

On March 25, 1966, Petitioner tendered for filing an executed service agreement dated March 7, 1966, providing for the sale and delivery by Petitioner of interruptible volumes of natural gas on a "best efforts" basis under Rate Schedule G-X-2 from the date of this authorization through December 31, 1966. This new agreement supersedes the currently effective service agreement dated September 1, 1965, and provides for an annual volumetric limitation of 63,725,000 Mcf in lieu of the 174,680 Mcf daily maximum provided for in the current agreement.

Due notice of the filing of the petition to amend was published in the Federal Register on March 22, 1966 (31 F.R. 4817). No protest, petition to intervene, or notice of intervention has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the certificate of public convenience and necessity issued October 17, 1962, in Docket No. CP62–154, and later amended, be further amended as hereinafter ordered.

---

[1] All volumes are stated at 14.73 psia.

The Commission orders:

(A) The certificate of public convenience and necessity issued in Docket No. CP62–154 on October 17, 1962, and amended on August 31, 1964, and December 28, 1965, is further amended by changing the volumetric limitation in the authorization for service to Southern California Gas Company and Southern Counties Gas Company of California under Petitioner's Rate Schedule G–X–2 from a maximum daily volume of 174,680 Mcf to an annual maximum of 63,725,000 Mcf of natural gas, as hereinbefore described and as more fully described in the petition to amend.

(B) In all other respects the certificate, as amended, shall remain in full force and effect.

(C) The superseding Service Agreement between Petitioner and Southern dated March 7, 1966, and submitted for filing on March 25, 1966, is accepted for filing and made effective the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LONE STAR GAS COMPANY, DOCKET NO. CP66–286

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued May 2, 1966)

On March 8, 1966, Lone Star Gas Company (Applicant) filed in Docket No. CP66–286 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and salvage 0.79 mile of 6⅝-inch O.D. and 0.01 mile of 7-inch O.D. pipeline, all as more fully set forth in the application.

The pipeline to be abandoned (known as Line GD–J) is looped by 8-inch Line 2nd GD–J. The area in which the looped portion of Line GD–J is located will be inundated by a projected water supply reservoir for the Town of Elmore City, Garvin County, Oklahoma. The looped portion of Line GD–J and part of Line 2nd GD–J will be submerged in the water used to fill the reservoir. The submerged pipeline must be anchored to prevent it from floating to the surface.

Applicant states that during peak periods Lines GD–J and 2nd GD–J transport natural gas southward from the Warren Petroleum Corporation, *et al.*, Antioch Gasoline Plant to Applicant's Line GD to augment the gas supply for the Town of Wynnewood, Oklahoma, and certain other of Applicant's customers. At other times gas flows in the opposite direction, moving from the Katie Gasoline Plant through Lines GD–J and 2nd GD–J into Line TB, furnishing a part of the requirements of Applicant's T system. In either case, Line 2nd GD–J has sufficient capacity to handle the available volumes of natural gas to be transported.

Applicant will anchor Line 2nd GD–J for immersion under the water of the projected reservoir and abandon and salvage for use elsewhere Line GD–J, which is neither suitable nor economically feasible for service under water.

The proposed abandonment will have no detrimental effect on Applicant's existing services.

Due notice of the filing of the application was published in the Federal Register on March 22, 1966 (31 F.R. 4818). No protest, petition to intervene or notice of intervention has been filed.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued April 11, 1944, in Docket No. G-442 (4 FPC 565).

(2) The facilities to be abandoned, as hereinbefore described, as more fully described in the application in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval therefor should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, as more fully described in the application in this proceeding are granted.

(B) Applicant shall advise the Commission of the date of said abandonment within ten days thereof.

(C) Applicant shall file a report with the Commission within 60 days after the completion of this project giving a full description of the methods used to anchor the pipeline which will be submerged including the costs subdivided between material and labor.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP66-275

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 2, 1966)

On February 23, 1966, Michigan Gas Storage Company (Applicant), filed in Docket No. CP66-275 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the establishment of two new delivery points for the delivery of gas to Consumers Power Company (Consumers) and the construction and operation of the necessary metering and regulating facilities at the proposed new delivery points, all as more fully set forth in the application.

The purpose of the proposed new delivery points is to deliver gas to its sole customer Consumers for service to the unincorporated community of Eureka (third year peak day of 76 Mcf) and adjoining areas in the Township of Greenbush, Clinton County, Michigan, and to the unincorporated community of Cohoctah (third year peak day of 87 Mcf) and adjoining areas in the Township of Cohoctah, Livingston County, Michigan, which communities do not presently have natural gas service. The delivery point proposed to serve Eureka will be located on Applicant's 22-inch pipeline and 26-inch pipeline near the center of Greenbush Township, Clinton County, Michigan. The delivery point proposed to serve Cohoctah will be located on Applicant's 24-inch pipeline near the southeast corner of Cohoctah Township, Livingston County, Michigan

Applicant states that gas deliveries to the proposed new delivery points will not result in any increase in Applicant's present annual or peak day deliveries of gas to Consumers and that deliveries at these points will be made possible by the adjustment of Applicant's pattern of deliveries at other delivery points on its system.

The total estimated cost of the facilities proposed to be constructed by Applicant is $44,000, which cost will be defrayed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on April 27, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Delaware corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The proposed construction and operation of facilities and sale of natural gas by Applicant to Consumers as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and sale of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Michigan Gas Storage Company in this proceeding, authorizing the construction and operation of facilities and the sale of natural gas to Consumers, as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–228

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 2, 1966)

On February 25, 1966, Northern Natural Gas Company (Applicant), filed in Docket No. CP64–228 an application to amend the order issued in said docket on March 9, 1965, and amended on June 30, 1965, 33 FPC 501, 1307, by requesting authority to install one 9,100 horsepower compressor unit at its Clifton Kansas Compressor Station (Clifton) in lieu of the two 4,000 horsepower units presently authorized and by requesting that the time prescribed by the Commission for the completion of construction be extended 12 months from March 9, 1966, to March 9, 1967, all as more fully set forth in the application to amend.

The order issued in the instant docket, as amended, authorized Applicant to construct and operate certain facilities, including two 4,000 horsepower compressor units at Clifton, to render initial natural gas service to the Consumers Cooperative Association for use in its fertilizer plant located near Fort Dodge, Iowa.

Applicant states that in viewing its 1966 mainline construction program, it has become apparent that certain economies of construction can be realized by utilizing larger units of horsepower. In order to take advantage of these economies it requests the authority to install one 9,100 horsepower compressor unit at Clifton in lieu of the two 4,000 horsepower units presently authorized. Applicant further states that the estimated cost of the two 4,000 horsepower units is $2,390,100 as compared with the estimated cost of $2,151,000 for the installation of one 9,100 horsepower unit, resulting in a savings of approximately $239,100.

The Commission's order issued in the instant docket provided that the facilities must be constructed and placed in service by March 9, 1966. Petitioner requests that the time be extended for twelve months to allow for construction of the proposed 9,100 horsepower unit.

Due notice of the subject application to further amend and opportunity for hearing has been given by publication in the Federal Register on March 12, 1966 (31 F.R. 4365). No protest, petition to intervene, or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued in Docket No. CP64–228 on March 9, 1965, as amended on June 30, 1965, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 9, 1965, as amended on June 30, 1965, in Docket No. CP64–228 is further amended so as to authorize the Applicant to install one 9,100 Hp compressor unit at its Clifton Kansas Compressor Station in lieu of the two 4,000 Hp units presently authorized, and to extend the time within which the construction of the compressor unit shall be completed and the facilities placed in operation from March 9, 1966 to March 9, 1967.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

APPALACHIAN POWER COMPANY, PROJECT NO. 2317

ORDER DENYING REHEARING OF DISMISSAL, IN PART, OF LICENSE APPLICATION, AND DENYING RECONSIDERATION OF GRANT OF INTERVENTION AND HEARING AS TO REMAINDER OF LICENSE APPLICATION

(Issued May 3, 1966)

On February 26, 1965, the Appalachian Power Company (Appalachian) filed an application for license seeking authorization to construct (1) a hydroelectric development (including pumped storage) consisting of upper and lower reservoirs in the New River in North Carolina and Virginia and appurtenant power-generating and other facilities; and (2) the installation of power facilities at the United States Bluestone Reservoir project dam. Bluestone Dam is in West Virginia, about 140 river miles downstream from the proposed lower pumped storage reservoir. Bluestone Reservoir impounds water in West Virginia and Virginia.

By order, issued March 8, 1966, 35 FPC 359, we dismissed that part of the application for license relating to the Bluestone Reservoir project on the ground that the Bluestone project, including power-generating facilities, has been authorized by the Congress for construction under the direction of the Secretary of the Army and the supervision of the Chief of Engineers. On April 6, 1966, Appalachian filed an application for rehearing of that part of our order of March 8, 1966 dismissing that portion of the license application relating to Bluestone. The Applicant also requested reconsideration of our ordering a hearing and permitting certain REA cooperatives to intervene.

In our order of March 8, 1966, we examined the legislative history of the Bluestone Reservoir project, which reveals that the project, including the installation of power-generating facilities, was authorized by the President under emergency relief legislation, and that the Congress not only ratified this action but also authorized the project for flood control and power generation in the Flood Control Acts of 1936 (49 Stat. 1570, 1572, 1586) and 1938 (52 Stat. 1215–17). The "production of power is combined with flood control in the project" as authorized by the President and Congress. *United States* v. *West Virginia Power Co.*, 122 F. 2d 733, 738 (CA4–1941) (Parker, J.), cert. denied, 314 U.S. 683.

In its application for rehearing the Applicant repeats the argument that the discretion to change or modify project plans, conferred upon the Chief of Engineers, includes by implication the power to eliminate one of the major purposes of the project as authorized by the President and the Congress. As detailed in our order of March 8, 1966, in December, 1945, the Chief of Engineers, through General Crawford, informed the Subcommittee of the Senate on Appropriations that at Bluestone "the power generating facilities are being deferred at present" because "the entire storage capacity is needed for flood control". For this reason we stated that it was not necessary for us to examine the extent of the discretion conferred on the Chief of Engineers because installation of power had been deferred not eliminated as a project purpose.

The reservoir at Bluestone was completed in 1952. It is the contention of the Applicant that to install power-generating facilities at this time a "new authorization" by Congress would be required. In examining the authorization of a project, the established practice by which the Chief of Engineers makes known his recommendations to the Congress should be consulted. *United States* v. *Arizona*, 295 U.S. 174, 191–2. The Chief of Engineers may, of course, recommend major modifications of a project to the Congress. If authorization is for a single purpose, such as flood control, and changed conditions make it seem desirable to install power-generating facilities, the Chief of Engineers may recommend Federal installation of such facilities to the Congress leading to an amendment or supplement to the statute originally authorizing construction.

As an example, the House Committee on Flood Control, reporting the Flood Control Act of 1938, stated that Bluestone was one of but two reservoirs in the bill at which the development of power was authorized.[1] In 1945 the Corps of Engineers, informing the Subcommittee of the Senate Committee on Appropriations that installation of power-generating facilities at Bluestone was deferred for flood control reasons, distinguished it from the Detroit project, in Oregon, a single-purpose flood control project.[2] In the Flood Control Act of 1948, (62 Stat. 1171, 1175, 1178), the Detroit project authorization was specifically modified to provide for the installation of power-generating facilities in accordance with the recommendation of the Chief of Engineers.

The Detroit project illustrates that where power-generating facilities are installed at a flood control reservoir constructed under the general authority of the Flood Control Act of 1938, the project is expressly modified by statute in subsequent legislation. The Bluestone Reservoir project is the reverse of this situation. Installation of power-generating facilities at Bluestone was expressly recommended in 1935 by the Chief of Engineers and power generation was subsequently authorized as a project purpose by Executive Order No. 7183A, September 12, 1935, and the Flood Control Acts of 1936 and 1938. Accordingly, should the upstream development relieve the Bluestone Reservoir project of some of its flood control burden, the Chief of Engineers could, without any further construction authorization authority from Congress, continue to build the project by installing power-generating facilities, subject to the availability of funds.

The Applicant also contends that the Commission has the authority to license non-federal development when "it is clear that the Congressional authorization is outdated or is not to be carried out". In this connection the Applicant cites *Grand River Dam Authority*, 8 FPC 635, in which the Commission, dismissing a preliminary permit application for the Markham Ferry project, found that there was no evidence in the record that "construction of the project under Congressional authorization as found herein has been abandoned or modified". *Id.* at 637. The history of the case shows that changed circumstances affecting authorization must be sought in the action of Congress. In 1955 a license was issued 14 FPC 815, for the Markham Ferry project after Congress had authorized this by the Act of July 6, 1954 (68 Stat. 450).

By our order of March 8, 1966, we granted intervention to the following cooperatives: (1) the North Carolina Electric Membership Corporation and the Old Dominion Electric Cooperative, each representing, respectively, a number of REA cooperatives located in North Carolina and Virginia; (2) the Blue

[1] H.R. Rep. No. 2353, 75th Cong., 3rd Sess. 5–6 (1938).

[2] Hearings before Subcommittee of Senate Committee on Appropriations, *First Deficiency Appropriation Bill for [Fiscal] 1946; H.R. 4805*, 79th Cong., 1st Sess., at 513–514 (1945).

Ridge Electric Membership Corporation, a member of North Carolina Electric; (3) Mecklenburg Electric Cooperative, a member of Old Dominion; (4) Harrison Rural Electrification Association, Inc., of West Virginia. The Applicant requests reconsideration of our ordering a public hearing and permitting the cooperatives to intervene.

As noted in our order of March 8, 1966, in their petitions to intervene the cooperatives alleged, among other things, that the Commission should refuse to issue the license and should recommend to the Congress under Section 7(b) of the Federal Power Act, that a multiple-purpose project at the Moores Ferry site should be undertaken by the United States itself. In this connection the cooperatives state that the reach of the river sought to be developed by the Applicant upstream from Fries, Virginia, is important from the standpoint of flood control, power generation, low flow augmentation and recreation, and that the Applicant's proposed project inadequately provides for these public uses.

Appalachian contends that a hearing is not warranted by the comments of interested Federal agencies nor by the allegations of the cooperatives. The Chief of Engineers, in his report on the application filed November 10, 1965, stated that the most significant problem is the high degree of industrial pollution of the New-Kanawha River in the vicinity of Charleston, West Virginia. The Secretary of Health, Education, and Welfare, in his letters of August 12, 1965 and March 15, 1966, stated that the project as proposed would realize only a relatively small portion of the potential of the site for flow regulation for water quality control. The Secretary of the Interior, in his report on the application, received November 3, 1965, expressed the view that the recreational development plan, submitted by the Applicant, does not adequately provide for initial and ultimate development of the recreational resources of the project area. Moreover, in our order issuing a preliminary permit we warned the Applicant that under the circumstances of this case issues under Sections 10(a) and 7(b) of the Federal Power Act are of "special significance." *Appalachian Power Co.*, 29 FPC 445, 447, Project No. 2317, March 11, 1963.

The Commission finds:

The application for rehearing of our order dismissing in part the license application, and the petition for reconsideration of our order granting intervention and ordering a hearing present no fact or legal principle which would warrant any change or modification of our order issued March 8, 1966.

The Commission orders:

The application for rehearing and petition for reconsideration filed by Appalachian Power Company on April 6, 1966, are hereby denied.

Chairman White *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

LAKE SUPERIOR DISTRICT POWER COMPANY, PROJECT NO. 2444

ORDER ISSUING LICENSE (MINOR)

(Issued May 3, 1966)

Application was filed on February 3, 1964 by Lake Superior District Power Company (Applicant) of Ashland, Wisconsin, for a license under the Federal

Power Act (Act) for constructed Project No. 2444, known as the White River Hydroelectric Project, located on White River in the Township of White River, Ashland County, Wisconsin. No lands of the United States are affected by the project.

The original project dam was constructed in 1907 and the project was completed in its present form in 1927.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, advised that the project as presently operated does not affect adversely fish and wildlife resources and no fishway is needed at this time, but the Department recommended for inclusion in any license for the project conditions in the interests of fish and wildlife and recreational resources, as set forth in Articles 4 and 7 of attached Form L-9.

The Department of Health, Education, and Welfare has reported that the project has no adverse affects on water supply, pollution control or vector control and none is anticipated.

The Conservation Department of the State of Wisconsin recommended that in the interests of public recreation the present access and boat launching site be enlarged and an additional area be reserved for its further expansion; that a public portage route be established from the dam to the vicinity of the powerhouse; and that a reasonable downstream flow at all times be insured by a provision to that effect in any license for the project. In commenting on the Department's recommendations, Applicant advised that it was presently enlarging the boat launching site to accommodate at least five cars and that a sign would be erected to indicate that the existing road is available as a public portage for canoeists. The Wisconsin Conservation Department has advised that these improvements have not, as yet, been completed. By Article 12, we are requiring Applicant to file Exhibit R in conformance with § 4.41 *Exhibit R* of the Commission's Regulations, which shall include in addition to a schedule for completion of these improvements, plans following consultation with the Wisconsin Conservation Department, for reasonable flow releases at all times downstream from the project dam to maintain the fishery.

The White River is the largest tributary of the Bad River which enters Lake Superior five miles southeast of Chequamegon Bay in northern Wisconsin. The White River, having a total length of about 40 to 45 miles, rises in Long Lake in Bayfield County, Wisconsin, at about 700 feet above the level of Lake Superior, most of which descent is concentrated in its upper waters. White River enters Bad River about five river miles above its mouth in Lake Superior. There is ample historical evidence of the extensive use of White River for the commercial transportation of logs from its source in Long Lake down to its confluence with Bad River and down the latter river to sawmills on Chequamegon Bay. These operations commenced from at least as early as 1863 and extended until the 1880's. Project No. 2444 is located on White River about 13 miles above its confluence with Bad River.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) White River, from its source in Long Lake down to its confluence with Bad River and the latter River to its mouth in Chequamegon Bay are navigable waters of the United States.

(2) Project No. 2444 is located upon navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of Wisconsin, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,330 horsepower, and the amount of annual charges, based on such capacity, is to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Federal Power Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Lake Superior District Power Company of Ashland, Wisconsin, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2444, located on White River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2444 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) an 800 foot long, 30-foot high earth dam, a concrete spillway and headrace section near the center containing two sluiceways controlled by radial gates 25 feet wide and 26½ feet high; a 7-foot diameter redwood penstock from dam to surge tank at the powerhouse; a 39 x 60 foot powerhouse with total installed capacity of 1,000 kilowatts operating under a gross head of 49.5 feet; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States" (32 FPC 577), which terms and conditions, designated as Article 1 through 11, are attached hereto, and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall, on or before January 1, 1966, file with the Commission for approval its proposed recreational use plan for the project. The plan shall conform to the requirements of 18 CFR 4.41, *Exhibit R* of the Commission's Regulations under the Act, and shall include plans, following consultation with the Wisconsin Conservation Department, for reasonable flow releases at all times downstream from the dam to maintain the fishery, parking spaces at the boat launching ramp, a canoe portage at the dam, and signs as needed to inform the public of recreational opportunity at the project.

Article 13. The Licensee shall pay to the United States the following annual charge effective April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, an annual charge of $66.50.

(D) The terms and conditions of the Act, which it has been found to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. CP62-243, CP61-339, CP63-99; TRUNKLINE GAS COMPANY, DOCKET NO. CP66-171; MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NOS. G-863, CP62-242, CP63-100

ORDER DENYING SEVERANCE AND GRANTING OMISSION OF INTERMEDIATE DECISION PROCEDURE

(Issued May 3, 1966)

Prior to the conclusion of the formal hearing in the above-styled proceedings on April 7, 1966, the applicants Mississippi River Transmission Corporation (Mississippi), Natural Gas Pipeline Company of America (Natural), and Trunkline Gas Company (Trunkline) orally moved, pursuant to Rule 1.30(c) for a waiver and omission of the intermediate decision procedure.

Natural and Mississippi on April 7th and 8th, 1966, respectively filed written motions with the Commission pursuant to Sections 1.30(c) and 1.32(b) of its Rules of Practice and Procedure requesting that the intermediate decision in the above-entitled proceedings be omitted and that an order be issued forthwith granting the certificates of public convenience and necessity as applied for in these proceedings. In addition Natural also moved that the proceedings in *Trunkline Gas Company*, Docket No. CP66-171, be severed from all the other dockets that were consolidated pursuant to this Commission's order in *Natural Gas Pipeline Company of America, et al.*, Docket No. CP62-243, *et al.*, issued on February 24, 1966.

On April 13, 1966, Trunkline filed a motion joining in the motion filed by Mississippi for omission of the intermediate decision. Motions in support of Mississippi's motion were filed on April 13, 1966, and April 14, 1966, by Laclede Gas Company (Laclede) and Missouri Natural Gas Company (Missouri Natural).

On April 15, 1966, Owens-Illinois Inc. and Granite City Group filed a motion in opposition to that portion of Natural's motion which requested that the proceedings in *Trunkline Gas Company*, Docket No. CP66-171, be severed from all other dockets consolidated by the Commission's order of February 24, 1966.

On April 13, 1966, the Presiding Examiner certified to the Commission the oral motions made by the Applicants to omit the intermediate decision on April 7, 1966.

Applicants point out that in the event Commission approval is forthcoming with respect to their requests that substantial new facilities will have to be constructed. They argue that these facilities must be installed during the coming summer months if delivery of gas is to be made commencing this fall. Applicants further contend that if time is allowed for a full briefing schedule, an Examiner's decision, and the filing of exceptions thereto, a strong possibility would exist that the needed facilities could not be installed prior to the next winter heating season.

In view of the foregoing, the Commission will therefore grant the request of the applicants for omission of the intermediate decision.

The Commission is of the opinion that the proceeding in *Trunkline Gas Company*, Docket No. CP66-171, was properly consolidated with the other dockets in the above-styled proceedings in the order issued by it on February 24, 1966. These applications present certain common issues that should be considered together. Natural in its motion for severance did not cite any compelling reasons why the severance it requested should be granted. The Commission will therefore deny that portion of Natural's motion whereby it requests the severance of the proceeding in *Trunkline Gas Company*, Docket No. CP66-171.

The Commission is also of the opinion that any alteration in the briefing method and schedule fixed by the Presiding Examiner would tend to delay a final determination in these proceedings. It will therefore adopt the Presiding Examiner's briefing schedule and require the filing of briefs be made in accordance with that schedule.

The Commission finds:

(1) The due and timely execution of the Commission's functions require that the Intermediate Decision Procedure be omitted in the proceedings in *Natural Gas Pipeline Company of America*, Docket No. CP62-243, *et al.*

(2) Orderly and proper procedure require that all dockets in the proceedings in *Natural Gas Pipeline Company of America*, Docket No. CP62-243, *et al.*, be considered on a consolidated basis.

(3) The alteration of the briefing schedule that has been fixed by the Presiding Examiner in Natural Gas Pipeline Company of America, Docket No. CP62-243, *et al.* will tend to further delay the final determination of these proceedings.

The Commission orders:

(A) The motions of the applicants requesting the omission of the Intermediate Decision Procedure in the proceedings in *Natural Gas Pipeline Company of America, et al.*, Docket No. CP62-243, *et al.* is granted.

(B) The motion of Natural Gas Pipeline Company of America requesting the severance of the proceeding in Trunkline Gas Company, Docket No. CP66-171, from the proceedings in *Natural Gas Pipeline Company of America, et al.*, is denied.

(C) All parties desiring to submit briefs to the Commission in the proceeding in *Natural Gas Pipeline Company of America*, Docket No. CP62-243, *et al.* shall do so in accordance with the briefing schedule fixed by the Presiding Examiner.

Commissioner Black *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE POTOMAC EDISON COMPANY OF WEST VIRGINIA, PROJECT NO. 2516

ORDER ISSUING LICENSE (MINOR)

(Issued May 3, 1966)

Application was filed on April 14, 1965 by Potomac Light and Power Company[1] (Applicant) of Martinsburg, West Virginia, for a minor license under the Federal Power Act (Act) for constructed minor Project No. 2516, known as Dam No. 4 Hydro Station, located on the Potomac River, at river mile 195, in Berkeley County, West Virginia, near the Town of Shepherdstown.

---

[1] Since the filing of the application for license, we have received documentary evidence that Potomac Light and Power Company has changed its name to The Potomac Edison Company of West Virginia, whose address is 55 East Washington Street, Hagerstown, Maryland 21740. Hence the word "Applicant" as used herein will refer to The Potomac Edison Company of West Virginia.

According to the application, the project has been in service since 1909 and it appears that no substantial alterations have been made to the project.

Applicant's project, consists of a headrace, powerhouse, tailrace and a substation—all located at a U. S. Government dam on the Potomac River. Applicant takes water from above the dam for the generation in its powerhouse of hydroelectric energy. The water released for power purposes is surplus to that used to maintain navigation on the Chesapeake and Ohio Canal on the Maryland side of the river which forms a part of the Chesapeake and Ohio Canal National Monument.

The United States, through the National Park Service, Department of the Interior, purchased the Chesapeake and Ohio Canal in 1938. Applicant has been operating the project and paying an annual rental under agreements with the United States through the Park Service, the last of which, dated December 31, 1963, expires December 31, 1968. The annual rental charge is $750 for the use of Dam Nos. 4 and 5, except during periods when the generating plants cannot be operated. During periods when only one of the plants can be operated, the rental charge is reduced by 50 percent for such periods. In addition to the rental payment, the agreement requires Applicant to maintain the Government dam. By letter dated April 15, 1966, we were advised by Applicant that its expense for maintenance of Government Dam Nos. 4 and 5 has averaged less than $500 per year for each dam over the last 10 years. On the basis of the foregoing, the annual benefits to the United States provided under the agreement Applicant and the United States are considered reasonable.

In the circumstances, we are granting this license for a period co-terminating with the expiration date of the outstanding agreement between Applicant and the Park Service, namely, December 31, 1968. Should the aforesaid agreement be renewed for an additional period, Applicant may apply for a new license for the project for the period of the new or supplemental agreement, but not to exceed a period of 25 years.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that: a study of the Potomac River was authorized by a Resolution of the Senate Public Works Committee, dated January 26, 1956, which requested a review of a previous report on the Potomac River and Tributaries;[2] a subsequent resolution by the same Committee, dated July 6, 1959, and other resolutions expanded the scope of the study and while the report on the result of such study has been completed by the District and Division Engineers, the report has not been submitted to Congress. The report, dated February, 1963, recommends a comprehensive plan for development of the water resources of the Potomac River Basin for the purposes of flood control, water supply, water quality control, and recreation. The report on the application for license also advised that the plans of the project structures affecting navigation are satisfactory, and no objection to the issuance of a license for the project was offered.

The Department of the Interior, in reporting on the application, advised that the project as presently operated does not affect adversely fish and wildlife, and no fishway is needed at this time, but it did recommend for inclusion in any license for the project, two conditions in the interests of fish and wildlife resources as set forth in Article 7 of attached Form L-9 and Article 15.

The Department of Health, Education, and Welfare has recommended that the Potomac River's downstream flow be maintained equal to the river's incoming flow during naturally low streamflow periods to prevent adverse effects on water quality in the river, as provided for in Article 14.

---

[2] Published as House Document No. 622, 79th Cong. 2d Sess. (1946).

By Article 13 we are requiring Applicant to file Exhibit R in conformance with § 4.41 *Exhibit R* of the Commission's Regulations under the Federal Power Act.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company*, Project No. 2347, *et al.*, (33 FPC 275), we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

In our order dated March 14, 1966, 35 FPC 378, issuing a license to Applicant for its constructed Harpers Ferry Hydro Station, Project No. 2515, (situated on the Potomac River at river mile 173), we found that the Potomac River, from its mouth in the Chesapeake Bay, at least upstream therefrom to Cumberland, Maryland, at mile 307 on its North Branch, is a navigable waterway of the United States. Project No. 2516 is situated within this stretch of the Potomac River.

The Commission finds:

(1) Dam No. 4 Hydro Station Project No. 2516 is located along navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of West Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as neccesary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) While the project affects a Government dam, the issuance of a license therefor, as hereinafter provided, will not affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,300 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); (10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to The Potomac Edison Company of West Virginia (Licensee) of Hagerstown, Maryland, under Sections 4(e) and 10(i) of the Act, for a period effective April 1, 1966, and terminating December 31, 1968, for the continued operation and maintenance of Project No. 2516 located in Berkeley County, West Virginia, on the Potomac River, a navigable water of the United States, subject to the terms and conditions of the Federal Power Act insofar as not expressly waived herein, which Act is incorporated by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Dam No. 4 Hydro Station (Project No. 2516) consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits of which are otherwise defined;

(ii) a head race, 230 feet long and 50 feet wide; a stone and reinforced concrete powerhouse (75 ft. x 80 ft. in plan) which contains two 500 kw horizontal generators operated by two 670 hp horizontal water wheels; a tailrace, approximately 80 feet wide and 600 feet long, a substation, appurtenant electrical and mechanical facilities; and

(iii) all other structures, fixtures, equipment, or facilities used or useful in the maintenance and operation of the project and which are located in the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Water of the United States", (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions which are set forth as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $65, effective as of April 1, 1966;

(ii) The annual benefits to the United States under the aforementioned supplemental agreement dated December 31, 1953, and supplements thereto to date, are reasonable and adequate for the purpose of recompensing the United States for the use of surplus water or waterpower from a Government dam.

Article 13. The Licensee shall, within one year from the date of issuance of this license, submit for Commission approval an Exhibit R for this project which conforms to § 4.41 *Exhibit R* of the Commission's Regulations under the Federal Power Act.

Article 14. In the interest of water quality the Licensee shall, during periods of low flow in the Potomac River, utilize through its plant turbines all water which is made available to it by the National Park Service, Department of the Interior.

Article 15. The Licensee shall, for the conservation and development of fish, wildlife, and recreation resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior, the Maryland Department of Game and Inland Fish or West Virginia Department of Natural Resources, after notice and opportunity for hearing and upon a finding based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of this issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE POTOMAC EDISON COMPANY OF WEST VIRGINIA, PROJECT NO. 2517

ORDER ISSUING LICENSE (MINOR)

(Issued May 3, 1966)

Application was filed on April 14, 1965, by Potomac Light and Power Company[1] (Applicant) of Martinsburg, West Virginia, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2517, known as Dam No. 5 Hydro Station, located on the Potomac River, at river mile 217, in Berkeley County, West Virginia, near the Town of Hedgesville.

According to the application, the project was placed in service in 1919, and it appears that no substantial alterations have been made to the project.

Applicant's project consists of a head race, powerhouse, tailrace and substation—all located at a U.S. Government dam on the Potomac River. Applicant takes water from above the dam for the generation in its powerhouse of hydroelectric energy. The water released for power purposes is surplus to that used to maintain navigation on the Chesapeake and Ohio Canal on the Maryland side of the river which forms a part of the Chesapeake and Ohio Canal National Monument.

The United States, through the National Park Service, Department of the Interior, purchased the Chesapeake and Ohio Canal in 1938. Applicant has been operating the project and paying an annual rental under agreements with the United States through the Park Service, the last of which, dated December 31, 1963, expires December 31, 1968. The annual rental charge is $750 for the use of Dam Nos. 4 and 5, except during periods when the generating plants cannot be operated. During periods when only one of the plants can be operated, the rental charge is reduced by 50 percent for such periods. In addition to the rental payment, the agreement requires Applicant to maintain the Government dam. By letter dated April 15, 1966, we were advised by Applicant that its expense for maintenance of Government Dam Nos. 4 and 5 has averaged less than $500 per year for each dam over the last 10 years. On the basis of the foregoing, the annual benefits to the United States provided under the agreement between Applicant and the United States are considered reasonable.

---

[1] Since the filing of the application for license, we have received documentary evidence that Potomac Light and Power Company has changed its name to The Potomac Edison Company of West Virginia, whose address is 55 East Washington Street, Hagerstown, Maryland 21740. Hence, the word "Applicant" as used herein will refer to The Potomac Edison Company of West Virginia.

In the circumstances, we are granting this license for a period co-terminating with the expiration date of the outstanding agreement between Applicant and the Park Service, namely, December 31, 1968. Should the aforesaid agreement be renewed for an additional period, Applicant may apply for a new license for the project for the period of the new or supplemental agreement, but not to exceed a period of 25 years.

The Secretary of the Army and the Chief of Engineers have reported that: a study of the Potomac River was authorized by a Resolution of the Senate Public Works Committee, dated January 26, 1956, which requested a review of a previous report on the Potomac River and Tributaries;[2] a subsequent resolution by the same Committee, dated July 6, 1959, and other resolutions expanded the scope of the study and while the report on the result of such study has been completed by the District and Division Engineers, the report has not been submitted to Congress. The report, dated February, 1963, recommends a comprehensive plan for development of the water resources of the Potomac River Basin for the purposes of flood control, water supply, water quality control, and recreation. The report on the application for license also advised that the plans of the project structures affecting navigation are satisfactory, and no objection to the issuance of a license for the project was offered.

The Department of the Interior, in reporting on the application, advised that the project as presently operated does not affect adversely fish and wildlife and no fishway is needed at this time, but it did recommend for inclusion in any license for the project, two conditions in the interests of fish and wildlife resources as set forth in Article 7 of attached Form L-9 and Article 15.

The Department of Health, Education, and Welfare has recommended that the Potomac River's downstream flow be maintained equal to the river's incoming flow during naturally low streamflow periods to prevent adverse effects on water quality in the river, as provided for in Article 14.

By Article 13 we are requiring Applicant to file Exhibit R in conformance with § 4.41 *Exhibit R* of the Commission's Regulations under the Federal Power Act.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company*, Project No. 2347, *et al.*, (33 FPC 275), we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

---

[2] Published as House Document No. 622, 79th Cong. 2nd Sess. (1946).

In our order dated March 14, 1966, 35 FPC 378, issuing license to Applicant for its constructed Harpers Ferry Hydro Station, Project No. 2515, (situated on the Potomac River at river mile 173), we found that the Potomac River, from its mouth in the Chesapeake Bay, at least upstream therefrom to Cumberland, Maryland, at mile 307 on its North Branch, is a navigable waterway of the United States. Project No. 2517 is situated within this stretch of the Potomac River.

The Commission finds:

(1) Dam No. 5 Hydro Station Project No. 2517 is located along navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of West Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) While the project affects a Government dam, the issuance of a license therefor, as hereinafter provided, will not affect the development of any resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,500 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to The Potomac Edison Company of West Virginia, (Licensee) of Hagerstown, Maryland, under Sections 4(e) and 10(i) of the Act, for a period effective April 1, 1966, and terminating December 31, 1968, for the continued operation and maintenance of Project No. 2517 located in Berkeley County, West Virginia, on the Potomac River, a navigable water of the United States, subject to the terms and conditions of the Federal Power Act insofar as not expressly waived herein, which Act is incorporated by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Dam No. 5 Hydro Station Project No. 2517 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined;

(ii) an existing facility known as Dam No. 5 Hydro Station, which derives its power supply from a dam on the Potomac River owned by the United States, consisting of (1) a headrace approximately 40 feet x 80 feet in plan; (2) a reinforced concrete and brick powerhouse, approximately 40 feet x 80 feet in plan, which contains two 560 kw vertical generators driven by two 750 hp vertical water wheels; (3) a tailrace; (4) a substation; and (5) all other electrical and mechanical facilities appurtenant to the operation of the project; and

(iii) all other structures, fixtures, equipment, or facilities which are located in the project area and are useful in the maintenance and operation of the project; and all rights and interests the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States", (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions which are set forth as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge:

(i) For the purpose of reimbursing the United States for the costs of adminstration of Part I of the Act, $75, effective as of April 1, 1966;

(ii) The annual benefits to the United States under the aforementioned supplemental agreement dated December 31, 1953, and supplements thereto to date, are reasonable and adequate for the purpose of recompensing the United States for the use of surplus water or waterpower from a Government dam.

Article 13. The Licensee shall, within one year from the date of issuance of this license, submit for Commission approval an Exhibit R for this project which conforms to § 4.41 *Exhibit R* of the Commission's Regulations under the Federal Power Act.

Article 14. In the interest of water quality the Licensee shall during periods of low flow in the Potomac River, utilize through its plant turbines all water which is made available to it by the National Park Service, Department of the Interior.

Article 15. The Licensee shall, for the conservation and development of fish, wildlife, and recreation resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the West Virginia Department of Natural Resources after notice and opportunity for hearing and upon a finding based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(D) The terms and conditions of the Act, which it has been found to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS UTILITIES COMPANY, DOCKET NOS. CP65–270 AND CP62–288

FINDINGS AND ORDER AMENDING ORDER AUTHORIZING THE EXPORTATION OF NATURAL GAS AND DISMISSING APPLICATION TO AMEND

(Issued May 3, 1966)

On January 4, 1966, Texas Gas Utilities Company (Applicant) filed in Docket No. CP65–270 an application to amend the Commission's order issued May 14, 1965, 33 FPC 1020, to authorize Applicant to continue the exportation of natural gas from the United States to the Republic of Mexico for sale to Compania Nacional de Gas, S.A. (Compania) for resale and distribution by the latter in the town of Piedras Negras, Coahuila, Mexico, and for sale to Altos Hornos de Mexico, S.A. (Altos Hornos) (formerly La Consolidada, S.A.), all pursuant to new contracts with said purchasers, all as more fully set forth in the application to amend in this proceeding.

The order of May 14, 1965, authorized Applicant to continue to export natural gas, as successor to Associated Oil and Gas Company, for sale to the two above-described purchasers pursuant to a contract with Compania executed June 20, 1956, and a contract, as amended, with Altos Hornos executed June 19, 1956. On May 14, 1965, an amended Presidential Permit was released authorizing Applicant to continue the operation, maintenance and connection of natural gas transmission facilities at the international boundary near Eagle Pass, Texas, in order to continue the exportation of natural gas authorized by the order of May 14, 1965.

Pursuant to the sales contracts with Compania and Altos Hornos service to these purchasers will terminate on December 21, 1966, and June 19, 1966, respectively. The order of May 14, 1965, provides, among other things, that the authorization to export natural gas shall automatically terminate upon the termination or expiration of the subject sales contracts.

Applicant has executed new contracts with Compania on December 7, 1965, and Altos Hornos on November 11, 1965. The contract with Compania, for a term of twenty years from January 1, 1966, provides for the sale by Applicant of the full resale requirements of Piedras Negras, up to a maximum of 10,000 Mcf per day, at a step rate ranging from 35 cents per Mcf for the first 180,000 Mcf per year down to 26 cents per Mcf for volumes in excess of 580,000 Mcf per year. The rate escalates one cent per Mcf in each step every five years, commencing January 1, 1971. The contract with Altos Hornos, for a term of ten years from January 1, 1966, provides for the sale of the full requirements of the steel plant of Altos Hornos, but not less than 500,000 Mcf per year, at a rate of 22 cents per Mcf until January 1, 1971, and at 23 cents per Mcf thereafter.

No new facilities will be required for the proposed continued exportation of natural gas.

On January 4, 1966, Applicant filed an application to amend its Amended Presidential Permit in Docket No. CP62-288 to continue the exportation of natural gas as proposed, and as hereinabove described, in Docket No. CP65-270. Since Applicant does not propose any new construction or change of existing facilities at the international boundary near Eagle Pass, Texas, Applicant may continue the exportation of natural gas, pursuant to the new contracts, under the existing provisions of the Amended Permit. Accordingly, the application to amend the Amended Permit in Docket No. CP62-288 should be dismissed.

Due notice of the filing of the application to amend in Docket No. CP65-270 and opportunity for hearing thereon has been given by publication in the Federal Register on January 22, 1966 (31 F.R. 925). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 14, 1965, in Docket No. CP65-270, be amended as hereinafter ordered.

(2) The application to amend the Amended Permit in Docket No. CP62-288 should be dismissed.

The Commission orders:

(A) The Commission's order issued May 14, 1965, in Docket No. CP65-270 is amended to authorize Applicant to continue the exportation of natural gas for sale to Compania and Altos Hornos, pursuant to new contracts executed December 7, 1965, and November 11, 1965, respectively, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

(C) The application to amend the Amended Permit in Docket No. CP62-288 is dismissed.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PORTLAND GENERAL ELECTRIC COMPANY, PROJECT NO. 2195

ORDER APPROVING REVISED PROJECT EXHIBIT L DRAWINGS

(Issued May 4, 1966)

On December 17, 1965, Portland General Electric Company, licensee for Project No. 2195, filed for Commission approval revised Exhibit L drawings L-30 and L-31 showing project structure changes made necessary by an increase in the spillway capacity of the existing River Mill Hydroelectric Development of Project No. 2195, located on the Clackamas River in Oregon, to provide for the passage of a flood of 150,000 cfs. The drawings were filed pursuant to Article 36 of the Commission's order issued April 23, 1965, 33 FPC 876, amending the license (17 FPC 58) for the project, which article states that when the Commission has approved the plans (drawings), the licensee shall commence construction as soon as river and weather conditions permit and shall complete the work within one year from the date of the start of construction.

Commission staff has reviewed the revised Exhibit L drawings and a report submitted by the licensee, with the Exhibit L drawings and supplement filed February 7, 1966, prepared by engineering consultants of the licensee on

"Requirements for Increasing the Spillway Capacity of the River Mill Hydroelectric Development Project No. 2195", and concluded that the project structures in the range of headwater at elevation 404.0 feet and the tailwater at elevation 333.0 feet, are safe and adequate for the passage of a flood of 150,000 cfs per second.

Under the revised Exhibit L drawings, if approved by the Commission, the license would be required to: (a) increase the height of the existing concrete counterfort wall on the right bank from elevation 399.3 to 407.0 feet, U.S.G.S. datum; (b) increase the height of the existing concrete wall on the left bank from elevation 398.0 to elevation 407.0 feet and extend the training wall downstream to contain the upper nappe of the 150,000-cfs design flood; (c) provide a levee-type dyke on the left bank about 10 feet high with a top width of 10 feet at elevation 408.0 feet and a concrete core wall 1 foot thick from the top of an existing concrete wall to elevation 407.0 feet; (d) install watertight steel plates for windows and stop logs at the double access door at the loading house, and rearrange structural features; (e) support the downstream wall at the gatehouse by horizontal structural steel beams placed against the outside wall and connected to existing pilasters and install an interior bulkhead between the gatehouse and the unloading house; and (f) place watertight ⅜-inch steel plate to outside face of window sills at the powerhouse to height of 4.5 feet against tailwater rise to elevation 333.0 feet.

The Department of the Army has advised that the structural project changes shown on the revised Exhibit L drawings are satisfactory insofar as the interests of navigation are concerned.

The Department of the Interior and the State of Oregon have advised that they have no objections to the design shown on the revised Exhibit L drawings, and that the fishway would not be affected thereby.

The Commission finds:

The following designated and described revised Exhibit L drawings conform to the Commission's Rules and Regulations and should be approved as part of the license for the project, and license Exhibit L, Sheet 10 Revised (FPC–2195–69) "General Plan," which is superseded, should be eliminated from the license for the project:

Exhibit No.	FPC No.	Title
L Sheet 30	2195-90	General Plan and Sections.
L Sheet 31	2195-91	Gatehouse Plan and Sections.

The Commission orders:

(A) The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2195, and the Exhibit L drawing described in the same finding as being superseded is hereby eliminated from the license for the project.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of the foregoing order. In acknowledgment of the acceptance of the foregoing order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WISCONSIN MICHIGAN POWER COMPANY, PROJECT NO. 2357

ORDER MODIFYING LICENSE ORDER ON REHEARING

(Issued May 4, 1966)

On April 8, 1965 Wisconsin Michigan Power Company (Applicant) filed application for rehearing of the order, dated March 10, 1965, 33 FPC 526, issuing a license under Section 4(e) of the Federal Power Act for constructed major Project No. 2357, known as the White Rapids project, located on Menominee River in Menominee County, Michigan and Marinette County, Wisconsin.

The Company alleged that it was aggrieved by the provisions of Article 30 of the license order which reserves to the Commission the right to determine at a later date what transmission facilities shall be included in the license as part of the project. The Commission granted rehearing for further consideration in an order issued May 3, 1965.

Applicant has proposed by letter dated January 6, 1966, as a means of disposing of the pending application for rehearing, that the license be amended to specifically include as part of the project the 0.28 mile of 138 kv transmission line from its 10,000 kva 2.3/138 kv substation to Chalk Hill-Junction Tower Line, the 10,000 kva substation and related facilities and to provide the word "additional" before the term "transmission facilities" in Article 30 of the license.

In a letter dated March 1, 1966, Applicant has also requested that the time for the filing of a recreational use plan for Project No. 2357 in accordance with Article 25 of the license be extended to March 10, 1967.

Upon further consideration of the matter, the Commission believes that it would be appropriate to modify the license order as proposed by Applicant in its letter of January 6, 1966.

The Commission finds:

It is appropriate and consistent with the public interest that the order issuing license in Project No. 2357 be modified as hereinafter provided.

The Commission orders:

(A) The license order, issued March 10, 1965 for Project No. 2357 is hereby modified as follows:

(1) Paragraph (B) of the license order is modified to read as follows:

(B) The White Rapids Project No. 2357 consists of:

(i) all lands constituting the project area and included by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as:

Exhibit J (FPC No. 2357—1) "General Map"

Exhibit K (FPC No. 2357—2) "Project Boundary and Transmission Line Location" (Exhibit K shows, but Exhibit M excludes, the transmission line extending southwardly from Applicant's Chalk Hill Plant, Project No. 2394)

(ii) project works consisting of: (1) a dam, 1,236 feet long and about 50 feet in maximum height—a composite structure made up of a concrete gravity channel segment 378 feet long flanked by clay-gravel embankment extending (at a top elevation of 723 feet m.s.l.) to the Michigan and Wisconsin banks of the river, the concrete segment consisting of a spillway section 246 feet long (controlled by 9 tainter gates 24 feet wide and 15.5 feet high) adjoining an integral-intake-powerhouse-substructure section 117 feet long; (2) a reservoir of about 465 acres; (3) a fish chute; (4) a reinforced concrete, steel and brick powerhouse 35.5 feet wide and containing two vertical shaft generators of 3,000 kw capacity driven by Francis turbines of 4,385 horsepower capacity (under a head of 29 feet) and one generator of 2,000 kw capacity driven by a Francis turbine of 3,100 horsepower capacity; (5) the 10,000 kva 2.3/138 kv Wisconsin Michigan Power Company substation at White Rapids; (6) the 138 kv transmission line extending from said substation about 0.28 of a mile to the Chalk Hill–Junction Tower Line; and (7) appurtenant electrical and mechanical facilities, the location, nature and character of which are delineated on the following described exhibits:

Exhibit L:

Sheet 1 (FPC No. 2357–3) "General Layout"
Sheet 2 (FPC No. 2357–4) "Cross Section of Plant"
Sheet 4 (FPC No. 2357–6) "Plant Floor and Sectional Plans'"
Sheet 5 (FPC No. 2357–7) "Plant Elevations"
Sheet 6 (FPC No. 2357–8) "Tainter Gate and Spillway Details"
Sheet 7 (FPC No. 2357–9) "Abutement Walls"

Exhibit M: Three typewritten pages "General Description of Project and Equipment"

(iii) all of the structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(2) Article 30 is modified to read as follows:

Article 30. The Commission reserves the right to determine at a later date what additional transmission facilities shall be included in this license as a part of this project.

(3) Article 25 of the license is modified to extend the time for the filing of a recreational use plan for Project No. 2357 to March 10, 1967.

(B) In all other respects the aforesaid application for rehearing in Project No. 2357 is denied.

Chairman White and Commissioner Bagge *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

CITIZENS UTILITIES COMPANY, DOCKET NO. E–7253

ORDER AUTHORIZING ISSUANCE OF COMMON STOCK

(Issued May 6, 1966)

Citizens Utilities Company (Applicant), filed an application with the Federal Power Commission on November 12, 1965, seeking an order pursuant to

Section 204 of the Federal Power Act authorizing the issuance of $9,500,000 in short-term Promissory Notes and the issuance of up to 950,000 shares of Common Stock, Series A, $1.00 par, and the issuance of up to 390,000 shares of Common Stock, Series B, $1.00 par. The Commission authorized issuance of the Promissory Notes in an order dated December 10, 1965 34 FPC 1441. This order relates to Applicant's proposed issuance of the additional shares of Common Stock.

Applicant is incorporated under the laws of the State of Delaware and furnishes one or more of the following services—electric, gas, telephone, water and ice, in parts of Arizona, Idaho, Colorado, Maine and Vermont, with its principal place of business at Stamford, Connecticut.

The Applicant proposes to split its outstanding Common Stock, both Series A and Series B, on a three-for-two basis by issuing one additional share for each two shares outstanding. To record the transaction, Applicant proposes to enter on its books a debit to Premium on Capital Stock in an amount equal to the total par value of the shares of Common Stock to be issued and to enter a credit of the same amount to Common Stock (Series A and Series B). According to the Applicant the purpose of the proposed split of Common Stock is to improve the marketability of the Applicant's stock in order to obtain more stockholders in the 100 shares and over classification. After the split each stockholder will have three shares for every two held prior to the split and will have the same proportionate interest in the Applicant after the split as before the split.

Written notice of the application has been given to the Arizona Corporation Commission, the Idaho Public Utilities Commission, the Public Service Board of the State of Vermont and to the Governor of each of those States. Notice was also published in the Federal Register on November 25, 1965 (30 F.R. 14694), stating that any person desiring to be heard or to make any protest with reference to said application should on or before December 9, 1965, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). The Vermont Public Service Board filed a Notice of Intervention in this proceeding on November 26, 1965. It held a hearing on February 7, 1966, with respect to Applicant's proposed issuance of Common Stock and by an order issued April 12,. 1966, approved the transaction.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued December 10, 1965, *Citizens Utilities Company*, in Docket No. E-7253 (34 FPC 1441).

(2) The proposed issuance of up to 950,000 shares of Common Stock, Series A, and the issuance of up to 390,000 shares of Common Stock, Series B, for the purposes of effectuating a three-for-two stock split, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Common Stock, as described above, is therefore not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) Under the circumstances set forth above the issuance of the additional shares of Common Stock are exempt from the competitive bidding

requirements of Sections 34.1a(a), (b) and (c) of the Commission Regulations under the Federal Power Act.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonable, necessary and appropriate for such purposes.

(6) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Common Stock, referred to above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance of Common Stock is hereby exempted from the competitive bidding requirements of Sections 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days of the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE POTOMAC EDISON COMPANY OF WEST VIRGINIA, PROJECT NO. 2343

ORDER APPROVING EXHIBIT R FOR PROJECT

(Issued May 6, 1966)

On August 11, 1965, The Potomac Edison Company of West Virginia, licensee for constructed Project No. 2343, filed for Commission approval a recreational use plan for the project. The plan was filed pursuant to Article 31 of the license, 32 FPC 584.

The project, known as the Millville Hydro Station is located on the Shenandoah River in West Virginia. The recreational use plan, identified as Exhibit R consisting of a map, (FPC Project No. 2343–6) and a written text entitled "Plans for Recreational Use" shows proposed recreational development for the project. The licensee proposes to develop recreational facilities at the project, over a five year period, consisting of a campground, two parking lots, each with a boat launching ramp, fisherman's trail along the river bank, sanitary facilities, and a protective fence and markers between the dam and the powerhouse. There is, at present, no recreational development at the project.

The Departments of the Interior and Health, Education, and Welfare have recommended certain modifications of the plan in the interest of public safety and health. Licensee has agreed to adopt their respective recommendations relating to the schedule for construction of recreational facilities. Furthermore, Licensee has indicated it will comply with the additional recommendations of the Department of Health, Education, and Welfare, except with respect to the installation of sanitary facilities at the planned Big Eddy Parking Area which it believes are not necessary due to the relatively small size of the area and its principal use for boat launching and parking. While we are not requiring the inclusion of these facilities in the plan, such facilities could be required by the Commission in the future under Article 17 of the license, if the need therefor should arise.

The Commission finds:

The following designated and described recreational use plan for the project should be approved as part of the license for the project: Exhibit R—One Sheet (FPC No. 2343-6) Map of Project Area, Statement entitled: "Plans for Recreational Use".

The Commission orders:

The recreational use plan for Project No. 2343, designated and described in the above finding is hereby approved as part of the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

YUBA COUNTY WATER AGENCY, PROJECT NO. 2246

ORDER AMENDING LICENSE (MAJOR)

(Issued May 6, 1966)

Application was filed on May 4, 1964, and supplemented, by Yuba County Water Agency, licensee for proposed Project No. 2246, for amendment of the license, 29 FPC 1002, for the project to be located on Yuba River and certain of its tributaries, in Yuba, Nevada and Sierra Counties, California, and affecting lands of the United States within the Plumas and Tahoe National Forests, and utilizing the existing U.S. Corps of Engineers' Englebright Dam and Reservoir pursuant to the Act of June 25, 1938 (52 Stat. 1040).

The above-mentioned May 4, 1964 application for amendment has been revised by amendments or supplements thereto, principally an amendment filed October 6, 1965. The changes proposed in the October 6, 1965 filing, as supplemented, are designed, among other things, to make the cost of the project financially feasible.

The principal changes proposed in the May 4, 1964 and October 6, 1965 filings and supplements thereto consist of: (1) a change in the effective date of the 50-year license from May 1, 1963 to April 1, 1966; (2) an increase in the lands of the United States to be occupied by the project by about 960 acres; (3) a change in New Bullards Bar Dam from rockfill to concrete arch type with relocated spillway and eliminate the authorized New Bullards Bar power plant; (4) a reduction in the diameter of Lohman Ridge Tunnel from 14.0 to 12.5 feet and a reduction in the diameter of the Camptonville Tunnel from 15.5 to 14.5 feet; (5) the relocation of Log Cabin Dam 50 feet upstream;

(6) the elimination of the New Colgate Diversion and Timbuctoo Afterbay dams; (7) realignment of New Colgate Tunnel and an increase in its diameter from 20.0 to 26.0 feet; (8) an increase in the installed capacity of New Colgate Power Plant from 122,000 to 282,600 kw; (9) the relocation of New Narrows Plant to a point upstream with an increase in its installed capacity from 41,000 to 46,700 kw; and (10) deletion from the license of Article 36 requiring construction of fish trapping facilities at Timbuctoo Afterbay Dam which has been eliminated. The total rated capacity of the project would be increased under the proposed changes from 295,000 to 329,300 kw.

The licensee advises that the proposed changes in the project works are justified following additional investigations of foundations and materials which developed data permitting refined designs of structures and facilities and, as stated above, are necessary to improve the financial feasibility of the project. The designs of power facilities at New Bullards Bar and New Colgate were revised to utilize the combined head between those two sites more efficiently and to maximize the hydroelectric potential of Yuba River upstream from Englebright Reservoir. The revised 282,600 kw installed capacity at New Colgate replaces the presently authorized capacities of 132,000 kw at New Bullards Bar and of 122,000 kw at New Colgate and the 24,000 kw capacity at Pacific Gas and Electric Company's existing unlicensed Colgate plant, the title to which will pass to the licensee when the plant is shut down and abandoned upon commencement of water storage behind New Bullards Bar Dam.

The deletion from the project of Timbuctoo Afterbay Dam, as proposed, is justified by the fact that we are herein modifying the requirements of subparagraph (b) of license Article 33 so as to provide that the New Narrows Power Plant shall be operated in a manner consistent with the needs of fishery resources, and deletion of Timbuctoo Afterbay Dam will also justify the deletion of license Article 36 which requires the licensee to construct and maintain such facilities at the Timbuctoo Afterbay Dam for trapping and removing salmon and steelhead trout as have been approved by the Commission. The proposed increase in lands of the United States to be occupied by the project is a result of inclusion in the project area of recreational use sites, possible aggregate quarry area, and the revised layouts of the project works.

The requested new effective date of the license from May 1, 1963 to April 1, 1966 is necessary, the licensee states, due to its inability to obtain bids for the construction of the project and to the extended period of time required for geologic exploration resulting in the aforementioned design changes of project structures and facilities. The changes will delay completion of project construction to a date which, under the present license period, allows only 43 years in which to obtain power revenues for the servicing of the bonds to finance the power facilities of the project. The licensee states that unless a period of 46 years (in addition to the construction period) is authorized under the license for such bond servicing, the project cannot be financed, and the licensee points out that it has acted diligently in prosecuting all exploration, design, negotiations, and finance efforts to bring the project to the present status of having a negotiated contract for the construction of the project at a cost figure considered by the licensee to be financially feasible. In order to allow the licensee the maximum term for servicing its revenue bonds, we are herein making the effective date of the license for the project May 1, 1966.

The licensee received one bid to construct the project and this was unacceptable. The sole bidder expressed its willingness to negotiate a contract upon the licensee obtaining appropriate State legislation to negotiate a construction contract. The California Legislature gave statutory permission to negotiate and a construction contract in the amount of $142,891,459 has been negotiated, conditioned upon Commission approval of the license amendment herein applied for and upon the licensee's sale of revenue bonds.

The licensee has obtained Congressional authority in the Rivers and Harbors Act of 1965 (Public Law 89–298) for a grant of funds for the flood control features of the project, estimated by the licensee to be about $13,200,000. However, the money has not yet been appropriated. The licensee has applied for a grant from the State of California under the latter's Davis–Grunsky Act and has received approval by the California Department of Water Resources for a grant totalling $4,403,000, of which not more than $695,000 is for recreation, $397,100 is for onshore water supply systems and sanitary facilities for the initial phase of recreational development, and $3,311,000 is for fish enhancement. In addition, the licensee has negotiated contracts with Pacific Gas and Electric Company for: (1) the purchase by the licensee of Pacific's existing Bullards Bar and Colgate projects and associated water rights and (2) the sale to Pacific of Project No. 2246 power output, yielding to the licensee an annual payment of $7,700,000 for service of the debt on the project during that period of the license in which the project is capable of full operation, and a monthly payment of $25,000 for operation and maintenance of the project.

Based upon a study and analysis of the proposed changes in the project works, Commission staff has concluded that the project works as revised are stable and safe and that the project as presently proposed is financially and economically feasible.

The Department of the Army has reported that the proposed changes in the license would not alter any previous comments and recommendations made by the Corps, and no additional terms or conditions are considered necessary for inclusion in the license.

The Department of Health, Education, and Welfare has reported that vegetation permitted to be left in about the lower 300 feet (below elevation 1700 feet) of the New Bullards Bar Reservoir under a September 2, 1965 Agreement between the licensee and the California Department of Fish and Game could result in low dissolved oxygen levels, particularly with thermal stratification in the New Bullards Bar Reservoir, and that insufficient knowledge is presently available to the Department to permit prediction of such a problem in any new project reservoirs or to determine the most economic method of preventing its occurrence, and the Department recommended that the clearing plan be re-evaluated when New Bullards Bar Reservoir is constructed. In responding to HEW's report, the licensee stated that: (1) intended removal of merchantable timber and slash between elevations 1700 and 1580 feet will reduce considerably the vegetation left under the water; (2) State and Federal fish experts consider submerged vegetation beneficial to fishlife; and (3) water temperature studies by the State Department of Fish and Game indicate that thermal stratification should not be a contributing factor to low dissolved oxygen levels in New Bullards Bar Reservoir. Based upon Commission staff studies of the problem involving other licensed project reservoirs, it is believed that oxygen deficiency could occur below the thermocline even with complete reservoir clearing, but that since game fish do not inhabit such areas, such deficiency would have no adverse effects on fishery resources. In any event, releases through the multi-level outlets of the New Bullards Bar Dam can provide mixed waters for downstream flows suitable for the fish habitat, as herein required by revised license Article 40.

The Department of the Interior, in reporting on the application for amendment, pointed out that the deck of the project's New Narrows Power Plant is shown at elevation 343 feet on Exhibit L drawings of the application, whereas the spillway design flood for the possible downstream Federal Marysville Reservoir, as shown on the U. S. Corps of Engineers' report[1] would be at elevation 345 feet, and the Department suggested that liability in the event New Narrows Power Plant is inundated by flood under Marysville Reservoir operation should be clarified by a license stipulation to that effect. The licensee has advised that it will revise the deck design of New Narrows Power Plant from elevation 343 to elevation 345 feet and that it concurs in the inclusion of a license condition on the subject somewhat revised from that proposed by the Department. We consider that new license Article 59 herein will assure adequate protection to the United States.

The Department stated also that in view of the revised project features and operation, it requests either revision or deletion of the following license articles pertaining to fish and wildlife interests, namely: revision of *Article 33*, which fixes minimum streamflow schedules for maintenance of fishlife in the streams listed; revision of *Article 34*, which establishes minimum pool levels at New Bullards Bar Reservoir and Timbuctoo Afterbay Dam; and revision of *Article 40*, which provides for control of water temperatures at New Colgate Diversion Dam; deletion of *Article 35* regulating releases from Timbuctoo Afterbay Dam; and deletion of *Article 36* providing for the construction and maintenance of facilities at Timbuctoo Afterbay Dam for trapping and removing salmon and steelhead trout; and inclusion in the license of new conditions covering: (1) breaching of the existing Bullards Bar Dam; (2) financing by the licensee of a $16,500 post-project-construction study of fish conditions in Yuba River downstream from New Narrows Power Plant; (3) inclusion of fish screens in the irrigation diversion works; and (4) approval by State and Federal fish agencies of the design of the outlet works at New Bullards Bar Dam.

In commenting on the Department's request for further revisions of the license, the licensee agreed to revision of license Article 33, with minor rewording; to the revision of license Article 34; to the deletion of license Articles 35, and 36; and to the revision of license Article 40 essentially as hereinafter set forth. With respect to the Department's above-mentioned requested revision of license Article 33, we consider that any modification of streamflow schedule set forth in the article could be accomplished under the provisions of license Article 31 and therefore does not require the inclusion of condition H. to footnote "3" to Article 33 of the license, as requested by the Department.

In commenting on the Department's requested new license conditions, the licensee objected to the breaching of existing Bullards Bar Dam. The licensee pointed out that license Article 31 already provides that the Commission may require modification of project structures and operation in the interest of fish life and that the Department's requested post-project-construction study would impose additional financial liability on the licensee. In view of license Article 31, under which the Commission could require the licensee to make such a study when indicated by operating conditions, we are not including in the license the Department's requested condition for the study. The licensee pointed out that fish screens on the irrigation diversion works, as requested by the Department, are not presently required by the license and would be downstream from and outside of the project boundary. The Department has informally advised us that it has reconsidered its requests for the breaching of the existing Bullards Bar Dam and for the installation of fish screens on the irrigation diversion works, and may withdraw its requests. With respect to the Department's request for a license condition requiring fish agency approval of the design of outlet works at New Bullards Bar Dam, the licensee refers to the September 2, 1965 Agreement with California Department of Fish and Game (referred to above in HEW's report on the application) which, the licensee states, covers approval of the design of this facility and that this request of the Department is a duplication of the general requirements of license Article 40. However, inasmuch as the design of the multi-level outlet works shown on Exhibit L–38 (FPC No. 2246–92) filed for Commission approval on March 7, 1966, has not been submitted for comments by State or Federal fish agencies, we are including herein new Article 60, requiring approval by such agencies of the outlet works design a condition precedent to the start of construction thereof, even though we are herein approving the Exhibit L drawing except insofar as the requirements of Article 60 have not been met.

---

[1] H. Doc. 180, 89th Cong., 1st Sess. (1965).

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Tahoe and Plumas National Forests, has advised that no additional license conditions are necessary for the protection and utilization of the National Forest lands affected by the proposed project changes.

Pursuant to Article 56 of the license, the licensee has filed for Commission approval a Recreational Use Plan, developed in cooperation with the U.S. Forest Service, describing a plan for recreation sites and facilities at eight areas on the New Bullards Bar Reservoir including an administration site, an observation point, three camping areas and three day-use areas, two of which will have boat launching facilities and one of which will have a swimming beach. Because comments on the plan have not been received from appropriate Federal and State agencies, we are not approving the plan at this time. However, by inserting in the license Article 61, we are assuring the development for both initial and future recreation needs at the project.

We are revising license Article 4 so as to conform to the article presently included in licenses for the type of project herein involved with respect to project inspection procedures. We are including herein new license Articles 58 and 62 requiring, respectively, that the licensee: (1) engage at least three qualified independent consultants to advise it on appropriate foundation treatment for project works; and (2) to measure and report to the Commission at stated intervals stress, strain, and temperature conditions within New Bullards Bar Dam and its foundation. We are revising license Article 57 to show the authorized increased installed horsepower capacity of the project as being 439,000 horsepower. Finally, we are eliminating from the license Article 30 because we are herein giving our approval to final design Exhibit L drawings for New Bullards Bar Dam and Spillway.

The Commission finds:

(1) Public notice of the application for amendment filed October 6, 1965 has been given. No protests or petitions to intervene have been received.

(2) The license for Project No. 2246, amended as hereinafter provided, is in the public interest.

(3) The authorized horsepower capacity of the project for the purpose of computing the capacity component of the administrative annual charges is by this order increased to 439,000 horsepower, and the amount of annual charges, based upon such increased capacity, to be paid under the license for the project for the costs of administration of Part I of the Federal Power Act is reasonable.

(4) Amended Exhibit J (FPC Nos. 2246–88, –89, and –90); amended Exhibit K (FPC Nos. 2246–66 through –72) insofar as the tentative project boundary and the project works are shown; amended and supplemented Exhibit L (FPC Nos. 2246–45, –47, –52, –73 through –87, –91, and –92); and Exhibit M (amended, February, 1966) filed in the Commission February 28, 1966; conform to the Commission's Rules and Regulations and should be approved as part of the license for the project to the extent indicated in paragraph (A) below.

(5) Superseded license Exhibit K (FPC Nos. 2246–8, –9, –11, –15, –32, –36, and –37); license Exhibit K (FPC No. 2246–17); superseded license Exhibit L (FPC Nos. 2246–19, –23 through –27, –29, –33, –34, and –35); and license Exhibit M filed in the Commission June 14, 1961; should be eliminated from the license for the project.

The Commission orders:

(A) The exhibits designated in finding (4) above are hereby approved as part of the license for Project No. 2246 to the extent indicated therein and the license exhibits designated in finding (5) above are hereby eliminated from the license for the project.

(B) The effective date of the license for Project No. 2246, is by this order hereby amended to be May 1, 1966.

(C) Paragraph (A) of the license is hereby amended to read as follows:

(A) This license is hereby issued to Yuba County Water Agency, of Marysville, California (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective as of May 1, 1966, for the construction, operation and maintenance of Project No. 2246, affecting lands of the United States within the Plumas and Tahoe National Forests and a Government dam and lands of the United States adjacent thereto; subject to the terms and conditions of the Act which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(D) Paragraph (B) of the license is hereby amended to read as follows:

(B) Project No. 2246 consists of:

(a) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed a part of the application for license and application for amendment of license and which are designated and described as follows:

Exhibit	*FPC No. 2246-*	*Titled*
J–1 (Amended)	88	Yuba River Development—General Map.

*Insofar as they show the tentative project boundary and the location of project works.

(b) All project works consisting principally of:

1. A concrete arch dam, designated New Bullards Bar Dam and located on North Yuba River, about 631 feet high above streambed and about 2,320 feet long at its crest, with a gated spillway through the left abutment, creating a reservoir with gross storage capacity of 930,000 acre-feet and water surface area of 4,600 acres at normal maximum operating surface at Elevation 1,955 feet; a power pressure tunnel and penstock incorporating a surge tank and extending about 27,600 feet from a multi-level intake structure at the dam to a power plant designated New Colgate Power Plant; such power plant, located on the right bank of Yuba River downstream from the confluence of North and Middle Yuba Rivers, with total installed capacity of 282,600 kilowatts in two similar generating units;

2. A concrete arch dam, designated Hour House Diversion Dam and located on Middle Yuba River upstream from its confluence with Oregon Creek, about 77 feet high above streambed and about 335 feet long on the top axis, with an ungated, overflow type spillway centered on the dam, creating a reservoir with gross capacity of approximately 290 acre-feet and surface area of about 14 acres at normal maximum operating surface at Elevation 2,030 feet;

3. A concrete arch dam, designated Log Cabin Diversion Dam and located on Oregon Creek upstream from its confluence with Middle Yuba River, about 49 feet high above streambed and about 292 feet long at the top, with an ungated, overflow type spillway centered on the dam, creating a reservoir

with gross capacity of approximately 95 acre-feet and surface area of about 5.5 acres at normal maximum operating surface at Elevation 1,970 feet;

4. A gravity-flow tunnel, designated Lohman Ridge Tunnel and extending approximately 19,410 feet from Hour House Diversion reservoir to Log Cabin Diversion reservoir;

5. A gravity-flow tunnel, designated Camptonville Tunnel and extending approximately 6,110 feet from Log Cabin Diversion reservoir to New Bullards Bar reservoir;

6. A power pressure tunnel, designated New Narrows Power Tunnel and extending about 750 feet from an intake structure on the right bank of Yuba River immediately upstream from existing Englebright dam of the California Debris Commission to New Narrows Power Plant; such power plant, located on the north bank of Yuba River downstream from Englebright dam, with installed capacity of 46,700 kilowatts in one generating unit; and

7. A substation at each power plant; and appurtenant hydraulic, mechanical and electrical facilities and miscellaneous project works

the location, nature and character of which structures are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which formed part of the application for license and application for amendment of license:

M (Amended, February, 1966) comprised of two typewritten pages entitled "General Description of Mechanical, Electrical and Transmission Equipment" filed February 28, 1966.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as part of the project is approved or acquiesced in by the Commission; also all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance or operation of the project.

(E) Articles 4, 28, 33, 34, 40, and 57 of the license are hereby amended to read as follows:

Article 4. The construction, operation, and maintenance of the project and any work incident to additions or alterations shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, San Francisco, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of the project. Construction of the project works or any feature thereof shall not be initiated until the program of inspection for the project works or any such feature thereof has been approved by said representative. The Licensee shall also furnish to said representative such further information as he may require concerning the construction, operation, and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work will begin, as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 28. The Licensee shall commence construction of the project works within one year from May 1, 1966, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete construction within 4½ years from May 1, 1966.

Article 33. The Licensee shall maintain the following minimum streamflow schedules for maintenance of fish life in the several streams listed:

(a) Stream	Flow (cfs)[1]		Measurement point
	Apr. 15 to June 15	June 16 to Apr. 14	
Middle Yuba (below Hour House Diversion).	50	30	Approx. 500 ft. downstream of dam.
Oregon Creek (below Log Cabin Diversion).	12	8	Approx. 500 ft. downstream of dam.
North Yuba (below New Bullards Bar).	5	5	Approx. 500 ft. downstream of dam.

[1] Or natural flow, whichever is less. Maximum 24-hour fluctuations of plus or minus 10 percent shall be permitted for flows in Middle Yuba below Hour House Diversion and in Oregon Creek below Log Cabin Diversion.

(b) Stream	Flow (cfs)[1]			Measurement Point
	Jan. 1 to June 30	July 1 to Sept. 30	Oct. 1 to Dec. 31	
Yuba River (below Daquerre Point Dam).	245	70	400	Over crest of Daquerre Point Dam and through fishway.

[1] *Provided* that these flows shall be in addition to releases made to satisfy existing downstream water rights.

(c) Water releases for fish life as specified in paragraphs (a) and (b) of this article shall be subject to the following reduction in any critical dry year, defined as a water year for which the April 1 forecast of the California Department of Water Resources predicts that streamflow in the Yuba River at Smartville will be 50 percent or less of normal:

Yuba River at Smartville Streamflow Forecast Percent of Normal	Reduction in Water Releases for Fish Life, Percent
50	15
45	20
40 or less	30

However, in no event shall releases for fish life below Daguerre Point Dam be reduced to less than 70 cfs. The critical dry year provisions herein shall be effective from the time the aforesaid forecast is available until the April 1 forecast of the following year.

(d) In addition to maintaining minimum water releases for fish life in Yuba River below Daquerre Point Dam, as specified in paragraphs (b) and (c) of this article, the Licensee shall maintain uniform and continuous releases from Englebright Dam within the limits of the following schedule:

Period	Releases (cfs)[1]	Measurement Point
Oct. 16 to 31	600-1,050	New gaging station to be built downstream from the two Narrows powerhouses.
November	600-700	
December	600-1,400	
Jan. 1 to 15	1,000-1,850	
Jan. 16 to Mar. 31	600	

[1] Provided that:
A. Variations from this schedule are permissible during emergencies, uncontrollable flood flows, and critical dry year curtailments.
B. Variations from the scheduled uniform releases of not more than 15 percent is permissible but shall be minimized whenever possible.
C. Reduction in the average continuous flow from October 15 to 31 shall be not more than 35 percent of the average flow during the preceding seven-day period and shall be minimized whenever possible.
D. Reduction in the average continuous flow from November 1 to 30 shall be not more than 15 percent of the average flow during the preceding 15-day period and shall be minimized whenever possible.
E. Increase in uniform releases during October and November shall be permitted when water storage is sufficient, provided no reduction in December releases is necessary as a result of the increases.
F. Changes in flow releases due to project operation during the period January 16 to October 15 shall not fluctuate at an hourly rate of more than 500 cfs and shall be changed as gradually as possible within the hourly period.
G. These provisions shall be subject to re-evaluation and revision at such time as Marysville or other downstream reservoir is constructed on the Yuba River.

Article 34. The Licensee shall maintain a minimum pool in New Bullards Bar Reservoir at Elevation 1,730 feet.

Article 40. Consistent with the primary purpose of the power intakes in the new Bullards Bar Dam, the Licensee shall operate, within limits of the project, the multiple-level power intakes in New Bullards Bar Dam to provide water of suitable quality in the Yuba River downstream from the New Narrows Power Plant for the production of anadromous fish as may be prescribed by the Commission upon the recommendations of the Director of the California Department of Fish and Game and the Fish and Wildlife Service, Department of the Interior.

Article 57. The Licensee shall pay to the United States the following annual charges:

(i) For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part II of the Commission's regulations. The authorized installed capacity for such purpose is 439,000 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy and enjoyment of its lands, including those used for transmission line right-of-way, an amount to be determined hereafter by the Commission.

(F) The following additional articles are hereby included in the license:

Article 58. The Licensee shall engage at least three qualified, independent consultants for the purpose of reviewing and reporting on the foundation treatment of the New Bullards Bar arch dam and other hydraulic structures, including tunnels. The report of the consultant shall be submitted prior to the initiation of foundation treatment. The Licensee shall also submit a final report of the board covering the construction of the project upon completion.

Article 59. The Licensee shall not hold the United States liable for any damage to New Narrows Power Plant due to inundation or backwater resulting from a downstream Federal reservoir with a water surface elevation of up to and including 345 feet (U.S.G.S. datum) measured at the downstream dam, nor shall the Licensee hold the United States liable for any loss of power head or reduction in power protection due to said reservoir within the limits of a normal water surface elevation not in excess of 340 feet (U.S.G.S. datum) measured at the downstream dam.

Article 60. The Licensee shall not commence construction of the multilevel power intake at New Bullards Bar Dam until specifically authorized by the Commission following concurrence with the Licensee by the Director of the California Department of Fish and Game and by the Fish and Wildlife Service, Department of the Interior, on the location and functional design of the intake.

Article 61. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 62. The Licensee shall install instruments in the dam and foundation for the purpose of measuring foundation stresses and movements, deflections in the dam, and stresses and temperatures in the concrete, and shall submit to the Commission annually, for a period of five years after completion of construction of the New Bullards Bar Dam, reports evaluating the results of the instrumentation.

(G) Articles 30, 35, and 36 of the license are hereby eliminated therefrom.

(H) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(I) This order shall become final 30 days after the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WEST PENN POWER COMPANY, DOCKET NO. E-7276

ORDER AUTHORIZING LEASE OF ELECTRIC FACILITIES

(Issued May 9, 1966)

West Penn Power Company (Applicant), filed an application with the Federal Power Commission on March 7, 1966, seeking an order pursuant to Section 203 of the Federal Power Act authorizing it to lease the electric facilities of the Borough of Brackenridge, (Borough), Allegheny County, Pennsylvania.

Applicant is incorporated under the laws of the State of Pennsylvania and authorized to do business in the States of Pennsylvania and West Virginia. It is an operating public utility engaged in the production, distribution and sale of electricity in the greater portion of the Counties of Armstrong, Butler, Fayette, Greene, Washington, and Westmoreland, and in parts of Allegheny, Cameron, Centre, Clarion, Clinton, Elk, Indiana, Lycoming, McKean, and Potter Counties, Pennsylvania. It interchanges power with the Monongahela Power Company in West Virginia and with the Potomac Edison Company in Maryland.

The Borough is located in Allegheny County, Pennsylvania, about 15 miles northeast of Pittsburgh and operates an isolated electric utility system within its corporate limits, which serves the Borough and its residents.

Under a lease agreement dated December 23, 1965, between the Borough and the Applicant, the Applicant proposes to lease the Borough's electric utility system for a period of 30 years from the effective date of the lease for a total rental of $2,000,000 payable as follows: $260,000 on the effective date of the lease and the balance of $1,740,000 in 29 annual installments of $60,000 each. The lease agreement also provides that within 6 months after its effective date, the Applicant shall construct facilities to connect the leased property with its interconnected system and shall give written notice to the Borough of the completion thereof. At that time the Borough's generating facilities shall cease to be a part of the leased property.

Applicant estimates that the original cost less an accumulated provision for depreciation of the Borough's steam production plant is $280,912 and that of the distribution plant is $147,145. Applicant proposes to record the entire annual amount of rent, $60,000 plus $6,667 for $\frac{1}{30}$ of the initial payment of $200,000, total $66,667 as a charge to Account 426, Other Income Deductions.

According to the application the proposed transaction will have the immediate effect of reducing the rates of 1,667 of the Borough's 1,748 customers.

The other 81 customers will receive electric service at their present rates as long as they continue to take service at their present locations. After the proposed lease is made effective, it is expected that the service to the present customers of the Borough will be improved and more reliable because Applicant with its large generating capacity is better able to take care of the growing needs of the Borough's inhabitants, and with its substantial and conveniently located resources of men, material and equipment, Applicant can restore service promptly in case of interruption.

Written notice of the application has been given to the Pennsylvania Public Utilities Commission and the Governor of that State. Notice was also published in the Federal Register on March 22, 1966 (31 F.R. 4821), stating that any person desiring to be heard or to make any protest with reference to said application should on or before April 4, 1966, file petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10), with the Federal Power Commission, Washington D.C. 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated in the State of Pennsylvania and consumed in the States of West Virginia and Maryland, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy or facilities used in local distribution or solely for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, Applicant will indirectly merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Borough, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed lease of facilities by Applicant as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed lease by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees and as proposed in the application.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

GULF RESOURCES, INCORPORATED AND NATURAL GAS GATHERING COMPANY, INC., DOCKET NO. CI61-282

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 10, 1966)

On August 24, 1960, Gulf Resources, Incorporated, and Natural Gas Gathering Company, Inc.[1] (Applicants), filed in Docket No. CI61-282 an application as supplemented on February 12, 1963, and August 13, 1965, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Applicants to construct and operate facilities and transport natural gas in interstate commerce, all as more fully set forth in the application.

Applicants seek authorization to construct and operate approximately seventy-five miles of pipeline and appurtenant facilities to gather and transport natural gas to be purchased from producers thereof by Tennessee Gas Pipeline Company, a Division of Tenneco Inc. (Tennessee), in various fields in Starr and Zapata Counties, Texas. Applicants will deliver the gas to Tennessee in the Zim Field area, Starr County, Texas.

Estimated cost of the facilities proposed to be constructed and operated by Applicants is $2,600,000, which amount Applicants will obtain through debt and equity financing.

Applicants have submitted a pipeline type application and by letter dated November 12, 1965, they agree to accept a certificate classifying them as pipeline companies. Applicants request that their contract with Tennessee be accepted as a special rate schedule. Gas will be gathered and transported for Tennessee at a rate of 2.85 cents per Mcf at 14.65 psia.

Temporary certificates were issued August 31, 1960, and May 14, 1963, authorizing Applicants to construct and operate facilities and transport natural gas.

After due notice, petitions for leave to intervene were filed by The Brooklyn Union Gas Company, Consolidated Edison Company of New York, Inc., Long Island Lighting Company and Public Service Electric and Gas Company. Notices of intervention were filed by the Pennsylvania Public Utility Commission and the Public Service Commission of the State of New York. After a subsequent notice of the filing of the application as finally supplemented, in which notice the aforementioned parties were invited to file again if they desired to participate in this proceeding, petitions for leave to intervene were filed by The Brooklyn Union Gas Company and Consolidated Edison Company of New York, Inc., and a notice of intervention was filed by the Public Service Commission of the State of New York. Subsequently, The Brooklyn Union Gas Company filed a notice of conditional withdrawal of its petition and stated that the withdrawal should not be construed to indicate that the Petitioner considers that either the proposed transportation rate of Applicants or the total delivered cost to Tennessee of gas transported by Applicants has been established to be in the public interest. Consolidated Edison Company of New York, Inc., filed a notice of withdrawal of its petition and stated that by its withdrawal Petitioner does not waive its rights to object to future gathering system arrangements by Applicants or others. By letter the Public Service Commission of the State of New York advised the Commission that it would not object to the issuance of a certificate to Applicants "Assuming that entry of an order under the abridged, non-contested hearing procedure would not constitute a precedent in future cases involving short-haul pipeline companies * * *" No further petition for leave to intervene or notices of intervention have been received.

---

[1] Natural Gas Gathering Company, Inc., is the owner of a one half interest in the proposed project and is a wholly owned subsidiary of Gulf Resources, Incorporated.

At a hearing held on May 5, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicants, Gulf Resources, Incorporated, and Natural Gas Gathering Company, Inc., will be engaged in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission and each will, therefore, be a "natural-gas company" within the meaning of the Natural Gas Act upon commencement of service under the authorization hereinafter granted.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of facilities and transportation of natural gas by Applicants are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicants should be required to comply with the provisions of the Natural Gas Act and the rules, regulations and orders of the Commission thereunder applicable to natural gas pipeline companies.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicants, Gulf Resources, Incorporated, and Natural Gas Gathering Company, Inc., authorizing the construction and operation of facilities and the transportation of natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued in paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation and the transportation of natural gas shall commence, as provided in paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act within six months from the date on which this order issues.

(D) Applicants shall comply with the provisions of the Natural Gas Act and the rules, regulations and orders of the Commission thereunder applicable to natural gas pipeline companies, and particularly,

(a) Within 45 days from the date of this order Applicants shall file pursuant to Section 154.52 of the Regulations under the Natural Gas Act a special rate schedule in a form acceptable to the Commission which shall provide a single, rolled-in, system-wide rate of 2.85 cents per Mcf for their transportation service performed for Tennessee; and to the extent that said rate schedule shall not conform to the requirements of Sections 154.32 (second sentence) and 154.33 of the Regulations under the Natural Gas Act, the requirements of said Regulations are waived;

(b) Applicants shall establish and maintain their accounts and records in accordance with the Uniform System of Accounts Prescribed for Natural Gas Companies (Class C); and

(c) Beginning with the year 1966 Applicants shall file an annual report, F.P.C. Form No. 2-A.

Before Commissioners: Carl E. Bagge, Acting Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

KANSAS GAS AND ELECTRIC COMPANY,
DOCKET NO. E-7279

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued May 10, 1966)

By order issued April 29, 1966, 35 FPC 649, in the above-entitled matter, the Commission authorized Kansas Gas and Electric Company (Applicant) to issue and sell at competitive bidding $16,000,000 principal amount of First Mortgage Bonds, due 1966, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on May 10, 1966, filed an amendment, pursuant to the requirements of the aforementioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Lehman Brothers and Salomon Brothers & Hutzler, to purchase the proposed issuance of $16,000,000, principal amount of Bonds, for the price of 100.903% of principal amount, with an interest rate of 5⅝%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued April 29, 1966, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued April 29, 1966, in the above docket.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

KENNEBEC RIVER PULP & PAPER COMPANY, INC., PROJECT NOS. 2364 AND 2365

DECLARATORY ORDER AND FURTHER ORDER ON REHEARING

(Issued May 10, 1966)

On September 16, 1965, the Kennebec River Pulp & Paper Company, Inc. (Petitioner) filed a petition, including a statement of facts, pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, for a declaratory order with respect to certain provisions of license orders for Project Nos. 2364 (Abenaki) and 2365 (Anson) respectively, issued August 3, 1964 and August 11, 1964, respectively, 32 FPC 502, 580.

Applicant requests the following:

(A) A termination date for both licenses of December 31, 2003, or 50 years from the date when the Kennebec River was determined by the Commission to be navigable.

(B) The effective dates of the respective licenses be no earlier than the dates of acquisition of the respective project by Petitioner.

(C) Paragraph (C) of the respective license orders be amended by inserting therein immediately after the words "except for Article 4 thereof" the words "and that the actual cost to Applicant shall be used for the purposes of Article 11 thereof."

These aforesaid matters were initially placed in issue in an application for rehearing of the license orders, filed September 2, 1964, upon which the Commission granted rehearing for further consideration on September 30, 1964. The petition for declaratory order, together with a statement of facts, was presented to enable the Commission to dispose of the questions presented without a hearing.

Petitioner states that it purchased the Anson Development (Project No. 2365) as part of the Anson Mill, a paper mill with an integrated groundwood pulp mill, on July 11, 1955, and the Abenaki Development (Project No. 2364) as part of the Abenaki Pulp Mill which is approximately 4,000 feet downstream from the Anson Mill, on October 4, 1961. It states that when these mills were acquired they were in extremely poor condition, and that it has spent approximately $2,856,258 on a rehabilitation program for both the power facilities and the mills themselves, with a future investment for a new paper machine and auxiliary equipment estimated at $10,000,000. Petitioner further asserts that its mills provide directly and indirectly a livelihood for substantially all of the people in the towns of Madison and Anson, Maine, with a combined population of about 6,300. Petitioner avers that the power generated at these projects, which is used solely for its mills, is extremely important to its operation and that unless the license term is extended to provide sufficient time for financing future development, the existence of the mills will be threatened. It states that the power produced by the projects "is the life blood of the mills" and "without it both mills would be uneconomic and forced to close".

In the respective license orders we granted licenses for those projects with an effective date of May 1, 1954[1] and a termination date of December 31, 1993, in accordance with our decision in *Androscoggin*, Opinion No. 357[2]. The termination date in *Androscoggin*, which involved a public utility, was established on the basis of 50 years from 1943, at which time it was determined that navigability could be based on log driving and rafting[3] and subsequently affirmed in the Courts[4].

In the instant case, the termination date of December 31, 1993, gives Petitioner, an industrial company which acquired both projects subsequent to the effective date of the licenses, an effective term of approximately 38 years for Project No. 2365 and 32 years for Project No. 2364. Petitioner asserts that unless it obtains a 50 year license term it will be unable to undertake necessary rehabilitation of its mills, vital to the future existence of the company. While the expenditures contemplated are primarily for the improvement of its mills and include the installation of a new modern competitive paper machine, Petitioner demonstrates that the continued existence of the projects are of the utmost importance to its operation and to the economy of the area. It is apparent, in considering the termination date of the licenses, that Petitioner is faced with a potentially greater problem at the expiration of its license, in event of recapture, than that which would face an electric utility under similar circumstances. Although both would recover the net investment in the project, Petitioner's recovery would represent only a part of its total investment in its paper producing enterprise which in the absence of suitable substitute source of power would be rendered practically valueless at the end of the license term. We believe that petitioner has made an adequate showing in support of its request for a 50 year license term. Accordingly, we shall extend the license terms for Project Nos. 2364 and 2365 to April 30, 2004, 50 years from the effective dates of the respective licenses.

---

[1] The Commission made a specific determination that the Kennebec River was navigable on May 21, 1954. *Central Maine Power Company*, Docket No. E–6456 (13 FPC 1076).

[2] *Public Service Company of New Hampshire*, Project No. 2288, 27 FPC 830.

[3] *City of Spooner, Wisconsin*, 3 FPC 986 (April 20, 1943); *Wisconsin Michigan Power Company*, 3 FPC 449 (July 27, 1943); *Wisconsin Public Service Corporation* (Tomahawk, 3 FPC 495 (July 30, 1943)).

[4] *Wisconsin Public Service Corporation v. F.P.C.*, 147 F. 2d 743 (CA7–1945), cert. den., 325 U.S. 880 (1945).

Petitioner has also requested that the Commission change the effective date of the licenses, contending that, unless the effective date is changed, it will be required to pay past due annual charges from May 1, 1954 on. It asserts that this would be unfair, since both projects were owned by other companies for part of the time, about a year in the case of Project No. 2365 and seven years four months in the case of Project No. 2364. While admittedly, the payment of annual charges is related to the effective date of a license, it is not the controlling factor in its determination. Consistent with our decision in *Androscoggin*, we have consistently backdated licenses issued for constructed projects in order to insure that licensees have the same rights and obligations as they would have had if timely declarations of intention or applications for license had been made. This practice has been supported by the United States Court of Appeals for the First Circuit in *Central Maine Power Company* v. *F.P.C.*, 345 F. 2d 875 (May 18, 1965)[5]. We, therefore, conclude that the effective date prescribed by the Commission for both Project Nos. 2364 and 2365, under the circumstances presented herein, is appropriate.

Petitioner further requests that its actual cost be used as the basis for determining the actual legitimate original cost as required by Article 11 of Form L-3, incorporated as part of the respective license orders. It submits that in the case of Project No. 2364, which it purchased in 1961, there are no records and the depreciated value is presumably zero; and in the case of Project No. 2365, which it purchased in 1955, the remaining undepreciated book cost represents about 25% of its purchase price.

Article 11 of the license for Project No. 2364 and Project No. 2365, respectively, makes the following provision for determination of the project cost (30 FPC 1658, 1659):

> The actual legitimate original cost, estimated where not known, and the accrued depreciation of the project as of the effective date of the license shall be determined by the Commission in accordance with the [Federal Power] Act and the rules and regulations of the Commission, and such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date.

Section 4(b) of the Federal Power Act provides that each licensee shall file a statement showing the "actual legitimate original cost of construction of * * * project, addition, or betterment" for the purpose of aiding the Commission in determining the "actual legitimate original cost" (ALOC) of a licensed project. ALOC has been construed by both the Commission and the courts to relate to the construction of a project (and any additions or betterments) rather than to the acquisition of a project. See *Louisville Hydro-Electric Company, Licensee*, 1 FPC 130, 139 (1933), petition for review dismissed *sub. nom. Louisville Gas & Electric Co.* v. *F.P.C.*, 129 F. 2d 126 (CA6–1942), cert. den. 318 U.S. 761, rehearing den. 318 U.S. 800; *Alabama Power Co.* v. *F.P.C.*, 134 F. 2d 602, 606 (CA5–1943), affirming (with modifications on other issues) *Alabama Power Company, Licensee*, 2 FPC 432 (1941); and *Niagara Falls Power Co.* v. *F.P.C.*, 137 F. 2d 787, 794 (CA2–1943), cert. den. 320 U.S. 792, rehearing den. 320 U.S. 815, affirming (with modifications on other issues) *The Niagara Falls Power Company, Licensee*, 3 FPC 206 (1942). It should also be noted that section 8 of the Act provides that any successor licensee "shall be subject to all the conditions of the license * * * and * * * to all the provisions and conditions of this Act to the same extent as though such successor * * * were the original licensee hereunder * * *." Significantly, neither Section 4(b) nor Section 8 of the Act makes any distinction in its requirements between licensees which are engaged primarily in the electric utility business, on the one hand, and licensees which are engaged primarily in non-utility operations, such as manufacturing, on the other hand.

---

[5] See also, Commission Opinion No. 481, issued November 15, 1965, in 34 FPC 1298, in the *Niagara Mohawk Power Company* case.

To determine the ALOC of a project owned and operated by an electric utility licensee (or its successor in interest) on the basis of the cost of construction of its project (and additions and betterments), while at the same time determining the ALOC of a project owned and operated by an industrial licensee (or its successor in interest) on the basis of the cost of acquisition of its project (and additions and betterments) might result in discriminatory treatment as between the two types of licensees. Under Section 3(13) of the Federal Power Act, the ALOC represents a major component of a licensee's "net investment" in a project. Therefore, in the event of the take over of any project by the United States upon payment of the licensee's "net investment" therein under Section 14 of the Act, uniform treatment under Sections 3(13) and 4(b) of the Act would not be achieved. Furthermore, to the extent that the project acquisition costs reflect payments for intangible elements, the allowance of such payments in determining ALOC and "net investment" would obviously violate Section 14's prohibition against including "good will, going value, or prospective revenues" in "net investment". Under these circumstances we believe that it is unnecessary and inappropriate to modify the provisions of Article 11 of the license for each project.

In a letter to the Commission dated March 29, 1965, the Petitioner, in connection with its application for rehearing, requested that the payment of annual charges commence on the date that the license orders were issued. Section 11.28 of the Commission Regulations under the Federal Power Act provides that annual charges shall commence on the effective date of the license. Accordingly, our determination with respect to the effective date of the respective licenses is dispositive of this issue.

In its application for rehearing petitioner requested that Articles 31 and 32 be deleted from the license order for Project No. 2364. In its letter of September 16, 1965, transmitting the petition for declaratory order, Petitioner has stated that it would accept as a substitute for Articles 31 and 32, a license condition providing that the licensee shall develop the undeveloped head in the stretch of the Kennebec River immediately downstream from the Abenaki project extending to the head of the Weston Project (No. 2325) reservoir as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing. Upon further consideration of the matter we conclude that such provision would satisfactorily provide for future development opportunities in order to achieve comprehensive development of the River.

The Commission finds:

(1) It is appropriate and consistent with the public interest that the Order in Project Nos. 2364 and 2365 be modified as hereinafter provided.

(2) It is appropriate and in the public interest in administering Part I of the Federal Power Act (16 U.S.C. 791a—825r) that the Kennebec River Pulp & Paper Company's petition for declaratory order filed September 15, 1965 and application for rehearing filed September 2, 1964 with respect to license orders issued August 3, 1964 and August 11, 1964, respectively, for

Project Nos. 2364 and 2365 to the extent that it seeks modification in addition to that provided herein be denied.

The Commission orders:

(A) Orders issuing licenses for Project Nos. 2364 and 2365 are hereby modified as follows:

(1) Paragraph (A) of the license order for Project No. 2364 is modified to read as follows:

(A) This license is hereby issued to Kennebec River Pulp & Paper Company, Inc. (licensee of New York, N.Y.) under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective May 1, 1954 for the continued operation and maintenance of the Abenaki Development (Project No. 2364), located on the Kennebec River, a navigable water of the United States, in Somerset County, Maine, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(2) Paragraph (A) of the license order for Project No. 2365 is modified to read as follows:

(A) This license is hereby issued to Kennebec River Pulp & Paper Company, Inc. (licensee of New York, N.Y.) under Section 4(e) of the Federal Power Act (Act) for a period of 50 years, effective May 1, 1954, for the continued operation and maintenance of the Anson Development constituting Project No. 2365, located on the Kennebec River, a navigable water of the United States, in Somerset County, Maine, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of the license, and subject to such rules and regulations as the Commission has issued or prescribed thereunder.

(3) Articles 31 and 32 of the license order for Project No. 2364 are deleted and the following article is substituted therefor:

Article 35. The licensee shall develop the undeveloped head in the stretch of the Kennebec River immediately downstream from the Abenaki project extending to the head of the Weston project (No. 2325) reservoir as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

(B) In all other respects the relief requested in the aforesaid petition for declaratory order and the application for a rehearing in Project Nos. 2364 and 2365 is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NATURAL GAS COMPANIES—EMERGENCY PLANNING—ANNUAL REPORTS OF SYSTEM FLOW DIAGRAMS, DOCKET NO. R-257

ORDER GRANTING EXEMPTION

(Issued May 10, 1966)

Valley Gas Transmission, Inc. (Valley Gas) by letter dated November 12, 1965, requested that it be excused from complying with the requirements of Order No. 303, 34 FPC 536. In support of its request, which we will consider as a petition filed pursuant to § 1.7(b) of the Rules of Practice and Procedure, Valley Gas suggested that the regulation is not intended to apply to small gathering companies having numerous non-integrated gathering systems; that it has 17 separate gathering lines delivering gas to 3 major interstate pipeline companies; that the total capability of all 17 systems could exceed 100,000 Mcf per day, although its existing sales commitments do not exceed that figure; that the information required by the report will be reported by its present purchasers, resulting in an overlap of reporting. Our records indicate that Valley Gas' description of its operations is accurate.

The Commission finds:

Good cause has been shown for granting the exemption requested.

The Commission orders:

The request of Valley Gas to be excused from complying with the requirements prescribed by Order No. 303 as amended by Order No. 303-A, *infra*, is granted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PRESCRIBING SYSTEM FLOW DIAGRAMS

(Issued May 10, 1966)*

By order issued October 14, 1965 (34 FPC 1158, 30 F.R. 13359), we granted reconsideration of Order No. 303, issued August 19, 1965 (34 FPC 536, 30 F.R 11101) in which we amended our regulations by prescribing a system flow diagram to be filed by certain large natural gas pipeline companies subject to the provisions of the Natural Gas Act. In the October order we also extended the filing date for the initial submission of the diagram to "a date to be fixed hereafter."

We have given further careful consideration to the points raised in the application for reconsideration and, in the light of the arguments advanced, have revised several of the subparagraphs included in paragraph (b) of § 260.8 as it was prescribed in Order No. 303. We recognize that the submission of the detailed information to be required is, to some extent, duplicative and that its preparation imposes a significant burden upon the companies required to report. We are still of the opinion, earlier expressed in our original order herein, that the information is necessary for regulatory purposes and that the public interest in this regard more than compensates for the added burden. Furthermore, the modifications of the original proposal which were incorporated in Order No. 303, together with those additional changes we are now adopting, make the burden as light as possible and yet at the same time supply information consistent with our minimum needs.

One reason for granting reconsideration of our original order was to provide the time necessary to complete the steps being taken in compliance with the

---

*Published in the Federal Register on May 18, 1966 (31 F.R. 7226).

Federal Reports Act of 1942 (5 U.S.C. 139c). Those steps have now been completed and the Bureau of the Budget has approved the collection of the information in the form here being prescribed. Items 12, 13 and 14 of that information (§ 260.8(b)(12), (13), and (14)) are subject to reapproval after one year.

Two other matters should be noted. First, Order No. 303 and our order granting reconsideration both contemplated that the initial report would cover the calendar year 1964. In view of the fact that reports will be required annually, our purposes will be served by having the initial report cover calendar year 1965 and, though succeeding reports will be due by June 1 of each year, we are providing that the initial report be filed by June 30, rather than June 1, 1966.

Finally, we recognize that the impact of the reporting burden will be heavier on some companies than on others due, mainly, to the diverse nature of system operations. The Bureau of the Budget, therefore, has asked us to remind the respondents of the provisions of § 1.7(b) of our Rules of Practice and Procedure (18 CFR 1.7(b)), pursuant to which we will entertain a petition to amend or waive rules. This rule provides the means whereby companies with unusual circumstances may apply for relief in connection with any of the detailed requirements of the report upon an adequate showing of a need for the relief requested. Such a petition is now pending before us and is being granted by separate order.

Upon further consideration of the matter, the Commission *finds*:

(1) Section 260.8(b) of the Regulations under the Natural Gas Act prescribed by Order No. 303 issued August 19, 1965 herein should be revised for the reasons set forth above and in the manner hereinafter provided.

(2) For convenience, it is appropriate that paragraph (a) of § 260.8 and those subparagraphs of paragraph (b) which are not revised hereby be published together with the revised portions referred to above and, therefore, that the ordering paragraphs (A) and (B) of Order No. 303 be revised and adopted as hereinafter provided.

(3) From the circumstances referred to in the recitals set forth above, it it unnecessary in the public interest that further notice be had prior to the adoption of the revised regulations, and good cause exists for making it effective forthwith.

The Commission, acting pursuant to the authority heretofore set forth in Order No. 303, *orders:*

(A) Ordering paragraphs (A) and (B) of Order No. 303, issued herein on August 19, 1965 (34 FPC 536, 30 F.R. 13359), are deleted and the following is inserted in lieu thereof.

(A) Part 260, Statements and Reports, Subchapter G, Chapter I, Title 18 of the Code of Federal Regulations, is amended by adding a new § 260.8 to read as follows:

§260.8 System flow diagrams.

(a) Each Class A natural gas pipeline company, having a system delivery capacity in excess of 100,000 Mcf per day (measured at 14.73 psia and 60° F.), shall file with the Commission by June 1 of each year twelve (12) copies of a diagram or diagrams reflecting operating conditions on its main transmission system during the previous twelve months ended December 31. For purposes of system peak deliveries, the heating season overlapping the year's end shall be used. Facilities shall be those installed and in operation on December 31 of the reporting year. All volumes shall be reported on a uniform stated pressure and temperature base.

(b) The diagram or diagrams shall include the following items of information:

(1) Nominal diameter (inches) of each pipeline.

(2) Miles of pipeline (to nearest 0.1 mile) between points of intake, delivery, river crossings, storage fields, cross-overs, compressor stations and connections with other pipeline companies.

(3) Direction of flow in the pipelines. If direction of flow can be reversed at compressor stations, so indicate.

(4) Maximum permissible operating pressure for each pipeline at discharge side of each compressor station, or other critical point, determined by the provisions set forth in the American Standards Associations publication B 31.8 "Gas Transmission and Distribution Piping System" or by the company's own standard (whichever governs the company's operation), provided that the company supplies an explanation of the standard used. Where company standard governs, so designate by appropriate symbol or legend.

(5) Total horsepower of compressor engines installed at each compressor station.

(6) Designed suction pressure for each compressor station, psig.

(7) Designed discharge pressure for each station, psig.

(8) Maximum volume, Mcf per day that can be compressed at each compressor station under conditions of suction and discharge set forth in (6) and (7) above. If direction of flow affects these factors provide the information for each direction of flow.

(9) The fuel requirement at each compressor station under conditions described in (8).

(10) Pressure in the pipeline at points of emergency interconnection with other pipeline companies which can normally be expected to exist, and the volume which could be delivered or received at such emergency interconnection points at such pressures. Give the name of the interconnecting company.

(11) For each storage field, connected to the system and operated by the respondent pipeline company, the maximum dependable daily and seasonal withdrawal volumes available under normal conditions of operation.

(12) The average and maximum (coincidental and noncoincidental) daily volumes delivered at each take-off point during the reporting year. Where deliveries to a single customer are made at two or more points and conjunctive billing is used to determine charges, the volumes delivered shall be reported on the conjunctive basis. Small deliveries (less than 100 Mcf per day) which have little or no effect upon the operation of the pipeline may be grouped in an appropriate manner, *i.e.*, between compressor stations or the last mainline compressor station and the end of the pipeline. If an estimate is used for a delivery, so indicate.

(13) The average daily volume received at each intake point to the transmission pipeline system.

(14) The volume received into the transmission pipeline system at each intake point on the day of maximum coincidental delivery.

(15) The information required by subparagraphs (12), (13) and (14) may be furnished in tabular form, or by reference to FPC Form No. 2, providing, that the information is suitably keyed to the diagram(s) by appropriate identifying symbol or number.

[Secs. 4, 5, 7, 16, 52 Stat. 823, 824, 825, 830; 15 U.S.C. 717c, 717d, 717f, 717o.]

(B) This amendment shall be effective initially for the reporting year 1965 except that the last day for filing the flow diagrams depicting 1965 operations is postponed to June 30, 1966.

(B) In all other respects the provisions of Order No. 303 remain in full force and effect.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-180

ORDER GRANTING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING ABANDONMENT

(Issued May 10, 1966)

Tennessee Gas Transmission Company (Tennessee) on December 3, 1965, filed, pursuant to subsections (b) and (c) of Section 7 of the Natural Gas Act an application for permission and approval to abandon certain facilities and for a certificate of public convenience and necessity authorizing the construction and operation of other facilities as described in the application. The application was supplemented on February 1, 1966 to reflect changed market requirements of a group of Tennessee's customers, *i.e.* Consolidated Natural Gas Company and certain of its subsidiaries. Tennessee seeks a certificate to construct and operate the following facilities, all as more fully described in the application and testimony and exhibits of record.

262.37 miles of 36-inch loop line in Mississippi, Alabama, Tennessee, Kentucky, Ohio and Pennsylvania, 36.67 miles of 36-inch pipe between stations 527 and 524 in South Louisiana, 8.48 miles of 42-inch loop line in Kentucky, 60.16 miles of 30-inch loop lines in Ohio, Pennsylvania and New York, 10.68 miles of 26-inch loop line in West Virginia, 22.61 miles of 20-inch pipeline lateral to the Grand Isle Block 43 Field, 4.07 miles of 8-inch and 2.57 miles of 6-inch pipeline replacing equivalent lengths of 4-inch and 3-inch lateral line in New England, and 21,500 additional compressor horsepower in seven existing compressor stations.

Tennessee also seeks permission and approval to abandon its Scofield Bay Compressor Station No. 526A in Louisiana consisting of five 1,000 horsepower compressor units.

Construction and operation of the proposed facilities will increase Tennessee's average day system capacity from 3,027,000 Mcf to 3,203,000 Mcf or by 176,000 Mcf per day. 111,891 Mcf of the added capacity will be utilized to increase deliveries to contract demand and general service customers. The remainder of the added capacity will increase Tennessee's unallocated capacity. The total unallocated capacity that will be available to Tennessee after construction of the facilities in question will be 81,177 Mcf per day.

The Scofield Bay Compressor Station No. 526A, sought to be abandoned, is no longer needed to meet demands on this segment of Tennessee's system.

The estimated cost of the proposed facilities is $82,465,000, the construction of which will be financed through the sale of First Mortgage Pipe Line Bonds, Debentures and Second Preferred Stock.

Notice of the filing of the application was issued on December 13, 1965 and was published in the Federal Register on December 18, 1965 (30 F.R. 15684).

By order issued March 18, 1966, 35 FPC 398, Tennessee was granted temporary authority to construct, but not to operate, the facilities proposed in this docket. That order also provided for the commencement of hearings on April 25, 1966.

At those hearings testimony and exhibits were introduced by Tennessee and were received into evidence without objection; cross-examination of such evidence was waived by all parties. Additionally, a stipulation was entered into by all parties present at the hearing providing that a certificate should issue to Tennessee in this docket subject to certain conditions contained in that stipulation. The record in the proceeding was certified to the Commission by Presiding Examiner William L. Ellis.

The proposed conditions contained in the stipulation, in brief, provided:

(1) The proposal to increase East Tennessee Natural Gas Company's Maximum Contract Quantity would be reduced by 13,562 Mcf until such time as the Commission decides the proceedings involving East Tennessee's application in Docket No. CP65–66.

(2) The certificate issued shall not be considered as a prejudgment of the issues involved in Docket No. R–293, "Provision For Reserve Capacity in Natural Gas Pipeline Company Certificate Applications."

(3) During the period through October 30, 1966, without specific permission from the Commission, Tennessee will not sell gas under its Rate Schedules R, SR, TWS, ERS, or under the excess withdrawal provisions of Rate Schedules SS–5 and SS–E; except that such sales can be made of such amount of gas that cannot be moved beyond Tennessee's Compressor Station 200.

(4) From November 1, 1966 through March 31, 1968 Tennessee, without specific permission from the Commission, will not make sales under such rate schedules unless its top storage inventories are at specified levels at the end of the then preceding month; except, however, that such sales can be made of such amount of gas that cannot be moved beyond Tennessee's Compressor Station 200.

(5) Tennessee will each month report to the Commission (a) its top storage inventory balance as of the end of the month and (b) sales of gas under Rate Schedules R, SR, TWS, ERS and under the excess withdrawal provisions of Rate Schedules SS–5 and SS–E.

(6) No determination shall be made in this proceeding of the propriety of the proposed accounting treatment of the abandonment of Compressor Station No. 526A.

During the 1965-66 winter heating season Tennessee experienced a critical gas delivery situation due primarily to the lack of adequate underground storage inventories. At the end of that heating season (March 31, 1966) Tennessee had a negative top storage inventory of 8,500,000 Mcf.[1] In addition to its use of substantial quantities of base storage gas to meet deliveries, Tennessee was able to purchase 3,400,000 Mcf of gas from Texas Eastern Transmission Corporation and to receive on a loan basis a total of 2,500,000 Mcf from the Columbia Gas System, Transcontinental Gas Pipe Line Corporation, and TransCanada Pipe Lines Limited.

The critical gas delivery situation occurred in the last two weeks of January 1966 when Tennessee's entire system was blanketed with extremely cold weather. As a result, Tennessee had to withdraw from storage 2,200,000 Mcf more gas during January than had previously been scheduled in that month, which was at a time when Tennessee's gas storage inventories already were quite low.[2] Tennessee listed a number of reasons to indicate the reason for its having had inadequate storage inventories:

---

[1] At the end of February 1966 Tennessee had a negative top storage inventory of 8,966,000 Mcf.

(1) In the early spring of 1965 Tennessee experienced an unexplained increase in pressure drop across the Lake Borgne crossing of its Delta-Portland Line which had the effect of decreasing the capacity of that line until facilities to remedy such situation were installed. Those facilities were completed on November 19, 1965 pursuant to Commission authorization in Docket No. CP65–321, 33 FPC 1302.

(2) On March 4, 1965 Tennessee experienced a pipeline rupture on the Natchitoches-Portland portion of its mainline system and as a result it reduced the operating pressure on that portion of its system thereby causing a decrease in the volume of gas which could be transported on a portion of its system during the winter heating season. Facilities to remedy this situation, which were authorized in Docket No. CP66–54, 34 FPC 1060, were not completed until November 25, 1965.

(3) Due to unforeseen delays, primarily due to an extreme shortage of skilled labor, certain of Tennessee's facilities to be installed during the summer of 1965 were not completed until late in 1965. Consequently, as a result of these delays and the delays discussed in the preceding paragraphs, Tennessee was without anticipated pipeline capacity during a period of time when it was injecting gas into underground storage. These construction delays resulted in a loss in storage injection volumes of approximately 2,200,000 Mcf.

(4) Tennessee's customers' actual natural gas requirements exceeded their estimates by approximately 7,500,000 Mcf during 1965.

(5) A hurricane and a tropical storm during the fall of 1965 reduced storage gas injections by approximately 3,000,000 Mcf.

(6) Freeze-offs in the gas supply area and other gas supply problems in January, 1966 resulted in a loss in system throughout volume of approximately 600,000 Mcf.

(7) Tennessee experienced abnormal outages of vital compressor units due to mechanical problems which caused a reduced system throughout of approximately 1,000,000 Mcf during the 1965-66 winter heating season. Remedial steps are being taken to solve the problems encountered with such units in order to assure dependable and satisfactory service.

Furthermore, as is apparent on the record, at the end of the 1964-65 winter heating season Tennessee had a negative top storage inventory of 7,064,000 Mcf. This substantial negative top storage inventory at the end of that winter heating season and at the beginning of the 1965 gas storage injection season obviously accounted in large part for the inadequate storage inventory at the beginning of the 1965-66 winter heating season. Also, Tennessee has had negative top storage inventories at the beginning of its gas storage injection seasons in 1962, 1963 and 1964 due to a variety of causes relating to storage and system operations.

The stipulation contains the following language stating Tennessee's intentions with respect to achieving adequate underground storage inventories in the future:

In view of the fact that Tennessee experienced, during the 1965–66 winter heating season, a critical gas delivery situation due primarily to the lack of adequate underground storage inventories, it is Tennessee's intention to exercise maximum effort in the coming months to achieve the top storage inventories set forth in Tennessee's Exhibit T–15 in this proceeding. Tennessee therefore has no intention to make sales of gas during the 1966 injection season under Rate Schedules R, SR, TWS, ERS, or under the excess withdrawal provisions of Rate Schedules SS–5 and SS–E, if such gas can be injected into its underground storage fields. Additionally, Tennessee has no intention to make sales of gas during the 1967 injection season under Rate Schedules R, SR, TWS, ERS, or under the excess withdrawal provisions of Rate Schedules SS–5 and SS–E, if such gas can be injected into, and is required for injection into, its underground storage fields.

---

[2] At the end of December 1965 Tennessee's top storage inventory was only 1,422,000 Mcf.

The evidence of record shows that, if Tennessee achieves the top storage inventory shown as being attained in its exhibits at the beginning of the 1966–67 winter heating season and assuming full utilization of the 81,177 Mcfd of unallocated capacity during that heating season, Tennessee will be able to meet its customers' requirements during that season, including coverage for a colder than normal winter, without requiring withdrawal from its base storage. Tennessee has shown that the top storage inventory required as of the beginning of the 1967–68 winter heating season, including coverage for a colder than normal year, is 27,000,000 Mcf assuming that 17,800 Mcfd of unallocated pipeline capacity is also available. The scheduled monthly storage inventories which Tennessee, intends to maintain and which are listed in the conditions contained in ordering paragraphs (F) through (H) below are designed to provide adequate storage inventory levels to meet Tennessee's obligations and to provide an end of withdrawal season top storage inventory of zero.

Tennessee has demonstrated a need to construct and operate the proposed facilities in the manner proposed. Therefore, we find that the public convenience and necessity require that a certificate of public convenience and necessity be issued subject to the terms of the stipulation entered into by the parties to the proceeding.

The Commission further finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in *Tennessee Gas Transmission Co.*, Docket No. G–910 (6 FPC 777).

(2) The facilities to be constructed hereinbefore described, as more fully described in the application and evidence in this proceeding are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Tennessee are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(4) Tennessee is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Tennessee and the proposed abandonment of facilities are required and permitted by the public convenience and necessity and a certificate and approval therefor should

be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b) (c) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) The stipulation entered into by Tennessee, various of the interveners, and the staff of the Commission and put into the record on April 29, 1966 in Docket No. CP66-180 is hereby accepted and approved.

(B) A certificate of public convenience and necessity is issued authorizing Tennessee to construct and operate the proposed facilities to sell and deliver natural gas as hereinbefore described, all as more fully described in the application and evidence in this proceeding, upon the terms and conditions of this order.

(C) Tennessee is granted permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application and evidence in the proceeding.

(D) The authorization to increase East Tennessee Natural Gas Company's Maximum Contract Quantity is limited to a volume of 13,562 Mcf per day less than that proposed by Applicant until such time as East Tennessee is certificated in Docket No. CP65-66 to render additional service to Chattanooga Gas Company. If East Tennessee's application at Docket No. CP65-66 is denied, the 13,562 Mcf reduction in East Tennessee's proposed Maximum Contract Quantity will be considered as unallocated peak day capacity on Tennessee's system.

(E) The certificate issued herein shall not be considered as a prejudgment of the issues involved in Docket No. R-293, "Provision for Reserve Capacity in Natural Gas Pipeline Company Certificate Applications".

(F) Without specific permission from the Commission, Tennessee shall make no sales under Rate Schedules R, SR, TWS, ERS, or excess withdrawal provisions of Rate Schedules SS-5 and SS-E prior to November 1, 1966; *Provided*, however, that sales under such rate schedules may be made of such amount of gas which Tennessee is reasonably convinced cannot be moved beyond its Compressor Station No. 200.

During the period November 1, 1966 through March 31, 1967, Tennessee shall be permitted to make sales under such rate schedules of 1,300 MMcf each month plus or minus the amount of excess or deficiency, as the case may be, in top storage inventory based on the top storage inventory for the month ending prior to such sales as shown below:

October, 1966	16,989 MMcf
November, 1966	16,082 MMcf
December, 1966	11,344 MMcf
January, 1967	6,460 MMcf
February, 1967	1,750 MMcf
March, 1967	0 MMcf

Any sales of gas under such rate schedules as contemplated above shall be made so as to be consistent with the maintenance of the specified top storage inventory for the end of the then current month.

(G) Without specific permission from the Commission, Tennessee shall make no sales under Rate Schedules R, SR, TWS, ERS, or excess withdrawal provisions of Rate Schedules SS-5 and SS-E during the months of April through October, 1967; *Provided*, however, that sales under such rate schedules may be made if

Tennessee has had the following volumes of gas in top storage at the end of the immediately preceding month:

March, 1967	0 MMcf
April, 1967	2, 569 MMcf
May, 1967	6, 318 MMcf
June, 1967	10, 752 MMcf
July, 1967	15, 621 MMcf
August, 1967	20, 244 MMcf
September, 1967	24, 012 MMcf
October, 1967	27, 000 MMcf

and provided further that additional sales under such rate schedules may be made of such amounts of gas which Tennessee is reasonably convinced cannot be moved beyond its Compressor Station No. 200.

(H) During the period November 1, 1967 through March 31, 1968, Tennessee shall be permitted to make sales under such rate schedules of 1,300 MMcf each month, plus or minus the amount of excess or deficiency, as the case may be, in top storage inventory based on the top storage inventory for the month ending prior to such sales as shown below:

October, 1967	27, 000 MMcf
November, 1967	23, 624 MMcf
December, 1967	16, 155 MMcf
January, 1968	9, 210 MMcf
February, 1968	2, 646 MMcf
March, 1968	0 MMcf

Any sales of gas under such rate schedules as contemplated above shall be made so as to be consistent with the maintenance of the specified top storage inventories for the end of the then current month.

(I) The conditions set forth in ordering paragraphs (F), (G), and (H) shall not be construed as prohibiting Tennessee, upon a proper showing, from requesting the Commission to either modify or remove such conditions.

(J) With respect to the conditions set forth in paragraphs (F), (G), and (H) above, Tennessee will, on or before the 15th of each month, report to the Secretary of the Commission (1) its top storage inventory balance as of the end of the month immediately preceding such report, and (2) any sales of natural gas made during the immediately preceding month under Rate Schedule R, SR, TWS, ERS and under the excess withdrawal provisions of Rate Schedules SS-5 and SS-E, showing the specific rate schedule under which each such sale was made, the customer to whom the sale was made, and the volumes of natural gas sold.

(K) Permission for, and approval of, the abandonment of facilities shall not be construed as Commission approval or disapproval of the proposed accounting treatment contained in Exhibit Y to the application in Docket No. CP66-180.

(L) The certificate issued by paragraphs (B) and (C) above and the rights granted thereunder are conditioned upon Tennessee's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), and (e) of Section 157.20 of said Regulations.

(M) The facilities hereby authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (B) above shall commence, as provided by paragraph (b) of Section

157.20 of the Commission's Regulations under the Natural Gas Act, within 8 months from the date on which this order issues.

(N) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (C) above within ten days of such abandonment.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66–191

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF SERVICE

(Issued May 10, 1966)

On December 13, 1965, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66–191 an application as supplemented on February 28, 1966, pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon the natural gas transportation service performed for Tennessee Gas Transmission Company (Tennessee) and for a certificate of public convenience and necessity authorizing the construction and operation of natural gas pipeline facilities, as more fully set forth in the application.

On January 22, 1946, Applicant commenced the natural gas transportation service for Tennessee between the Carthage Field, Panola County, Texas, and West Monroe, Louisiana. On January 20, 1965, Tennessee advised Applicant that it did not wish to extend the term of the transportation agreement beyond its expiration date of January 22, 1966. The service involved the transportation of 121,300 Mcf of natural gas per day a distance of 143 miles pursuant to Applicant's Rate Schedule T–1.

Tennessee no longer requires the transportation service. Applicant therefore proposes to abandon the service but will retain in place the existing sales meter and related facilities for use in connection with an emergency exchange agreement with Tennessee (Applicant's Rate Schedule X–15).

Applicant states that upon termination of the transportation service for Tennessee its 20-inch Carthage-Longview and 18-inch Champlin Oil & Refining Company pipelines will be better utilized and more efficiently operated if a tie-over between the lines is constructed. Applicant requests authorization to construct 20 feet of 10-inch pipeline tie-over between the above-mentioned pipelines in Panola County, Texas. The proposed tie-over will, in effect, loop a portion of the Carthage-Longview Line and enable Applicant to better utilize this pipeline.

The estimated cost of construction of the proposed tie-over pipeline is $5,668, which will be financed out of current working funds.

Due notice of the filing of the application was published in the Federal Register on December 30, 1965 (30 F.R. 16286). On January 4, 1966, Tennessee filed a petition to intervene stating that it had no objection to disposal of the application pursuant to the shortened procedure provided for by Section 1.32(b) of the Commission's Rules of Practice and Procedure, but merely wished to be advised in the event of a formal hearing. No other petition to intervene, protest or notice of intervention has been filed in this proceeding.

At a hearing held on May 5, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

(6) The service to be abandoned, as hereinbefore described and as more fully described in the application in this proceeding, is subject to the jurisdiction of the Commission and abandonment of such service by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(7) Such abandonment, as hereinbefore described and as more fully described in the application in this proceeding, is permitted by the public convenience and necessity and an order approving same should be issued as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, United Gas Pipe Line Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation as authorized in paragraph (A) above within 60 days from the date of this order, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act.

(D) Permission for and approval of the abandonment by Applicant of the transportation service hereinbefore described, as more fully described in the application in this proceeding, are granted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

WESTERN KENTUCKY GAS COMPANY AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66-295

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 10, 1966)

On March 21, 1966, Western Kentucky Gas Company (Applicant) filed in Docket No. CP66-295 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Tennessee Gas Transmission Company (Respondent) to establish an additional point of physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 239 Mcf of natural gas per day for resale and distribution in the City of Hustonville, Lincoln County, Kentucky, as more fully set forth in the application.

Applicant will construct and operate a natural gas distribution system in the City of Hustonville, Lincoln County, Kentucky, consisting of 11,500 feet of 2$\frac{3}{8}$-inch O.D. pipeline extending from Respondent's main pipeline situated approximately 0.3 mile north of Hustonville to and through the proposed service area, 1,500 feet of 1$\frac{5}{16}$-inch O.D. pipeline in the service area, a regulator station and appurtenant valves and fittings. Respondent will install a meter.

Applicant estimates that the volumes of natural gas required for service to Hustonville during the first three years of proposed operations are as follows:

	First year	Second year	Third year
Annual (Mcf)	13,307	16,263	19,758
Peak day (Mcf)	162	197	239

The gas is to be purchased by Applicant from Respondent under Respondent's GS-2 Rate Schedule.

The estimated cost of the facilities to be constructed by Applicant is $37,100, which will be financed through short-term bank loans and retained earnings.

Applicant acquired a 20-year franchise from the City of Hustonville by successfully bidding at a public auction of the franchise on December 28, 1965. On March 4, 1966, the Public Service Commission of Kentucky issued a certificate of convenience and necessity to Applicant authorizing the construction and operation of the distribution system as proposed.

Respondent filed an answer to the application on April 8, 1966, stating that it does not oppose the issuance of an order directing it to serve Applicant as requested in the application.

Due notice of the filing of the application was published in the Federal Register on April 1, 1966 (31 F.R. 5272). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Tennessee Gas Transmission Company, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G-910 (6 FPC 777).

(2) Applicant is a public utility company in the Commonwealth of Kentucky and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to render natural gas service to Applicant, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish an additional connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 239 Mcf of natural gas per day to Applicant for resale and distribution in the City of Hustonville, and its environs, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

COMMUNITY PUBLIC SERVICE COMPANY, DOCKET NO. E-7274

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued May 11, 1966)

By order issued April 29, 1966, 35 FPC 644, in the above-entitled matter, the Commission authorized Community Public Service Company (Applicant), to issue and sell at competitive bidding $5,000,000, principal amount of first Mortgage Bonds, due 1996, subject among others, to the provisions set forth in paragraph (B) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on May 11, 1966, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Salomon Brothers & Hutzler, to purchase the proposed issuance of $5,000,000, principal amount of Bonds, for the price of 100.82% of principal amount, with an interest rate of 5⅞%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (B) of the Commission's order issued April 29, 1966, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (C), (D) and (E) of the Commission's order issued April 29, 1966, in the above docket.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

LUCY G. MOSES, DOCKET NO. CS66-6; HENRY AND LUCY MOSES FOUNDATION TRUST, DOCKET NO. CS66-7; BANKERS TRUST COMPANY AS TRUSTEE OF WILLIAM L. HERNSTADT 1950 TRUSTS, DOCKET NO. CS66-8; ESTATE OF WILLIAM L. HERNSTADT, DECEASED, DOCKET NO. CS66-9

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING SMALL PRODUCER CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY, TERMINATING CERTIFICATES, CANCELLING FPC GAS RATE SCHEDULES, AND SEVERING AND TERMINATING PROCEEDINGS

(Issued May 11, 1966)

Each Applicant herein has filed an application pursuant to Section 7(c) of the Natural Gas Act and Section 157.40 of the Regulations thereunder for a small producer certificate of public convenience and necessity authorizing the sale for resale and delivery of natural gas in interstate commerce from the Permian Basin area of Texas and New Mexico, all as more fully set forth in the Appendix hereto and in the applications.

Applicants have heretofore been authorized to sell natural gas from the Permian Basin area; and, therefore, the small producer certificates issued to them shall be effective on the date of this order. Applicants' presently effective certificates for sales from the Permian Basin area proposed to be continued under small producer certificates will be terminated and the related FPC gas rate schedules will be cancelled.

Applicants have heretofore filed increases in rate which were suspended in Docket Nos. RI62-116, RI62-117, RI62-118 and RI62-124 and have not been made effective. Said suspension proceedings, which are consolidated with the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61-1, *et al.*, 34 FPC 424, will be severed from said proceeding and terminated.

After due notice no notices of intervention have been received. A petition for leave to intervene was filed on February 3, 1966, by Hunt Oil Company and was denied by order issued March 4, 1966, 35 FPC 331. An order denying rehearing of said order was issued on April 26, 1966, 35 FPC 636. No further petitions for leave to intervene have been received.

At a hearing held on May 5, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications, submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Each Applicant herein is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications herein and in the Appendix hereto, will be made in interstate commerce subject to the jurisdiction of the Commission, and such sales by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) Applicants are independent producers of natural gas who are not affiliated with natural gas pipeline companies and whose total jurisdictional sales on a nationwide basis, together with sales of affiliated producers, were not in excess of 10,000,000 Mcf at 14.65 psia during the preceding calendar year.

(5) The sales of natural gas by Applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and small producer certificates of public convenience and necessity therefor should be issued as hereinafter ordered and conditioned.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificates heretofore issued to Applicants for sales of natural gas from the Permian Basin, which sales will be continued under the small producer certificates issued hereinafter, should be terminated, and the related FPC gas rate schedules should be cancelled.

(7) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the proceedings pending in Docket Nos. RI62-116, RI62-117, RI62-118 and RI62-124 should be severed from the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61-1, *et al.*, and terminated.

The Commission orders:

(A) Small producer certificates of public convenience and necessity are issued upon the terms and conditions of this order authorizing the sale for resale and delivery of natural gas in interstate commerce by Applicants from the Permian Basin area of Texas and New Mexico, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, all as hereinbefore described and as more fully described in the Appendix hereto and in the applications in this proceeding.

(B) The certificates granted in paragraph (A) above are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission, and particularly,

(a) The subject certificates shall be applicable only to all previous and all future "small producer sales," as defined in Section 157.40(a)(3) of the Regulations under the Natural Gas Act, from the Permian Basin area,

(b) Sales shall not be at rates in excess of those set forth in Sections 157.40(b)(1) of the Regulations under the Natural Gas Act, and

(c) Applicants shall file annual statements pursuant to Section 154.104 of the Regulations under the Natural Gas Act.

(C) The certificates granted in paragraph (A) above shall remain in effect for small producer sales until the Commission on its own motion or on application terminates said certificates because Applicants no longer qualify as small producers or fail to comply with the requirements of the Natural Gas Act, the regulations thereunder, or the terms of the certificates. Upon such termination Applicants will be required to file separate certificate applications and individual rate schedules for future sales. To the extent compliance with the terms and conditions of this order is observed, the small producer certificates will still be effective as to those sales already included thereunder.

(D) The grant of the certificates issued in paragraph (A) above shall not be construed as a waiver of the requirements of Section 7 of the Natural Gas Act or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificates aforesaid for service to the particular customers involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificates aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales subject to said certificates.

(E) The small producer certificates issued herein shall be effective on the date of this order.

(F) The certificates heretofore issued to Applicants for sales proposed to be continued under small producer certificates are terminated and the related FPC gas rate schedules are cancelled.

(G) The proceedings pending in Docket Nos. RI62-116, RI62-117, RI62-118 and RI62-124 are severed from the proceeding on the Order to Show Cause issued August 5, 1965, in Docket No. AR61-1, *et al.*, and terminated.

TOWN OF CORN, OKLAHOMA AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-126

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 12, 1966)

On October 22, 1965, the Town of Corn, Oklahoma (Applicant), filed an application in Docket No. CP66-126, as supplemented on March 14, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Respondent) to establish physical connection of its transportation facilities with the proposed facilities of Applicant and to sell natural gas to Applicant, all as more fully set forth in the application, as supplemented, on file with the Commission.

Applicant proposes to construct and operate a municipally-owned natural gas distribution system within its borders, and environs adjacent thereto, and approximately 1.7 miles (9200 feet) of connecting lateral extending from the Town of Corn in a westerly direction to Respondent's transmission line, at which point Applicant requests Respondent provide a tap, regulating and metering facilities.

The estimated annual and peak day gas requirements for the first three years of the proposed operations are as follows:

	First year	Second year	Third year
Annual (Mcf)	21,123	23,786	27,302
Peak day (Mcf)	361	416	481

The total estimated cost of Applicant's proposed distribution system and connecting lateral is $43,549, which will be defrayed from the sale of gas revenue bonds.

Respondent was duly notified by letter of the Commission dated October 27, 1965, of the filing of the application by the Town of Corn, Oklahoma, for an order directing it to provide the requested connection and service. The Respondent did not file an answer to the application within the time limits prescribed by the Commission's Regulations, and it is therefore assumed it has no objection to the rendering of the requested service.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on November 6, 1965 (30 F.R. 14056). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 481 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in the Town of Corn, Oklahoma, and environs, within one year from the date of issuance of this order.

(5) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon it nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Natural Gas Pipeline Company of America, Respondent, is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as herein described, and to sell and deliver up to 481 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 10 days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP66-241

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 12, 1966)

On January 27, 1966, Kansas-Nebraska Natural Gas Company, Inc. (Applicant) filed in Docket No. CP66-241 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 3,300 horsepower of natural gas compression and 68 miles of various diameter natural gas pipeline, all as more fully set forth in the application.

Specifically, Applicant proposes to construct and operate natural gas facilities as follows:

(A) Install approximately 1,100 additional horsepower at the Big Springs, Nebraska, Compressor Station;

(B) parallel 24 miles of 10-inch pipeline with 12-inch pipeline between Ogallala and Paxton, Nebraska;

(C) replace 10 miles of 8-inch and 2 miles of 10-inch pipeline with 16-inch pipeline between North Platte and Brady, Nebraska;

(D) install a new 1,100 horsepower compressor station at Riverdale, Nebraska;

(E) install a 1,100 horsepower addition to the Grand Island, Nebraska, Compressor Station;

(F) replace 24 miles of 6-inch pipeline with 8-inch pipeline between Riverdale and Litchfield, Nebraska;

(G) replace approximately 8 miles of 2-inch pipeline between Northport and Oshkosh, Nebraska, with 3-inch pipeline.

Applicant states that the increase of firm market demands of the towns presently connected to its system makes it necessary for Applicant to increase its transmission capacity to serve the additional growth. The capacity of the main transmission facilities will be increased by approximately 10,000 Mcf per day.

Additional sales to existing customers utilizing the facilities to be constructed will be made under existing filed FPC rate schedules, as those sales are subsequently authorized. No new authorizations for sales are sought in the instant filing.

The estimated total cost of construction of the facilities listed above is $1,590,700, which will be financed from current working capital and by interim bank loans if required.

Due notice of the filing of the application was published in the Federal Register on February 16, 1966 (31 F.R. 2801). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation with its principal place of business in Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Kansas-Nebraska Natural Gas Company, Inc., authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MICHIGAN GAS AND ELECTRIC COMPANY, DOCKET NO. E-7222

ORDER DENYING MOTION TO OMIT INTERMEDIATE DECISION PROCEDURE

(Issued May 12, 1966)

Staff counsel on April 20, 1966, filed a motion under Section 1.30(c) of the Rules of Practice and Procedure to omit the intermediate decision procedure in this proceeding. On April 29, 1966, Michigan Gas and Electric Company (MG&E), filed an answer in opposition to staff's motion. For reasons set forth hereafter we deny staff's motion.

This proceeding was initiated by Commission order issued May 4, 1965, 33 FPC 954, instituting an investigation and hearing to determine the lawfulness of wholesale electric rates and charges of MG&E to the City of Dowagiac, Michigan and to the Village of Paw Paw, Michigan. The hearing convened on December 22, 1965, before a Commission Examiner and concluded on April 18, 1966. A three part briefing schedule has been fixed by the Examiner with final briefs to be filed on or before July 11, 1966.

Staff bases its motion primarily upon the fact that the intermediate decision procedure carries with it certain time limitations. However, staff fails to show, in the circumstances of this proceeding, that due and timely execution of the Commission's regulatory functions warrants our dispensing with the Examiner's initial decision.

We agree with staff's statement that this proceeding should be concluded with all prudent speed. We are confident that the Examiner also recognizes the desirability of expediting the decisional process. The briefing schedule as fixed by the Examiner is calculated to balance such time considerations with the demands of resolving the factual and legal issues presented in this proceeding.

Upon careful consideration of the arguments for and against the motion to omit the intermediate decision procedure, we find it in the public interest to deny staff's motion.

The Commission orders:

The motion to omit the intermediate decision procedure filed by staff is hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SHENANDOAH GAS COMPANY, DOCKET NO. CP65-287

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 12, 1966)

On March 16, 1966, Shenandoah Gas Company (Petitioner) filed in Docket No. CP65-287 a petition to amend the order issued in said docket on June 29, 1965, 33 FPC 1300, by authorizing the construction and operation of additional natural gas facilities to deliver natural gas on an interruptible basis to a new industrial customer, Bauhan-Davis Lime Co., Inc. (Bauhan-Davis), as more fully set forth in the petition to amend.

In the order issued June 29, 1965, Petitioner was authorized, *inter alia*, to construct and operate approximately 1.8 miles of 2-inch and 3-inch pipeline lateral from Strasburg, Virginia, to the 26-inch transmission pipeline of Atlantic Seaboard Corporation (Atlantic) for service to Strasburg. Atlantic was directed to establish physical connection of its facilities with the facilities to be constructed by Petitioner and sell to Petitioner up to 97 Mcf of natural gas per day.

Petitioner now requests authorization to construct and operate 300 feet of 4-inch and 5,700 feet of 3-inch steel pipeline with appurtenant meter and regulator facilities. The pipeline will extend from the existing point of interconnection with Atlantic's facilities authorized June 29, 1965, to the Bauhan-Davis plant located in Shenandoah County, Virginia, in the vicinity of Strasburg.

Bauhan-Davis proposes to use the natural gas in producing lime from local deposits of limestone in the area. The process involves the calcination of lime rock for use primarily in the manufacture of steel and glass.

Petitioner estimates that the annual and daily requirements for natural gas to serve Bauhan-Davis on an interruptible basis during the first three years of operations will be 195,000 Mcf and 610 Mcf, respectively. The agreement between Petitioner and Bauhan-Davis calls for the delivery of a maximum of 6,250 therms per day on an interruptible basis.

The estimated cost of the facilities to be constructed is $32,700, which will be financed from open account advances made by Washington Gas Light Company, Petitioner's parent company.

On April 20, 1966, Atlantic filed an answer to the petition to amend stating that its system capacity and its Contract Demand with Petitioner are both sufficient to cover the contemplated service.

Due notice of the petition to amend was published in the Federal Register on March 31, 1966 (31 F.R. 5234). No protest, petition to intervene, or notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order issued in Docket No. CP65-287 on June 29, 1965, be amended as hereinafter ordered.

The Commission orders:

(A) The order issued in Docket No. CP65-287 on June 29, 1965, authorizing Petitioner, Shenandoah Gas Company, to construct and operate certain natural gas facilities is amended by authorizing the construction and operation of 300 feet of 4-inch and 5,700 feet of 3-inch steel pipeline lateral and the delivery of up to 6,250 therms per day of natural gas to Bauhan-Davis as described above and as more fully described in the petition to amend.

(B) Paragraph (D) of the order issued in this docket on June 29, 1965, is amended to read as follows: Atlantic Seaboard Corporation is directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver at such connection natural gas to Applicant for resale in the Strasburg area all as hereinbefore described and as more fully set forth in the application as amended in this proceeding.

(C) The authorization herein issued shall be without force and effect unless the fees, if any, prescribed by Sections 159.2(b) and 159.2(d) of the Commission's Regulations under the Natural Gas Act, established by the Commission's Order Nos. 317 and 317-A in Docket No. R-282, 35 FPC 30, 392, have been paid in accordance with the requirements thereof.

(D) The interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Petitioner for firm service to its customers.

(E) In all other respects the order issued in Docket No. CP65-287 on June 29, 1965, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP66-288

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 12, 1966)

On March 14, 1966, Transwestern Pipeline Company (Applicant) filed in Docket No. CP66-288 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas compressor facilities, as more fully set forth in the application.

Specifically, Applicant will construct and operate the following facilities:

(1) a 1,000 horsepower gas turbine compressor unit and appurtenant facilities at Applicant's existing Keystone Station No. 1 in Winkler County, Texas, and

(2) a 660 horsepower reciprocating compressor unit and appurtenant facilities on Applicant's existing Atoka pipeline lateral in Eddy County, New Mexico.

Applicant states that the volume of natural gas which it is required to take into its Keystone lateral has increased to the point where additional capacity is required on that lateral and that the additional 1,000 horsepower compressor is needed to enable it to meet its commitments.

The volume of natural gas which Applicant is required to take from wells connected to its Atoka lateral has also increased in sufficient quantities to require additional capacity on that lateral. The proximity of the Atoka Field to the junction of Applicant's West Texas and Panhandle systems makes additional capacity on the Atoka lateral desirable for the purpose of furnishing greater operating flexibility to meet peak demand.

The total estimated cost of the proposed facilities is $428,000, which will be financed from internally generated funds.

Due notice of the filing of the application was published in the Federal Register on March 26, 1966 (31 F.R. 5025). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued August 10, 1959, in Docket No. G–14871, *et al.* (22 FPC 391).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transwestern Pipeline Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, by October 1, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66–291

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1966)

On March 16, 1966, El Paso Natural Gas Company (Applicant) filed an application in Docket No. CP66–291 pursuant to Section 7(c) of the Natural Gas

Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, the acquisition from Southern Union Gas Company (Southern Union) and operation of a segment of pipeline and the sale and delivery of natural gas to Southern Union, all as more fully set forth in the application.

Applicant and Southern Union have formulated a project to provide natural gas service for consumers situated in the community of Truth or Consequences, Sierra County, New Mexico, and environs, including the community of Williamsburg situated adjacent to Truth or Consequences, and to consumers situated in areas of Luna, Sierra and Dona Ana Counties, New Mexico, along the route of the proposed facilities of Applicant and Southern Union described in the application. These communities are proposed to be served by Southern Union from volumes of natural gas to be sold to it by Applicant.

Applicant proposes to construct and operate a measuring and regulating station at a point where Southern Union's proposed 4½-inch O.D. pipeline will interconnect with Applicant's California mainline system. Southern Union will construct and operate approximately 70.1 miles of the 4½-inch line, of which Applicant proposes to acquire approximately 11.2 miles extending from the measuring and regulating station.

The estimated annual and peak day natural gas requirements of Southern Union are 355,300 Mcf and 2,740 Mcf, respectively. The service is proposed to be rendered pursuant to Applicant's Rate Schedules A-2, B-3 and D-3, FPC Gas Tariff, Original Volume No. 1.

The total cost to Applicant for this proposed project, including the purchase of a portion of the lateral pipeline to be installed by Southern Union, will be $120,000.00 and is to be financed from working funds.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G-242 and G-257 (3 FPC 851).

(2) The proposed acquisition of facilities from Southern Union, the construction and operation of facilities, and sale of natural gas in interstate commerce, as hereinbefore described, and as more fully described in the application and exhibits in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed acquisition of facilities, construction and operation of facilities, and sale of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas

Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant, El Paso Natural Gas Company, in this proceeding authorizing the construction and operation of facilities, the acquisition and operation of facilities and sale and delivery of natural gas to Southern Union, all as more fully described in the application and exhibits herein, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-314

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1966)

On April 4, 1966, Southern Natural Gas Company (Applicant) filed in Docket No. CP66-314 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities required to deliver natural gas on an interruptible basis to Paymaster Oil Company, a division of Anderson, Clayton & Co., Incorporated (Paymaster), all as more fully set forth in the application.

Applicant proposes to construct and operate the following natural gas facilities in Warren County, Mississippi.

(1) A line tap located at approximately M.P. 1.735 on Applicant's Vicksburg Harbor Project lateral pipeline in Warren County, Mississippi;

(2) 520 feet of 3½-inch pipeline from the said tap to Paymaster's plant; and

(3) A measuring station at the terminus of the said 3½-inch pipeline.

Paymaster's estimated natural gas requirements to be served through the proposed facilities are 1,500 Mcf per day. The service will be on an interruptible basis and rendered pursuant to a contract between Applicant and Paymaster dated February 25, 1966. Paymaster will utilize the gas in its plant, which is now under construction, for the processing of soybeans.

The estimated cost of the facilities to be constructed by applicant is $23,690, which will be defrayed from funds on hand.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation, having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Southern Natural Gas Company, in this proceeding authorizing the construction and operation of facilities, and the transportation of natural gas in interstate commerce for the delivery of up to 1500 Mcf per day on an interruptible basis, as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

(D) The certificate issued by paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be subject to any curtailment or interruption required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP65-398

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 13, 1966)

On June 11, 1965, Texas Gas Transmission Corporation (Applicant), filed in Docket No. CP65-398 an application and a supplement thereto on September 20, 1965, pursuant to Sections 7(b)[1] and 7(c) of the Natural Gas Act for permission and approval to abandon the operation of certain natural gas facilities at Applicant's Haughton, Louisiana, compressor station and to remove from the Haughton Station a 1320 Hp compressor unit to a proposed site in the Midland Field in Muhlenberg County, Kentucky, and for a certificate of public convenience and necessity authorizing the installation and operation of the 1320 Hp compressor unit, together with 3500 feet of 12-inch pipeline and 3200 feet of 10-inch pipeline, to be located in the Midland Field in Muhlenberg County, Kentucky, all as more fully set forth in the application and supplement thereto.

The compressor unit proposed to be relocated in the Midland Field is no longer needed in the Haughton Compressor Station in Bossier Parish, Louisiana, due to a decline in production from the nearby Carthage Field. Additional compression is required in the Midland Field to enable Applicant to meet its present and future purchase obligations related to the Midland Field reserves.

The estimated cost of the Applicant's proposals is $473,110 and will be defrayed from funds on hand.

After due notice of the application published in the Federal Register on June 26, 1965 (30 F.R. 8245) Charles Baker and W. E. Williams (B&W) independent producers selling natural gas to Applicant in the Midland Field, filed on July 15, 1965, a petition to intervene. The petition to intervene was withdrawn on February 17, 1966. No other petition to intervene, or notice of intervention or protest to the granting of the application, as supplemented, has been filed.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1948, in Docket No. G-855 (7 FPC 213).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

---

[1] Proposal to remove and relocate compressor unit treated as a request for permission to abandon operation in present location.

(4) The proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce, as hereinbefore described and as more fully described in the application, filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant, Texas Gas Transmission Corporation, of the facilities hereinbefore described, as more fully described in the application, supplement, and exhibits filed in this proceeding, are granted.

(B) A certificate of public convenience and necessity is issued to Applicant, Texas Gas Transmission Corporation, authorizing the construction and operation of facilities, and the transportation of natural gas as hereinbefore described, all as more fully described in the application, supplement and exhibits upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) within ten days of such abandonment.

(E) The facilities authorized shall be constructed and placed in actual operation, and the transportation of gas authorized in paragraph (B) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

THE COLORADO RIVER WATER CONSERVATION DISTRICT, PROJECT NO. 2511

ORDER ISSUING PRELIMINARY PERMIT

(Issued May 16, 1966)

Application was filed on March 31, 1965 by The Colorado River Water Conservation District (Applicant) of Glenwood Springs, Colorado, for a preliminary permit under Section 4(f) of the Federal Power Act (Act) for proposed Project

No. 2511, to be known as Red Cliff project, to be located on Eagle River and its tributaries, Homestake Creek, Peterson Creek and Fall Creek, in Eagle County, Colorado, near the towns of Red Cliff and Gilman, and affecting lands of the United States within the White River National Forest.

The proposed project, which is to serve as a combination water storage for industrial and municipal needs and hydroelectric development, would consist principally of a dam and reservoir and regulating reservoir, a canal, conduits and powerhouse with a proposed installed capacity therein of 16,000 kw.

The Secretary of the Army and the Chief of Engineers have advised that they have no objection to the issuance of a permit.

The U.S. Forest Service has advised that it has no objection to the issuance of a permit subject to the terms and conditions set forth in attached Form P–1, and to a special condition in the interests of alleviating damage to and achieving maximum utilization of the National Forest resources affected, as set forth in Article 11.

The Department of the Interior has recommended that any preliminary permit for the project be made subject to the attached Form P–1 terms and conditions and to special conditions in the Department's interests, as set forth in Articles 12, 13 and 14.

The Department of Health, Education, and Welfare has advised that while the project is not expected to create or intensify any water supply or water pollution problems in the area, vector prevention measures should be incorporated into the design, construction, and operation of the project, as provided for in Article 10.

No construction is authorized under a preliminary permit. Such a permit gives the permittee, during the period of the permit, the right of priority of application for license over other non-Federal entities, while the permittee undertakes the necessary studies and examinations required by Section 9 of the Federal Power Act in order to determine the economic feasibility of the proposed project, the means of securing the necessary financial arrangements for construction, the market for power, and all other information necessary for inclusion in an application for license, should one be applied for under the permit. A license would authorize construction of a project.

By our order issued November 1, 1965, 34 FPC 1211, we denied petitions to intervene in this proceeding filed by the City of Colorado Springs, Colorado, The City of Aurora, Colorado, and The New Jersey Zinc Company, all alleging principally that the proposed project might interfere with or affect claimed water rights of Petitioners. Our order stated that, as mentioned above, a preliminary permit does not authorize construction, and such a permit would not affect any vested water rights Petitioners may have.

Applicant requests a preliminary permit for 36 months. It appears appropriate, however, that the period of the permit should be 24 months as herein provided.

The Commission finds:

(1) Applicant is a municipal corporation organized under the laws of the State of Colorado.

(2) Public notice of the filing of the application has been given. Except for the aforesaid petitions to intervene, no protests or petitions to intervene have been received. No conflicting application is before the Commission. The project would not affect a Government dam.

The Commission orders:

(A) This preliminary permit is hereby issued to The Colorado River Water Conservation District (Permittee) of Glenwood Springs, Colorado, for a period of 24 months, effective as of May 1, 1966, for the sole purpose of maintaining priority of application for license for Project No. 2511, to be located on Eagle River and its tributaries, Homestake Creek, Peterson Creek and Fall Creek, near the towns of Red Cliff and Gilman, and affecting lands of the United States within White River National Forest, subject to the terms and conditions of Sections 4(f) and 5 of the Act which are incorporated herein by reference as a part of this permit, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project, as tentatively proposed in the application, would consist of: (1) Iron Mountain earth and rockfill dam (about 1,000 feet long and 190 feet high) located on Homestake Creek; (2) Iron Mountain Reservoir, at elevation 8,880, created by the dam on Homestake Creek, about 750 acres in area with a capacity of 53,000 acre-feet; (3) Pando Feeder Canal some 9,000 feet long to convey water from a headgate on the Eagle River to the above reservoir; (4) Gilman Power Conduit 6 feet in diameter 19,000 feet long; (5) a penstock 13,500 feet long; (6) a powerplant with a proposed installed capacity of 16,000 kw; (7) feeder conduits to convey water to the power conduit from intake structures on Peterson Creek and Fall Creek; (8) Edwards (regulating) Reservoir with a capacity of about 3,000 acre-feet; and (9) appurtenant facilities.

(C) This preliminary permit is also subject to the terms and conditions set forth in Form P-1 entitled "Terms and Conditions of Preliminary Permit" (16 FPC 1303-1305) which terms and conditions, designated and described as Articles 1 through 8, are attached hereto and made a part hereof; and further subject to the following special conditions set forth herein as additional articles:

Article 9. The Permittee shall submit at the close of each six month period, from the effective date of the Permit, to the Regional Engineer, Federal Power Commission, Fort Worth, Texas, having supervision over the project, or to such other officer as the Commission may designate, accurate statements of the work accomplished during the period and of the work contemplated under this permit for the ensuing period.

Article 10. The Permittee shall, during the period of project planning, consult with the appropriate State and local agencies to determine any necessary mosquito and insect control measures.

Article 11. The Permittee shall, prior to undertaking any investigation work under this preliminary permit on National Forest lands, consult with the Regional Forester, United States Forest Service, Denver Federal Center, Denver, Colorado, or his representative, as to reasonable requirements relative to operations, field surveys and explorations, and shall abide by such requirements: and shall cooperate with the United States Forest Service during the period of this permit to develop a plan for alleviation of damage to, and achieving maximum utilization of, National Forest resources insofar as affected by the proposed project.

Article 12. The Permittee shall, during the period of project planning, cooperate with the U.S. Fish and Wildlife Service and the Colorado Department of Game, Fish and Parks for the purpose of planning and designing adequate conservation measures: (1) to prevent loss of or damage to existing fish and wildlife resources, (2) to mitigate and compensate for the loss of or damage to those resources, and (3) to develop and improve those resources where practicable.

Article 13. The Permittee shall cooperate with the Bureau of Outdoor Recreation, the U.S. Forest Service, and the Colorado Department of Game, Fish, and Parks in developing a recreational use plan providing for full development of the project's recreational potential, consistent with regional needs for recreation opportunity, necessary limitations in the interests of public health and safety, and the necessity to operate the project for its primary purposes of water storage and hydroelectric development. This recreational use plan shall be submitted as Exhibit R in the application for license and shall meet all requirements of Federal Power Commission Order No. 292 of January 8, 1965, 33 FPC 32.

Article 14. The Permittee shall consult with the Regional Director, National Park Service, Southwest Regional Office, P.O. Box 728, Santa Fe, New Mexico 87501, concerning the cost of archeological survey and salvage operations.

Article 15. The Permittee shall, for the purpose of assuring the cooperation required by the terms of the permit, designate a liaison officer to act for the Permittee in keeping the several agencies specified in this permit currently informed, and such liaison officer shall communicate with such agencies within 60 days from the date of issuance of this permit.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this preliminary permit. In acknowledgment of the acceptance of this preliminary permit, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

E. L. CORD, PROJECT NO. 1746

ORDER ISSUING NEW LICENSE (MINOR)

(Issued May 16, 1966)

Application was filed on August 26, 1965, and supplemented on March 11, 1966, by E. L. Cord (Applicant) of Reno, Nevada, for a new license under Section 4(e) of the Federal Power Act (Act) for a period of 25 years for constructed minor Project No. 1746, located on Leidy or Robinson Creek, a tributary to Fish Lake Valley Sink, in Esmeralda County, Nevada, and affecting lands of the United States within the Inyo National Forest and other lands of the United States.

The present license for the project, issued to Applicant on February 7, 1962, 27 FPC 316, will expire on September 30, 1966.

The Chief, Forest Service, acting for the Secretary of Agriculture, who has supervision over the Inyo National Forest, has advised that the project will not interfere or be inconsistent with the purposes for which the National Forest was created or acquired, provided that Articles 7 and 8 of attached Form L–7, amended in the manner set forth in Articles 15 and 16, are included in any new license for the project.

The Department of the Interior has advised that the project has no significant effect on fish and wildlife and no conditions in addition to those set forth in attached Form L–7 are considered necessary for inclusion in any license for the project in the interest of fish and wildlife resources.

The Department of Health, Education, and Welfare has advised that the project does not have any significant adverse effects on water supply or water quality, and none is anticipated.

In the interest of assuring full public access to and utilization of project lands and waters for navigation and recreational purposes, we are including herein special Article 17.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, et al., Project No. 2347, et al.*, 33 FPC 275, we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) Applicant is a citizen of the United States and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(2) The project affects lands of the United States.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The issuance of a new license for the project will not interfere or be inconsistent with the purposes of any reservation or withdrawal of public lands, or with the purposes for which the Inyo National Forest was created or acquired.

(7) The installed capacity of the project is 300 horsepower, and the amount of annual charges to be paid under the new license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, based on such capacity, and for recompensing the United States for the use, occupancy, and enjoyment of its lands (44.43 acres) is reasonable as hereinafter fixed and specified.

(8) The transmission line mentioned in Paragraph (B) below is part of the project within the meaning of Section 3(11) of the Act.

(9) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d), 10(f); 11; 12: 14; except insofar as the power of condemnation is reserved; 15, 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

(10) The following described exhibit on file with the Commission and included in the application for new license by reference thereto, and hereto-

fore approved by the Commission as a part of the license expiring on September 30, 1966, should be reapproved as part of this new license:

Exhibit A Sheet 1 of 1: (FPC No. 1746-7) A map and plan in one sheet entitled "Existing Hydroelectric Plant for E. L. Cord at Dyer, Esmeralda County, Nevada. Circle L Ranch Pipeline Plan & Profile", drawn by Nelson Engineering—Civil Engineer, Reno, Nevada, November 30, 1960.

The Commission orders:

(A) This new license is hereby issued to E. L. Cord (Licensee) of Reno, Nevada, under Sections 4(e) and 10(i) of the Federal Power Act, for a period of 25 years, effective as of October 1, 1966, for the continued operation and maintenance of constructed minor Project No. 1746, located on Leidy or Robinson Creek, in Esmeralda County, Nevada, and affecting lands of the United States within the Inyo National Forest and other lands of the United States, subject to the terms and conditions of the Act, insofar as not expressly waived herein, which Act is incorporated herein as a part of this new license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 1746 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined;

(ii) a reinforced concrete dam 71 feet long and approximately 9 feet high; two 12-inch pipe conduits 97 feet long to a small concrete settling basin; a 12-inch pipe conduit about 1,525 feet long joining the original pipe line; a 10-inch pipe conduit about 19,484 feet long; a cement-block powerhouse containing two 150 horsepower water wheels connected to two 100 kw generators; a 5,700 foot long transmission line; and all other structures, fixtures, equipment or facilities used or useful in the operation and maintenance of the project and located on the project area; and all rights and interests therein, the possession of which is necessary in the maintenance of the project.

(C) This new license is also subject to the terms and conditions set forth in Form L-7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions, designated as Articles 1 through 14 (except Articles 7 and 8) are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 15. Timber on lands of the United States cut, used, or destroyed in the construction and maintenance of the project works, or in the clearing of said lands, shall be paid for and the resulting slash and debris disposed of in accordance with the requirement of the agency of the United States having jurisdiction over said lands. Payment for merchantable timber will be at current stumpage rates, and payment for young growth timber below merchantable size will be at current damage appraisal value. However, the agency of the United States having jurisdiction may sell or dispose of the merchantable timber to others than the Licensee, with the provisions that timber so sold or disposed of will be cut and removed from the area prior to or without undue interference with clearing operations of the Licensee and in coordination with his project construction schedules. Such sale or disposal to others will not relieve the licensee of the responsibility for the clearing and disposing of all slash and debris from project lands.

Article 16. The licensee shall do everything reasonably within its power and shall require its employees, contractors, and employees of contractors to do everything reasonably within their power, both independently and upon the request of officers of the agency concerned to prevent, make advance preparations for suppression, and suppress fires on the lands to be occupied or used under the license. The Licensee shall be liable for and pay the costs incurred by the United States in suppressing fires caused from the construction, operation, or maintenance of the project works or of the work appurtenant or accessory thereto under the license.

Article 17. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 18. The Licensee shall pay to the United States the following annual charges effective as of October 1, 1966:

(i) For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $15.00; and

(ii) for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of the transmission line right-of-way, $53.32 per annum.

(D) The exhibit designated and described in finding (10) above is hereby reapproved as part of this new license.

(E) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this new license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this new license. In acknowledgment of the acceptance of this new license, it shall be signed by the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP65-393

ORDER GRANTING MOTION FOR LEAVE TO INTERVENE OUT OF TIME AND PETITION TO INTERVENE

(Issued May 16, 1966)

On April 25, 1966, the Department of Health, Education, and Welfare (Department) filed a motion for leave to intervene out of time accompanied by a petition for intervention in the above-named case. On May 2, 1966, our staff filed an answer in opposition to such motion, and on May 5, 1966, Florida

Gas Transmission Company (Florida Gas) submitted an answer to the petition and motion.

The Department alleges that it has a statutory duty with respect to the causes, effects, extent and prevention and control of air pollution, that the public interest as represented by it is not adequately presented by existing parties in this proceeding[1] and therefore that its intervention is required at this time. It alleges that the interests of the Department and the public interests would be served by intervention to insure that its views on the air pollution issue in this proceeding can be adequately presented. Florida Gas states that it has been authorized to state that the Department does not desire to reopen the record to present testimony or cross-examine witnesses in view of the present posture of the proceeding. The record in the case was closed three days prior to the filing of the motion and petition to intervene and the briefing schedule has been fixed.

Staff objects to the intervention on the ground that it was filed much too late and that there is no extraordinary reason or good cause alleged to excuse such late filing, as required by our rules of practice and procedure. Staff points out that the Department knew of the air pollution issue long before it filed its motion and petition and, in fact, had been formally notified of the air pollution question in the case by a February 18, 1966 letter from our General Counsel.

In his letter to the General Counsel of the Department, our General Counsel called attention to the fact that testimony had been presented by Florida Gas Transmission Corporation and the Florida State Board of Health on the question of air pollution and stated "Should you desire to express your views on this matter in this case, I feel it would be advisable that you formally do so at an early stage of the proceeding." Although the Department, in filing its petition at a time after the record had just been closed, is late, the Department did state specifically that it wanted only those rights available to existing parties "at the present posture of this proceeding." Consequently, it will be unnecessary to reopen this record to obtain an expression of the Department's views based upon the record which has already been made.

While no excuse or reason was submitted by the Department for its late filing, we recognize that the issue of air pollution is a comparatively novel one in proceedings before us and would welcome the views of the governmental agency specifically concerned with the problem on a national basis. We would anticipate that future filings will be timely made. Since, in this proceeding there apparently would be no delay suffered by the presence of the Department as an intervener solely for the purpose of presenting its position in briefs or other post-hearing proceedings as may arise, we shall permit its limited intervention on the air pollution question at this time.

The Commission orders:

(A) The motion of the Department of Health, Education, and Welfare for leave to intervene out of time is granted.

(B) The petition of the Department of Health, Education, and Welfare for intervention is granted, limited, however to those rights and interests specifically set forth in its petition for intervention and to the timely filing of briefs and exceptions as appropriate, participation in oral argument, if any, before the Commission, and such further proceedings as may be had before the Commission.

---

[1] The Florida State Board of Health is an intervener.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

MIDHURST OIL CORPORATION, DOCKET NO. RI66-334

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued May 16, 1966)

Midhurst Oil Corporation (Midhurst) on April 22, 1966, filed a motion for reconsideration[1] of the order issued April 8, 1966, in Docket No. RI66-334 suspending for one day proposed increased rates of 14.5¢ per Mcf, designated as Supplement Nos. 4 and 13 to Midhurst's FPC Gas Rate Schedule Nos. 5 and 2, respectively, for sales of natural gas to El Paso Natural Gas Company from the Permian Basin area. Midhurst was also required by that order to submit quality statements for each rate schedule in the form prescribed by Opinion Nos. 468 and 468-A.

In support of its motion Midhurst claims that it is a "small producer" as classified in Opinion Nos. 468 and 468-A, 34 FPC 159, 1068 and therefore the proposed increased rates should not have been suspended and it should not be required to file quality statements.

Midhurst's proposed rates are equal to the applicable base rate ceiling prescribed in the Permian opinion. While those producers which filed applications for small producer certificates in accordance with Order No. 308 issued October 29, 1965 in Docket No. R-279, 34 FPC 1202 were relieved of the requirement of filing quality statements by the Permian opinion,[2] such relief was not accorded to any producer which did not apply for small producer authorization even though that producer might otherwise qualify as a small producer. Since Midhurst has not sought a small producer certificate it is not entitled to the relief authorized thereunder. Moreover, apart from the requirement in the April 8 order that quality statements be filed for the subject sales, Midhurst was also required to file such quality statements by Opinion No. 468, as subsequently amended, on or before March 21, 1966. In view of the foregoing, we shall deny Midhurst's motion for reconsideration.

The Commission orders:

For the reasons set forth above, Midhurst's motion for reconsideration filed on April 22, 1966, in Docket No. RI66-334 is denied.

---

[1] Midhurst termed the document a motion for rehearing or reconsideration. An application for rehearing of an interlocutory order such as here involved may not properly be filed [Section 1.30(e) of the Rules of Practice and Procedure. (18 CFR 1.30(e))]. The document has been considered as a motion for reconsideration pursuant to Section 1.12 of the Rules of Practice and Procedure.

[2] Under the Permian Opinion and order No. 308, those producers which receive small producer certificate authorization are entitled to the applicable area base ceiling rate or contract rate, whichever is lower no matter what type of gas is sold under the contract. Such producers are therefore not required to make downward adjustments for the sale of less than pipeline quality gas.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-310

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 16, 1966)

On March 30, 1966, Transcontinental Gas Pipe Line Corporation, (Applicant), filed in Docket No. CP66-310 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a river crossing, all as more fully set forth in the application.

Applicant proposes to construct and operate .85 mile of dual 18-inch pipeline, comprising an underwater crossing of the Atchafalaya River, on Applicant's main pipeline between its compressor stations No. 50 and No. 60 in St. Landry and Pointe Coupee Parishes, Louisiana. The Atchafalaya River is very erratic and subject to severe flooding and continual changes in course. The situation, has caused Applicant's concern over its existing crossings; an aerial bridge-type crossing composed of two 30-inch pipelines, and underwater crossing composed of two 18-inch pipelines. The new underwater crossing will provide added assurance of ability to render service.

The estimated total cost of construction of the proposed river crossing is $1,431,000, which will be financed from cash on hand or from short term bank loans.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 29, 1948, in Docket No. G-704 (7 FPC 24).

(2) The proposed construction and operation of facilities by Applicant as hereinbefore described, and as more fully described in the application, in this proceeding, is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs

(a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HUNT OIL COMPANY, DOCKET NO. RI66–127 AND HUNT OIL COMPANY (OPERATOR), ET AL., DOCKET NO. RI66–128

ORDER ACCEPTING DECREASED RATE FILINGS

(Issued May 18, 1966)

On April 19, 1966, Hunt Oil Company and Hunt Oil Company (Operator), *et al.*, (both referred to herein as Hunt) each submitted a proposed tax reimbursement decrease, totaling $1,300 annually. The tax reimbursement reductions are due to the buyer, United Gas Pipe Line Company, exercising its option to reduce the amount of Louisiana Severance Tax reimbursement due such seller under their respective Gas Purchase Contracts. Hunt's decreased rate filings are set forth in Appendix "A" hereof.

The proceeding in Docket No. RI66–127 involves a rate increase filed by Hunt Oil Company on November 1, 1965, proposing to increase its rate to 22.25¢ per Mcf at 14.65 psia for sales of natural gas to United Gas Pipe Line Company in the South Mermentau Area, Acadia Parish, Louisiana (South Louisiana). The proposed incerase, designated as Supplement No. 5 to Hunt's FPC Gas Rate Schedule No. 42, was suspended by the Commission's order issued October 22, 1965, until April 1, 1966, and was later permitted to become effective subject to refund as of April 1, 1966.

The proceeding in Docket No. RI66–128 involves a rate increase filed by Hunt Oil Company (Operator), *et al.*, on November 1, 1965, proposing to increase their rate to 22.375¢ per Mcf at 14.65 psia, for sales of natural gas to United Gas Pipe Line Company in the Castor Creek Area, Allen Parish, Louisiana (South Louisiana). The proposed increase, designated as Supplement No. 5 to Hunt's FPC Gas Rate Schedule No. 41, was suspended by the Commission's order issued October 22, 1965, until April 1, 1966, and was later permitted to become effective subject to refund as of April 1, 1966.

Hunt request that their proposed decreased rate filings be permitted to become effective as of April 1, 1966, the date the increased rates in Docket Nos. RI66–127 and RI66–128, including tax reimbursement, were made effective subject to refund. Since the proposed tax changes do not affect the base rate which exceeds the ceiling level for increased rates in South Louisiana as set forth in the Commission's Statement of General Policy No. 61–1, as amended, we believe that it would be in the public interest to waive the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act and accept for filing Hunt's proposed tax decreases effective as of April 1, 1966, the proposed effective date, subject to refund in the existing rate proceedings in Docket Nos. RI66–127 and RI66–128.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to accept for filing the proposed tax reimbursement rate decrease filings, designated as Supplement No. 6 to Hunt Oil Company's FPC Gas Rate Schedule No. 42, and Supplement No. 6 to Hunt Oil Company (Operator), *et al.'s* FPC Gas Rate Schedule No. 41, subject to the existing rate suspension proceedings in Docket Nos. RI66–127 and RI66–128, respectively, and refund obligations related thereto.

The Commission orders:

The tax reimbursement decreases, designated as Supplement No. 6 to Hunt Oil Company's FPC Gas Rate Schedule No. 42, and Supplement No. 6 to Hunt Oil Company (Operator), *et al.'s* FPC Gas Rate Schedule No. 41, are accepted for filing, effective as of April 1, 1966, subject to the existing rate suspension proceedings in Docket Nos. RI66–127 and RI66–128, respectively, and refund obligations related thereto.

APPENDIX A

Docket No.	Respondent	Rate Sched. No.	Supp. No.	Purchaser and Producing Area	Amount of Annual Decrease	Rate Filing Tendered	Effective Date	¢ per Mcf		Rate in Effect Subject To Refund in Docket Nos.
								Rate in Effect	Proposed Decreased Rate	
RI66-127	Hunt Oil Company, 1401 Elm Street, Dallas, Texas 75202.	42	[1] 6	United Gas Pipe Line Company (South Mermentau Area, Acadia Parish, Louisiana) (South Louisiana).	$1,050	4-19-66	[2] 4-1-66	[6] 22.25	[3][4][5] 22.00	RI66-127

---

[1] Includes a letter dated April 6, 1966, which provides for the reduction in tax reimbursement.

[2] The stated effective date is the effective date proposed by Respondent.

[3] Tax reimbursement rate decrease.

[4] Pressure base is 14.65 psia.

[5] Includes 1.50¢ per Mcf tax reimbursement.

[6] Includes 1.75¢ per Mcf tax reimbursement.

[7] Includes 1.875¢ per Mcf tax reimbursement.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-206

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 19, 1966)

On December 23, 1965, Northern Natural Gas Company (Applicant) filed in Docket No. CP66-206 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in order to sell and deliver increased quantities of natural gas to certain existing customers and to initiate firm natural gas service, through Applicant's Peoples Natural Gas Division, to a new plant of the U.S. Steel Corporation (U.S. Steel) now under construction near Mountain Iron, Minnesota, all as more fully set forth in the application in this proceeding.

Applicant proposes to increase its system capacity by 55,024 Mcf of gas per day. Of this amount 41.674 Mcf will be used to meet the increased contract demand requirements of its existing customers and 13,350 Mcf per day will be used to supply U.S. Steel. Applicant and U.S. Steel have entered into a contract, dated September 20, 1965, providing for maximum daily deliveries by Applicant of 13.350 Mcf. U.S. Steel, however, may exercise its right to have the daily delivery volume reduced to a minimum of 10,000 Mcf after it has determined the new plant's capacity. In the event U.S. Steel exercises its right to reduce the daily volume, Applicant shall be required to file a petition to amend the subject order to authorize any lower contract demand.

Applicant also requests approval of reductions in effective contract demands of certain communities presently served by three of its utility customers, Iowa Electric Light & Power Co., Western Power & Gas Company, Inc. and Applicant's Peoples Division. These reductions to individual communities do not constitute a decrease in the overall effective contract demands of the three utility customers involved.

Specifically, Applicant proposes to construct and operate the following facilities: (1) 8.5 miles of 30-inch pipeline north of Oakland, Iowa; (2) 10.1 miles of 30-inch pipeline northeast of Palmyra, Nebraska; (3) 10.6 miles of 36-inch pipeline north of Beatrice, Nebraska; (4) 8 miles of 30-inch pipeline north of Bushton, Kansas; (5) 10 miles of 36-inch pipeline north of Macksville, Kansas; (6) 1.9 miles of 6-inch pipeline near Harlan, Iowa; (7) 2.3 miles of 4-inch pipeline near Northfield, Minnesota; (8) 4.6 miles of 10-inch pipeline together with two 10-inch orifice meter runs near Mountain Iron, Minnesota, for service to the new U.S. Steel plant, and (9) certain piping modifications, additions to existing control system for North Branch, and compressor facilities, totaling approximately 39,365 horsepower, to be located at various points in Minnesota, Iowa, Kansas, Oklahoma and Texas.

Applicant states that it has been previously authorized to construct and operate certain facilities which are scheduled for construction during 1966. Additionally, at Docket No. CP65-196, Applicant has pending before the Commission authorization for other facilities which, if authorized, would be constructed in 1966. In viewing the 1966 construction program as a single larger increment in system capacity instead of a series of small individual increases, Applicant states that economies can be realized by taking advantage of large units of horsepower and larger diameter loops. By Commission order issued

February 21, 1966, 35 FPC 238, in Docket No. CP64–255 (Phase I), Applicant has already been authorized to revise certain 1966 construction, theretofore authorized in that docket, to reflect changes in construction necessary to realize such above-described economies. Accordingly, to conform any authorization which may be granted in Docket No. CP65–196 with the authorization granted hereinafter, Applicant should also file a petition to amend any order which may be issued authorizing facilities in Docket No. CP65–196 to reflect changes, if any, in the facilities which may be authorized by such order.

The total estimated cost of Applicant's proposed facilities is $16,996,700, which cost will be financed from the sale of sinking fund debentures and from internal sources such as reserve accruals, retained earnings and cash-on-hand.

Several petitions to intervene have been filed herein. None of said petitions requests formal hearing in this proceeding or objects to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said petitions appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 11, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and/or sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and/or sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and/or sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and *(e)* of Section 157.20 of such Regulations.

(6) Applicant should file a petition to amend the subject order to authorize any lower contract demand for U.S. Steel for use at the latter's proposed plant near Mountain Iron, Minnesota, should the precise contract demand to be subsequently determined be lower than the maximum daily volume of 13,350 Mcf hereinafter authorized to be transported and delivered to U.S. Steel.

(7) To conform any authorization which may be granted in Docket No. CP65–196 with the authorization granted hereinafter, Applicant should file a

petition to amend any order which may be issued authorizing facilities in Docket No. CP65–196 to reflect changes, if any, in the facilities which may be authorized by such order.

(8) This certificate should not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to sell and/or transport and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sales and/or transportation and deliveries of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) Applicant shall file a petition to amend the subject order to authorize any lower contract demand for U.S. Steel for use at the latter's proposed plant near Mountain Iron, Minnesota, should the precise contract demand to be subsequently determined be lower than the maximum daily volume of 13,350 Mcf authorized by paragraph (A) above to be transported and delivered to U.S. Steel.

(E) To conform any authorization which may be granted in Docket No. CP65–196 with the authorization granted in paragraph (A) above, Applicant shall file a petition to amend any order which may be issued authorizing facilities in Docket No. CP65–196 to reflect changes, if any, in the facilities which may be authorized by such order.

(F) This certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

[LETTER-ORDER ISSUING TEMPORARY CERTIFICATE]

Docket No. CI66–410, Sinclair Oil & Gas Company (Operator), et al.

SINCLAIR OIL & GAS COMPANY
Sinclair Oil Building
Tulsa, Oklahoma 74102

Attention: P. T. Davis, Manager
FPC Activity

Gentlemen:

This is with reference to your request filed March 18, 1966, in Docket No. CI66–410, for a temporary certificate to sell residue gas derived from gas-well

---

*Amended by letter-order issued June 17, 1966, 35 FPC 1046; Rehearing denied August 17, 1966, 36 FPC 458. Affirmed, *sub nom. Brooks Gas Corp.* v. *F.P.C.*, 383 F.2d 503 (CADC–1967).

gas to Northern Natural Gas Company from the Eldorado Plant, Schleicher County, Texas at a proposed rate of 16.5¢ per Mcf at 14.65 psia.

According to the application, the proposed sale may not meet all of the requirements set forth in the Commission's Opinion No. 468, 34 FPC 159, as modified. Accordingly, a temporary certificate is hereby issued to Sinclair Oil & Gas Company (Operator), *et al.* to sell natural gas as proposed in application for certificate, Docket No. CI66–410, from fields, other than the Velrex Eldorado field, located in Schleicher, Menard, Concho, Kimble, Tom Green, Sutton and Irion Counties, Texas.

(1) The initial rate shall be that provided in the rate schedule accompanying the certificate application or the applicable base area rate (16.5¢ per Mcf at 14.65 psia) as adjusted for quality pursuant to ordering paragraph (B) of the Commission's Opinion No. 468, as modified, whichever is lower.

(2) No increase in rate may be filed prior to January 1, 1968, except in compliance with a specific order of the Commission, for a rate in excess of the applicable area rate as determined pursuant to the Commission's Opinion No. 468, as modified, or pursuant to later order of the Commission.

(3) The filing, within 90 days from the date of initial delivery, of a Rate Schedule-Quality Statement as specified by ordering paragraph (F) of the Commission's Opinion No. 468, as modified, reflecting the rate determined in (1) above.

(4) If the quality of the gas delivered hereunder at any time deviates from the quality standards set forth in ordering paragraph (B) of Opinion No. 468–A, 34 FPC 1068, so as to require a downward adjustment to the existing rate, a notice of change in rate must be filed pursuant to the provisions of Section 4 of the Natural Gas Act; *provided, however*, that adjustments reflecting changes in Btu content shall be computed by the applicable formula and charged without the filing of a notice of change in rate.

(5) In the event any amounts are collected in excess of the rate finally determined in (1) above, your company shall refund to Northern, from the date of initial delivery, with interest of 7 percent per annum, all amounts collected in excess of such finally determined rate.

(6) This temporary certificate, with conditions attached thereto, shall not be construed to authorize Sinclair Oil & Gas Company (Operator), *et al.* to sell natural gas produced in the Velrex Eldorado field, Schleicher County, Texas, and shall be accepted as issued within 30 days herefrom by written acceptance by a responsible official of the company (original and three copies). If reconsideration of the temporary certificate is sought, service hereunder shall not be started. If service is commenced under this temporary certificate, the conditions attached shall be effective and the service may not be discontinued without permission of the Commission issued pursuant to the provisions of the Natural Gas Act.

Your related proposed rate schedule will be considered accepted for filing upon compliance with the above conditions to be effective on the date of initial delivery subject to the provisions of Sections 154.94(c) and 154.101 of the Commission's Regulations under the Natural Gas Act.

The related proposed rate schedule has been designated as follows:

Description	*Designation*
Contract 10–29–65	Sinclair Oil & Gas Company (Operator), et al. FPC Gas Rate Schedule No. 348

Please advise the Commission of the date of commencement of deliveries under such rate schedule making reference in your communication to the above designation.

Issuance of this temporary certificate and the acceptance of the above rate schedule are without prejudice to such final disposition of the application for certificate as the record may require. If service is not commenced within 90 days from the date of this temporary certificate, then such temporary certificate shall be void and of no effect.

By direction of the Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

HUNT OIL COMPANY, DOCKET NO. RI66-127

ORDER ACCEPTING DECREASED RATE FILING

(Issued May 20, 1966)

On April 28, 1966, Hunt Oil Company (Hunt) filed a letter correcting a previously filed rate increase which was made effective subject to refund in Docket No. RI66-127. Hunt's letter, construed as a notice of change, deletes that part of the prior rate increase relating to tax reimbursement which Hunt now states it is not entitled to under the contract terms. The decreased rate filing is set forth in Appendix "A" hereof.

The proceeding in Docket No. RI66-127 involves a rate increase filed by Hunt on October 1, 1965, proposing to increase its rate to 14.6958¢ per Mcf at 14.65 psia for sales of gas to Tennessee Gas Transmission Company from the Bethany Field, Panola County, Texas (Railroad District No. 6). The proposed increase, designated as Supplement No. 7 to Hunt's FPC Gas Rate Schedule No. 26, was suspended by the Commission's order issued on October 22, 1965, until April 1, 1966, and was later permitted to become effective subject to refund on April 1, 1966.

Hunt requests an effective date of April 1, 1966, for the proposed rate decrease to correspond to the date the prior rate increase of 14.6958¢, plus tax reimbursement, became effective subject to refund in Docket No. RI66-127. Since the proposed corrected rate filing is due to the elimination of the tax reimbursement, we believe that it would be in the public interest to waive the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act and accept for filing Hunt's proposed tax decrease effective as of April 1, 1966, subject to refund in the existing rate proceeding in Docket No. RI66-127.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to accept for filing the proposed tax reimbursement rate decrease filing designated as Supplement No. 1 to Supplement No. 7 to Hunt's FPC Gas Rate Schedule No. 26, effective as of April 1, 1966, subject to the existing rate suspension proceeding in Docket No. RI66-127 and refund obligation related thereto.

The Commission orders:

The tax reimbursement decrease, designated as Supplement No. 1 to Supplement No. 7 to Hunt's FPC Gas Rate Schedule No. 26, is accepted for filing effective as of April 1, 1966, subject to the existing rate suspension proceeding in Docket No. RI66-127 and refund obligation related thereto.

APPENDIX A

Docket No.	Respondent	Rate Sched. No.	Supp. No.	Purchaser and Producing Area	Amount of Annual Decrease	Rate Filing Tendered	Effective Date	¢ per Mcf		Rate in Effect Subject To Refund in Docket Nos.
								Rate in Effect	Proposed Decreased Rate	
RI66-127	Hunt Oil Company, 1401 Elm Street, Dallas, Texas 75202.	26	[1] 1 to 7	Tennessee Gas Transmission Company (Bethany Field, Panola County, Texas) (R.R. District No. 6).	$25	4-28-66	[2] 4- 1-66	[5] [6] 14.6958	[3] [4] [5] 14.5	RI66-127

---

[1] Letter dated April 27, 1966, being treated as a notice of change. Corrects previously filed notice of change.

[2] The date rate of 14.6958¢ per Mcf was placed into effect subject to refund in Docket No. RI66-127.

[3] Tax reimbursement decrease. Decrease due to no contractual basis for tax reimbursement at this time.

[4] Pressure base is 14.65 psia.

[5] Subject to a downward Btu adjustment.

[6] Includes base rate of 14.5¢ plus 0.1958¢ tax reimbursement.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. E-7280

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued May 20, 1966)

Iowa Southern Utilities Company (Applicant) filed an application on March 28, 1966 seeking an order pursuant to Section 203 of the Federal Power Act authorizing it to acquire certain electric facilities from Southwestern Federated Power Cooperative, Inc., (Southwestern) and to sell certain other electric facilities to Southwestern.

Applicant is incorporated under the laws of the State of Delaware and is qualified to do business in the State of Iowa with its principal business office at Centerville, Iowa. It is engaged primarily in the generation, transmission and sale of electric energy in 24 counties in south central and southeast Iowa.

Southwestern is a cooperative engaged in the generation and transmission of electric energy and supplies power to five cooperative distribution systems and to seven municipal systems.

Under an Interconnection and Joint Construction Agreement, dated July 28, 1965, the Applicant proposes to acquire and Southwestern proposes to sell two 69 KV transmission lines, one 3.95 miles in length extending from Southwestern's present substation near Osceola, Iowa, to Applicant's substation north of Osceola and the other 5.30 miles in length extending from Southwestern's Woodburn Junction Substation to Southwestern's Osceola Substation, for a cash consideration of $91,005. These lines have an original cost of $101,687, and an applicable accumulated provision of $10,682, for a depreciated original cost of $91,005, which amount is the same as the consideration. This purchase of facilities will not create an acquisition adjustment on the books of the Applicant.

Also, under the same Agreement, the Applicant proposes to sell and Southwestern proposes to acquire one 69/34.5 Kv transformer bank, located at Applicant's substation in Creston, Iowa, for a cash consideration of $6,210. This item of property has an original cost of $16,131, and an applicable accumulated provision for depreciation of $9,921, for a depreciated original cost of $6,210, which amount is the same as the consideration. This sale of plant will not create a gain or loss on the books of the Applicant.

Presently the western one-quarter of Applicant's system and the eastern one-half of the Southwestern system are super-imposed with Applicant serving the urban areas and Southwestern serving, through its distribution cooperatives, the rural areas. Applicant states that it is desirable, insofar as possible, that their respective ownership of facilities be continuous rather than alternate ownership of a given line. Therefore, in order to balance their respective investment in facilities in relation to the loads served and the benefits resulting from such facilities, Applicant states that it is necessary to transfer ownership of the facilities involved in this application. Applicant further states that if they had not entered into the above-mentioned Interconnection and Joint Construction Agreement both the Applicant and Southwestern would be forced to install substantially more facilities than are involved in this application.

Written notice of the application has been given to the Iowa State Commerce Commission and to the Governor of that State. Notice was also published in the Federal Register on April 13, 1966 (31 F.R. 5721), stating that any person desiring to be heard or to make any protest with reference to said application should on or before April 21, 1966, file with the Federal Power Commission, Washington, D.C. 20426, petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued July 1, 1963, *Iowa Southern Utilities Company*, Docket No. E-7103 (30 FPC 1).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Southwestern, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition and sale of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition and sale of facilities by Applicant all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7281

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE SINKING FUND BONDS

(Issued May 23, 1966)

Montana-Dakota Utilities Co. (Applicant), a corporation organized under the laws of the State of Delaware and doing business in the States of Minnesota, Montana, North Dakota, South Dakota and Wyoming, with its principal business office at Minneapolis, Minnesota, filed an application on March 29, 1966, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $10,000,000 principal amount of First Mortgage ——% Sinking Fund Bonds, due July 1, 1986.

Applicant proposes to issue the new Bonds under the provisions of its Indenture of Mortgage to the Chemical Bank New York Trust Company and John H. Baile as trustee, dated as of May 1, 1939, as supplemented and as to be further supplemented by a Twenty-sixth Supplemental Indenture to be dated June 1, 1966.

The Applicant intends, on or about May 25, 1966, to invite sealed, written proposals for the purchase of the $10,000,000 new Sinking Fund Bonds. The Statement of Terms and Conditions will contain the following principal provisions:

Each bid, which may be made by a single bidder or by a group of bidders, must be for the purchase of all the Bonds. No bidder may submit or participate in more than one bid. All bids must be presented to the Applicant at the offices of Chemical Bank New York Trust Company, Tenth Floor, 20 Pine Street, New York, N.Y., before 11:00 A.M., New York Time, on Thursday, June 2, 1966, and must be accompanied by deposits of $300,000.

Each bid shall specify the coupon rate, which rate shall be a multiple of ⅛ of 1%; and shall specify the price (exclusive of accrued interest) to be paid to the Applicant for the Bonds, which price shall not be less than 99% of principal amount. Each bid shall provide that accrued interest from June 1, 1966 to the date of payment therefor and delivery thereof will be paid by the purchaser or purchasers to the Applicant.

Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Statement of Terms and Conditions, it will accept the bid which will provide for the lowest annual cost of money.

The net proceeds from the $10,000,000 new Bonds will be used for payment of $4,000,000 short-term notes issued in 1965 to provide temporary financing for part of the cost of constructing additions to the Applicant's electric and gas plant in 1965, and the balance of the proceeds will be used for payment of part of the cost of the Applicant's 1966 construction program. Applicant's 1966 construction program calls for the expenditure of $11.7 million of which $7.9 million is estimated for electric facilities, $3.3 million for gas, and $500,000 for common utility property. Of the $7.9 million scheduled for electric facilities, $100,000 has been budgeted for production plant, $5.5 million for transmission facilities, $2.2 million for distribution facilities and $50,000 for general plant. An application for certification of certain gas items is now pending before this Commission in Docket No. CP66–82.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, Montana Board of Railroad Commissioners, North Dakota Public Service Commission, South Dakota Public Utilities Commission, Wyoming Public Service Commission, and to the Governors of those States. Notice has also been given by publication in the Federal Register on April 12, 1966 (31 F.R. 5670), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before April 27, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued April 26, 1962, *Montana-Dakota Utilities Co.*, Docket No. E–7027 (27 FPC 844).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuances of securities are, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of $10,000,000 First Mortgage ——% Sinking Fund Bonds, upon the terms and conditions and for the purposes specified in the application as described above, are hereby authorized, subject to the provisions of this order.

(B) None of the proceeds from the issuance and sale of the new Bonds shall be used for the payment of the cost of construction for the gas facilities described in the application in Docket No. CP66-82 prior to the issuance of certificates of convenience and necessity in accordance with the Natural Gas Act.

(C) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(D) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(E) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body.

(F) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHERN STATES POWER COMPANY, DOCKET NO. E-7284

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued May 23, 1966)

Northern States Power Company (Applicant), filed an application on April 18, 1966, with the Federal Power Commission seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue, from time to time, promissory notes in amounts not exceeding an aggregate amount of $40,000,000 outstanding at any one time to evidence short-term borrowing from commercial banks.

Applicant, a corporation organized under the laws of the State of Minnesota with its principal business office at Minneapolis, Minnesota, owns and operates utility properties and furnishes electric service at retail in 426 communities and adjacent territories and electric energy at wholesale for resale in 31 additional communities and at wholesale to rural electric cooperative associations and other utility companies located in Minnesota, North Dakota and South Dakota.

According to the application, promissory notes will be issued on various days and for various periods of time, but no note will mature more than 12 months after date of issue or renewal nor shall the maturity date of any note be later than October 31, 1967. Applicant states that the interest rate will be a rate that to the best knowledge and belief of the officers making the borrowings, does not exceed the prime loan interest rate at the time and place of making.

Applicant represents that it is its present intention, if, in the opinion of its directors and officers, market and economic conditions are favorable, to obtain funds for the prepayment of all of its promissory notes described above by offering at competitive bidding approximately $45,000,000 of First Mortgage Bonds on or about July 27, 1966. Applicant also intends to issue long-term and/or permanent securities in 1967.

According to the application, the proceeds from the bank borrowings to be evidenced by the promissory notes described above will be added to the general funds of the Applicant and used to pay in part the expenditures made and to be made in 1966 in connection with the Applicant's construction program. This program has an estimated cost of $74,600,000 in 1966. Included among Applicant's principal expenditures for its 1966 construction program are approximately $29,500,000 for its Allen S. King plant in Oak Park Heights, Minnesota, $3,800,000 for construction of approximately 100 miles of 345 kv transmission line from the Red Rock Substation to Adams Substation, $484,000 for the installation of transmission line outlet facilities at the Allen S. King plant, $502,000 for construction of 23.5 miles of 345 kv transmission line from Allen S. King plant to Terminal Substation, $779,000 for the installation of Terminal facilities at the Red Rock Substation, $1,535,000 for the installation of substation and line terminal facilities for the Allen S. King plant, and approximately $17,969,000 for distribution facilities.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the North Dakota Public Service Commission, and the South Dakota Public Utilities Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on April 30, 1966 (31 F.R. 6554), stating that any person desiring to be heard or to make any protest with reference to the application, shall file petitions or protests on or before May 10, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 3, 1965, *Northern States Power Company*, Docket No. E-7202 (33 FPC 942).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $40,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $40,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $40,000,000 outstanding at any one time, whether an original issue or a renewal note, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all notes to be issued pursuant thereto being not later than October 31, 1967.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE ATLANTIC REFINING COMPANY, G-9283, G-9284, ET AL.; TENNESSEE GAS TRANSMISSION COMPANY, RP65-6; NATURAL GAS PIPELINE COMPANY OF AMERICA, RP65-7; HUMBLE GAS TRANSMISSION COMPANY, RP65-12; NORTHERN NATURAL GAS COMPANY, RP65-14; UNITED GAS PIPE LINE COMPANY, RP65-15; TEXAS GAS TRANSMISSION CORPORATION, RP65-16; KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., RP65-17; CITIES SERVICE GAS COMPANY, RP65-21; UNITED FUEL GAS COMPANY, RP65-22; FLORIDA GAS TRANSMISSION COMPANY, RP65-26; TEXAS EASTERN TRANSMISSION CORPORATION, RP65-27; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, RP65-31

ORDER RELEASING REFUNDS IN PART

(Issued May 24, 1966)*

The Commission by order issued October 8, 1964, in *The Atlantic Refining Company*, Docket Nos. G-9283 and G-9284, *et al.*,[1] approved the settlement of

---

* See order issued August 2, 1966 rejecting application for rehearing, etc., 36 FPC 351.

[1] 32 FPC 933.

The Atlantic Refining Company's (Atlantic) pending rate and certificate proceedings. That order, among other things, directed Atlantic to retain the amounts of refunds to be made (with certain limited exceptions) until further order of the Commission. The retention requirement was imposed in order to accomplish the Commission's policy that refunds should flow-through to the extent of its jurisdictional reach. *Humble Oil & Refining Company*, Docket Nos. G–9287 and G–9288, *et al.*, 32 FPC 49, 52.

The report of Atlantic's refund computation filed December 28, 1964 shows that approximately $5,381,000, exclusive of escrow earnings, will be refunded in these proceedings. In response to a letter from the Secretary or on their own initiative, all of Atlantic's customers to whom substantial amounts are refundable from Atlantic have filed reports setting forth their proposed disposition of these amounts. The customers' reports have been analyzed and it appears that the major portion of the refund amounts being retained by Atlantic would flow-through to the limits of the Commission's jurisdiction. Some amounts would not be flowed-through by Atlantic's direct (primary) customers, and these amounts are not included in the amounts to be released. Those amounts which Atlantic is to continue to retain will be dealt with in separate proceedings concerning the claims of the respective primary customers that they are entitled to retain such amounts and not flow them through. We emphasize that we are not now passing judgment on the merits of these claims.[2]

The reports filed by Trancontinental Gas Pipe Line Corporation (Transco), Texas Gas Transmission Company (Texas Gas), Northern Natural Gas Company, Humble Gas Transmission Company, Kansas-Nebraska Natural Gas Company, Inc., Natural Gas Pipeline Company of America, and Tennessee Gas Transmission Company (Tennessee Gas) indicate that substantially all the jurisdictional portion of the amounts refundable by Atlantic to these companies would be flowed-through.

The major portion of the amounts to be refunded by the primary customers listed above will flow-through to the extent of the Commission's jurisdictional reach. There are particular amounts, however, with respect to which subsequent jurisdictional customers do not recognize a flow-through obligation, and we are directing Transco and Texas Gas to retain certain amounts pending further order of the Commission. Transco is directed to retain amounts refundable to The Manufacturers Light and Heat Company and United Natural Gas Company. Those two companies have indicated previously that they recognize no flow-through obligation with respect to Transco's Docket No. RP61–13, under which Transco will flow-through the amounts refundable by Atlantic. Texas Gas is directed to retain amounts attributable to purchasers by Texas Eastern Transmission Corporation and The Ohio Fuel Gas Company; this provision applies to amounts received by Texas Gas both as a primary customer of Atlantic and as a secondary customer through Tennessee Gas. Texas Eastern has stated previously that it has no flow-through obligation with respect to Texas Gas' Docket No. RP61–15, and Ohio Fuel does not propose to flow-through any refunds to its resale customers.

The other primary customers of Atlantic to whom substantial amounts are refundable are Texas Eastern Transmission Corporation (Texas Eastern), Florida Gas Transmission Company (Florida Gas), United Fuel Gas Company (United Fuel), Cities Service Gas Company (Cities), and United Gas Pipe Line Company (United Gas). Each of these companies claims that it is entitled to retain all or part of the amount refundable by Atlantic, as discussed below.

---

[2] See order issued October 4, 1965, in *Texas Eastern Transmission Corporation*, Docket No. RP66–12, 34 FPC 1099.

Texas Eastern and Florida Gas state that they would flow-through none of the Atlantic refunds, so those respective amounts must be retained.

United Fuel takes the position that it is not obligated to flow-through amounts refundable by Atlantic which reflect rates collected subject to refund in excess of 19.9 cents per Mcf. Therefore, we are releasing amounts representing the difference between the various settlement rates and 19.9 cents, and the balance of the refund will be retained by Atlantic.

The settlement by Cities in Docket No. RP64–9 utilized a cost-of-service which reflected Atlantic's settlement rates in the instant proceedings. Since Cities' settlement rates in Docket No. RP64–9 became effective as of April 23, 1964, we are directing Atlantic to release to Cities all amounts attributable to the period after April 22, 1964, which Cities will receive without further flow-through obligation. Atlantic is directed to retain all amounts refundable to Cities for the period from December 1, 1961 through December 22, 1961, with respect to which Cities recognizes only a partial obligation. Atlantic is also directed to retain amounts attributable to Docket No. RI63–213 for the period from its effective date, May 23, 1963, through April 22, 1964, with respect to which Cities recognizes no flow-through obligation.

United Gas is obligated to flow-through refund amounts reflecting purchases under Atlantic's Rate Schedule No. 48, and these amounts are being released. With respect to purchases under Atlantic's Rate Schedule No. 49, however, it appears that United Gas does not propose to flow-through refunds reflecting rates collected subject to refund in excess of 14.80 cents per Mcf. We are, therefore, releasing only that portion of the refunds attributable to purchases under Rate Schedule No. 49 which reflects the difference between the settlement rate and the rate of 14.80 cents for the entire refund period.

The Commission orders:

(A) Atlantic and Morgan Guaranty Trust Company (Escrow Agent), the escrow agent appointed by Atlantic pursuant to paragraph (G) of our order issued October 8, 1964, in *The Atlantic Refining Company*, Docket Nos. G–9283 and G–9284, *et al.*, are jointly directed to release and pay over within 45 days after the date of this order to Tennessee Gas Transmission Company, Natural Gas Pipeline Company of America, Humble Gas Transmission Company, Northern Natural Gas Company, Texas Gas Transmission Corporation, Kansas-Nebraska Natural Gas Company, Inc., Transcontinental Gas Pipe Line Corporation, and Southern Union Gathering Company, the amounts indicated to be refundable to those customers in the refund report filed by Atlantic on December 28, 1964, together with the net earnings of the escrow account attributable to each of these principal sums.

(B) Atlantic and the escrow agent are jointly directed to release and pay over within 45 days after the date of this order to United Gas Pipe Line Company, Cities Service Gas Company, and United Fuel Gas Company the amounts indicated to be refundable to those customers in the refund report filed by Atlantic on December 28, 1964, together with the net earnings of the escrow account attributable to each of these principal sums, *except that*, the Escrow Agent shall retain the following principal sums together with the associated escrow earnings:

1. That portion of the refund which is attributable to purchases by United Gas Pipe Line Company under Atlantic's Rate Schedule No. 49 and which represents the difference between a rate of 14.80 cents per Mcf at 14.65 psia and rates collected subject to refund in excess of this rate.

2. That portion of the refund which is attributable to purchases by Cities Service Gas Company during the period from December 1, 1961 through Decem-

ber 22, 1961, and that portion which is attributable to purchases under Atlantic's Rate Schedule No. 163 during the period from May 23, 1963 through April 22, 1964.

3. That portion of the refund which is attributable to purchases by United Fuel Gas Company under Atlantic's Rate Schedule Nos. 63 and 166 and which represents the difference between a rate of 19.9 cents per Mcf at 15.025 psia and rates collected subject to refund in excess of that rate.

(C) Within 60 days after the date of this order, Atlantic shall submit a report showing the amount received by each customer named in paragraphs (A) and (B) above and the amounts which the Escrow Agent will continue to retain pursuant to paragraph (B) above. The amounts deposited with the Escrow Agent and the allocable portion of the earnings of the escrow account shall be shown separately with respect to each customer.

(D) Except as specifically ordered hereinafter to retain amounts and defer the flow-through to specified parties, each company shall flow-through the refunds received pursuant to this order in accordance with applicable Commission orders and settlement agreements. Companies which flow-through amounts received pursuant to this order shall submit a report showing the details of their refund within 15 days after the refund is made or within the time specified in the applicable order or settlement agreement, whichever is later.

(E) Transcontinental Gas Pipe Line Corporation shall, pending further order of the Commission, retain and defer the flow-through of those portions of amounts received pursuant to paragraph (A) above which are attributable to purchases by:

1. The Manufacturers Light and Heat Company
2. United Natural Gas Company

(F) Texas Gas Transmission Corporation shall, pending further order of the Commission, retain and defer the flow-through of those portions of amounts received pursuant to paragraph (A) above, including amounts received from Tennessee Gas Transmission Company, which are attributable to purchases by:

1. Texas Eastern Transmission Corporation
2. The Ohio Fuel Gas Company

(G) United Gas Pipe Line Company shall retain and defer the flow-through of those portions of amounts received pursuant to paragraphs (A) and (B) above, including amounts received from Tennessee Gas Transmission Company, which are attributable to purchases by its pipeline customers other than Mississippi River Transmission Corporation, as provided by paragraph (K) of Opinion No. 428–A, 32 FPC 687, and by the order issued April 21, 1965, 33 FPC 837, and letter–order issued November 24, 1965 in Docket No. RP61–18, *et al.*

(H) The amounts ordered to be retained pursuant to paragraphs (E) and (F) above shall be retained in accordance with the methods set forth in paragraph (J) of the Commission's order issued April 21, 1965 in *Humble Oil & Refining Company*, Docket Nos. G–9287 and G–9288, *et al.*, 32 FPC 830. Within 30 days after the receipt of refunds pursuant to this order, Transco and Texas Gas shall each submit a report showing the amounts to be retained in accordance with this paragraph and the manner in which such amounts will be retained, and shall serve such report on the respective customers.

(I) Where amounts have been retained pursuant to paragraphs (B), (E), (F), and (G) above and the party which would otherwise have received such amounts is presently obligated to pass on such amounts by prior order of the Commission or will voluntarily assume the obligation to pass on such amounts, a report setting forth the details of such obligation or an agreement assuming the obligation to pass on the refund shall be filed by such party within 20 days after the date of this order.

(J) Pending further order of the Commission, Atlantic and the Escrow Agent shall retain all remaining refundable amounts in accordance with paragraphs (E) and (G) of the order issued October 8, 1964 in these proceedings.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, ET AL., DOCKET NO. CP66-226, ET AL.

ORDER PERMITTING INTERVENTION AND GRANTING WITHDRAWAL OF PRIOR INTERVENTIONS

(Issued May 24, 1966)

On March 7, 1966, W. E. Bakke, d/b/a, W. E. Bakke Oil Co., petitioned the Commission to intervene in the above consolidated proceeding because of its alleged interest therein due to the fact that Bakke sells gas from its Kansas-Hugoton wells to Pan American Petroleum Corp., which sells the gas to Cities Service Gas Co. No opposition to Bakke's petition has been filed.

On March 3, 1966, E. A. Stansfield filed a notice of withdrawal in behalf of Public Service Co. of Colorado, Cheyenne Light, Fuel and Power Co., Pueblo Gas and Fuel Co., and Colorado-Wyoming Gas Co. (now Western Slope Gas Co.).

The Commission further finds:

It is desirable to allow W. E. Bakke to become an intervenor in this proceeding in order that he may establish the facts and law from which the nature and validity of his alleged rights and interests may be determined and what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) W. E. Bakke, d/b/a, W. E. Bakke Oil Co., is permitted to become an intervenor in this proceeding subject to the rules and regulations of the Commission: *Provided, however,* that the participation of such intervenor shall be limited to matters affecting asserted rights and interests as specifically set forth in his said petition for leave to intervene; and *provided, further,* that the admission of such intervenor shall not be construed as recognition by the Commission that he might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(B) The Public Service Co. of Colorado, Cheyenne Light, Fuel and Power Co., Pueblo Gas and Fuel Co., and Colorado-Wyoming Gas Co., (now Western Slope Gas Co.), are permitted to withdraw as intervenors in this proceeding.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONSOLIDATED GAS SUPPLY CORPORATION, DOCKET NO. CP66-290

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On March 14, 1966, Consolidated Gas Supply Corporation (Applicant) filed in Docket No. CP66-290 an application pursuant to Section 7(c) of the Natural

Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas pipeline facilities, all as more fully set forth in the application.

Specifically, Applicant will construct and operate the following new facilities:

(1) Approximately 10.6 miles of 20-inch pipeline extending from its Utica, New York, compressor station in an easterly direction, parallel to its Line No. 30, to the Herkimer Connection, all in Herkimer County, New York, and

(2) approximately 19.8 miles of 20-inch pipeline extending from the present southern terminus of its Line No. 554 at the Genessee Falls Gate, Wyoming County, New York, in a southerly direction and parallel to Lines 14 and 24, to the Angelica Gate in Allegany County, New York.

The facilities described in paragraph (1) above are required to increase the capacity of the portion of Applicant's transmission system which extends from the Utica compressor station to Albany, New York. This portion of the system is used to serve a part of the requirements of Niagara Mohawk Power Corporation.

The facilities described in paragraph (2) above are required to increase the capacity of that portion of Applicant's transmission system which extends from the State Line compressor station near the Pennsylvania-New York state line north to Monroe County, New York. This portion of the transmission system serves principally the increasing requirements of Rochester Gas and Electric Corporation.

Applicant supplies all of the natural gas requirements of both of these customers under currently effective service agreements which are on file with the Commission. The increased requirements of these customers for natural gas represent normal growth in residential and commercial space heating in the present market areas served by Applicant. No new service is proposed in connection with this application.

The above-described facilities are required to meet the peak-day requirements of Applicant's customers beginning with the 1966–67 winter.

The estimated costs of the facilities to be constructed by Applicant are $890,000 for the 10.6 mile loop and $1,590,000 for the 19.8-mile loop, for a total of $2,480,000. The cost of construction will be financed from cash on hand and from funds to be obtained from Applicant's parent corporation, Consolidated Natural Gas Company, through the issuance of notes of face value or through the issuance of common stock, or a combination of both.

Due notice of the filing of the application was published in the Federal Register on March 29, 1966 (31 F.R. 5024). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Consolidated Gas Supply Corporation, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 2, 1965, in Docket No. CP63–272 (33 FPC 150).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Consolidated Gas Supply Corporation, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, by November 1, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–12793

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On February 24, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. G–12793 a petition and supplements thereto on April 4, and April 22, 1966, to amend paragraph (D) of the order of the Commission issued in said docket on September 10, 1957, 18 FPC 321, as amended on September 24, 1958, 20 FPC 396, so as to authorize Petitioner to change deliveries of firm and interruptible gas to San Francisco Chemical Company (San Francisco) to firm gas and increase the volume thereof for use in its phosphate processing plant located near Sage, Wyoming, all as more fully set forth in the petition to amend.

On September 10, 1957, Pacific Northwest Pipeline Corporation[1] (El Paso's predecessor) received authorization in the subject docket to deliver up to 300 Mcf (approximately 3000 therms) of natural gas per day, on an interruptible basis, to Chemical Company for use in its fertilizer plant near Sage, Wyoming. Paragraph (D) of the subject order was amended on September 24, 1958, so as to authorize Pacific Northwest to increase its deliveries to Chemical Company from 300 Mcf per day of interruptible gas to a maximum of 100 Mcf (approximately 1000 therms) of firm gas and 1,400 Mcf (approximately 14,000 therms) of interruptible gas per day.

---

[1] Pacific Northwest Pipeline Corporation is a part of El Paso Natural Gas Company. El Paso has been directed by order of the court to divest Pacific Northwest from El Paso.

In the instant petition, as supplemented, Petitioner wishes to further amend the subject order and to change its daily deliveries to Chemical Company from 1,000 therms of firm gas and 14,000 therms of interruptible gas to 18,000 therms of firm gas.

Due notice of the filing of the petition to amend and opportunity for hearing has been given by publication in the Federal Register on March 12, 1966 (31 F.R. 4363). No protest, petition to intervene, notice of intervention or request for hearing has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued September 10, 1957, in Docket No. G-12793 be further amended, as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued September 10, 1957, in Docket No. G-12793 and as amended on September 24, 1958, is further amended so as to modify paragraph (D) of the said order and authorize Petitioner to change the maximum volume of natural gas to be delivered to San Francisco from 1,000 therms of firm gas and 14,000 therms of interruptible gas per day to 13,500 therms (as agreed to by Petitioner in its second Supplement filed herein on April 22, 1966) of firm gas per day.

(B) The certificate order issued in Docket No. G-12793 is amended on the express condition that the firm service authorized herein shall not entitle San Francisco to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increase in their requirements.

(C) In all other respects said order shall remain in full force and effect.

(D) The amendment authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EQUITABLE GAS COMPANY, DOCKET NO. CP66-293

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On March 18, 1966, Equitable Gas Company (Applicant), filed in Docket No. CP66-293 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in Wetzel County, West Virginia, all as more fully set forth in the application.

Applicant seeks authorization to install and operate the equipment necessary to supercharge two existing gas engines from 660 horsepower to 800 horsepower each, at its Logansport Compressor Station, Wetzel County, West Virginia. The basic equipment to be added includes turbo-charger and manometer assemblies, exhaust manifold, air manifold assembly, air filter and parallel air piping and revisions of existing air, water and exhaust piping together with larger gas cooling equipment.

The facilities proposed to be installed will provide additional pumping capacity necessary to continue the development phase of Applicant's Mobley Storage Pool.

The estimated cost of the facilities to be constructed by Applicant is $70,000, which will be defrayed from funds on hand.

After due notice no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Equitable Gas Company, a Pennsylvania corporation, having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of May 9, 1944, in Docket No. G–275 (4 FPC 558).

(2) The proposed construction and operation of facilities as hereinbefore described and as more fully described in the application and exhibits filed in this proceeding are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Equitable Gas Company, in this proceeding authorizing the construction and operation of facilities as hereinbefore described, all as more fully described in the application and exhibits filed in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized to be constructed and operated by Applicant shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within six months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66–25

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 24, 1966)

On February 3, 1966, Illinois Power Company (Applicant), filed in Docket No. CP66–254 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the communities of Seaton and Little York and environs in Mercer and Warren Counties, Illinois, and the communities of Andover, Osco, Ophiem and Lynn Center and environs in Henry County, Illinois, all as more fully set forth in the application.

Specifically, Applicant proposes to construct approximately 21.3 miles of 2-inch lateral pipeline (12.5 miles to serve Seaton and Little York and 8.8 miles to serve Andover, Osco and Lynn Center), and a distribution system for each of the above communities and appurtenant regulator facilities. Applicant also requests that Respondent construct a total of approximately 2.45 miles of lateral pipeline, pursuant to its "ten-cent formula", extending from its main line to Applicant's proposed 2-inch lateral pipelines and to the distribution system proposed for Ophiem.

The total estimated volumes of natural gas necessary to meet the annual and peak day requirements of the communities of Seaton and Little York for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	21,660	28,046	35,539
Peak day (Mcf)	217	286	365

The total estimated volumes of natural gas necessary to meet the annual and peak day requirements of the communities of Andover, Osco, and Lynn Center for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	19,237	24,304	30,629
Peak day (Mcf)	204	257	323

The total estimated volumes of natural gas necessary to meet the annual and peak day requirements of the community of Ophiem for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	5,788	6,608	7,586
Peak day (Mcf)	92	101	110

The total estimated cost of constructing distribution system and appurtenant 2-inch lateral and regulator facilities for the communities of Seaton and Little York; Andover, Osco, and Lynn Center; and Ophiem are $210,000, $174,200, and $13,700, respectively.

Applicant has obtained all necessary franchises to supply natural gas in said communities and on December 22, 1965, the Illinois Commerce Commission in its Docket No. 51865 granted Applicant a certificate to construct and operate the necessary facilities and to sell gas therein.

On March 3, 1966, Michigan Wisconsin filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to extend its facilities, establish connection of its facilities and provide the requested service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on February 18, 1966, (31 F.R. 2908). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order dated November 30, 1946 in Docket No. G–699 (5 FPC 953).

(2) Applicant, Illinois Power Company, an Illinois corporation having its principal place of business in Monticello, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to sell and deliver to Applicant, under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 365 Mcf for Seaton and Little York, 323 Mcf for Andover, Osco and Lynn Center and 110 Mcf for Ophiem on a maximum day for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the named communities, and their environs, within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company is directed to sell and deliver to Applicant up to 365 Mcf for Seaton and Little York, 323 Mcf for Andover, Osco and Lynn Center and 110 Mcf for Ophiem on a maximum day under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein one year from the date of issuance of this order.

(D) This order shall be effective upon the issuance of the Commission's order in Docket No. CP66–208, *infra*, p. 777.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ILLINOIS POWER COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-271

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 24, 1966)

On February 18, 1966, Illinois Power Company (Applicant), filed in Docket No. CP66-271 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the unincorporated communities of Olivet and Vermilion Grove and environs, Vermilion County, Illinois, all as more fully set forth in the application.

Applicant proposes to construct distribution systems in Olivet and Vermilion Grove together with a 2-inch pipeline, 2.6 miles in length, extending from Respondent's transmission line to said distribution systems. Applicant also proposes that Respondent construct a sales meter station to service the proposed interconnection of facilities.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	17,561	20,131	22,280
Peak day (Mcf)	190	222	236

The total estimated cost of Applicant's proposed transmission and distribution systems is $81,045, which cost will be financed from funds on hand.

On February 23, 1966, Respondent was duly advised of the application filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on March 9, 1966 (31 F.R. 4174). No protest, petition to intervene or request for hearing has been filed in this proceeding.

On January 25, 1966, the Illinois Commerce Commission in its Docket No. 52000 granted Applicant a certificate to construct and operate the necessary facilities and to sell gas to the public in the above-mentioned villages.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 236 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Respondent serve Applicant as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the Villages of Olivet and Vermilion Grove and environs in Vermilion County, Illinois, within one year from the date of issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Illinois Power Company as herein described, and to sell and deliver up to 236 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations. Such service shall be rendered pursuant to Panhandle Eastern's currently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE INLAND GAS COMPANY, INC., DOCKET NO. CP66-313

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On April 1, 1966, The Inland Gas Company, Inc. (Applicant) filed in Docket No. CP66-313 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 420 feet of 3½-inch natural gas pipeline and regulating and measuring facilities for use in the sale and delivery of natural gas to Air Products and Chemicals, Inc. (Air Products), all as more fully set forth in the application.

The application states that Air Products' plant is located in Boyd County, Kentucky, approximately 420 feet from Applicant's existing 16-inch transmission pipeline which extends north from Floyd County, Kentucky.

Air Products will use the natural gas to manufacture hydrogen and will require annual and maximum day volumes of 91,250 Mcf and 300 Mcf, respectively. Applicant and Air Products have entered into a letter agreement providing for the sale of gas.

The total estimated cost of the facilities to be constructed by Applicant is $3,510, which will be financed from cash on hand.

Due notice of the filing of the application was published in the Federal Register on April 16, 1966 (31 F.R. 5917). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, The Inland Gas Company, Inc., a Kentucky corporation having its principal place of business in Ashland, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued October 18, 1962, in Docket No. CP61–266 (28 FPC 683).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, The Inland Gas Company, Inc., authorizing the construction and operation of the facilities hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, by June 30, 1966.

Before Commissioners: **Lee C. White, Chairman; L. J. O'Connor, Jr.,** Charles R. Ross, David S. Black and Carl E. Bagge.

MICHIGAN WISCONSIN PIPE LINE COMPANY,* DOCKET NO. CP66-208

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On December 27, 1965, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP66-208 an application pursuant to Section 7(c) of the Natural Gas Act authorizing the construction and operation of certain natural gas facilities and the lease of the Loreed Field, in west central Michigan, from Michigan Consolidated Gas Company (Michigan Consolidated) in order to increase by 264,000 Mcf its daily system sales capacity and to sell and deliver additional gas to existing customers and to accommodate anticipated requests for service to new communities, all as more fully set forth in the application in this proceeding.

Specifically, Applicant proposes the following:

(1) To construct and operate 83.3 miles of 6 to 24-inch gas supply laterals and 5,500 compressor horsepower in order to attach 1,351,419 MMcf of proven dedicated reserves located in fourteen fields in southern Louisiana. Of these proposed laterals, 2.9 miles of 6-inch pipe is for the proposed Redfish Point Lateral necessary to receive gas proposed to be sold by Gulf Oil Corporation (Gulf) in Docket No. CI66-453 and 17 miles of 12-inch pipe is for the proposed Vermilion Bay Lateral necessary to receive gas proposed to be sold by Texaco Inc. in Docket No. CI66-484. Neither Gulf nor Texaco has received authorization from this Commission to sell gas in those respective dockets. Accordingly, authorization for the construction of the Redfish Point and Vermilion Bay Laterals shall hereinafter be appropriately conditioned upon Gulf and Texaco receiving the necessary Commission authorization.

(2) To construct and operate 527 miles of 30-inch main pipeline loop in the States of Louisiana, Mississippi, Tennessee, Indiana, Ohio and Michigan and in the Commonwealth of Kentucky.

(3) To construct and operate 660 compressor horsepower at Slaughters, Kentucky, to elevate the pressure of the gas purchased at that point from Texas Gas Transmission Corporation.

(4) To construct and operate 2,200 compressor horsepower each at Stations "A" and "B" in Michigan and 4,400 compressor horsepower at Station "A" in Illinois.

(5) To construct and operate 12.9 miles of 10-inch loop on the Keokuk lateral and 9.5 miles of 8-inch loop on the Burlington lateral, both in Iowa, and 8.7 miles of 12-inch loop on the Racine lateral in Wisconsin.

(6) To construct and operate a new line consisting of 90.1 miles of 12-inch pipeline from Applicant's North Madison measuring station to a point near Weyauwega, Wisconsin. Applicant states that this new line is more desirable than the alternative of further looping the existing system from Milwaukee to Green Bay.

---

* Michigan Wisconsin Pipe Line Company and American Louisiana Pipe Line Company, as joint Applicants, filed this application prior to and in anticipation of their merger. By Commission order issued December 23, 1965, in Docket No. CP66-65, 34 FPC 1539, the merger was authorized and became effective January 1, 1966. As the surviving company of that merger, Michigan Wisconsin Pipe Line Company will be treated as the sole Applicant in the subject docket.

Further, Applicant proposes to lease the Loreed Field from Michigan Consolidated and to operate it as a natural gas underground storage field. Loreed Field is a depleted oil field which Michigan Consolidated has been developing for gas storage usage since 1962. Total gas content is estimated to be 21,600,000 Mcf at the beginning of the 1966 withdrawal season; of this amount 9,570,000 will be cushion gas and 12,030,000 Mcf will be working storage. The application indicates that at ultimate development sometime about the end of 1973, the total gas content is estimated to be 49,300,000 Mcf with 17,700,000 Mcf being cushion gas and 31,600,000 Mcf being working storage. The ultimate delivery capability is estimated to be 1,000,000 Mcf per day and the maximum reservoir pressure is estimated to be 2,000 psia. Applicant's lease rental payments will be based on a cost of service formula that includes a 6.5 percent rate of return.

The total estimated cost of the proposed facilities is $75,600,000, which cost will be financed initially by borrowings, retained earnings and other funds generated internally, and by the sale of first mortgage pipe line bonds.

The subject proposals will increase Applicant's daily system sales capacity from 2,168,000 Mcf to 2,432,000 Mcf. Of this 264,000 Mcf increase 212,000 Mcf will be utilized to meet the needs of existing customers for the 1966–67 heating season and the remaining 52,000 Mcf will be unallocated gas to accommodate anticipated requests for service to new communities.

Several petitions to intervene and notices of intervention have been filed herein. None of said petitions or notices requests formal hearing in this proceeding or objects to the hearing and disposition of the subject application under the shortened procedure provided for by the Commission's Rules. Inasmuch as the shortened procedure is being used herein, no further action on said petitions or notices appears necessary.

After due notice, no other petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof, the operation of the storage field and the proposed transportation and sales of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities, the lease and operation of the subject storage field and the proposed transportation and sales of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's

compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Applicant should not construct the Vermilion Bay Lateral to the West Cote Blanche Bay Field consisting of 17 miles of 12-inch line until Texaco Inc. receives and accepts requisite authorization in Docket No. CI66-484.

(7) Applicant should not construct the Redfish Point Lateral consisting of 2.9 miles of 6-inch line until Gulf Oil Corporation receives and accepts requisite authorization in Docket No. CI66-453 and Texaco Inc. also receives and accepts the requisite authorization referred to in paragraph (6) above.

(8) The maximum inventory of gas stored in the Loreed Storage Field should not exceed 49,300,000 Mcf at 14.73 psia and the maximum reservoir pressure should not exceed 2,000 psia without prior authorization of the Commission.

(9) Applicant should submit semiannual reports as hereinafter prescribed.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Michigan Wisconsin Pipe Line Company, to construct and operate the proposed facilities, to operate the Loreed Storage Field to be leased from Michigan Consolidated and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(2), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the sales and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

(D) Applicant shall not construct the Vermilion Bay Lateral to the West Cote Blanche Bay Field consisting of 17 miles of 12-inch line until Texaco Inc. receives and accepts requisite authorization in Docket No. CI66-484.

(E) Applicant shall not construct the Redfish Point Lateral consisting of 2.9 miles of 6-inch line until Gulf Oil Corporation receives and accepts requisite authorization in Docket No. CI66-453 and Texaco Inc. also receives and accepts the requisite authorization referred to in paragraph (D) above.

(F) The maximum inventory of gas stored in the Loreed Storage Field shall not exceed 49,300,000 Mcf at 14.73 psia and the maximum reservoir pressure shall not exceed 2,000 psia without prior authorization of the Commission.

(G) Applicant shall submit semiannual reports (to coincide with the termination of the injection and withdrawal cycles) containing the following information on the proposed operations:

(a) The volumes of gas injected or withdrawn each month and the corresponding total volume in the reservoir;

(b) The maximum daily injection or withdrawal volumes experienced during the month;

(c) The average working pressure on such maximum days taken at a central measuring point where the total volume injected or withdrawn is measured;

(d) The stabilized shut-in wellhead pressure of each observation and active well when pressure stabilization exists and the water level in each observation well not showing gas;

(e) A map of the most recent interpretation of underground structure and the area occupied by the gas bubble showing for each well, the date on which gas was first noted during or after injection and the date on which water encroached during or after withdrawal;

(f) A tabulation of wells drilled, cleaned or recompleted with subsea depths of formations and casing settings. Copies of any core analyses, back-pressure tests or electric logs, and

(g) Reports shall continue to be filed until the storage inventory volume has reached or closely approximated the maximum volume permitted in paragraph (F) above and for two years thereafter.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64-13

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On April 5, 1966, Natural Gas Pipeline Company of America (Petitioner), filed in Docket No. CP64-13 a petition to amend the certificate of public convenience and necessity issued in that docket on October 10, 1963, 30 FPC 993, by authorizing Petitioner to increase the inventory in its Keota Storage area above the presently prescribed 1,500,000 Mcf limit, all as more fully set forth in the petition to amend.

By the certificate issued on October 10, 1963, Petitioner was authorized to test and develop an underground natural gas storage reservoir, known as the Keota Storage area, located in Washington County, Iowa. The maximum authorized storage inventory was limited to 1,500,000 Mcf of natural gas.

Petitioner states that injection of natural gas into the reservoir has continued since November 14, 1963, except for withdrawal testing during the 1965-66 heating season and that the limit will be reached by April 10, 1966. Petitioner further states that orderly development of the Keota Storage area and growth of the inventory to the level required for use for service to Petitioner's customers requires continued injection of gas without interruption. In order to serve the customers' storage needs during the winter of 1966-67, Petitioner requests that the authorized inventory limitation be increased to 2,000,000 Mcf of natural gas, to become available by November, 1966.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on April 15, 1966 (31 F.R. 5848). No protest, petition to intervene or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 10, 1963, in Docket No. CP64-13, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued October 10, 1963, in Docket No. CP64-13 is amended so as to modify the provisions of Ordering Paragraph (D) and authorize Natural Gas Pipeline Company of America to increase the inventory volume of 1,500,000 Mcf in the Keota Storage area to 2,000,000 Mcf, as requested in its said petition to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PENNSYLVANIA GAS COMPANY, DOCKET NO. CP64-199

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On March 18, 1966, Pennsylvania Gas Company (Petitioner) filed in Docket No. CP64-199 a petition, as supplemented on April 14, 1966, to amend the certificate of public convenience and necessity issued in said docket on May 25, 1964, 31 FPC 1284, requesting authorization to construct 6.9 miles of pipeline from Sugar Grove in Warren County, Pennsylvania, in a southerly direction to a point on Petitioner's main pipeline in Warren County, Pennsylvania, all as more fully set forth in the petition to amend.

The original application in this docket filed on March 9, 1964, requested a certificate authorizing the construction and operation of 16.2 miles of 12-inch pipeline to replace an 8-inch pipeline which had been constructed in the year 1885. Petitioner subsequently amended the application by letter dated March 13, 1964, and deleted the request for authorization to construct the 6.9-mile segment of the proposed 12-inch pipeline.

A certificate of public convenience and necessity was issued in this docket on May 25, 1964, authorizing the construction and operation of 9.3 miles of 12-inch pipeline extending from Sugar Grove Township in Warren County, Pennsylvania, to the city of Jamestown in Chautauqua County, New York.

Petitioner states that the 6.9 miles of 12-inch pipeline which was deleted from the original application will be required during 1966. Petitioner therefore requests permission to replace the balance of the 8-inch pipeline constructed in 1885 with the 6.9 miles of 12-inch pipeline.

The estimated cost of construction is $283,500, which will be financed from retained earnings, depreciation accruals and from the proceeds of long-term installment promissory notes to be issued to Petitioner's parent company, National Fuel Gas Company.

Petitioner states that it does not desire to abandon the entire 8-inch pipeline at this time. Approximately one mile of the 8-inch pipeline will be removed from service upon installation of the 12-inch pipeline. Certain segments of the remaining 5.9 miles of the 8-inch pipeline will be used as by-passes while a parallel 10-inch pipeline is relocated due to New York State highway construction.

Due notice of the filing of the petition to amend was published in the Federal Register on April 7, 1966 (31 F.R. 5531). No protest, petition to intervene or Notice of intervention has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 25, 1964, in Docket No. CP64–199, be amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued to Pennsylvania Gas Company on May 25, 1964, in Docket No. CP64–199 is amended by authorizing the construction and operation of 6.9 miles of 12-inch pipeline from Sugar Grove Township in Warren County, Pennsylvania, to Petitioner's main pipeline in Warren County, as described above and as more fully described in the petition to amend, upon the terms and conditions of this order.

(B) Petitioner shall notify the Commission of the completion of the relocation of the 10-inch pipeline required by the New York State highway construction within 10 days of the completion of such relocation.

(C) Petitioner shall submit a proper filing pursuant to Section 7(b) of the Natural Gas Act for permission for and approval of the abandonment of the 8-inch pipeline constructed in 1885 within 30 days after the required notification submitted pursuant to paragraph (B) above or, in the alternative, submit to the Commission evidence of good cause for the continued operation of said 8-inch pipeline.

(D) In all other respects said certificate, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES OF PRINCETON AND MERCER, MISSOURI, AND LINEVILLE, IOWA, AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66–240

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 24, 1966)

On January 27, 1966, the Cities of Princeton and Mercer, Missouri, and Lineville, Iowa, (Applicants) filed in Docket No. CP66–240 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its transmission facilities with the facilities to be constructed by Applicants and to sell and deliver to Applicants a total of up to 1,459 Mcf of natural gas per day for resale and distribution in the respective communities, all as more fully set forth in the application.

Lineville is located in Wayne County, Iowa, on the Iowa-Missouri border, approximately three miles due south of the nearest point on the portion of Respondent's main transmission system which traverses southern Iowa. Mercer is located in Mercer County, Missouri, approximately five miles south of Lineville. Princeton is also located in Mercer County, Missouri, and is approximately eight miles south of Mercer. Princeton is the largest of the three communities with an estimated population of 1,506.

The lateral pipeline required for service to the three Applicants will extend approximately 16.1 miles in a southerly direction from Respondent's transmission pipeline. Applicants propose that Respondent construct approximately 5.1 miles of 4½-inch O.D. lateral pipeline pursuant to its "ten-cent formula". Princeton will construct 11 miles of 3½-inch O.D. pipeline which will join the pipeline to be constructed by Respondent at a point between the communities of Mercer and Lineville.

Each of the three communities will construct and operate its own municipal gas distribution system. Princeton will also construct and operate metering stations at Mercer and Princeton in addition to the aforementioned 11 miles of pipeline.

Lineville will be served from Respondent's portion of the lateral pipeline, and Princeton and Mercer will be served from the portion to be constructed by Princeton. Princeton will charge Mercer 15 cents per Mcf for the transportation service to be provided by Princeton's facilities.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three-year period of proposed operations are as follows:

Annual	First year	Second year	Third year
Princeton	49, 397	69, 207	90, 239
Mercer	14, 180	18, 367	25, 266
Lineville	17, 912	26, 015	31, 164
Total	81, 489	113, 589	146, 669
Peak day			
Princeton	517	675	887
Mercer	147	192	262
Lineville	176	258	310
Total	840	1, 125	1, 459

These purchases will be made under Respondent's SGS–1 Rate Schedule at a flat rate of 44.7 cents per Mcf.

The total estimated costs to the cities of Lineville and Mercer of constructing their proposed distribution systems are approximately $89,000 and $55,000, respectively. The total estimated cost to the city of Princeton of constructing its distribution system, pipeline lateral and metering stations is $315,000. The financing of the proposed facilities will be by means of Gas Revenue Bonds to be issued separately by each city.

On March 3, 1966, Respondent filed an answer to the application. Respondent has no objection to the granting of the application and is willing to construct approximately 5.1 miles of pipeline lateral, provided its expansion proposal filed on December 27, 1965, in Docket No. CP66–208 is approved. Authorization for the expansion is being issued concurrently herewith in Docket No. CP66–208, *supra*, p. 777.

Due notice of the filing of the application was published in the Federal Register on February 16, 1966 (31 F.R. 2799). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation with its principal place of business in Detroit, Michigan, is a "natural-gas company"

within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicants are municipalities in their respective states and are authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along their systems.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities to be constructed by Applicants, to construct and operate approximately 5.1 miles of pipeline lateral and to sell and deliver up to a total of 1,459 Mcf of natural gas per day to the Applicants, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve the Applicants, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicants, to construct and operate approximately 5.1 miles of pipeline lateral and to sell and deliver up to a total of 1,459 Mcf of natural gas per day to Applicants, all as hereinbefore described and as more fully described in the application.

(B) Applicants shall be prepared to receive natural gas from Respondent at the proposed connections within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a service agreement with each Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP66–303

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 24, 1966)

On March 24, 1966, Tennessee Gas Transmission Company (Applicant), filed in Docket No. CP66–303 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant seeks authorization for the construction and operation of 14.18 miles of 36-inch O.D. loop pipeline on the Delta–Portland (D–P) portion of its mainline system between MLV No. 547 and MLV No. 548. Applicant states that its D–P line extends in a northeasterly direction from the Louisiana Delta area, 556 miles to its Compressor Station No. 87 near Portland, Tennessee.

The installation and operation of this proposed pipeline will provide Applicant with a dual pipeline system from the Louisiana Delta area to its Compressor Station No. 87. Applicant now has only a single pipeline between the aforementioned valve sections and it must eliminate this bottleneck which, in the event of a pipeline failure between said two mainline valves, would result in Applicant's being unable to transport 1.25 billion cubic feet of gas per day during such failure.

The total estimated cost of Applicant's proposed construction is $2,377,000, which will be financed from general funds or from revolving credit.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization, and upon consideration of the record,

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued July 15, 1947, in Docket No. G–910 (6 FPC 777).

(2) The proposed construction and operation of facilities as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to applicant, Tennessee Gas Transmission Company, authorizing the construction and operation of facilities as more fully described in the application and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are hereby conditioned upon Applicant's compliance with all the applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the Commission Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES OF UNIONVILLE AND MILAN, MISSOURI, AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-238; IOWA SOUTHERN UTILITIES COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-239

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 24, 1966)

On January 27, 1966, the Cities of Unionville and Milan, Missouri, filed in Docket No. CP66-238 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish a physical connection of its transmission facilities with the facilities to be constructed by the Cities and to sell and to deliver up to 1,867 Mcf per day of natural gas to Unionville and up to 1,592 Mcf per day to Milan for resale and distribution in their respective communities. On the same day, Iowa Southern Utilities Company (Iowa Southern) filed an application in Docket No. CP66-239 pursuant to Section 7(a) of the Natural Gas Act for an order directing Respondent to establish a physical connection between its transmission facilities with the facilities to be constructed by Iowa Southern and to sell and deliver up to 324 Mcf of natural gas per day to Iowa Southern for resale and distribution in the community of Cincinnati, in Appanoose County, Iowa. The proposals are more fully set forth in the respective applications.

Respondent will construct and operate approximately 17 miles of 4½-inch O.D. pipeline lateral extending from its transmission pipeline near Jerome, Iowa, in a southerly direction where it will interconnect with 21 miles of 3½-inch O.D. pipeline lateral extending from Unionville to Milan, Missouri, to be constructed by the City of Milan. Iowa Southern will construct and operate approximately two miles of 2⅜-inch O.D. pipeline lateral from the Unionville lateral to Cincinnati.

The estimated maximum day and annual requirements of natural gas for all three communities during the first three years of proposed operations are as follows:

Annual	First year	Second year	Third year
Cincinnati	18, 362	26, 295	31, 405
Unionville	113, 364	173, 618	207, 925
Milan	191, 839	235, 284	262, 959
Total	323, 565	435, 197	502, 289
Maximum Day			
Cincinnati	189	271	324
Unionville	1, 125	1, 528	1, 867
Milan	980	1, 317	1, 592
Total	2, 294	3, 116	3, 783

Milan and Unionville will each construct and operate distribution systems in their respective communities. The estimated cost of the distribution facilities to be constructed by Unionville is $450,000. The estimated costs of the 21 miles of pipeline lateral and the distribution system to be constructed by Milan are $248,000 and $267,000, respectively. Each city will finance its construction by a separate issue of Gas Revenue Bonds.

Iowa Southern will construct and operate the distribution system in Cincinnati and the two miles of pipeline lateral at estimated construction costs of $61,157 and $21,059, respectively. The construction by Iowa Southern will be financed by internally generated funds and short-term bank loans.

Iowa Southern has obtained a franchise which was approved by the voters of Cincinnati on December 3, 1965. Iowa Southern will apply for a franchise from the Iowa Commerce Commission for the facilities to be constructed outside the corporate limits of Cincinnati when this order is issued.

On March 3, 1966, Respondent filed answers to the applications in Docket Nos. CP66–238 and CP66–239. Respondent indicated that it has no objection to either proposal, provided it is authorized to expand its facilities pursuant to the program set forth in its application filed in Docket No. CP66–208 on December 27, 1965. The authorization in Docket No. CP66–208 is being issued concurrently herewith, *supra*, p. 777. Respondent also agreed to construct and operate approximately 17 miles of 4½-inch O.D. pipeline lateral, as proposed in the instant applications.

Notices of the filing of the applications in Docket Nos. CP66–238 and CP66–239 were published in the Federal Register on February 16, 1966 (31 F.R. 2799 and 31 F.R. 2801, respectively). No protest, petition to intervene or notice of intervention has been filed in either proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation with its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued on November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Unionville and Milan are municipalities in the State of Missouri, and Iowa Southern is a public utility company in the State of Iowa, and, as such, the Applicants are authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along their systems.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities to be constructed by Applicants, to construct and operate approximately 17 miles of 4½-inch O.D. pipeline lateral and to sell and deliver up to 1,867 Mcf per day and 1,592 Mcf per day of natural gas to Unionville and Milan, Missouri, respectively, for resale and distribution in their respective communities and up to 324 Mcf per day of natural gas to Iowa Southern for resale and distribution in the community of Cincinnati, Iowa, all as hereinbefore described and as more fully described in the applications in these proceedings, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve the Applicants, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by the Applicants, to construct and operate approximately 17 miles of 4½-inch O.D. pipeline lateral and to sell and deliver up to 1,867 Mcf per day and 1,592 Mcf per day of natural gas to Unionville and Milan, Missouri, respectively, for resale and distribution in their respective communities and up to 324 Mcf per day of natural gas to Iowa Southern for resale and distribution in the community of Cincinnati, Iowa, all as hereinbefore described and as more fully described in the application.

(B) The Applicants shall be prepared to receive natural gas from Respondent at the proposed new connections within one year from the date of this order.

(C) The authorization granted by paragraph (A) above is conditioned upon Iowa Southern's filing with the Commission proof of the issuance of required authorization from the Iowa Commerce Commission.

(D) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(E) Respondent shall execute and file with the Commission a superseding service agreement with Iowa Southern and service agreements with Unionville and Milan, Missouri, in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WISCONSIN PUBLIC SERVICE CORPORATION AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-283

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 24, 1966)

On March 7, 1966, Wisconsin Public Service Corporation (Applicant) filed in Docket No. CP66-283 an application and supplement thereto on April 13, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed by Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the Villages of Coleman and Pound, and the Towns of Beaver and Pound, all in the State of Wisconsin, all as more fully set forth in the application and supplement.

Applicant proposes to construct a gate station, a regulator, 4.6 miles of 4-inch pipeline and appurtenant transmission facilities together with the necessary distribution facilities for the aforementioned communities. Applicant also proposes that Respondent construct approximately 3.3 miles of 4-inch pipeline, pursuant to its "ten-cent formula", extending from its main transmission line in a northwesterly direction to Applicant's proposed gate station.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	23,910	68,840	100,420
Peak day (Mcf)	175	431	627

The total estimated cost of Applicant's proposed transmission and distribution facilities is $271,075, which cost will be financed from internal funds.

Applicant has obtained necessary franchises to supply natural gas in said communities and on August 10, 1965, the Wisconsin Public Service Commission in its Docket No. CA–4526 granted Applicant a certificate to construct and operate the necessary facilities and to sell gas therein.

On April 5, 1966, Michigan Wisconsin filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to extend its facilities, establish connection of its facilities and provide the requested service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 17, 1966 (31 F.R. 4532). No protest, petition to intervene or request for hearing has been filed in this proceeding. The Public Service Commission of Wisconsin filed a notice of intervention on April 11, 1966, stating no hearing was being requested.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–699 (5 FPC 953).

(2) Applicant, Wisconsin Public Service Corporation, a Wisconsin corporation having its principal place of business in Milwaukee, Wisconsin, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Michigan Wisconsin to sell and deliver to Applicant, under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, up to 627 Mcf for the Villages of Coleman and Pound and the Towns of Beaver and Pound on a maximum day for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from Michigan Wisconsin for distribution in the named communities, and their environs, within one year from the date of the issuance of this order.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company is directed to sell and deliver to Applicant up to 627 Mcf for the Villages of Coleman and Pound and the Towns of Beaver and Pound on a maximum day under a service agreement to be executed by Applicant with Michigan Wisconsin in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Michigan Wisconsin's presently filed appropriate rate schedule.

(B) Michigan Wisconsin shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein one year from the date of issuance of this order.

(D) This order shall be effective upon the issuance of the Commission's order in Docket No. CP66–208, *supra*, p. 777.

OPINION NO. 491

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP65-196; WISCONSIN GAS COMPANY, DOCKET NOS. CP65-195, CP65-201, CP65-202

OPINION AND ORDER MODIFYING AND ADOPTING EXAMINER'S DECISION ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 25, 1966)*

Syllabus

1. Commission reviews prescribed formula under which Northern may expand its facilities to provide gas service to new communities. P 792.
2. In testing feasibility of proposed branchlines and determining amount of distributor contribution required, it was correct to use pipeline's new lower rates instead of higher rates in effect at time application was filed. PP. 792, 793, 797.
3. There is nothing here to indicate that use of pipeline's reduced rates to test branchline feasibility will have any detrimental effect on development of future projects. P. 793.
4. Facts and best estimates available, in this instance a known change in rates, must be criteria by which project of this nature is judged. P. 793.
5. Date Northern filed its certificate application does not constitute a cut-off date beyond which adjustments necessary for accuracy could not be made —to do otherwise would violate principle of matching costs and revenues. PP. 793, 798.
6. It is reasonable here to condition Northern's certificate to require refunds of distributor contributions to extent that actual third-year revenues from branchlines exceed projected revenues. PP. 793, 799.
7. Claimed difficulties of refund procedure do not justify rejection of refund condition. P. 794.
8. Required refunds should be related to actual volumes of gas delivered in third year compared with record estimates rather than with third-year revenues. P. 794.
9. Prior Commission holdings on filing of industrial contracts did not rule out possibility that contracts would be required for sales accounting for less than 15 percent of branchline revenues. P. 794.
10. Under circumstances here, signed contracts are required for three sales although they do not exceed 15 percent of the total branchline sales. PP. 794, 801.
11. Examiner properly denied two municipalities permission to participate since petition was untimely filed and never granted. P. 795.
12. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificate of public convenience and necessity.

F. Vinson Roach, J. C. Osborne, D. B. O'Brien, John Gale, Justin R. Wolf, Charles A. Case, Jr. and *Stanley Wanger* for the Northern Natural Gas Company.

Ned Willis for North Central Public Service Company and Natural Gas, Inc.

Peyton G. Bowman III and *Richard M. Merriman* for Great Plains Natural Gas Company and Midwest Natural Gas, Inc.

Laverne Kostner for Great Plains Natural Gas Company and Midwest Natural Gas, Inc.

Jacob Goldberg for Natrogas, Inc.

---

*Initial decision appears on p. 796.

John F. Gaston for Iowa Electric Light and Power Company.

Albert J. Feigen for American Gas Company of Wisconsin, Inc., the Town of Sabula, Iowa and the Town of Preston, Iowa.

Glen H. Bell for St. Croix Valley Natural Gas Company, Inc.

Eugene O. Gehl and *R. J. Sutherland* for Wisconsin Power & Light Company.

Nicholas J. Lesselyoung and *Robert L. Waldo* for Wisconsin Gas Company.

John W. Kern, III, Cecil A. Beasley, Jr. and *Everett B. Chapman* for City of Viroqua, Wisconsin.

William E. Torkelson and *Clarence B. Sorenson* for Public Service Commission of Wisconsin.

Mark W. Putney for Iowa Power and Light Company.

Edward J. Hartman for Iowa-Illinois Gas and Electric Company.

William J. Grove, Lambert McAllister and *Craig McAllister* for North Star Natural Gas Company and the Town of Waukee, Iowa.

J. F. Kinney and *Ira E. Delk* for Iowa Public Service Company.

A. R. Renquist for Northern States Power Company.

George C. Mastor for Minneapolis Gas Company.

George C. Pardee for Metropolitan Utilities District of Omaha.

Warren K. Dalton for Western Power & Gas Company, Inc.

Thomas M. Knebel for Minn-Dak Fuel Association, Inc.

Charles V. Shannon and *Louis Flax* for Michigan Wisconsin Pipe Line Company.

John W. Scott and *Louis L. DaPra* for Minnesota Natural Gas Company.

David S. Lichtenstein for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

This is a certificate case, arising under Section 7(c) of the Natural Gas Act, and is before us at this time for decision on exceptions to the initial decision of Presiding Examiner Arthur H. Fribourg, issued February 10, 1966. Northern Natural Gas Company (Northern) seeks a certificate of public convenience and necessity authorizing the construction and operation of approximately 26 miles of 30-inch main line loop and 812 miles of branchlines and related facilities costing $19,305,400, to render initial natural gas service to 131 communities in Iowa, Minnesota, Nebraska, and Wisconsin. The estimated third-year contract demand is 48,137 Mcf per day and third-year sales would be 12,185,837 Mcf. Northern proposes to use its Redfield, Iowa, storage field to supply a portion of the needed volume.

The examiner would grant a certificate to Northern authorizing the facilities and sales proposed. No exceptions have been taken to this finding. We conclude that this determination of the examiner is correct.

The principal issues raised by the exceptions and replies thereto[1] are as follows: (1) How much should Northern's proposed distributing company customers be required to contribute to the costs of the branchlines to establish their economic feasibility and to prevent possible injury to existing customers? (2) Should Northern be required to refund contributions to the distributors in the event the branchlines' actual revenues (or sales) exceed those projected? (3) Should the distributors be required to obtain signed contracts covering large interruptible industrial sales prior to Northern's constructing the branchlines in order to protect against the possible loss of such sales?

---

[1] Exceptions were filed on March 2, 1966, by staff; on March 14, 1966, by Northern, Wisconsin Gas Company, Midwest Natural Gas, Inc., Minneapolis Gas Company, American Gas Company of Wisconsin, Inc., St. Croix Valley Natural Gas Company, Inc. and the Towns of Preston and Sabula, Iowa; and on March 21, 1966, by Northern States Power Company. Reply exceptions were on different dates filed by some of the parties listed previously, and were also filed on April 1, 1966, by Northern and the Public Service Commission of Wisconsin; and on April 4, 1966, by Minneapolis Gas Company, Wisconsin Power & Light Company, and Wisconsin Gas Company.

The examiner would require branchline contributions in the amounts specified in his decision and would provide for possible refunds to the extent contributions exceed costs. Finally, he would require that two branchlines serving three industrial customers should not be constructed until the distributing companies obtain signed contracts from the three customers. In general, we conclude that the examiner properly determined each of the substantial issues and, with one minor modification, we affirm the examiner's decision on these issues and reject the parties' exceptions respecting these and other matters.

Branchline feasibility and contributions.—Northern is presently serving the major population centers in its pipeline area, and its remaining unserved markets include many smaller communities requiring branchline investments that are large in relation to sales volumes. Consequently, to establish the economic feasibility of a proposed branchline, and to protect existing customers from having to assume costs which new customers should properly pay, we have prescribed a formula under which Northern may expand its facilities to provide gas service to new communities. The formula provides that the estimated third-year revenues for a town located on a branchline should be equal to or greater than the estimated cost of service, including the cost of gas in the field plus incremental transmission expenses, of that branchline. If the cost of service on a branchline exceeds the estimated revenues generated by the line, the distributing company customer must contribute sufficient funds to defray such costs in order to make the branchline economically feasible. Absent such a contribution, Commission authorization for the branchline will be denied.[2]

In testing the feasibility of Northern's proposed branchlines and determining the amount of contributions required, the examiner used Northern's rates in effect on October 15, 1965, while this proceeding was in progress, as reduced by a settlement in Docket No. RP66–3, instead of using the higher rates in effect when Northern filed its original application. Use of Northern's former higher rates would require distributor contributions of $276,300, while use of the current lower rates would require contributions of $630,917.[3]

Northern, many of its proposed distributing company customers, and the Wisconsin Public Service Commission favor use of the old higher rates on the ground that these rates were used by Northern and the distributors in planning their proposals and determining the amounts of contributions to be made. They argue that to change the basis of their proposals because of a subsequent rate reduction is unfair and would interfere with the orderly development of future projects. They contend that the additional contributions will not materially benefit Northern but will, on the contrary, impose a heavy burden on some of the distributors. Staff and Minneapolis Gas Company favor use of the new reduced rates.

We conclude that the examiner's use of Northern's new reduced rates is correct. The new reduced rates are the actual rates Northern is charging, and their use will provide the most realistic measure of Northern's revenues from its branchlines in the future. There is no merit to the contention of Wisconsin Gas Company that this approach erroneously substitutes new information respecting the "rates" factor in the "equation", while incorrectly assuming that other factors, such as sales, would remain the same. As the examiner noted, the record does not show that the reduction in rates would cause an increase in the distributors' sales, and no party offered to make such a showing by introducing supplementary evidence.

---

[2] Commission Opinion No. 324, *Northern Natural Gas Co.*, 22 FPC 164, 172–3 (1959); Opinion No. 404, *id.*, 30 FPC 859, 865 (1963).

[3] The amounts each distributor would pay are listed in Appendix A to the examiner's decision.

Further, there is nothing in the record to indicate that the use of Northern's reduced rates, to test branchline feasibility in order to determine the amount of distributor contributions required, will have any detrimental effect on the development of future projects. The facts and best estimates available, in this instance, a known change in rates, must be selected as the criteria by which a project of this nature will be judged. We agree with the examiner's conclusion that the date Northern filed its certificate application does not constitute a cutoff date beyond which adjustments necessary for accuracy could not be made. This is especially true where the adjustment in rates was made only three days after Northern's direct case was submitted but before the actual hearing in the case. Any other result would violate the principle of matching costs and revenues. In the absence of evidence clearly demonstrating that a substantial adverse impact on future planning will occur by virtue of computing contributions on the basis of Northern's reduced rates, this argument must be rejected.

Refunds of contributions.—The examiner would condition Northern's certificate to require Northern to refund the distributor's contributions to them, to the extent that actual third-year revenues from the branchlines exceed the projected revenues. In the examiner's opinion, such a provision would protect new customers from being charged excessive contributions in the event actual sales exceed estimates and could lessen the burden of basing contributions on Northern's new reduced rates.

The Commission's staff, Northern, and certain distributing companies oppose this refund provision on the grounds, *inter alia*, that it illogically bases the feasibility test not on estimates as to the future, but on results not definitely known until three years after the project is certificated. They contend that such a provision might operate unfairly since it constitutes a "one-way street" that would require refunds where actual revenues exceed projected revenues but would not recoup lost revenues where actual revenues are less. Finally, they argue that it would postpone the final determination of the case, give rise to uncertainty respecting the status of projects and investments and engender conflicts with respect to the proper amounts of refunds.

Conversely, the Wisconsin Public Service Commission and several of the proposed distributing company customers favor the examiner's refund provision. They contend that it is essentially a mathematical adjustment that would further the purpose of the branchline contributions requirement by limiting contributions to covering the risk that the branchlines might not be economically feasible, and no more. The Wisconsin Public Service Commission points out that many distributing companies today apply their own "branchline" rules providing for refunds to their customers of contributions in aid of extensions where revenue from such extensions exceed a specified amount.[4]

We conclude that the condition for refunding contributions is a reasonable one under the circumstances of this case. The provision is in keeping with the purpose of the requirement for branchline contributions, in that it assures that only the minimum contributions necessary to establish feasibility will be required. The claimed difficulties of the refund procedure do not justify its rejection. Initial difficulties attend the use of most new procedures, but progress in improving and refining the administrative process is possible only by attempting the use of new procedures where they appear reasonably likely to succeed.

---

[4] *State ex rel. Kennedy, et al.* v. *Public Service Commission*, 42 S.W. 2d 349 (1931), and *Commonwealth ex rel. Green, et al.* v. *Alexandria Water Company*, 65 S.E. 2d 521 (1951).

We conclude, however, that these refunds should be related to the actual volumes of gas delivered in the third year compared with the estimates made on the record,[5] rather than compared with third-year revenues, as the examiner provided. This requirement should avoid some of the uncertainties that would attend the use of revenues, and would relate the amount of refunds more directly to the efforts of the distributors to increase their gas sales.

Industrial contracts.—The examiner recognized that various past Commission decisions involving Northern have required the filing of firm industrial contracts where a contemplated sale appears "to have a strong bearing on the economic feasibility of the project and where there is reason to question whether in fact the sale will be made." [6] In applying this rule in the *Northern* case, Opinion No. 463, the Commission found on the facts there presented that sales which account for more than 15 percent of the projected branchline revenues would have such "strong bearing" on feasibility that contracts would be required for them. However, the Commission did not rule out the possibility that contracts would be required for sales accounting for less than 15 percent of such revenues.

Applying this policy, the examiner held that three signed contracts must be obtained: one for the Wisconsin Co-op Dairy sale, which the Wisconsin Power & Light Company proposed to make from the New Lisbon, Wisconsin, branchline; one for the Twin City Milk Products sale; and one for the River Falls Power Plant sale. The latter two sales are proposed to be made from the Black River Falls branchline, the first by Wisconsin Gas Company, and the second by the St. Croix Valley Natural Gas Company. Although these sales do not exceed 15 percent of total branchline sales, the examiner found signed contracts justified in the light of all the circumstances. We agree. The New Lisbon branchline would become economically infeasible if the Wisconsin Co-op Dairy sale were lost, and the Black River Falls branchline, for which a deficit is already forecast, would be plunged into an even deeper deficit if any sale on the branchline were lost. These and other considerations discussed by the examiner necessitate signed contracts.

This requirement is not onerous since the examiner provided that, alternatively, the distributors on these branchlines could make contributions to the costs of the branchline reflecting the revenue deficiency that would attend loss of these industrial sales, which contributions Northern would refund if the customers sign contracts by the end of the second full year of operations. Such a provision was applied in our Opinion No. 424, *Southern Natural Gas Co.*, 31 FPC 789 (1964), and is equally appropriate in this case. The amounts of the contributions are set forth in Appendix B to the examiner's decision.

The Towns of Preston and Sabula.—The Towns of Preston and Sabula, Iowa, request that Northern be directed to sell to them the volumes of gas Northern proposed to sell to its Peoples Natural Gas Division (Peoples) for resale in the two towns. Preston and Sabula contend that as the result of municipal elections, the towns now plan to install and operate their own gas distribution systems and that the franchises previously granted to Peoples to serve the towns are no longer valid. However, Preston's and Sabula's petition to intervene was filed late and was never granted, and the examiner properly denied them permission to participate in this proceeding or to present any evidence. In view of these facts, there is no basis in the record for granting Preston's and Sabula's requests. However, the towns are at liberty to seek service from Northern in other proceedings. Compare our order amending order accompanying Opinion No. 324, issued February 20, 1962, in *Northern Natural Gas Company*, Docket No. G-17485, *et al.*, 27 FPC 382. If such applications are promptly filed and adequately supported, it appears likely they can be granted in time for service in the coming heating season. Since Northern would have constructed the necessary branchline facilities for Peoples in this case, it may reasonably be required to do so for the two towns if they can show they otherwise meet the requirements of Section 7(a).

---

[5] See *Kansas-Nebraska Natural Gas Company, Inc.*, 29 FPC 1058, paragraph B(iii).

[6] See Opinion Nos. 324 and 404, *supra*. See also Opinion No. 463, *Northern Natural Gas Company*, Docket No. CP64-255 (Phase II), 33 FPC 1163 (1965).

We have considered the exceptions to the examiner's decision not discussed herein, but have concluded that they are without substantial support in fact or reasonable basis in law, or are immaterial to decision in this case, and should therefore be denied.

The Commission further finds:

(1) Northern, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as the Commission has heretofore found.

(2) The facilities hereinabove described, as more fully described in Northern's application and the record in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Northern is able and willing properly to do the acts and to perform the service proposed and conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the facilities and the transportation, sale and delivery of natural gas proposed by Northern are required by the public convenience and necessity and a certificate therefor should be issued, as hereinafter ordered and conditioned.

(5) The public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Northern's compliance with all applicable Commission Regulations under the Natural Gas Act and the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Northern Natural Gas Company to construct and operate the proposed facilities and to sell and deliver natural gas as hereinabove described, and as more fully described in Northern's application and the record in this proceeding, upon the terms and conditions of this order.

(B) Northern's certificate, and the rights granted thereunder, are subject to the condition that Northern shall comply with all applicable provisions of the Commission's Regulations under the Natural Gas Act and specifically with paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations. The time within which Northern's facilities shall be completed and in actual operation in conformity with Section 157.20(b) shall be 12 months from the date of issuance of this opinion.

(C) Northern's certificate, and the rights granted thereunder, are subject to the further condition that no construction shall commence on any branchline unless and until each distributor whose name is listed in Appendix A to the examiner's decision shall have paid Northern the amount set opposite the distributor's name with respect to that branchline. In the event that actual volumes of sales on any branchline in the third full calendar year of operation exceed the projected total for that branchline, as reflected in Appendix A, Northern within 60 days thereafter shall submit for the Commission's approval a plan for refunding all or part of any payments required by this paragraph, so as to conform to actual experience. Such refunds shall be determined by utilizing the same factors employed in the formula used in this case, except that volumes of sales (both contract demand and annual volume) made at the time such refunds are determined shall be used.

(D) Northern's certificate, and the rights granted thereunder, are subject to the further condition that construction of the New Lisbon, Wisconsin, branchline shall not commence unless and until the Wisconsin Co-op Dairy shall have signed a contract for the purchase of natural gas from a distributor on this line or, alternatively, unless and until each distributor on this line shall have paid Northern the amount set opposite its name in Appendix B to the examiner's decision with respect to that branchline. Said payments shall be promptly refunded by Northern if the contract is signed at any time before the end of the second full calendar year of the operation of that branchline.

(E) Northern's certificate, and the rights granted thereunder, are subject to the further condition that construction of the Black River Falls, Wisconsin, branchline shall not commence unless and until the Twin City Milk Products Co. and the River Falls Power Plant have contracted to purchase natural gas from a distributor on this line or, alternatively, unless and until each distributor shall have paid Northern the amount set opposite its name in Appendix B to the examiner's decision with respect to Twin City Milk Products if Twin City Milk Products does not sign such a contract, and the amount set opposite its name with respect to the River Falls Power Plant if no contract is signed for that sale. Payments made with respect to either of these contracts shall be promptly refunded by Northern if the contract is signed at any time before the end of the second full calendar year of operation of the Black River Falls branchline.

(F) The initial decision of the presiding examiner issued herein on February 10, 1966, is to the extent consistent with this opinion hereby adopted by the Commission as of the date of issuance of this opinion, to constitute with this opinion the Commission's decision in this case.

(G) Except to the extent herein granted, the exceptions filed to the presiding examiner's decision are denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER GRANTING CONDITIONED CERTIFICATE UNDER SECTION 7 OF THE NATURAL GAS ACT

(Issued February 10, 1966)

FRIBOURG, *Presiding Examiner*: Northern Natural Gas Company seeks authorization to build and operate $19,305,400 of facilities to bring natural gas service to 131 Iowa, Minnesota, Nebraska and Wisconsin communities which do not now have it.[1] The estimated third year contract demand is 48,137 Mcf and third year sales are estimated at 12,185,837 Mcf.

Northern proposes to construct some 26 miles of 30-inch mainline loop, 812 miles of branch lines, and various measuring and compressor facilities. It proposes also to use its Redfield, Iowa, storage field to supply the increase of 8,580 Mcf per day of contract demand between the second and third years of service. No additional facilities are needed for that purpose.

The record shows, and it is undisputed, that the project presents no problem as to design, location, financing, gas reserves, storage facilities, cost, or, except as noted below, markets and economic feasibility. The disputed issues relate to contributions to be required from certain of the distributors to whom Northern will sell. Northern determined that contributions of $276,300 should be made in aid of the construction of five branch lines. The Commission staff argues for contributions of $630,917 on eleven branch lines, provided that before construction begins signed contracts are obtained by the distributors from three industrial customers. If these contracts are not signed, the Staff would require a total of $940,749 of contributions from the distributors.

Branch-Line Feasibility

(a) *Rates*

Northern's application was filed December 31, 1964, and amended April 19, 1965. Subsequently, on October 15, 1965, 34 FPC 1162, this Commission approved a reduction in Northern's rates effective as of June 27, 1965 (Docket No. RP66–3). As the feasibility of the various branch lines is determined on the basis of estimated revenues in the third year of operation, and as the revenue estimates are based upon the application of Northern's rates to the volumes of gas estimated to be sold in that year, the choice of which rate to apply bears directly on feasibility. In this instance, to use the former higher rates, as Northern would do, would result in the requirement of $276,300 of contributions, while application of the current rates, as urged by the Staff, would require $630,917 of contributions, disregarding for the moment the matter of contracts to be signed with three industrial customers.

Those who would use the old rates to determine probable third-year revenues argue that the distributors have relied upon Northern's calculation of contributions, which was based on the old rates, that it would be unfair to penalize the distributors for the Commission's not having issued a certificate before the rate reduction, that the additional contributions would be a severe burden on some distributors but would be *de minimis* to Northern in relation to the size of the project, that there must be a cut-off date as of which the determination of feasibility should be made and that to avoid uncertainty the cut-off date should not be later than the filing of the application.

The Examiner disagrees. He finds and concludes that the reduced rates should serve as the basis for determining contributions. The considerations governing the determination of contributions to a pipeline are not unlike those governing a pipeline rate case. In both, it is necessary to provide a fair return to the pipeline. In a rate case this is achieved by changing the amount of revenues to be earned on a given rate base. In a contribution case the estimated revenues are a given figure but the rate base (*i.e.*, the pipeline's investment in the project) is reduced to one on which the estimated revenues will provide an adequate return. It is familiar procedure in a rate case to take some past year as a test year and adjust it for known changes which will operate in the future. In a contribution case the "test year" is necessarily in the future and is ordinarily the third full year of operation. In the present instance we have a known change in rates. The new rates are the best showing of what rates will be then. The estimates for that year should reflect them, just as, in a rate case, the test year figures would be adjusted to reflect a known change in the pipeline's cost of gas, or any other cost.

---

[1] With respect to certain of the communities in Wisconsin, the Wisconsin Gas Co., formerly Milwaukee Gas Light Co., is applying for an order requiring Northern to construct transmission facilities. The Wisconsin Gas Co., application, in effect, duplicates Northern's as to those communities.

The filing date of an application cannot be considered a cut-off date beyond which the Commission is relieved of the necessity for making its estimates as accurate as is reasonably possible. The mandate of Section 7(e) of the Natural Gas Act directs the Commission to issue a certificate if the project

> * * * is or will be required by the present or future public convenience and necessity * * *

The statute is not tolled by the filing of an application. The Commission speaks as of the date of its order.

The parties cannot complain that they have not been given opportunity to be heard on the effect of the rate cut. Some argued that the rate cut would cause a sales increase, and that it would therefore be unfair to take one into account and not the other. However, the record does not show that the rates of the distributors to whom Northern would sell have been or will be reduced. The cut consisted entirely of a reduction in Northern's demand charge and even on a 100 percent load factor would come to less than one cent per Mcf. There is no showing that a cut of this size, confined to Northern's demand charge alone, would lead to any appreciable sales growth among its customers. Some distributors, such as Iowa Electric Light & Power Co. in its counsel's opening statement, argued that they have become aware of additional potential customers since they made their market estimates. However, not one distributor offered to revise its market estimate, nor did the pipeline. Be that as it may, it is believed that the order made hereinafter adequately protects the distributors on branches where the estimates turn out to have been too low.

The public interest requires protection of both the pipeline and the distributors. The pipeline must be given reasonable assurance that a project will yield an adequate return, because if it does not, an unwarrantable burden may be thrown upon its other customers. On the other hand, if the distributors make contributions which turn out to be too large, they will in effect be paying more for their gas than they should. The Commission does not require that project revenues must yield a return comparable to that allowed on the existing system operations, but encourages the construction of branch lines wherever possible, provided that no undue burden is placed on existing customers. *East Tennessee Natural Gas Co.*, 32 FPC 158, 161; *Southern Natural Gas Co.*, 31 FPC 789, 796.

In the instant case, the third-year revenues of the project, based on current rates, would give Northern a return of 5.7 percent on its net investment in the new facilities. This takes into consideration only the contributions that Northern would require, not the additional ones proposed by Staff. In Opinion No. 324, *Northern Natural Gas Co.*, 22 FPC 164, 172-3, the Commission stated, with reference to the major extension then under consideration, that third-year revenues should be at least sufficient to cover the branch-line cost of service including an adequate rate of return, and that Northern's branch-line extension policy should be fixed accordingly. In Opinion No. 342, *Northern Natural Gas Co.*, 25 FPC 431, 433, Northern's rate of return was fixed at 6¼ percent, which figure has been used in the present case in the determination of the incremental cost of service.

This rate of return will be earned on Northern's net proposed branch-line investment only. That is, after deducting the payments required by this order from total branch-line investment, each branch would earn the 6¼ percent rate of return fixed in Opinion No. 342, and some of them would contribute something towards main-line costs. The return on the $14.9 million of branch-line facilities is adequate by Opinion No. 324 standards, since that opinion is directed towards return on branch lines, but it must be understood that Northern's return on its $19.4 million[2] over-all investment, less the $631,000 of payments to it which this order requires, is only 5.8 percent.

The danger in this sort of expansion is, of course, that it tends to burden existing customers with facilities on which an inadequate rate of return is earned. So viewed, this project is on the verge of infeasibility. The Staff may find it appropriate in future cases to take into consideration the over-all return, including main-line facilities, so that a policy may be formed for general use as the less lucrative markets are increasingly developed.

On the present record the danger is not serious enough to warrant denial of the project. The contemplated investment is not large enough to pose a threat to the stability of Northern's rates. (The projects considered in Opinion No. 324, for instance, were some five times as large, and the present project will form only a small part of Northern's total assets.) Nevertheless, the policy of Opinion No. 324 and other Commission opinions requiring branch lines to return something over their incremental costs is a good one and should be heeded.

Developments since its issuance give added reason for heeding it. On October 14, 1965, the Commission issued Opinion No. 479, *Northern Natural Gas Co.*, 34 FPC 1139, in which it authorized reductions in the contract demands fixed in Opinion No. 324 for five towns in Iowa. Although the burden on other customers as a result of the reduction was held not to be significant, the opinion showed that Northern has granted numerous reductions in its customers' contract demands (p. 1141). Regardless of the reasons for these reductions, the fact that they were found necessary emphasizes the need for care in protecting all customers in the present case, or any other case where the question of economic feasibility is a close one.

Protection of customers is not necessarily assured by requiring contributions in amounts sufficient to give the pipeline an adequate return. The new customers must be considered as well as the old ones. Obviously, if the contributions turn out to have been excessive, those who make them will have been overcharged. The burden imposed on some of the small distributors by the contributions suggested by the Staff is considerable. They, too, are entitled to protection should the burden turn out to be unnecessary.

The order will therefore provide that the certificate granted to Northern be conditioned upon payment by the respective distributors of the amounts, totalling $630,917, set opposite their names in Appendix A annexed to this decision. Each payment, however, is to be refunded in whole or in part after the third year if the actual third-year revenues from the lateral to which the payment applies exceed the revenues now projected for that lateral. The precise amounts of refunds are left for future determination, but it is intended that an excess sufficient to eliminate the projected deficiency on any lateral would result in a full refund by Northern of the payments made with respect to that lateral.

---

[2] In addition to the $19.3 million of construction Northern proposes to acquire from its Peoples Division for $110,000 a line known as the Fredericksburg, Iowa, line.

This would still leave some laterals contributing nothing to main-line costs and, if actual revenues run below the estimates, might leave some of them with revenues less than the incremental cost of service. However, the prospect of a refund may stimulate distributors on the deficit laterals to promote sales. Much may depend on how energetic a sales campaign is conducted. *Cf. East Tennessee Natural Gas Co.*, Opinion No. 435, 32 FPC 158, 161. If, for whatever reason, the estimates prove to be accurate or understated, each lateral would at least cover its incremental costs and the project as a whole would contribute something to main-line costs.

This disposition answers the claims that because the lower rates will produce more sales the market estimates should be revised upward. To the extent that the market estimates are exceeded, the required payments will be refunded. The requirements will ultimately be governed not by the estimates but by the facts as they develop. The method is self-correcting.

(b) *Market Estimates*

Minneapolis Gas Company argues that with respect to three of Northern's distributors there have been overestimates of the percentage of potential customers who will be attached during the third year. It claims that Great Plains Natural Gas Company, Midwest Natural Gas Company and Wisconsin Gas Company did not use their own historical experience or Northern's most recent experience in estimating this third-year meter saturation.[3] By using Northern's earlier meter saturation data, reflecting the experience of communities attached to Northern's line since 1950, these distributors are said to have overstated their expected demand.

The saturation figures based on communities attached since 1950 show slightly higher saturation in the smallest communities, substantially the same in the next larger ones, and lower in the largest communities, than do the figures for communities attached from 1959 through 1961. The Examiner has compared the results reached by the two methods and finds only insignificant differences. It is concluded that the saturation figures which Northern presents are reasonable.

Minneapolis Gas Company further objects to the use of the estimate that Great Plains will sell 1,535,000 Mcf to Northern States Power Company's Granite Falls plant on the Marshall, Minn. lateral, in the third year of service. It points out that actual fuel requirements of the plant have been less than that in recent years and that a decline is expected after the third year, so that ninth year sales are estimated at only 900,000 Mcf.

In the first place, an estimate based on this plant's estimated ninth year take, leaving the other sales estimates on this branch line unchanged, suffers from the implicit assumption that the other markets on the line will not develop during the fourth to ninth years. Second, the Marshall lateral shows the largest excess of revenues over costs of any of the proposed laterals. If the costs and revenues of this line were reduced to reflect sales of only 900,000 Mcf to the Granite Falls plant, the lateral would still make a substantial contribution to main line costs. Not even Minneapolis Gas Company requests any finding of infeasibility with respect to this lateral.

---

[3] Minneapolis Gas attempts to bolster its claims of infeasibility by presenting, in its brief, evidence that is not a part of this record. Wisconsin Gas Company's objection to this tactic is well taken.

(c) *Contracts with Industrials*

The Staff would condition the certificate as to two of the proposed branch lines upon the obtaining of contracts by the distributors with three of their large industrial customers, or alternatively upon the payment of contributions by those distributors. It would require Wisconsin Power & Light Co. to obtain a commitment from the Wisconsin Co-op. Dairy before the New Lisbon, Wis., line is constructed, or else require a $65,697 contribution from Wisconsin Power & Light Co. and Elroy Gas Co., who are the distributors to be served by that line. Similarly, it would require a $244,135 contribution from the distributors on the Black River Falls, Wis., line unless before construction Wisconsin Gas Co. obtains a contract from Twin City Milk Products and St. Croix Valley Natural Gas Co. obtains one from the River Falls Power Plant. This Black River Falls contribution would be in addition to a $239,318 contribution payment with respect to that line resulting from the deficiency of revenues against costs at Northern's current rates, assuming that the two contracts were signed.

The Staff originally would have required ten signed contracts (or, alternatively, contributions). During the hearing, however, seven of the customers signed up, leaving only the three mentioned above.

The requirement of signed contracts is discussed in several Commission opinions, notably No. 324, *Northern Natural Gas Co.*, 22 FPC 164; No. 404, *Northern Natural Gas Co.*, 30 FPC 859; No. 424, *Southern Natural Gas Co.*, 31 FPC 789; No. 435, *East Tennessee Natural Gas Co.*, 32 FPC 158; No. 463, *Northern Natural Gas Co.*, 33 FPC 1163, June 2, 1965; and No. 469, *Midwestern Gas Transmission Co.*, 34 FPC 457, August 10, 1965, among others. In general, the Commission has required firm commitments where the contemplated sales are large in relation to total estimated third-year sales on the branch-line, and where the feasibility of the line depended on the sale. The Staff takes a prospective sale of 100,000 Mcf or 15 percent of total projected sales on a branch-line as the point above which a contribution should be required, if loss of the customer would cause revenues from the line to drop below costs.

Various arguments are advanced against the Staff's proposal. It is argued that the three sales for which the Staff would require contracts have no strong bearing on economic feasibility. In support of this, it is pointed out that the two sales on the Black River Falls lateral would contribute only 3 percent and 2.6 percent of projected revenues. It it also argued that the record shows that there is every probability that all three of these customers will sign up, and that Commission policy has been not to require contracts in such a situation. Another argument is that to obtain contracts in advance of construction is contrary to established industry practice[4] and that to require them would put the distributor in a poor bargaining position with the prospective customer. Furthermore, the required contribution, if contracts cannot be obtained, is said to place a heavy burden on the small distributor.

The Commission's requirements as to what precautions are needed to protect economic feasibility have not been rigid. They show a case-by-case treatment which has not hardened into rule. That course of action is reasonable: precautions needed where feasibility is questionable may safely be discarded where the margin is wide.

---

[4] This argument is supported by language in the Commission's opinion in *Kansas Pipe Line & Gas Co.*, 2 FPC 29, 45.

The Black River Falls lateral will fail by a substantial margin to cover its incremental costs even if the two large potential industrial customers now unsigned make purchases in the amounts forecast. In that situation the loss of any prospective customer anywhere on the lateral would plunge the entire branch deeper into deficit.

In a sense, therefore, every prospective customer has a strong bearing on the feasibility of the line. Yet it is impractical and undesirable to attempt to sign up every customer. Failure of a few small customers to sign could not seriously impair feasibility, since the possibilities for replacement are substantial. Among the large customers this tends to be less true. Twin City Milk Products, the River Falls Power Plant and the Wisconsin Co-op. Dairy are less readily replaceable than smaller consumers.

The Staff would not require signed contracts from large customers who are on lines that would be feasible without them. Some 300 industrial sales are involved in the proposed expansion. The requirement of a signed contract is applied to only ten of them, and of those ten, seven have now signed. The requirement of ten out of 300, where infeasibility would result or would be increased by the loss of any of the ten, is a not unreasonable safeguard. The fact that seven have already signed shows it to be a not impractical one. The "established practice" of the industry, relied on by some who oppose the requirement, is evidently not so firmly established as to be inflexible.

The probability that the three prospective customers will sign is, in the Examiner's opinion, fairly well established. However, the provisions of this order make that probability less important. The order will provide that the payments must be made in the amounts the Staff would require, but that they are to be refunded if the customers sign contracts by the end of the second full year of operation.

This again is a matter of letting the facts govern the policy. If the contracts are obtained, the distributors will get their money back. If they are not obtained, the payments will have been needed to avoid or reduce the deficit expected without them. A prospective customer who has not signed up by the end of the second full year cannot be expected to contribute the estimated amount towards third-year revenues. The Staff's proposal of nonrefundable contributions entails the risk that the distributors will obtain the customers after the money has been paid. This would leave the distributors out of pocket by reason of a contingency that failed to materialize and would, in effect, result in their paying too much for their gas supplies. It is fairer to let their ultimate liability depend on the event.

This procedure takes much force out of the claim that to require a signed contract would leave the seller in a poor bargaining position. The threat that an industrial, by refusing to sign, could prevent the branch from being built would be gone. Only by waiting two years or more to sign a contract could the prospective customer put the distributor's payment to Northern beyond hope of refund. During that time he would be giving up the benefits of the contract. If the contract is profitable to him, the tendency would be to sign. If his signature cannot be obtained even through the gas is flowing past his door, it is a good indication that the sale should not have been included in the market estimate in the first place, and Northern should be protected to the extent of the required payment.

It is therefore provided that in addition to the $630,917 of payments referred to earlier, $65,697 be paid to Northern by the distributors on the New Lisbon, Wis., line unless before construction begins a contract is signed with Wisconsin Co-op. Dairy, and that $244,135 be paid by the distributors on the Black

River Falls, Wisconsin, line if before construction begins no contracts are signed for the sales to either Twin City Milk Products or the River Falls Power Plant. Of this, $129,473 is attributable to Twin City Milk Products and is to be paid if no contract is signed with that entity, and the remaining $114,662 to the power plant and shall be paid if no contract is signed as to it. If, after the commencement of construction and before the end of the second full calendar year of operation any one or more of the three contracts is signed, the distributor will immediately inform Northern, which will thereupon return the payments made in respect to that sale. After the end of the second year, the payments will not be subject to refund.

What is done here is not new. The Commission made similar provisions in the ordering portion of its Opinion No. 424, *Southern Natural Gas Co.*, 31 FPC 789, 799. This order follows that one.

Northern States Power Company (N.S.P.) is required by this order to make a payment of $19,436 by reason of the deficit which results from the non-inclusion of a potential sale to St. John's University in the market estimate relating to the St. Joseph, Minnesota, branch-line. N.S.P., which is the only distributor on that line, asks that if a contract is obtained before construction, the payment not be required.

The market estimates on which the contributions are based and which form an important part of the foundation for issuance of the certificate do not include this sale which, though originally included, was deleted by Northern Natural's witness.

The effect of granting N.S.P.'s request would be to include N.S.P.'s payment among those listed in Appendix B. That group, however, includes only prospective customers whose prospective purchases are included in the market estimates. It is intended to safeguard Northern in the event that an expected large contract does not materialize. To treat this branch consistently with the others, *i.e.*, to base its treatment, as in the other cases, on Northern Natural's markets estimates, the payment should be required. This payment, like the others provided for in Appendix A, will be refundable to the extent that actual third-year revenues from the branch-line suffice to wipe out the estimated third-year deficit.

In urging that it not be required to make a payment if in fact it obtains a contract prior to construction, N.S.P. is making a request that could be made by any other distributor who, before construction, obtains a contract from a customer not included in the market estimates. It would be impracticable to readjust the payments for every such event that may occur. Furthermore, the present disposition puts N.S.P. in a better position if a contract is signed after construction begins than it would be if its request were granted as made. The burden of leaving this amount of money with Northern until after the third year of operation is a negligible one for N.S.P.

Allocation of Payments

Wisconsin Gas Co. objects to the allocation of payments to distributors in proportion to their shares of the projected third-year revenues on the branch line involved. This intervenor does not offer a formula of its own but argues that the revenue-basis approach is inequitable and urges that a different method be used.

The revenue method, it says, requires distributors with adequate markets near the main pipeline to finance remote communities which, if they were considered individually, could not support branch-line extensions. It argues that a branch-line which more than covers its incremental costs is not required to support deficient ones, and similarly a distributor with a profitable market should not be required to make a contribution to open up an unprofitable one merely because both happen to be supplied from the same lateral.

It is difficult, however, to suggest a more equitable arrangement which is also practicable. To assess contributions on the basis of distance from the main line is not the answer. That would lead to some sort of "Mcf-mile" (or possibly "Mcf-yard"!) formula which carries its own inequities and would be intolerably cumbersome. Third-year revenues from the distributors are at least an approximate measure of the benefits with which the pipeline will supply them. The pipeline may derive varying rates of return from different customers, but the various parts of a utility system need not and cannot be equally profitable. *Minneapolis Gas Co.* v. *F.P.C.*, 278 F. 2d 870, 871, certiorari denied, 364 U.S. 891.

The third-year revenues method is acceptable to Northern, to the Staff and to the large majority of the distributors involved. Long usage sanctions it. It has its defects, but it is a reasonable measure of the benefits. No better method is suggested, nor has the Examiner been able to devise one. He therefore accepts it.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence and the briefs of the participants, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) The applicant Northern Natural Gas Company is engaged in the transportation of natural gas in interstate commerce and in the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The proposed facilities of the applicant as more fully set forth in its application and the evidence of record in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by the applicant are subject to the requirements of Section 7(c) of the Natural Gas Act.

(3) The applicant is able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act as amended and to the rules, regulations and orders of the Commission thereunder.

(4) Subject to the conditions hereinafter stated, the construction and operation of the proposed facilities and the proposed deliveries of natural gas by applicant are required by the public convenience and necessity and a certificate therefor so conditioned should be issued.

ORDER

WHEREFORE, *It is ordered*, that a certificate of public convenience and necessity be and the same hereby is issued authorizing applicant to make the sales and construct and operate the proposed facilities as hereinbefore described, on condition that:

(A) No construction shall commence on any branch line unless and until each distributor whose name is listed in Appendix A hereto annexed shall have paid Northern the amount set opposite the distributor's name with respect to that branch line. In the event that actual revenues on any branch line in the third full calendar year of operation exceed the projected total for that branch line as shown in Appendix A, Northern within 60 days thereafter shall submit for the Commission's approval a plan for refunding all or part of any payments required by this paragraph, so as to conform to actual experience.

(B) Additionally, it is ordered that construction of the New Lisbon, Wisconsin, branch line shall not commence unless and until the Wisconsin Co-op. Dairy shall have signed a contract for the purchase of natural gas from a distributor on this line or, alternatively, unless and until each distributor on this line shall have paid Northern the amount set opposite its name in Appendix B with respect to that branch line. Said payments shall be promptly refunded by Northern if the contract is signed at any time before the end of the second full calendar year of the operation of that branch line.

(C) It is further ordered that construction of the Black River Falls, Wis., branch line shall not commence unless and until the Twin City Milk Products Co., and the River Falls Power Plant have contracted to purchase natural gas from a distributor on this line or, alternatively, unless and until each distributor shall have paid Northern the amount set opposite its name in Appendix B with respect to Twin City Milk Products if Twin City Milk Products does not sign such a contract, and the amount set opposite its name with respect to the River Falls Power Plant if no contract is signed for that sale. Payments made with respect to either of these contracts shall be promptly refunded by Northern if the contract is signed at any time before the end of the second full calendar year of operation of the Black River Falls branch line.

ARTHUR H. FRIBOURG,
Presiding Examiner.

PIPELINE PRODUCTION AREA RATE PROCEEDING, DOCKET NO. RP66–24

ORDER DESIGNATING ADDITIONAL RESPONDENTS

(Issued May 25, 1966)

The Commission, by order issued April 13, 1966, 35 FPC 497, severed the Pipeline Production issue from the Hugoton–Anadarko Area Rate Proceeding Docket No. AR64–1, *et al.*, and instituted a new proceeding in the above-identified docket for the purposes of determining the proper method for pricing, as a component of the overall cost-of-service of the purchasing pipeline, natural gas produced by the pipelines or acquired by them from their affiliated producer companies.

In Appendix A to our order of April 13, 1966 we named various pipeline companies as parties-respondent to the newly instituted proceeding. Since this proceeding encompasses the issue of the appropriate method of pricing to be applied to natural gas acquired by pipelines from their affiliated producer companies we conclude upon further consideration that it is appropriate to join as parties-respondent the affiliated producer companies hereinafter named.

Accordingly, the Commission believes that it is in the public interest to amend Appendix A to the April 13 order to include the following affiliated producer companies: Anadarko Production Company, Cities Service Oil Company, Colorado Oil and Gas Company, Columbian Fuel Corporation, El Paso Natural Gas Products Company, La Gloria Oil and Gas Company, Lone Star Producing Company, The Preston Oil Company, Tenneco Oil Company, Texas Gas Company, Texas Gas Exploration Corporation, and Union Producing Company. This list of affiliated producer companies may not necessarily be all-inclusive; there may be other existing affiliated producer companies which may be brought to the Commission's attention during the course of this proceeding.

Additionally, we are amending Appendix A to the aforementioned order to include Iroquois Gas Company, United Natural Gas Company, Pennsylvania Gas Company, as parties-respondent pipeline companies to this proceeding.

The Commission orders:

Appendix A of the Commission's order in this docket issued April 13, 1966, is hereby amended to include the following companies as parties-respondent in the proceedings instituted by paragraph (B) of that order: Anadarko Production Company, Cities Service Oil Company, Colorado Oil and Gas Company, Columbian Fuel Corporation, El Paso Natural Gas Products Company, La Gloria Oil and Gas Company, Lone Star Producing Company, The Preston Oil Company, Tenneco Oil Company, Texas Gas Exploration Corporation, Union Producing Company, Iroquois Gas Company, United Natural Gas Company, and Pennsylvania Gas Company.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PIPELINE PRODUCTION AREA RATE PROCEEDING, DOCKET NO. RP66-24

ORDER PERMITTING AND DENYING INTERVENTIONS

(Issued May 25, 1966)

Pursuant to the Commission's order issued April 13, 1966, 35 FPC 497, instituting the "Pipeline Production Area Rate Proceeding, Docket No. RP66-24," timely petitions and notices to intervene were filed by the persons named in the following intervener categories:

I. The following state commissions filed notices of intervention under Section 1.8 of our Rules of Practice and Procedure:

Iowa State Commerce Commission (April 29, 1966).
Michigan Public Service Commission (May 3, 1966).
Mississippi Public Service Commission (April 25, 1966).
Public Service Commission of the State of New York (April 27, 1966).
Public Service Commission of Wisconsin (April 28, 1966).
State Corporation Commission of the State of Kansas (April 27, 1966).

The People of the State of California and the Public Utilities Commission of the State of California (May 2, 1966).

The Public Utilities Commission of Ohio (May 2, 1966).

II. State, county, and municipal governmental bodies filing petitions to intervene:

State of Wisconsin (May 2, 1966).

City of Chicago (April 28, 1966).

City and County of Denver, Colorado (May 2, 1966).

City of Los Angeles (April 29, 1966).

City and County of San Francisco (May 2, 1966).

City Group Gas Defense Association consisting of the Kansas Cities of Altamont, Atchison, Chanute, Countryside, Erie, Fairway, Girard, Grenola, Howard, Iola, Leavenworth, Neodesha, and Prairie Village; and the Missouri Cities of Aurora, Carl Junction, Carthage, Independence, Joplin, Kansas City, Marshall, Monett, Mt. Vernon, Neosho, Nevada, Oronogo, St. Joseph, Springfield, Waverly, and Webb City (May 2, 1966).

III. Natural gas distribution companies, natural gas distribution company associations, natural gas producers and association of natural gas producers filing petitions to intervene:

Atlanta Gas Light Company (May 2, 1966).

American Public Gas Association consisting of gas distributors within the States of Alabama, Arizona, Arkansas, Colorado, Connecticut, Florida, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Maryland, Massachusetts, Minnesota, Mississippi, Missouri, Nebraska, New Mexico, New York, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, Virginia and Washington (May 2, 1966).

The Berkshire Gas Company (May 2, 1966).
  Boston Gas Company
  The Bridgeport Gas Company
  Bristol and Warren Gas Company
  Brockton Taunton Gas Company
  Buzzards Bay Gas Company
  Cambridge Gas Company
  Central Massachusetts Gas Company
  Concord Natural Gas Corporation
  The Connecticut Gas Company
  Fall River Gas Company
  Fitchburg Gas and Electric Light Company
  Gas Service, Inc
  The Greenwich Gas Company
  The Hartford Electric Light Company
  Haverhill Gas Company
  City of Holyoke, Massachusetts Gas and Electric Department
  Lawrence Gas Company
  Lowell Gas Company
  Lynn Gas Company
  Manchester Gas Company
  Mystic Valley Gas Company
  New Bedford Gas and Edison Light Company
  The New Britain Gas Light Company
  New Haven Gas Company

- The Newport Gas Light Company
- North Attleboro Gas Company
- Northampton Gas Light Company
- North Shore Gas Company
- City of Norwich, Department of Public Utilities
- Norwood Gas Company
- The Pequot Gas Company
- Providence Gas Company
- South County Gas Company
- Hartford Gas Company
- Springfield Gas Light Company
- Tiverton Gas Company
- Valley Gas Company
- Wachusett Gas Company
- City of Westfield Gas and Electric Light Department
- Worcester Gas Light Company

The Brooklyn Union Gas Company (April 29, 1966).
Central Hudson Gas & Electric Corporation (May 2, 1966).
Central Illinois Light Company (May 2, 1966).
Central Illinois Public Service Company (May 2, 1966).
Consolidated Edison Company of New York, Inc. (April 29, 1966).
Gulf Oil Corporation (May 2, 1966).

- Amerada Petroleum Corporation
- The Atlantic Refining Company
- Continental Oil Company
- Kerr-McGee Corporation
- Marathon Oil Company
- Pan American Petroleum Corporation
- Phillips Petroleum Company
- Shell Oil Company
- Sinclair Oil & Gas Company
- Skelly Oil Company
- Warren Petroleum Corporation

Humble Oil & Refining Company (May 2, 1966).
Hunt Oil Company (May 5, 1966).
Illinois Power Company (May 2, 1966).
Iowa Electric Light and Power Company (May 2, 1966).
Iowa Public Service Company (May 2, 1966).
Long Island Lighting Company (April 27, 1966).
Memphis Light, Gas and Water Division (May 2, 1966).
Metropolitan Utilities District of Omaha (May 2, 1966).
Michigan Gas Utilities Company (April 26, 1966).
Minnesota Natural Gas Company (April 28, 1966).
Mississippi Valley Gas Company (April 29, 1966).
Niagara Mohawk Power Corporation (April 29, 1966).
Northern Illinois Gas Company (May 2, 1966).
Northern Natural Gas Producing Company (May 2, 1966).
Orange and Rockland Utilities, Inc. (May 2, 1966).
Pacific Gas and Electric Company (May 2, 1966).
Pacific Lighting Service and Supply Company, Southern California Gas Company, and Southern Counties Gas Company of California (May 2, 1966).
Philadelphia Electric Company (May 2, 1966).

Philadelphia Gas Works Division of The United Gas Improvement Company (April 28, 1966).
Public Service Company of Colorado (May 4, 1966).
Public Service Electric and Gas Company (April 25, 1966).
San Diego Gas & Electric Company (April 29, 1966).
Socony Mobil Oil Company, Inc. (May 2, 1966).
Sun Oil Company (May 2, 1966).
Superior Oil Company (May 2, 1966).
Wisconsin Gas Company (May 2, 1966).
Texas Independent Producers & Royalty Owners Association (April 27, 1966).
Texaco Inc. (May 2, 1966).
Washington Gas Light Company (May 2, 1966).
Willmut Gas and Oil Company (May 2, 1966).

In addition, The Pipeline Division, Independent Natural Gas Association of America (INGAA), a recognized trade organization which includes representatives of most of the large natural gas transmission companies subject to the Commission's jurisdiction, has filed a petition to intervene. Since INGAA's Pipeline Division participation will be that of an industry trade association, we shall grant intervention while recognizing that many of the Pipeline Division members are presently respondents to the proceeding.

IV. Cities Service Oil Company (Oil Company) and Columbian Fuel Corporation (Columbian), Union Producing Company (Union), and The Preston Oil Company (Preston Oil) have timely filed petitions to intervene.

In our order of April 13, we held that the first phase of the Pipeline Production Area Rate Proceeding should cover the matter of "what is the most appropriate pricing method to be applied to natural gas * * * which is produced by the pipeline or its *affiliated producing company* * * * ?" (emphasis added). Accordingly, in our order issued today designating additional respondents to the proceeding in Docket No. RP66-24, *supra*, p. 806, we have amended Appendix A to the Commission's order of April 13, to include as additional respondents to this proceeding, *inter alia*, the following affiliated producing companies: Oil Company, Columbian, Union and Preston Oil.

Additionally, a group of pipeline companies (including one producer company, Preston Oil) referred to as the Pipeline Production Group[1] has filed a petition to intervene. Each of the member companies of that Group was individually named as a respondent (except Preston Oil which is being included as a respondent in the aforementioned separate order issued today) in our order issued April 13, instituting this proceeding. Since each of the above petitioners is now specifically named as a respondent herein, entitled to all of the rights of a party to this proceeding and including the requested "right to file pleadings, introduce evidence, cross-examine witnesses", it is not necessary or appropriate that they be permitted to intervene either individually or as a group. Accordingly the petition of the so-called Pipeline Production Group should be denied. However, consistent with our desire to expedite this proceeding, the denial of the Pipeline Production Group's petition to intervene is not intended to preclude grouping of parties having a common interest. Accordingly, where appropriate to do so and without derogation of the rights of any parties, parties having common interests should be grouped, thereby limiting the number of persons individually and actively participating in this proceeding.

---

[1] Cities Service Gas Company, Colorado Interstate Gas Company, Columbia Gas System Service Corporation (United Fuel Gas Company, Inc., and the Preston Oil Company), Kansas-Nebraska Natural Gas Company, Inc., Lone Star Gas Company, Natural Gas Pipeline Company of America, Northern Natural Gas Company, Panhandle Eastern Pipe Line Company, Southern Natural Gas Company, Texas Gas Transmission Corporation, Transcontinental Gas Pipe Line Corporation, Trunkline Gas Company and United Gas Pipe Line Company.

The Commission orders:

(A) Subject to the rules and regulations of the Commission, all the petitioners and state commissions named in paragraphs II and III are permitted to intervene in this proceeding and to participate on a joint or individual basis. *Provided, however,* That the participation of such interveners shall be limited to matters affecting asserted rights and interests specifically set forth by said petitioners in their petitions and *Provided, further,* That the admission of said petitioners as interveners shall not be construed as recognition by the Commission that they might be aggrieved because of any order or orders of the Commission entered in this proceeding.

(B) The petitions for leave to intervene filed in these consolidated proceedings by the petitioners named in Paragraph IV above are hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

PUBLIC UTILITY DISTRICT NO. 2 OF GRANT COUNTY, WASHINGTON, PROJECT NO. 2114

ORDER APPROVING REVISED PROJECT EXHIBITS AND FIXING ANNUAL LAND CHARGES

(Issued May 25, 1966)

On April 13, 1964, February 5, 1966, and February 18, 1966, respectively, Public Utility District No. 2 of Grant County, Washington, licensee for Project No. 2114, filed for Commission approval, revised Exhibits J and K, supplemental and supersedery Exhibit K, and Exhibit F. The project is located on the Columbia River, State of Washington, and affects lands of the United States.

The filing followed several years of cooperative investigations by the licensee and Commission staff to determine the acreage of United States lands occupied by the project. Since the license, issued on November 4, 1955, 14 FPC 1067, has been frequently amended or otherwise altered by Commission orders, we are describing in this order the lands currently occupied by the project and the project works thereon, as shown on the revised exhibits herein approved as part of this license and other exhibits which are already part of the license, with the exception of Exhibit F which does not require Commission approval. The new Exhibit K filings show that the project occupies 1,105.07 acres of lands of the United States, and we are by this order for the first time fixing the amount of annual charges for such occupancy, effective as of October 19, 1959, the first day of project operation.

The Commission finds:

(1) The following described new exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Sheet Numbers	*FPC Number*	*Title*
J-1A	2114-118	Priest Rapids Development General Map.
K-1	2114-141	Project Area and Boundary.
K-2	2114-142	Project Area and Boundary.
K-3	2114-121	Project Area and Boundary.
K-4	2114-122	Project Area and Boundary.
K-5	2114-123	Project Area and Boundary.
K-6	2114-143	Project Area and Boundary.
K-7	2114-125	Project Area and Boundary.
K-8	2114-144	Project Area and Boundary.
K-9	2114-145	Project Area and Boundary.
K-10	2114-128	Project Area and Boundary.
K-11	2114-146	Project Area and Boundary.

K-21	2114-139	Project Area and Boundary.
K-22	2114-140	Project Transmission Line.

(2) The amount of annual charges under the license for the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2114.

(B) Subparagraph (a) and subparagraphs (1) and (2) of paragraph (b) of the license are hereby further amended to read as follows:

(a) all lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the Licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license or applications for amendment thereof and which are designated and described as follows:

SUNRAY DX OIL COMPANY, DOCKET NO. G–6822, ET AL.; KANSAS-COLORADO UTILITIES, INC., DOCKET NO. RP64–37

ORDER RELEASING REFUNDS IN PART

(Issued May 25, 1966)

The Commission, by order issued January 29, 1965, in Docket No. G–6822, *et al.*, 33 FPC 128, conditionally approved a rate settlement proposal by Sunray DX Oil Company (Sunray). Pursuant to that order, Sunray was required to make refunds of excess charges on sales made during the period December 31, 1962 to December 31, 1964. The order provided, however, that refund monies should be held by Sunray, or its escrow agent, pending a report by each of Sunray's pipeline purchasers involved, including Kansas-Colorado Utilities, Inc. (Kansas-Colorado), setting forth its intended disposition of the refund amounts it would receive.

The Commission, by letter-order dated June 29, 1964 in Docket No. RP64–37, accepted without suspension, certain revised tariff sheets of Kansas-Colorado, reflecting an increase in rates in its then sole existing rate schedules F–1 and G–1. The revised tariff sheets were allowed to become effective July 1, 1964, subject to the condition that, among other things, Kansas-Colorado flow-through to its jurisdictional resale customers the proportionate share of refunds it may receive from any producer supplier.

The total amount of refunds to be received by Kansas-Colorado from Sunray is $11,993.43, including interest. In its report, as amended, setting forth its plans for distributing the subject refund, Kansas-Colorado proposes to flow-through the amounts refundable to it on purchases from Sunray after July 1, 1964. Kansas-Colorado notes that prior to the aforementioned acceptance of its rate increase, without suspension, its jurisdictional cost of service exceeded jurisdictional revenues by $150,000, and that prior to July 1, 1964 it had not passed on to its jurisdictional customers any part of the Sunray increased rate. Accordingly, Kansas-Colorado proposes to flow-through to Plateau Natural Gas Company, its sole jurisdictional customer during the period covered by the refunds here involved, the amount of $1,770.04.

The report submitted by Kansas-Colorado, as amended, with respect to its intended disposition of refunds from Sunray, is in satisfactory compliance with the pertinent condition contained in the Commission's letter-order of June 29, 1964, in Docket No. RP64–37. Plateau is successor in interest to

Kansas-Colorado pursuant to our order issued January 25, 1966, in Docket No. CP66–154, and will therefore receive the total refund of $11,993.43, including the amount of $1,770.04, from Sunray. It is therefore, not necessary for us to order a flow-through to Plateau of the $1,770.04.

The Commission orders:

(A) Within 45 days from the date of this order, Sunray DX Oil Company, or its escrow agent, is directed to release and pay over to Plateau Natural Gas Company, successor in interest to Kansas-Colorado Utilities, Inc., the amount of $11,993.43, the total amount of refund due to Kansas-Colorado under the Sunray settlement order issued January 29, 1965, in Docket No. G–6822, *et al.*

(B) Within 60 days from the date of this order, Sunray shall file a report showing the amount paid to Platéau. The principal sums and escrow earnings and/or interest (as the case may be) shall be separately stated.

(C) Pending further order of the Commission, Sunray shall retain all remaining refundable amounts in accordance with paragraph (E) of the order issued January 29, 1965 in Docket No. G–6822, *et al.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE ATLANTIC REFINING COMPANY, PENNZOIL COMPANY AND HUMBLE OIL & REFINING COMPANY

ORDER GRANTING MOTION FOR RECONSIDERATION AND AUTHORIZING PREPAYMENTS

(Issued May 26, 1966)

The Atlantic Refining Company (Atlantic) on March 25, 1966, filed a motion for reconsideration of the Commission's letter-order issued February 24, 1966, accepting effective as of February 28, 1966, a contractual amendment executed on January 3, 1966, which was designated as Supplement No. 2 to Atlantic's FPC Gas Rate Schedule No. 286. The amendatory agreement authorizes Atlantic to collect prepayments from Northern Natural Gas Company (Northern), the purchaser, for the period between July 22, 1965 and February 25, 1966, when deliveries commenced to Northern from the Coyanosa Plant in Pecos County, Texas, under the subject rate schedule. The February 24 letter–order, however, did not authorize prepayments prior to February 28, 1966, thirty days after the date of filing.

Atlantic claims in its motion that it should be allowed to collect the prepayments authorized under the amendatory contract because it refrained from cancelling its contract with Northern, as it had the right to do, when Northern was unable to commence the purchase of gas by April 1, 1965, because of the delay involved in Northern obtaining certificate authorization. Atlantic points out that under the prepayment provision Northern has the right to receive "make-up" gas over the life of the contract. Atlantic further points out that, under the amendatory agreement, prepayments commence on July 22, 1965, the date it began to suffer drainage as a result of the commencement of other producer sales to El Paso Natural Gas Company in the Coyanosa Field.

Under the circumstances set forth by Atlantic in its motion we conclude that prepayment should be authorized and will therefore accept Atlantic's prepayment agreement effective as of July 22, 1965.

Prepayment agreements were also filed by Humble Oil & Refining Company (Humble) and Pennzoil Company (Pennzoil) for sales to Northern from the Coyanosa Plant similar to the one filed by Atlantic, which were designated Supplement No. 1 to Humble's FPC Gas Rate Schedule No. 365 and Supplement No. 3 to Pennzoil's FPC Gas Rate Schedule No. 13. Humble's agreement became effective as of August 2, 1965, thirty days after the date of filing, as provided in the Secretary's letter of July 30, 1965. Pennzoil's agreement was accepted by the Commission's letter of January 19, 1966, to be effective on the date of initial delivery under Pennzoil's rate schedule.

In view of the action taken herein on Atlantic's prepayment agreement, we conclude that it is appropriate on our own motion to treat Humble and Pennzoil in a similar fashion. We shall therefore also make the prepayment agreements of Humble and Pennzoil effective as of July 22, 1965.

The Commission orders:

(A) Atlantic's motion for reconsideration filed on March 25, 1966 is granted, and Supplement No. 2 to Atlantic's FPC Gas Rate Schedule No. 286 is accepted effective as of July 22, 1965.

(B) Supplement No. 1 to Humble's FPC Gas Rate Schedule No. 365 and Supplement No. 3 to Pennzoil's FPC Gas Rate Schedule No. 13 are accepted effective as of July 22, 1965.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

GEORGE MITCHELL & ASSOCIATES, INC., AGENT, DOCKET NO. RI63-23

ORDER PERMITTING WITHDRAWAL OF CERTAIN ESCROWED FUNDS

(Issued May 26, 1966)

By letter filed April 18, 1966, George Mitchell & Associates, Inc., Agent (Mitchell) advised that they had inadvertently collected an increased rate of 18.5 cents per Mcf, in Docket No. RI63-23, rather than 17.5 cents per Mcf, as authorized under the temporary certificate in Docket No. G-19308, for the period from January 2, 1963 to September 22, 1965 from Florida Gas Transmission Company (Florida Gas) for Mr. Gregory Gallagher's working interest. Mitchell states that one cent per Mcf of the 18.5 cent rate attributable to Mr. Gallagher's interest, which amounts to $1,098.94 for the aforementioned period of time, was placed in an escrow account with The Chase Manhattan Bank of New York in accordance with an Escrow Agreement dated November 26, 1962 and filed herein. Mitchell submitted a letter from Florida Gas requesting that said overpayment be refunded and requested authority to withdraw said amount for the purpose of refunding this amount to the purchaser.

The Commission finds:

For the foregoing reasons, good cause exist for permitting Mitchell to withdraw $1,098.94 from the aforementioned escrow account and to refund said amount, plus interest at 7 percent per annum, to the purchaser as hereinafter ordered.

The Commission orders:

Mitchell is permitted to withdraw $1,098.94 from the above-mentioned escrow account; and within 90 days from the date of this order, shall (1) refund said

amount, plus interest at 7 percent per annum computed to the date of actual refund, to Florida Gas, and (2) report to the Commission in writing, the amount of overpayment to Florida Gas, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with a release from Florida Gas showing receipt of said principal and interest.

OPINION NO. 487-A

GEORGIA POWER COMPANY, DOCKET NOS. E-7099 AND E-7193

OPINION AND ORDER DENYING REHEARING AND MOTION FOR STAY

(Issued May 26, 1966)

Syllabus

1. Request for stay pending appeal, and reasons advanced in support thereof, fail to meet standards of *Virginia Petroleum Jobbers* and must be denied. P. 819.
2. Commission *denies* application for rehearing and stay of prior opinion and order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BAGGE, *Commissioner:*

On April 28, 1966, Georgia Power Company (Georgia Power) filed an application for rehearing, supplemented by a motion for amendment filed May 9, 1966, of the Commission's Opinion No. 487 and order issued March 30, 1966, 35 FPC 436. There we found that a resale load ceiling provision and a resale credit provision contained in Georgia Power's standard form WR-4 contracts for service to municipally owned electric distribution systems were unjust, unreasonable and unduly discriminatory within the meaning of Sections 205 and 206 of the Federal Power Act and were, therefore, unlawful. We ordered these provisions to be eliminated from Georgia Power's rate schedules and provided for the filing of rate schedule supplements in compliance with our order.

Georgia Power alleges error on two grounds:

1. The Commission, in determining "the just and reasonable rate * * * to be thereafter observed and in force," as required by Section 206(a) of the Federal Power Act, erred (a) in failing to consider the relationship between the deleted provision and the existing rate schedule and (b) because of the existence of that relationship erred in failing to order further hearings in this Docket to determine "the just and reasonable rate * * * to be thereafter observed and in force," as required by Section 206(a) of the Federal Power Act.

2. The Commission erred in holding that Georgia Power is adequately protected by its right to file a new rate schedule under Section 205 of the Federal Power Act.

Georgia Power requests that further hearings in this proceeding be instituted to set a new rate level and that our Opinion No. 487 and order be stayed until this new rate level is established. In the event of denial of such relief, Georgia

Power requests a stay of our Opinion and order pending appeal, citing *Virginia Petroleum Jobbers* v. *Federal Power Commission*, 259 F. 2d 921 (CADC–1958).

In general, the issues raised in the application for rehearing, and the amendment thereto, are adequately discussed in our original Opinion, and no purpose will be served in repeating our discussions except for the comments below.

This is not a proceeding to determine just and reasonable rates, and involves the question of whether two provisions in the WR–4 rate schedules of Georgia Power, applicable to wholesale sales to municipally-owned distributors for resale, are unjust, unreasonable and unduly discriminatory and therefore unlawful under Sections 205 and 206 of the Federal Power Act. In considering the relationship between the deleted provisions and the existing rate schedule, we made it clear in our March 30 order that our refusal to expand this proceeding into a rate case in no way precluded Georgia Power from submitting for filing new rate schedules reflecting increased rates, in accordance with Section 205 of the Federal Power Act and Part 35 of the Commission's Regulations thereunder. Georgia Power may avail itself of this opportunity at any time, separate from this proceeding, where its contractual commitments permit such a filing.

Concerning the request for a stay, the burden of meeting the standards prescribed in *Virginia Petroleum Jobbers, supra*, is on Georgia Power. That burden has not been met since Georgia Power has made no showing of any special facts or circumstances which would justify the reasonableness of its contractural restrictions in this proceeding. There has been no showing of irreparable injury; a possible revenue loss on other sales cannot justify the retention of discriminatory provisions in rate schedules. It is clear that the municipalities would continue to suffer injury if a stay is granted. In Opinion No. 487, we concluded that the restrictions in service contained in Georgia Power's contracts with the municipalities which it serves adversely affects them. Moreover, these limitations restrict the development of their electric systems. Nothing has been alleged here which would alter that conclusion.

It follows that it is not in the public interest for a stay to be granted permitting Georgia Power to enforce its contractual limitations pending court review. Accordingly, we conclude that Georgia Power's request for a stay pending appeal, and the reasons advanced in support thereof, fail to meet the standards set forth in *Virginia Petroleum Jobbers, supra*, and must be denied.

We have considered the assignments of error and the grounds for rehearing set forth in the application and the amendment thereto and have reconsidered our Opinion No. 487 and accompanying order. The arguments advanced here by Georgia Power are similar, if not identical, to those advanced by it in briefs before the examiner and rejected by us in the Opinion. Our conclusions as to these matters remain unchanged. No new facts or arguments are called to our attention which would be cause for granting rehearing or disturbing the original Opinion and order.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the application for rehearing and the amendment thereto of Georgia Power Company present no new facts or principles of law which were not fully considered by the Commission when it issued its Opinion No. 487 and order or which, having now been considered, warrant any change in or modification of said Opinion and order.

(2) The request for a stay of our Opinion No. 487 and order should be denied.

The Commission orders:

(A) The application for rehearing filed on April 28, 1966, as amended on May 9, 1966, by Georgia Power is denied.

(B) The request for a stay of the Commission's Opinion No. 487 and order is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ANNUAL REPORTING OF RESEARCH AND DEVELOPMENT ACTIVITIES BY ELECTRIC UTILITIES AND NATURAL GAS COMPANIES, DOCKET NO. R-256

ORDER NO. 322

AMENDING ANNUAL REPORT F.P.C. FORMS NOS. 1 AND 2 AND PRESCRIBING DEFINITION OF "RESEARCH AND DEVELOPMENT"

(Issued May 26, 1966)*

On February 11, 1964, the Commission gave notice by publication in the Federal Register (29 F.R. 2512) that it proposed to amend the Commission's Annual Report Forms No. 1 and No. 2, prescribed, respectively, by § 141.1 and 260.1 of its regulations, for use by public utilities, licensees and natural gas companies, by the addition of a new schedule entitled "Research and Development Activities." The proposed schedules are designed to obtain information, not readily, reliably or uniformly available from existing sources, concerning the general nature of electric utility and natural gas research and development projects and the accounting related thereto. Such information will materially assist the Commission in its effort to encourage technological developments to improve service and lower costs in the electric utility and natural gas industries by providing consistent and reliable data concerning the character and scope of current research.

Comments were invited from interested persons to be submitted by March 16, 1964. Upon request, the time for filing written views was subsequently extended through April 15, 1964 (29 F.R. 3442). In response to this notice and invitation, the Commission has received comments from or on behalf of the 27 respondents listed in the margin,[1] all of which have been given careful consideration in preparing the text of the regulation herein promulgated. The principal objections to the proposed new schedules were that they would be open to public inspection and would require the disclosure of secret and confidential information, thereby infringing on contractual commitments, aiding competitors, compromising patent rights and ultimately hampering research and development activities. Additionally, there were objections to the cost and burden of supplying the needed data, the low monetary limit set for projects required to be reported, the requirement for identifying the particular accounts charged with research and development expense, and absence of explanation of what the term "significant technological research and development projects" was intended to cover. The necessity of providing the Commission with research and development information was questioned and the possibility of obtaining information from alternative sources was suggested.

---

*Published in the Federal Register on June 3, 1966 (31 F.R. 7897).

[1] American Electric Power Service Corporation, Baltimore Gas & Electric Company, Columbia Gas System Service Corporation, Commonwealth Edison Company, Bureau of Census (Dept. of Commerce), Edison Electric Institute, El Paso Natural Gas Company, Hope Natural Gas Company, Kansas-Nebraska Natural Gas Company, Inc., Lake Shore Pipe Line Co., National Science Foundation, Natural Gas Pipeline Company of America, New England Electric System, New York State Natural Gas Corporation, Northern Natural Gas Company, Panhandle Eastern Pipe Line Company, Pennsylvania Public Utility Commission, Portland General Electric Company, Public Service Electric and Gas Company, Southern Union Gas Company, Tennessee Gas Transmission Company, Texas Eastern Transmission Corporation, Texas Gas Transmission Corporation, Transcontinental Gas Pipe Line Corporation, Trunkline Gas Company, Virginia Electric & Power Company, Washington Gas Light Company.

This proceeding provides an unusually good example of the purpose to be served by the notice requirements of the Administrative Procedure Act for the comments and suggested changes in the rule proposed have proved to be extremely pertinent and helpful. They have enabled us to revise our proposed reporting schedules in the interest of clarity, definition, and simplification while, at the same time, obtaining a supply of information adequate for our purposes which, as stated in the notice, is to enable the Commission to enhance its ability to stay abreast of developments in the two industries over which it has jurisdiction.

The schedules here prescribed are designed to provide the Commission annually with a description of the character and cost of the principal (*i.e.*, those costing $5,000 or more) electric utility and natural gas research activities. Projects will be classified by system function, such as, fossil fuel, steam plant, transmission, pipeline design, storage. Each project will be briefly described by area of research, for example, safety, extra-high voltage transmission, pollution.

We recognize that the furnishing of this information imposes both additional costs and increased personnel burdens upon the reporting companies and have therefore endeavored to minimize that burden by requiring only brief descriptions of research projects. This does not mean, however, that the descriptions may be so general as to be meaningless. There is widespread interest these days concerning the adequacy of research into such matters as high-strength steel pipe for use in pipelines, gasification of coal, handling of liquefied natural gas, fuel cells, AC–DC conversion, appearance of transmission facilities, and new technologies of both underground and high-voltage transmission of electric energy. Wherever possible, therefore, projects relating to such specific matters should be so identified.

We shall not attempt to discuss all the suggestions for revising the text of the instructions in the schedules. Suffice it to say that those adopted were for the purpose of removing the misapprehensions of many respondents as to the extent of the detail required.

Other points raised, however, require more specific mention. Several respondents argued that the accounting detail required in the schedules as proposed would be exceedingly burdensome. We agree and are requiring only that such data be summarized with an indication as to whether the amounts expended (estimated, if necessary) were charged to plant or expensed.

Many respondents argued that such information should for various reasons be kept confidential, particularly with respect to the disclosure of business and trade secrets and the names of persons or other entities participating with the reporting company in a research project. There is some merit in these comments and we will not require the reporting of such names unless they be affiliated with the reporting company. We are not requiring the disclosure of trade secrets, for we believe that projects can be described sufficiently for our purpose in terms designed to protect any secrecy the company deems necessary.

Illustrative of the current interest in the adequacy of research was the establishment of the Electric Research Council whose objectives are to stimulate more fully-coordinated intensive research efforts in all segments of the electric power generating and distribution organizations in the country—investor-owned, state and local public, cooperative and federal. Because the Council was organized about a year following the initiation of this proceeding, the schedule originally proposed made no provisions for reporting expenditures made in its support. We trust and anticipate that its work will have full participating support from the industry. Such support should have public recognition and with that purpose in mind we have revised paragraph 2.B. of instructions in the electric schedule (attachment A) [2] to provide therefor.

Finally, in response to many of the comments, we are amending the Uniform System of Accounts by adding a definition of the term "Research and Development."

The Commission believes that the modifications incorporated in the proposed regulations meet the principal objections to the original proposal while at the same time enabling the Commission to obtain research and development information adequate for its minimum needs. Acting pursuant to the Federal Reports Act (5 U.S.C. 139), the Bureau of the Budget has approved the collection of the information in the form herein prescribed.

Under the regulations here adopted, the schedules will be initially effective for the reporting year 1966 instead of 1963, as originally proposed.

The Commission further finds:

(1) The addition to Annual Report Forms Nos. 1 and 2 of new schedules on research and development activities will provide important assistance to the Commission in carrying out its obligations under the Federal Power and Natural Gas Acts by assuring that the Commission will have adequate, current, and readily comparable information concerning research and development activities within the industries over which the Commission exercises regulatory responsibilities.

(2) In view of the foregoing, and upon consideration of all relevant matters presented, these amendments are necessary and appropriate for the purposes of the Federal Power and Natural Gas Acts.

(3) The definition of "research and development" here being added to the Uniform System of Accounts (18 CFR, Parts 101 and 102) is responsive to most of the comments submitted. It simplifies rather than increases the reporting burden and is one with which the companies are, we believe, familiar. Further notice thereof prior to adoption, as provided in section 4 of the Administrative Procedure Act, is therefore unnecessary.

The Commission, acting pursuant to the Federal Power Act, as amended, particularly sections 304, 309 and 311 thereof (49 Stat. 855, 858, 859; 116 U.S.C. 825c, 825h, 825j) and the Natural Gas Act, as amended, particularly sections 10 and 16 thereof (52 Stat. 826, 830; 15 U.S.C. 717i, 717o), *orders:*

(A) Effective for the reporting year 1966, Annual Report FPC Form No. 1 and FPC Form No. 2, prescribed for Class A and B electric utilities, licensees, and natural gas companies by § 141.1, Subchapter D, and § 260.1, Subchapter G, respectively, of Chapter I, Title 18 of the Code of Federal Regulations, are amended by adding a new schedule to each entitled "Research and Development Activities" as set out in *Attachments A and B*,[2] hereto.

(B) Paragraph (d) of the said § 141.1 and paragraph (c) of the said § 260.1 are amended by inserting "Research and Development Activities" immediately before "Attestation" in the list of schedules.

---

[2] Omitted in printing.

(C) The section, Definitions, in Part 101, "Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act," Subchapter C, of said Title 18, is amended by renumbering the existing definition 27 as 27.A. and inserting, to follow such renumbered definition, the following:

B. "Research and development" means expenditures incurred by public utilities and licensees which represent research and development costs in the experimental or laboratory sense. Unless otherwise prescribed by the Commission, the definition of the term "research and experimental expenditures" contained in Internal Revenue Service Regulations, Section 1.174–2 or superseding revisions thereof, shall be the controlling definition for the purposes of this uniform system of accounts and the related annual report forms prescribed by the Commission. Terms in the general definition of the Internal Revenue Service regulations have been modified for this system of accounts. The term includes generally all such costs incident to the development of an experimental or pilot model, a plant process, a product, a formula, an invention, or similar property, and the improvement of already existing property of the type mentioned. The term does not include expenditures such as those for the ordinary testing or inspection of materials or products for quality control or those for efficiency surveys, management studies, consumer surveys, advertising, or promotions. However, the term includes the costs of obtaining a patent, such as attorney's fees expended in making and perfecting a patent application. On the other hand, the term does not include the costs of acquiring another's patent, model, production or process, nor does it include expenditures paid or incurred for research in connection with literary, historical, or similar projects.

Research and development expenditures include, in addition to the costs incurred by the public utilities and licensees for research or experimentation undertaken directly by them, expenses paid or incurred for research or experimentation carried on in their behalf by another person or organization (such as a research institute, foundation, engineering company, or similar contractor). However, any expenditures for research or experimentation carried on in behalf of public utilities and licensees by another person are not research and development expenses to the extent that they represent expenditures for the acquisition or improvement of land or depreciable property, used in connection with the research or experimentation, to which the public utilities and licensees acquire rights of ownership.

(D) The section, Definitions, in Part 201, "Uniform System of Accounts Prescribed for Natural Gas Companies Subject to the Provisions of the Natural Gas Act," Subchapter F of said Title 18, is amended by renumbering the existing definition 24 as 24.A. and inserting, to follow such renumbered definition, the following:

B. "Research and development" means expenditures incurred by natural gas companies which represent research and development costs in the experimental or laboratory sense. Unless otherwise prescribed by the Commission, the definition of the term "research and experimental expenditures" contained in Internal Revenue Service Regulations, Section 1.174–2 or superseding revisions thereof, shall be the controlling definition for the purposes of this uniform system of accounts and the related annual report forms prescribed by the Commission. Terms in the general definition of the Internal Revenue Service regulations have been modified for this system of accounts. The term includes generally all such costs incident to the development of an experimental or pilot model, a plant process, a product, a formula, an invention, or similar property, and the improvement of already existing property of the type mentioned. The term does not include expenditures such as those for the ordinary testing or inspection of materials or products for quality control or those for efficiency surveys, management studies, consumer surveys, advertising, or promotions. However, the term includes the costs of obtaining a patent, such as attorney's fees expended in making and perfecting a patent application. On the other hand, the term does not include the costs of acquiring another's patent, model, production or process, nor does it include expenditures paid or incurred for research in connection with literary, historical, or similar projects.

Research and development expenditures include, in addition to the costs incurred by the natural gas companies for research or experimentation undertaken directly by them, expenses paid or incurred for research or experimentation carried on in their behalf by another person or organization (such as a research institute, foundation, engineering company, or similar contractor). However, any expenditures for research or experimentation carried on in behalf of natural gas companies by another person are not research and development expenses to the extent that they represent expenditures for the acquisition or improvement of land or depreciable property, used in connection with the research or experimentation, to which the natural gas companies acquire rights of ownership.

(E) The amendments herein prescribed shall be effective July 1, 1966.

(F) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2337

ORDER AMENDING LICENSE

(Issued May 26, 1966)

The license for Project No. 2337, 32 FPC 68, located on South and Middle Forks of Rogue River and Imnaha and Daniels Creeks, in Jackson County, Oregon, requires by Article 37 thereof that the licensee file a recreational use plan for the project which shall include recreational improvements to be provided by the licensee and such improvements to be provided by others.

In a statement filed by the licensee on July 12, 1965 under Article 37, the licensee states that the potential recreational improvements at the project are very limited and that adequate and more desirable recreational facilities are provided in the surrounding area by public agencies. The licensee's statement is supported by the Assistant Superintendent of State Parks of the State of Oregon.

Since it appears that any recreational improvements which could be provided at Project No. 2337 would not be used at this time, Article 37 should be eliminated from the license. In the event such improvements should become desirable, they may be required pursuant to Article 12 of the license.

The Commission finds:

It is appropriate and in the public interest that Article 37 be eliminated from the license for Project No. 2337.

The Commission orders:

The license for Project No. 2337 is hereby amended by eliminating Article 37 therefrom.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2337

ORDER APPROVING PROJECT EXHIBIT K MAPS

(Issued May 26, 1966)

On July 12, 1965, Pacific Power & Light Company, Licensee for Project No. 2337, known as Prospect No. 3 Hydroelectric Project,, located on the South and Middle Forks of Rogue River, Imnaha and Daniels Creeks in Jackson County, Oregon and affecting lands of the United States within the Rogue River National Forest, filed for Commission approval, in accordance with Article 35 of its license, a set of three Exhibit K maps (FPC Nos. 2337-6 through 8) showing the routing and right-of-way of the project 69 kv transmission line from the Prospect-3 powerhouse to the Prospect substation.

The Commission finds:

It is consistent with the public interest that sheets 3 through 5 of Exhibit K (FPC Nos. 2337-6 through 8) entitled "Prospect Sub. to Prospect-3 P. H." showing the routing and right-of-way of the project 69 kv transmission line be approved as part of the license.

The Commission orders:

The Exhibit K maps for Project No. 2337 as described in the above finding are approved as part of the license for Project No. 2337.

Before Commissioners: Lee C. White, Chairman: L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PUBLIC UTILITY DISTRICT NO. 1 OF SNOHOMISH COUNTY, WASHINGTON AND CITY OF EVERETT, WASHINGTON, PROJECT NO. 2157

ORDER APPROVING PROJECT EXHIBIT K MAPS

(Issued May 26, 1966)

On April 20, 1965, Public Utility District No. 1 of Snohomish County, joint licensee with the City of Everett, Washington, for Project No. 2157, filed for Commission approval four Exhibit K maps showing the project boundary for Dam and Reservoir No. 1 of the project, located on the Sultan River in Snohomish County, Washington, and affecting lands of the United States within the Snohomish National Forest. The filing was pursuant to the provisions of Article 34 of the license.

The Commission finds:

The maps, designated and described as Exhibit K sheets 1 through 4 (FPC No. 2157-53 through -56) entitled "Reservoir Maps–Dam No. 1," conform to the Commission's rules and regulations and should be approved as part of the license for the project; license Exhibit K: (FPC No. 2157-13 through -16) and license Exhibit K: (FPC No. 2157-23) which have been superseded to the extent that they show the tentative project boundary of Reservoir and Dam No. 1, should be eliminated from the license to the extent that they show the tentative project boundary; and license Exhibit K: (FPC No. 2157-24 through -26) which has been entirely superseded, should be eliminated from the license.

The Commission orders:

The Exhibit K maps described in the above finding as conforming to the Commission's rules and regulations are hereby approved as part of the license for Project No. 2157; the license Exhibit K maps described in the same finding as being partly superseded are hereby eliminated from the license to the extent that they have been superseded; and the license Exhibit K map described in the finding as being entirely superseded is hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CHICAGO DISTRICT PIPELINE COMPANY, DOCKET NO. CP66-242

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 27, 1966)

On January 28, 1966, Chicago District Pipeline Company (Applicant) filed in Docket No. CP66-242 an application, as supplemented on February 23, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to construct and operate an odorizer, a side tap connection on its existing 36-inch Joliet–Calumet No. 3 pipeline, and approximately 380 feet of 36-inch pipeline connecting the side tap with the facilities to be constructed by Natural Gas Pipeline Company of America (Natural). The facilities will be located in southeastern Cook County, Illinois.

The purpose of the proposed construction is to permit Applicant to receive and transport natural gas for its customers from the terminus of Natural's proposed 36-inch Herscher-Dyer Road pipeline. The construction of the Herscher-Dyer Road pipeline is authorized in our order in Natural Gas Pipeline Company of America, Docket No. CP66-169 (Phase I), being issued concurrently herewith, *infra*, p. 828.

Applicant states that no new volumes above presently authorized volumes of natural gas will be transported for its customers. Applicant receives natural gas from Natural at points near Elgin, Joliet and Minooka, Illinois, and from Midwestern Gas Transmission Company at a point near the village of Channahon, Illinois. The gas is then transported for the account of Applicant's customers located in Illinois and Indiana. Applicant makes no sales of natural gas.

The facilities proposed by the instant filing will assure the continuity of transportation service to Applicant's customers in the event of (1) an operational loss of capacity of Natural's facilities upstream from the present point of deliveries at Joliet and Minooka, Illinois, and (2) an operational loss of capacity of any one of Applicant's three Calumet pipelines between the Joliet and Minooka delivery points at the west end of Applicant's system and the new delivery point at the eastern end.

The total estimated cost of the facilities to be constructed by Applicant is $116,000, which will be financed from cash on hand.

Due notice of the filing of the application was published in the Federal Register on February 16, 1966 (31 F.R. 2798). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Chicago District Pipeline Company, an Illinois corporation with its principal place of business in Joliet, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued February 3, 1943, in Docket No. G–289 (3 FPC 911).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Chicago District Pipeline Company, authorizing the construction and operation of facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within twelve months from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-169 (PHASE I)

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 27, 1966)

On December 1, 1965, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66-169 an application, as supplemented on March 17 and April 7, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of natural gas transmission and storage facilities during 1966 and 1967 and the sale of natural gas for resale, all as more fully set forth in the application.

As an integral part of Applicant's two-year expansion proposal Applicant proposes to acquire a new gas supply from Texaco Inc. in the Erath Field, Vermilion Parish, Louisiana. Texaco has filed an application in Docket No. CI66-608 for a certificate of public convenience and necessity authorizing the sale of natural gas to Applicant. Texaco proposes to sell its gas at a rate in excess of that heretofore found to be "in line" for sales from South Louisiana; and, therefore, it will be necessary to consider its application in Docket No. CI66-608 in a formal hearing. Although Applicant's deliverability life without the Texaco reserves does not meet the standards ordinarily used by the Commission, Applicant has demonstrated its ability to attach substantial reserves as needed to meet its rapidly increasing requirements and the Commission expects this situation to be remedied in the near future through acquisition of the Texaco reserves or through reserves obtained from others. Notwithstanding the fact that the construction of certain of the facilities covered by the application is related to the procurement of the Texaco or other gas in lieu thereof, Applicant has shown an immediate need and ability to proceed with its proposals for 1966 only. The proceedings on Applicant's application, therefore, will be divided into two phases: The 1966 proposals will be designated as Phase I and the 1967 proposals will be designated as Phase II. The instant order will pertain to Phase I, and Phase II will be disposed of in a future proceeding after determination of Docket No. CI66-608. Applicant concurs in this division.

Applicant's customers have executed precedent agreements to purchase commencing December 1, 1966, 93,238 Mcf of gas per day of a proposed 104,000[1] Mcf per day increase in pipeline capacity. All of a proposed 78,000[2] Mcf increase in peak day storage delivery capacity has been committed to customers. These precedent agreements state that the customers will execute service agreements to purchase the added contract volumes effective December 1, 1966. In the proposed 1966 expansion 10,762 Mcf per day of pipeline capacity is unallocated. Applicant currently has 26,962 Mcf of unallocated capacity of which 3,644 Mcf has been requested by customers in pending applications.[3] Assuming that these pending applications will be granted, Applicant will have 34,080 Mcf or approximately one percent of its system capacity unallocated after certification of the proposed Phase I facilities.

Specifically, Applicant seeks authorization to sell and deliver additional daily contract quantities, or maximum daily quantities, of natural gas to existing resale customers commencing December 1, 1966, as follows:

---

[1] 100,000 Mcf @ 1,040 Btu converted to 1,000 Btu sales basis.

[2] 75,000 Mcf @ 1,040 Btu converted to 1,000 Btu sales basis.

[3] Docket Nos. CP66-126, CP66-148, CP66-262 and CP66-264.

Customer	*Mcf at 1,000 Btu per cubic foot and 14.65 psia*
Rate Schedule CD-1:

Total	78,000

Transmission facilities proposed for 1966 consist of 126.46 miles of 36-inch loop and 43,750 horsepower of compression on Applicant's Gulf Coast-Chicago mainline and 49.2 miles of 36-inch line extending northeast from Herscher Storage Field to a point of connection on the existing 36-inch line of Chicago District Pipeline Company near the Glenwood-Dyer Road in Cook County, Illinois. Cost of these facilities is estimated to be $37,664,000. Additional storage facilities to be constructed in the Cairo, Hersher and Keota fields consist of 19 injection-withdrawal wells, 19.46 miles of various size pipeline and 10,140 horsepower of compression. The 1966 storage facilities are estimated to cost $6,200,000. The total cost of transmission and storage facilities is estimated to be $43,864,000. Applicant's existing and proposed capacities are as follows:

Period	Capacity—Mcf at 14.65 Psia and 1,000 Btu		
	Line Flow	Storage	Total
At 12-31-65:			
Allocated	2, 249, 598	1, 040, 000	3, 289, 598
Unallocated	26, 962		26, 962

1966 Expansion:			
Allocated	93, 238	78, 000	171, 238
Unallocated	10, 762		10, 762
Total	104, 000	78, 000	182, 000
At 12-31-66:			
Allocated	2, 342, 836	1, 118, 000	[1] 3, 460, 836
Unallocated	37, 724		37, 724
Total	2, 380, 560	1, 118, 000	[1] 3, 498, 560

[1] Excludes pending application to serve the St. Louis area with 67,600 Mcf.

The proposed facilities will be financed initially through short-term bank loans and loans from Applicant's parent, The Peoples Gas Light and Coke Company. Permanent financing will be through the issuance of first mortgage bonds, debentures and preferred stock.

After due notice, petitions for leave to intervene in support of the application have been filed by Iowa Electric Light and Power Company, Iowa-Illinois Gas and Electric Company, Iowa Southern Utilities Company, Northern Indiana Public Service Company, Northern Illinois Gas Company, North Shore Gas Company and The Peoples Gas Light and Coke Company. No further petitions for leave to intervene, notices of intervention or protests to the granting of the application have been received.

At a hearing held on May 26, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits thereto, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G-235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation

and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission; and the construction and operation thereof and the transportation and sale of natural gas, all of which are hereinbefore designated as Phase I, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application in this proceeding and hereinbefore designated as Phase I, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and sale of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Regulations under the Natural Gas Act, within twelve months from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-262

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 27, 1966)

On February 9, 1966, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-262 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing an increase in the firm quantity of natural gas transported for sale to Phillips Petroleum Company (Phillips), an existing direct industrial customer of Applicant, of 1,000 Mcf of gas per day to a total firm quantity of 24,000 Mcf per day and a corresponding decrease of 1,000 Mcf per day in the transportation of off-peak quantities to a total off-peak quantity of 2,000 Mcf per day, all as more fully set forth in the application.

Applicant is presently authorized to transport for sale to Phillips, for use in its Beatrice, Nebraska, ammonia plant, 23,000 Mcf of gas per day on a firm basis and up to 3,000 Mcf of gas per day on an interruptible off-peak basis pursuant to Commission orders issued October 12, 1964, 32 FPC 980, in Docket No. CP65-16 and August 13, 1965, 34 FPC 507, in Docket No. CP65-169. Pursuant to the exercise of an option granted in Article V of its contract dated July 7, 1964 with Applicant, Phillips has elected to convert 1,000 Mcf per day of off-peak gas to firm gas increasing the total firm delivery quantity to 24,000 Mcf per day.

No additional facilities are involved and the proposed service will not affect Applicant's service to its other customers.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 26, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(2) The proposed transportation and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid transportation and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the transportation and delivery of natural gas as hereinbefore described, and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (e) and (f) of Section 157.20 of such Regulations.

(C) The service authorized shall commence as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 30 days of the date on which this order issues.

(D) The certificate authorization granted in paragraph (A) above shall be effective concurrently with the certificate authorization issued in Phase I of Docket No. CP66–169, *supra*, p. 828.

(E) The certificate shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities to additional gas for meeting any future increases in its requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66–264

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 27, 1966)

On February 11, 1966, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66–264 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale and delivery of an additional 2,000 Mcf of gas per day on a firm basis to Interstate Power Company (Interstate), an existing customer of Applicant, all as more fully set forth in the application.

Applicant states that it has been informed by letter dated February 2, 1966, that Interstate requires an additional firm service of 2,000 Mcf of gas per day due to a depletion in its storage service, the addition of a number of new firm customers, a shortage of propane for use in its peak shaving facilities and an extended period of extreme temperature. The proposed additional service will increase Applicant's deliveries to Interstate to a total of 27,934 Mcf of gas per day.

The proposed sale volumes will be obtained through the utilization of Applicant's existing unallocated capacity of 26,962 Mcf of gas per day.

No additional facilities are involved and the proposed service will not affect Applicant's service to its other customers.

Applicant was issued a temporary certificate on March 18, 1966, authorizing the delivery of an additional 2,000 Mcf of natural gas per day to Interstate.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 20, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G–9966 (20 FPC 694).

(2) The proposed sale and delivery of natural gas by Applicant as hereinbefore described, and as more fully described in the application and exhibits

in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid sale and delivery of natural gas is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding, authorizing the sale and delivery of natural gas as hereinbefore described and as more fully described in the application and exhibits in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of such Regulations.

(C) The service authorized shall commence as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 30 days of the date on which this order issues.

(D) The certificate authorization granted in paragraph (A) above shall be effective contemporaneously with the certificate authorization issued in Phase I of Docket No. CP66-169, *supra*, p. 828.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PENNSYLVANIA ELECTRIC COMPANY AND THE CLEVELAND ELECTRIC ILLUMINATING COMPANY, PROJECT NO. 2280

ORDER APPROVING REVISED EXHIBIT L PROJECT DRAWINGS

(Issued May 27, 1966)

On March 11, 1966, Pennsylvania Electric Company and The Cleveland Electric Illuminating Company, licensees for proposed Kinzua Project No. 2280, filed for Commission approval revised Exhibit L drawings for the project, which is a pumped storage development proposed to be located at the Allegheny Government Dam on the Allegheny River in Warren County, Pennsylvania.

The revised Exhibit L drawings were filed pursuant to *Article 42* of the license for the project which requires their approval by the Commission prior to the commencement of construction of any of the project structures. While the drawings filed cover all of the project structures, the licensees desire Commission approval at this time of only those drawings which relate to the Low Head Hydraulic structures located within the Corps' Allegheny Dam reservoir so that construction of such structures can proceed as scheduled by the construction contractors. Our consideration looking towards our approval of the other Exhibit L drawings filed will be deferred until we have received additional information pertaining to designs.

The Low Head Hydraulic structures will be used to withdraw water from the Allegheny Dam reservoir and will be located near the left abutment of the dam. The drawings show that the intake gates will be closer together than as originally contemplated, for economy of construction, and that their location has been changed for better foundation and easier access. Commission staff has reviewed the proposed changes and found them to be satisfactory.

The Office of the Chief of Engineers, Department of the Army, has approved the plans of the project structures affecting navigation insofar as the interest of navigation is concerned, pursuant to Section 4(e) of the Federal Power Act.

The Commission finds:

The following described revised Exhibit L drawings conform to the Commission's Rules and Regulations and should be approved as part of the license for the project, and superseded license Exhibit L, Sheet 6 (FPC No. 2280-29) should be eliminated from the license for the project:

Revised Exhibit L	*F.P.C. No.*	*Title, Kinzua Project*
Sheet 8A--------	2280-41	Low Head Hydraulic Structures—Sheet 1.
Sheet 8B--------	2280-42	Low Head Hydraulic Structures—Sheet 2.

The Commission orders:

The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2280, and the superseded license Exhibit L drawing described in the same finding is hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2203

ORDER APPROVING REVISED EXHIBIT L PROJECT DRAWINGS

(Issued May 31, 1966)

On February 1, 1966, Alabama Power Company, licensee for Project No. 2203, filed for Commission approval revised Exhibit L drawings for the project to be constructed on the Black Warrior River, Alabama, at the Government Holt Lock and Dam.

The Exhibit L drawings are for the powerhouse and intake section to be located at the Government dam, now under construction, and they were filed as required by *Article 47* of the license for the project prior to commencement of their construction. The drawings show project structures comprising the intake section and the integral powerhouse beginning at the spillway section, and the west (right) abutment non-over flow section. Commission staff has reviewed and checked the structures shown on the revised drawings and found them to be adequate.

The Office of the Chief of Engineers, Department of the Army, has approved the plans of the project structures insofar as the interest of navigation is concerned, pursuant to Section 4(e) of the Federal Power Act.

The licensee has advised that the U.S. Corps of Engineers' construction inside the second stage cofferdam may begin in June or July next, and the licensee desires to commence construction of the project structures shown on the drawings at that time.

The Commission finds:

The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project, and the following described superseded license Exhibit L drawings should be eliminated from the license for the project.

Exhibit L (Revision No. 3) Sheet No.	*FPC No.*	*Title*	*Superseding FPC No.*
1	2203–19	General Plan	2203–14
2	2203–20	Powerhouse Section Thru Unit	2203–15
3	2203–21	General Layout-Powerhouse and Non-overflow.	2203–16
4	2203–22	Powerhouse Floor Plan	2203–17
5	2203–23	Powerhouse Longitudinal Section Non-overflow and Parking.	2203–18
6	2203–24	Transverse Section Thru Service Bay and Dam.	---------

The Commission orders:

The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2203, and the superseded license Exhibit L drawings described in the same finding are hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP66–6

ORDER AMENDING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 31, 1966)

On April 15, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP66–6 a petition to amend the certificate of public convenience and necessity issued in said docket on September 24, 1965, 34 FPC 965, and amended on January 24, 1966, 35 FPC 134, by authorizing the sale of additional quantities of natural gas to Intermountain Gas Company (Intermountain) for resale and distribution in the community of Iona, Idaho, all as more fully set forth in the petition to amend.

The certificate issued on September 24, 1965, and amended on January 24, 1966, authorized, *inter alia*, Petitioner to sell and deliver natural gas to Intermountain for transportation to and resale and distribution in the communities of Rigby, Rexburg, Ucon and Lewisville, Idaho, and their respective environs. Intermountain has now acquired a certificate of public convenience and necessity from the Idaho Public Utilities Commission and a franchise from the Village of Iona authorizing the installation of facilities in and rendition of gas distribution service to Iona.

Petitioner will transport and sell to Intermountain, through Petitioner's existing Idaho Falls Meter Station without enlargement or modification, firm quantities of natural gas for Iona, Idaho, and its environs. The estimated maximum daily and annual requirements of the proposed service area will be 151 Mcf and 16,100 Mcf of natural gas, respectively.

The sale is proposed to be initiated in accordance with and at rates contained in Petitioner's Rate Schedule DI-1, FPC Gas Tariff, Original Volume No. 3.

Petitioner states that if the instant filing is approved prior to approval of Petitioner's application filed July 23, 1965, in Docket No. CP66-27, the service embraced by this petition will be divested by Petitioner to Northwest Pipeline Corporation, otherwise Northwest Pipeline Corporation will be substituted as the petitioner hereunder.

Due notice of the filing of the petition to amend was published in the Federal Register on April 29, 1966 (31 F.R. 6519). No protest, petition to intervene, or notice of intervention has been filed.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued September 24, 1965, and amended on January 24, 1966, be further amended as hereinafter ordered.

The Commission orders:

(A) The certificate of public convenience and necessity issued in Docket No. CP66-6 on September 24, 1965, and amended on January 24, 1966, is further amended by authorizing Petitioner to sell and deliver up to 151 Mcf of natural gas per day to Intermountain for resale and distribution in the Village of Iona, Idaho, and environs, all as more fully set forth in the petition to amend.

(B) In all other respects the certificate, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

HEADWATER BENEFITS DETERMINATION, DESCHUTES RIVER BASIN, DOCKET NO. E-7294

HEADWATER BENEFITS DETERMINATION

(Issued May 31, 1966)

This order, issued under Section 10(f) of the Federal Power Act (16 U.S.C. 803(f)), determines that Federal headwater improvements in the Deschutes River Basin in Oregon did not provide benefits to non-Federal downstream hydroelectric developments during the period of January 1, 1940, which was approximately when the first Federal headwater improvement was installed, through December 31, 1965. The Federal headwater improvements are the Crescent Lake, Crane Prairie, Wickiup, Prineville, and Ochoco projects, and the downstream developments are the Portland General Electric Company's Round Butte and Pelton developments, licensed as Project No. 2030, and the Pacific Power & Light Company's unlicensed Bend and Cline Falls developments and its Cove development, Project No. 1447, which was abandoned December 31, 1963, and is now inundated by the Round Butte reservoir.

The hydraulic capacities of the turbines at the Round Butte and Pelton projects are large enough to utilize all but rare instantaneous flows either with or without regulation from the headwater improvements. Thus, with pondage at Pelton and considerable storage at Round Butte, there is no increase in energy attributable to the Federal reservoirs.

Further, the headwater improvements are primarily irrigation reservoirs, constructed or rehabilitated by the Bureau of Reclamation, which store high flows during the months of October through April, the period of each year when the downstream owners' power system needs are greatest. Subsequent irrigation releases are made during May through September, non-critical months, with respect to power needs. Also, the storage capacity in the headwater reservoirs permits greater diversions from the stream for irrigation purposes, which result in larger depletions for consumptive use, and thus, less water is available for generation of power at downstream plants than would be the case in the absence of the upstream storage. In the circumstances, studies for succeeding years will not be made until changed conditions in the basin warrant otherwise.

Because of upstream diversions for irrigation, there are no benefits to the small plants, Bend and Cline Falls. Although some minor benefits may have accrued to Pacific Power & Light Company's Cove project before it was abandoned in 1963, the probable value of such benefits, if any, would not justify the study necessary for an assessment.

The Commission determines:

The United States' Crescent Lake, Crane Prairie, Wickiup, Prineville, and Ochoco headwater improvements did not provide benefits to the Portland General Electric Company's Round Butte and Pelton hydroelectric developments, Project No. 2030, or to the Pacific Power & Light Company's unlicensed Bend and Cline Falls developments or its Cove development, Project No. 1447, during the period of January 1, 1940, through December 31, 1965.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

INTERSTATE POWER COMPANY, DOCKET NO. E-7287

ORDER AUTHORIZING ISSUANCE OF SHORT-TERM PROMISSORY NOTES

(Issued May 31, 1966)

Interstate Power Company (Applicant) a public utility incorporated under the laws of the State of Delaware and domesticated in the States of Illinois, Iowa, Minnesota and South Dakota with its principal place of business at Dubuque, Iowa, filed an application on April 20, 1966, pursuant to Section 204 of the Federal Power Act seeking authority to issue $18,130,000 of unsecured short-term promissory notes of which not more than $16,000,000 will be outstanding at any one time.

Under Section 204(e) of the Federal Power Act, the Applicant has issued nine notes to local banks in the total amount of $2,130,000, dated April 15, 1966, due April 14, 1967, bearing interest at 5½% per annum. Pursuant to a credit agreement, dated April 13, 1966, between two New York City banks, The Chase Manhattan Bank (National Association) and Manufacturers Hanover Trust Company, and the Applicant, the banks will make $16,000,000 short-term funds available to the Applicant. These borrowings are to be evidenced by notes which are to be dated the date of their delivery, they are to mature one year from the date of their delivery, or August 31, 1967, whichever date shall be earlier. The interest rate will be the prime commercial rate of The Chase Manhattan Bank. This rate is now 5½% per annum. Although the $2,130,000 outstanding notes and the $16,000.000 notes permitted under the credit agreement, total $18,130,000, the notes outstanding at any one time will not exceed $16,000,000 for reason that $2,130,000 will be obtained under the credit agreement to pay off the outstanding notes at maturity on April 14, 1967. The application states that the Applicant expects to issue permanent securities in the spring of 1967.

Applicant states that the net proceeds from the issuance of the notes will be used to carry out its 1966 construction program estimated to cost $21,742,000. The principal items in this program are the construction of Applicant's Milton L. Kapp generating plant, Unit No. 2, at Clinton, Iowa, which will require an expenditure of $9.4 million in 1966 and the construction of a 55 mile portion of the 345 kv transmission line from Twin Cities to St. Louis which is expected to cost $1.8 million in 1966.

Written notice of the application has been given to the Illinois Commerce Commission, Iowa State Commerce Commission, Minnesota Railroad and Warehouse Commission, South Dakota Public Utility Commission and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on May 4, 1966 (31 F.R. 6646), stating that any person desiring to be heard or to make any protest with reference to the application, should file petitions or protests on or before May 18, 1966, with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 12, 1959, *In the Matter of Interstate Power Company,* Docket No. E-6877 (21 FPC 678).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $18,130,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $18,130,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(2).

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not

impair its ability to perform that service, and is reasonable, necessary and appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $18,130,000, outstanding at any one time, upon the terms and conditions and confined to the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of said notes in the amount of $18,130,000 being not later than August 31, 1967.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service accounts, valuation, estimates or determination of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-141

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 31, 1966)

On November 3, 1965, Natural Gas Pipeline Company of America (Applicant), filed in Docket No. CP66-141 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the development of an underground natural gas storage reservoir (Loudon Storage Field) in Fayette and Effingham Counties, Illinois, all as more fully set forth in the application.

Applicant proposes to construct and operate the following natural gas facilities:

(1) Approximately 4.5 miles of 30-inch pipeline to connect Applicant's main transmission system to the Loudon Storage Field;

(2) approximately 6.9 miles of various diameter field gathering pipeline;

(3) a 2,000 BHP compressor station;

(4) gas measurement, purification and other appurtenant facilities.

Applicant also proposes to rework 108 wells and drill 10 exploratory wells. The estimated cost of the proposed development and testing program, including inventory volume and storage rights for the first phase of development, is $17,893,000, which will be financed from funds on hand and from proceeds of interim loans. This includes an initial payment of $4,110,000 to Humble Oil & Refining Company for certain rights and properties now held by Humble in the storage area.

Applicant contemplates a testing program involving the injection of approximately 7,5000,000 Mcf of gas and withdrawals of approximately 1,500,000 Mcf of gas. Further authorization to utilize the proposed storage for customer service will be requested upon completion of the initial development and testing program.

The development and testing program will utilize the Devonian Reservoir. Applicant states that the necessary agreements with the present producer-operator, mineral and royalty owners, and land fee owners have been obtained.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 26, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-996 (20 FPC 694).

(2) The proposed construction and operation of facilities and the transportation of natural gas in interstate commerce, as more fully described in the application filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and the transportation of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the construction and operation of the facilities, and the transportation of natural gas as hereinbefore described, all as more fully described in the application, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The proposed development and testing program shall be completed and the transportation of gas authorized in paragraph (A) above shall commence as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 years of the date on which this order is issued.

(D) The certificate issued by paragraph (A) is conditioned upon Applicant's compliance with the following requirements:

(1) The maximum inventory of gas stored in the Loudon Storage area will not exceed 7,500,000 Mcf of natural gas at 14.73 psia without prior authorization of the Commission.

(2) Applicant will submit monthly reports containing the following information on the proposed operations:

(a) The volume of gas injected or withdrawn with the corresponding total volumes in the reservoir;

(b) The maximum daily injection or withdrawal rate experienced during the month;

(c) The average working pressure on such maximum days taken at a central measuring point where the total volume injected or withdrawn is measured;

(d) The stabilized shut-in wellhead pressure of each observation and active well when pressure stabilization exists and the water level in each observation well not showing gas;

(e) A map showing the latest concept of structure and the area occupied by the gas bubble. Show, for each well, the date on which gas was first noted during injection and the date on which water encroached during withdrawal;

(f) A tabulation of wells drilled, cleaned or recompleted with subsea depths of formations and casing settings. Copies of any core analyses, back-pressure tests or electric logs;

(g) Monthly reports will continue to be filed until the storage inventory volume has reached or closely approximated the maximum volume permitted in the Commission's order. Thereafter the reports shall be submitted semi-annually for a period of two years.

(3) Within 60 days after the issuance of this order Natural will submit pro forma accounting entries satisfactory to the Commission indicating the applicable accounts to be used to distribute the $17,893,000 of proposed expenditures at the time the subject facilities are completed and placed in service.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF PASADENA, CALIFORNIA, PROJECT NO. 1250

ORDER GRANTING EXEMPTION FROM PAYMENT OF ANNUAL CHARGES

(Issued May 31, 1966)

Application was filed on March 21, 1966 by the City of Pasadena, California, licensee for Project No. 1250, for exemption from payment of the net amount of annual charges under the license for the project for the calendar year ended December 31, 1965, pursuant to the provisions of Section 10(e) of the Federal Power Act (Act) and Regulations of the Commission thereunder, on the ground that the balance of the project power not used for municipal purposes was sold to the public without profit.

The statement of annual charges rendered by the Commission for the year involved amounted to $175.10. The application sets forth that the project operations for the year 1965 resulted in a net loss, and that the project power was sold by the licensee to ultimate consumers without profit.

The Commission finds:

(1) The licensee is a municipality within the meaning of Section 3(7) of the Act, and is entitled to claim exemption from payment of annual charges under Section 10(e) of the Act.

(2) The licensee is entitled to exemption from payment of the net amount of annual charges for which it was billed for the year 1965.

The Commission orders:

The licensee for Project No. 1250 is hereby exempted from liability under the license for the project for payment of annual charges for which it was billed for the calendar year 1965.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66-305

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued May 31, 1966)

On March 24, 1966, Southern Natural Gas Company (Applicant) filed in Docket No. CP66-305 an application pursuant to Section 7(c) of the Natural Gas Act, as implemented by Section 157.7(b) of the Regulations under the Act, for a certificate of public convenience and necessity authorizing the construction during the 12-months' period August 7, 1966, through August 6, 1967, and the operation of certain natural gas facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers in the general area of Applicant's existing transmission system, all as more fully set forth in the application in this proceeding.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system additional supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities covered by this application will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000, which costs are proposed to be financed with cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on May 26, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G-296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-months' period August 7, 1966, through August 6, 1967, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity is issued authorizing Applicant, Southern Natural Gas Company, to construct during the 12-months' period August 7, 1966, through August 6, 1967, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 157.7(b)(3) of the Commission's Regulations under the Natural Gas Act.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (e) and (f) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is limited to construction during the 12-months' period August 7, 1966, through August 6, 1967, and the total expenditures for facilities to be constructed thereunder are limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WARREN PETROLEUM CORPORATION (OPERATOR), DOCKET NO. G-20478, ET AL.; CITIES SERVICE GAS COMPANY, DOCKET NO. RP65-21

ORDER RELEASING REFUNDS IN PART

(Issued May 31, 1966)

The Commission by order issued December 30, 1965 in the above-entitled proceedings, 34 FPC 1616, directed Cities Service Gas Company (Gas Company) to file a report of its intended disposition of amounts refundable to Gas Company by Warren Petroleum Corporation, Kerr-McGee Oil Industries, Inc.,[1] and Cities Service Oil Company (WKC). The refunds are the result of the settlement of pending rate proceedings which was approved conditionally by the Commission's order issued June 3, 1965, 33 FPC 1212, as amended August 25, 1965, 34 FPC 587. The order issued June 3, 1965 directed WKC to retain all refundable amounts pending further order of the Commission.

WKC have filed reports indicating that a total of $2,626,301.40 excluding escrow earnings and additional interest, is refundable to Gas Company. Gas Company's report filed March 9, 1966, as amended by letter filed April 27, 1966, shows that, of the amount refundable to Gas Company, $1,796,597.78 is attributable to its jurisdictional sales and $829,703.62 is attributable to its non-jurisdictional sales. Of the amount attributable to its jurisdictional customers, Gas Company proposes to flow-through $1,566,677.13 and proposes to retain $229,920.65.

The amount attributable to jurisdictional customers which Gas Company proposes to retain is made up of two components.

1. For the period September 1, 1961 through December 22, 1961, Gas Company will flow-through amounts attributable to sales under its I Rate Schedule, but contends that it is not obligated to flow-through the amounts (aggregating $170,918.17) attributable to sales made under its F, C, and P Rate Schedules during this period.

2. Each of Gas Company's suppliers involved in these proceedings made two rate increases, one to 16.8 cents per Mcf and one to 17.9 cents per Mcf. Gas Company contends that it has no flow-through obligation for the period prior to April 23, 1964 with respect to the increases to 17.9 cents per Mcf. The amounts refundable by WKC representing the difference between 16.8 cents and 17.9 cents for the periods prior to April 23, 1964 aggregate $59,002.48.

Generally stated, it is Gas Company's position that the $229,920.65 ($170,918.17 plus $59,002.48) represents refunds of rate increases by its suppliers which it absorbed and did not pass on to its customers.

We have heretofore announced our policy that refunds should be flowed-through to the extent of our jurisdictional reach. *Humble Oil & Refining Company*, Docket No. G-9287, *et al.*, 32 FPC 49, 52. In furtherance of that policy and pending a proper showing by Gas Company that it is legally and equitably entitled to the amounts attributable to jurisdictional sales which it claims it is not obligated to flow-through, it is necessary and appropriate that such amounts continue to be retained by WKC as hereinafter provided. We emphasize that we are not now passing judgment on the merits of Gas Company's claim. *Texas Eastern Transmission Corporation*, Docket No. RP66-12, order issued October 4, 1965, 34 FPC 1099.

The Commission orders:

(A) WKC are each directed to release and pay over to Gas Company within 45 days after the date of this order the amounts shown in the reports filed by WKC pursuant to paragraph (C) of the order issued June 3, 1965, together with the net escrow earnings or interest (as the case may be) attributable to such amounts, *except that,* WKC shall retain the following amounts together with the associated escrow earnings or interest.

1. The amounts of $52,007.76 (Warren Petroleum Corporation) $5,466.76 (Kerr-McGee Corporation), and $113,443.65 (Cities Service Oil Company) which

---

[1] This company is now Kerr-McGee Corporation. See order issued January 17, 1966 in Docket No. G-2755, *et al.*

are attributable to purchases by Gas Company during the period from September 1, 1961 through December 22, 1961.

2. That portion of the refunds which is attributable to purchases by Gas Company prior to April 23, 1964 and which represents the difference between a rate of 16.8 cents per Mcf at 14.65 psia and the rate collected subject to refund in excess of that rate.

(B) Within 60 days after the date of this order, WKC shall each file a report showing the amounts paid to Gas Company and the amounts not herein released. The principal sums (principal and interest before June 3, 1965) and escrow earnings or interest since July 15, 1965 shall be separately stated.

(C) With respect to amounts received by Gas Company pursuant to paragraph (A) above which are attributable to the period September 1, 1961 through December 22, 1961, Gas Company shall refund to customers purchasing under its I Rate Schedule the amounts (plus allocable escrow earnings or interest) of $25,447.07 (Warren Petroleum Corporation), $2,674.85 (Kerr-McGee Corporation), and $55,507.28 (Cities Service Oil Company), as shown in Gas Company's report filed March 9, 1966.

(D) Subject to the provisions of paragraph (C) above, Gas Company shall flow-through amounts received from WKC in accordance with relevant provisions of its settlement agreements in Docket Nos. RP62-1 and RP64-9, and shall submit a report showing the details of its refund to the Commission within 15 days after the refund is made.

(E) Pending further order of the Commission, WKC shall retain all remaining refundable amounts in accordance with paragraphs (D) and (E) or (F) of the order issued June 3, 1965.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

YALE GAS COMPANY, INC. AND CITIES SERVICE GAS COMPANY, DOCKET NO. CP66-273

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued May 31, 1966)

On February 21, 1966, Yale Gas Company, Inc. (Applicant) filed in Docket No. CP66-273 an application, as supplemented on April 22, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Respondent) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell natural gas to Applicant for resale and distribution in the Community of Yale, Oklahoma, all as more fully set forth in the application in this proceeding.

Applicant states that it is an established utility serving Yale and that it requests herein service from Respondent because of the depleting supply of local natural gas. Further, Applicant states that natural gas service from Respondent will secure a dependable and permanent supply of gas for continued resale and distribution by Applicant in Yale.

Applicant proposes to construct approximately 100 feet of 4-inch pipe connecting Respondent's Payne County pipeline to Applicant's existing facilities. The cost of the proposed connecting line is estimated to be between $300 and $400.

Applicant's estimated third year annual and average peak day requirements are 132,732 Mcf and 690 Mcf, respectively.

Natural gas service to Applicant will be rendered under Respondent's FPC Gas Rate Schedule F-1.

On March 11, 1966, Respondent filed an answer stating that it has no objection to the granting of the subject application.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on March 9, 1966 (31 F.R. 4178). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Respondent, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) Applicant, Yale Gas Company, Inc., is a public utility organized and existing under the laws of the State of Oklahoma and is authorized to construct and operate natural gas facilities and to engage in the distribution of natural gas in the Community of Yale.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver natural gas to Applicant under a service agreement to be executed by Applicant and Respondent, in accordance with the Commission's Regulations, for resale and distribution as hereinbefore described. The sale of natural gas hereinafter directed should be made pursuant to Respondent's FPC Gas Rate Schedule F-1.

(4) The requirement that Respondent serve Applicant as hereinafter ordered will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in Yale within one year from the date of issuance of this order.

The Commission orders:

(A) Cities Service Gas Company is directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver natural gas under a service agreement to be executed by Applicant with Respondent, in accordance with the Commission's Regulations, for resale and distribution as hereinbefore described and as more fully described in the application, as supplemented, in this proceeding. Such service shall be rendered pursuant to Respondent's FPC Gas Rate Schedule F-1.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WILLIAM E. PORTMAN, DOCKET NO. CI66-880 AND J. M. KESSLER,[1] DOCKET NO. CI66-893

DECLARATORY ORDER WITH RESPECT TO COVERAGE UNDER RATE SCHEDULE

(Issued June 1, 1966)

Petitioners on March 22 and 23, 1966 severally filed herein petitions for a declaratory order, pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, requesting the Commission to determine that their interests in the jurisdictional sales of natural gas from the following described wells in the Guymon Hugoton Gas Field in Texas County, Oklahoma to Northern Natural Gas Company (Northern) by Hugoton Plains Gas & Oil Company (Hugoton) were covered by Hugoton's FPC Gas Rate Schedule No. 1, particularly Supplement No. 15 thereto:

Petitioners	*Well description*
William E. Portman	(1) Mayer #1 Gas Unit, Section 33-T5N-R17ECM. (2) Wiggains #1 Gas Unit, Section 27-T5N-R17ECM. (3) D. Compton #1 Gas Unit, Section 25-T6N-R18ECM. (4) I. H. Lutes #1 Gas Unit, Section 26-T6N-R18ECM.
J. M. Kessler	(1) Mayer #1 Gas Unit, Section 33-T5N-R17ECM. (2) Wiggains #1 Gas Unit, Section 27-T5N-R17ECM.

Supplement No. 15 contained the 15.75¢ per Mcf settlement rate approved by the Commission in Docket No. RI60-102 by order issued October 8, 1963, 30 FPC 973, for Hugoton's sales to Northern. Petitioners indicate that Hugoton has taken the position that there is doubt as to whether it can lawfully make payments to Respondents on the basis of the 15.75¢ per Mcf settlement rate which Hugoton collected from Northern from and after April 7, 1960 (less 1.12¢ per Mcf for the entire periods involved here and less 1.0¢ per Mcf compression charge after September 3, 1961) in accordance with Respondents' contracts with Hugoton. Petitioners seek to collect the difference between their contract rate of 8.26 cents per Mcf prior to April 7, 1960 and the adjusted amount of the settlement rate provided for under their contracts since that time. They claim their sales were covered by Hugoton's filings under Hugoton's FPC Gas Rate Schedule No. 1. Petitioners further state that they always received payments from Hugoton on the basis of Hugoton's filings under said rate schedule until the settlement rate was approved in Docket No. RI60-102. Petitioners also cite the Commission's declaratory order issued April 13, 1965 in *Panhandle Eastern Pipe Line Company*, Docket No. CI65-858, 33 FPC 728, where it was determined under circumstances similar to those presented here that Panhandle's sale was covered under Hugoton's FPC Gas Rate Schedule No. 1.

Petitioner Portman indicates that MAPCO Production Company (MAPCO) successor in interest to Hugoton as of February 1, 1965, recognized that he was covered by Hugoton's filing because of the rationale in the *Panhandle* order, and that MAPCO paid him the adjusted settlement rate from February 1, 1965. Portman therefore seeks here only its contract rate for the period prior to February 1, 1965.

Petitioner Kessler seeks its contract rate only for the period prior to January 23, 1962. T.E.L. on January 23, 1962 purchased Kessler's interests in the subject sales. T.E.L. filed for a certificate which was issued on July 23, 1965 in Docket No. CI65–943 at a rate of 14.63334¢ per Mcf, subject to the applicable deduction for compression. The effective date of this rate is January 23, 1962, the date T.E.L. acquired its interest. Hugoton paid T.E.L. at the higher rate from January 23, 1962 until February 1, 1965, but did not pay the higher rate to Kessler for the period from April 7, 1960 until January 23, 1962.

---

[1] On January 23, 1962, T.E.L. Oil and Gas Corporation (T.E.L.) became the successor in interest.

In our aforementioned *Panhandle* order, we held that although Hugoton's FPC Gas Rate Schedule No. 1 does not specifically refer to Panhandle's interest it covered Panhandle's interest. In the instant proceedings, we likewise find that Petitioners' interests were covered by Hugoton's filings under such rate schedule in view of Hugoton's prior practice of making payments to Petitioners on the basis of its own rate filings. It is also important that Portman never sought certification or filed his own rate schedule. We believe that Portman's said interest was covered by Hugoton's FPC Gas Rate Schedule No. 1. Kessler likewise considered that this interest was covered by Hugoton's filings, and we conclude that such interest was covered by Hugoton's filings under Hugoton's FPC Gas Rate Schedule No. 1 until January 23, 1962.

The Commission orders:

For the foregoing reasons we determine that Portman's interests in the above-designated properties were covered under Hugoton's FPC Gas Rate Schedule No. 1; and that Kessler's interests in the above-designated properties were covered under Hugoton's FPC Gas Rate Schedule No. 1 until January 23, 1962.

OPINION NO. 492

SKELLY OIL COMPANY, DOCKET NO. G–18638; GLEN A. MARTIN, G–18639; TENNECO OIL COMPANY, G–18765; GEORGE H. COATES, OPERATOR, ET AL., G–18938; GEORGE H. COATES, ET AL., CI61–178; CONTINENTAL OIL COMPANY, CI60–71; MOKEEN OIL COMPANY, ET AL., CI60–789; SOHIO OIL COMPANY, CI61–77, CI61–79; COASTAL STATES GAS PRODUCING COMPANY, CI61–471, CI61–472; RUSSELL MAGUIRE, ET AL., CI61–530; MORGAN MINERALS CORPORATION, CI61–648.

OPINION AND ORDER REQUIRING REFUNDS

(Issued June 1, 1966) [*]

Syllabus

1. **It is now established that Commission has both power and duty to require refunds of amounts collected in excess of "in-line" price absent a factual showing demonstrating inequity of such requirement in whole or in part. P. 852.**
2. **Argument that Commission has no power to require refunds where temporary certificates contained no refund provisions, and other related arguments, have been disposed of by Circuit Court of Appeals and will not avail to prevent ordering of refunds. P. 852.**
3. **In reaching this result (*supra* 2), Commission *notes* that overriding purpose of Natural Gas Act is protection of gas consuming public. P. 853.**
4. **Refund sums represent money Commission has determined should have been retained by consumers under proper initial rates required by public**

---

[*] Amended and confirmed by Opinion No. 492–A issued July 21, 1966, 36 FPC 143.

convenience and necessity—had proper rates been established in temporary authorizations, such sums would not have come into existence. P. 853.

5. Clearly stability and finality are desirable goals in producer regulation; temporary authorizations are not and could never be vehicle for assuring such stability. P. 853.
6. Considering judicially ratified finding that 15 cents is proper here, a solid equitable showing that no refunds should be made would be required. P. 853.
7. Producers here were on notice that price granted in temporary authorization was merely interim. P. 853.
8. Reasonable reliance upon supposedly firm price granted by Commission is a matter to be considered in weighing the equities; it is essential to any producer's claim that he not be compelled to refund. P. 854.
9. Refunds should be required except to extent producer shows both (1) that he paid monies which would not have been paid out had he not relied reasonably and in good faith on Commission's order and (2) that such monies cannot be recouped [either as a matter of law or practical matter] or while recoupment might be had, expense thereof would be disproportionate to amount to be removed. P. 854.
10. Producer need not refund that portion of any state production tax attributable to excess amounts collected to extent such taxes cannot now be recouped. P. 854.
11. Producer should refund that portion of excess amounts collected which was not paid out on taxes and royalties and that portion of taxes paid which can be recouped. P. 854.
12. Argument that those to whom refunds are made have failed to pass refunded amounts to consumers is not a ground on which producers may avoid refund obligation. PP. 854, 855.
13. Distributors are within control of local state regulating agencies and these agencies are responsible for seeing that refund benefits reach proper parties. P. 855.
14. Contention that it is inequitable to require refunds of any part of price of gas produced from a lease that has been a losing proposition to particular producer cannot be sustained. P. 855.
15. It is recognized that although company as a whole may be conducting a loss operation there is no reason why refunds should not be ordered of amounts in excess of in-line price; same principle applies where loss is incurred in connection with particular producing property, whether or not there is a loss on company-wide basis. P. 855.
16. Possible refunds arising from a certificate case should not be deferred until just and reasonable rates are determined. P. 855.
17. *Permian* does not support complete forgiveness of responsibility of small producers to make refunds. P. 855.
18. Successor stockholders must take possibility of loss as well as possibility of undisclosed profits when succeeding to interest of prior stockholders and therefore cannot avoid refunds. P. 856.
19. Accounting expense here does not appear so great as to be a ground for avoiding refunds. P. 856.
20. All amounts collected in excess of 15 cents per Mcf are to be refunded with exception of (1) amounts attributable to such excess and paid out in royalty or overriding royalty payments and (2) amounts so attributable paid out in state production taxes which cannot be recovered by way of credit or otherwise. P. 856.

21. Interest will be required at usual rates on amounts to be refunded to extent such amounts were retained by producer or used for his benefit—no interest will be required to extent refunds include recoupable overpayment of production taxes, unless refunds are delayed beyond time refunds must be made. P. 857.
22. There is no inequity in requiring producer to refund excessive amounts collected at a time when he was on notice that rate allowed in specified order was subject to revision as result of granting rehearing. P. 857.
23. In a proceeding under Section 7 of the Natural Gas Act, Commission *requires* refunds of excess amounts collected under temporary authorizations, containing no refund conditions.

Commissioner O'Connor *concurring* in part; *dissenting* in part.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

By our Order and Opinion No. 362, issued August 30, 1962, 28 FPC 401, we granted fifteen permanent certificates of public convenience and necessity under Section 7 of the Natural Gas Act to thirteen producers for sales of natural gas in Texas Railroad Commission District No. 4. These certificates were conditioned upon initial prices of 15 cents per Mcf.

Twelve of the producers, involved in fourteen of the fifteen dockets, had charged and collected rates in excess of the "in-line" price of 15 cents per Mcf while making sales under the temporary certificates.[1] We did not order refunds of the excess collected because the temporary certificates contained no refund conditions.

On appeals by intervenors The United Gas Improvement Company, Long Island Lighting Company, and Public Service Commission of the State of New York, the Court of Appeals for the District of Columbia held that the power to order refunds did not depend upon an explicit refund provision in the temporary authorizations. That power, the court declared, "resides in the Commission when it grants a permanent certificate. To hold that it may not then require refund of excessive prices previously permitted without notice or hearing or mature consideration, since the Commission acted on an emergency basis, would be inconsistent with the regulatory responsibility of the Commission to aid in the ascertainment and authorization of just and reasonable rates" (329 F. 2d 242, 249). The court in part bases the foregoing conclusions on the general language inserted in all temporary certificates to the effect that:

> This acceptance for filing shall not be construed as constituting approval of any rate * * * contained in the rate filing; * * * and such acceptance is without prejudice to any findings or orders which may be made in the final disposition of this proceeding * * * etc. * * * but such authorization and acceptance of the rate schedule are without prejudice to such final disposition of the certificate application as the record may require. * * * (329 F. 2d 242, 249).

The court remanded the case to the Commission for further consideration of the refund question in the light of the court's opinion, declaring "There must be, with the assistance of the parties, a broader and more penetrating analysis and consideration of the factors pro and con a refund, and its amount or extent in arriving at an equitable conclusion."

---

[1] The cases of two producers, *Jake L. Hamon*, CI61-930, and *Sunray DX Oil Company*, CI60-428, have since been settled. The case of *Glen A. Martin, et al.* (Martin), Docket No. G-18639, did not involve sales made under a temporary certificate, and will be separately considered later in this opinion.

Petitions for certiorari were denied by the Supreme Court. It is now established that the Commission had both the power and the duty to require refunds of amounts collected in excess of the "in-line" price in the absence of a showing of factual situations which demonstrate that it would be inequitable to require refund of either all or part of the excess amounts collected.[2]

Amerada Petroleum Corporation, et al., Opinion No. 422, 31 FPC 623 (March 23, 1964) we summarized the standard set by the Circuit Court of Appeals in the *Skelly* case as follows:

> The Court also has stated, however, that the existence of the power to order refunds at the time of permanent certifications does not mean that its exercise is mandatory. The standard to be followed is the standard of equity, and the decision as to whether refunds should be ordered is to turn on equitable considerations. The existence of a refund requirement is one such consideration but is not controlling; the public interest factors must also be weighed and may be adequate to offset the absence of an explicit condition. (p. 639)

By order issued February 8, 1966, 35 FPC 207, we permitted all producers who wished to do so to file statements of facts and briefs as to the equities. All but three of the producers involved filed such briefs.[3] No intervenor filed any answering brief.

Certain arguments made by several of the producers have already been disposed of by the decision of the Circuit Court of Appeals, which is now the law of this case. Among these are the contention that the Commission has no power to order refunds of amounts collected under temporary certificates which do not contain refund conditions, the argument that refunds should not be required because the producers had no notice of possible refunds and were lulled by the Commission's statements that refunds would not be ordered, and the argument that the Commission is estopped by its conduct from ordering refunds. All the facts upon which these arguments are based were known to the court at the time of its decision. The fact that financing plans were made on the basis of the reasonable expectation that no refunds would be required is also insufficient to prevent refunds from being ordered. The reliance of the producers upon the alleged firmness of the temporary certificate prices was fully known to the court and it is obvious that the financial planning of the companies involved would have been based to some degree upon their expectations in this regard. The argument that the temporary certificates were accepted in the belief that the prices specified would not be subject to refund, and thereby resulted in an entrapment of the producers, is another fact which is inherent in the situation which was presented to the Court of Appeals. All these arguments, therefore, will not avail to prevent the ordering of refunds.

---

[2] After the Supreme Court granted certiorari in the *Callery Properties* case on March 8, 1965, we deferred further action in this proceeding until after the Supreme Court had decided the *Callery* case. On December 7, 1965 the Supreme Court reversed the decision of the Circuit Court of Appeals in the *Callery* case. *United Gas Improvement Co. v. Callery Properties, Inc.*, 382 U.S. 223.

[3] Tenneco Oil Company, Coastal States Producing Company and Russell Maguire, *et al.*, did not file briefs. Sunray DX Oil Company correctly pointed out that its refund liabilities were discharged in a prior settlement. Those filing briefs upon the equities with respect to refund of amounts collected under temporary certificates without refund conditions were George H. Coates, *et al.* and George H. Coates, Operator, *et al.* (Coates), Continental Oil Company (Continental); Mokeen Oil Company, *et al.* (Mokeen); Morgan Minerals Corporation (Morgan); Skelly Oil Company (Skelly); Prado Oil and Gas Company (Prado) (predecessor of Sohio Oil Company).

In reaching this result, we begin with the proposition that the overriding purpose of the Natural Gas Act is the protection of the gas consuming public, as the courts have emphasized time and time again.[4] With this in mind, it is helpful to know just how the sums subject to refund came into existence. The producers here were initially granted temporary authorization to make sales in interstate commerce at the rates they requested. This was done on an *ex parte* basis, and no interested party was given notice or an opportunity to present its views to the Commission. Nevertheless, the temporary authorization granted in each case specifically indicated that it could not be construed as approval of any rate and is granted without prejudice to such final disposition of the certificate application as the record may require. In most of the cases, this expedited treatment was justified on the basis that the producer would otherwise experience an economic hardship of one sort or another. Only two cases posed a threat of loss of gas to the interstate market, in contrast to the interest of a private party.[5] This procedure continued long after it was widely known that certain interested parties, notably the New York Public Service Commission, protested the initiation of any sales from this area at an initial rate of more than 14.6 cents per Mcf.

When it became clear that interested parties had a legal right to participate in the setting of rates at which initial sales were authorized, these applications were set for hearing. Subsequent to the prehearing conference, nearly one-third of the originally consolidated 52 applications were severed and granted permanent certificates at the noncontested rate of 14.6 cents per Mcf and below. The remaining producers continued selling this gas under temporary authority until the proceeding was completed and it was found that the public interest required these sales to be made at an initial rate no higher than 15 cents per Mcf. However, this order was stayed, at the producers request, pending judicial review, and they continued collecting prices in excess of these levels. The court ratified the Commission's 15 cent in line determination and reversed our refusal to order refunds under the temporary authorizations.

Thus, the sums in question represent money which we have determined should have been retained by the consumers under proper initial rates required by the public convenience and necessity. Had proper rates been established in the temporary authorizations, these sums would never have come into being. But, in order to avoid economic hardships to the producers quick action was taken and there was no opportunity to adequately consider the price aspect.

It seems clear that stability and finality are desirable goals in producer regulation. It is equally clear that temporary authorizations are not and could never be a vehicle for assuring such stability by the very method by which they are handled.

Considering our judicially ratified finding that 15 cents is the proper rate at which initial sales should be made, it would require a solid equitable showing that no refunds should be made as the dissent suggests. These producers, similar to several others, could have obtained permanent certificates long ago which would have fixed with finality their initial rates, but they gambled on securing ratification of their higher contract prices and they lost. During this period, they were on notice that the price granted in their temporary authorization was merely interim, as the court has established.

[4] *F.P.C.* v. *H. L. Hunt*, 376 U.S. 515 (1964); *F.P.C.* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1 (1961); *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137 (1960); *Atlantic Refining Co. v. P.S.C. of New York*, 360 U.S. 378; *Hope Natural Gas Co.* v. *F.P.C.*, 320 U.S. 591.

[5] The applications in Docket Nos. CI61–657 and CI62–703 were based on allegations of loss of gas through flaring.

This is not to say that reasonable reliance upon a supposedly firm price granted by the Commission is not a matter to be considered in weighing the equities. Indeed, such reasonable reliance is essential to any claim by a producer that he should not be compelled to make refunds. In general, we think refunds should be required except to the extent that a producer shows both (1) that he has paid out monies that would not have been paid out had he not relied reasonably and in good faith upon the Commission's order and statements indicating that no refunds would be ordered, and (2) that the monies so paid out cannot be recouped (either as a matter of law or as a practical matter) or that, while recoupment might be had, the expense of such recoupment would be disproportionate to the amount to be recovered.

The producers generally have alleged only two classes of payments which they contend cannot be recouped, or would entail a disproportionate expense to recoup. These are the payments of those portions of state production taxes or royalties attributable to the amount by which the rates actually collected exceeded 15 cents per Mcf (the in-line price). It has been stated that the owners of many royalty interests are not the same as those to whom payment was previously made, and that the whereabouts or even the identities, in some cases, of former owners would now be difficult to ascertain. Many of these royalty interest owners are farmers or other small land holders. It is stated that the amounts involved would be small in many cases, and that the probable overall expense of recovery of the royalty payments would be greater than the amounts to be recovered.[6]

With respect to state production taxes the issue is less clear. The producers have stated that the recovery of these taxes would be difficult or impossible, but have provided no memoranda of law upon the subject. The Texas law provides "When it shall appear that a taxpayer to whom the provisions of this Chapter (gas tax) shall apply had paid more taxes than were due during any tax-paying period either on account of a mistake of fact or law, it shall be the duty of the State Comptroller to credit the total amount of taxes due by such taxpayer for the current period with the total amount of taxes so erroneously paid." (Title 122A, Art. 3.05, par. (2), Vernon's Ann. Civ. St.) Under this provision it would appear that any producer having current production might recoup any over-payment of these taxes, but a producer who no longer had production against which a credit might be applied would be unable to recover production taxes previously paid. Accordingly, the producers need not refund that portion of any state production tax attributable to amounts collected in excess of 15 cents per Mcf to the extent to which taxes so attributable cannot now be recouped by way of credit or otherwise.

The fact that taxes and royalties have been paid in reasonable reliance upon the Commission's prior order and statements and the further fact that some or all of these payments cannot be recouped is no ground for avoiding all refunds. That portion of the excess amounts collected which was not paid out on taxes or royalties, and that portion of taxes paid which can still be recouped, should be refunded.

The producers argue that those to whom refunds are made have failed to pass on to the consumers the amounts of the refunds. Prado states that less than 25 percent of any refunds ordered will reach the consumer and that the main benefits will fall to the commercial utilities and industrial users. This is not a ground on which producers may avoid their refund obligations. We have determined in the past that we will take action "to assure that within the limits of our jurisdictional reach, the refunds ordered actually flow to those parties legally and equitably entitled thereto." *Humble Oil & Refining Company*, 32 FPC 49, 52 (1964). Beyond the limits of our jurisdiction we cannot act. The distributors are within the control of their local state regulating agencies, and it is these agencies who are responsible for seeing that the benefits of these refunds reach the proper parties.

---

[6] See the testimony of Witness Kilroy in a similar case. *H. L. Hawkins & H. L. Hawkins, Jr.* (*Operator*), *et al.*, Docket No. G–18077, *et al.*, decided in Opinion No. 475, 34 FPC 897. The witness there testified that his attorneys advised him that the collection of royalty overpayments would cost approximately $50,000 more than would be collected.

Certain producers contend that it is inequitable to require refunds of any part of the price for gas produced from a lease that has been a losing proposition to a particular producer. This contention cannot be sustained.

The Supreme Court in *United Gas Improvement Company* v. *Callery Properties, Inc., supra*, upheld this Commission in refusing to receive cost-of-service evidence for the purpose of establishing an in-line price, and further upheld the Commission in its determination that refunds should be ordered of all amounts collected in excess of an established in-line price without waiting for a determination of the just and reasonable price in an area rate proceeding. The Supreme Court recognized that the fact that a company as a whole may be conducting a loss operation is no reason why refunds should not be ordered of amounts collected in excess of an established in-line price. We think the same principle applies in cases where a loss is incurred in connection with a particular producing property, whether or not there is a loss on a company-wide basis.

Another consideration is whether the timing of any refunds should be delayed until just and reasonable rates are determined. We have consistently required refunds at the earliest practicable time and the courts have affirmed our determinations. Thus, in *Callery*, the Court held:

> The Court of Appeals would delay the payment of the refund until the "just and reasonable" rate could be determined. We have said elsewhere that it is the duty of the Commission, "where refunds are found due, to direct their payment at the earliest possible moment consistent with due process." *Federal Power Commission* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 155. These excessive rates have been collected since 1958; under the circumstances, the Commission was not required to delay this refund further.

The precise question of whether possible refunds arising from a certificate application should be deferred until just and reasonable rates are decided was only recently considered again. Despite the pendency of the *Southern Louisiana* area rate case, it was decided to continue to require refunds in the context of certificate proceedings, rather than await a just and reasonable determination. (*Sohio Petroleum Co.*, Dec. 17, 1965, 34 FPC 1483)

No participant has suggested that small producers as a group be given special treatment respecting the refund issue. In this connection, we note that the small producers in the *Permian Basin* case were required to make refunds down to the price levels established in that proceeding, except for quality adjustments. Thus, the *Permian* decision does not support complete forgiveness of the responsibility of small producers to make refunds, nor are we otherwise convinced that their position is so essentially different as to warrant this relief.

Of course, this does not bar these producers from demonstrating with specificity on rehearing situations in which the payment of part or all of the refunds would create undue hardships or otherwise be inequitable. In such event, the Commission would give fresh consideration to whether or not refunds should be ordered.

Morgan urges that its stock was sold after it had collected the amounts in excess of 15 cents. It argues that to order refunds would place a loss upon the present stockholder whereas the benefits would be retained by the former stockholders. We do not think this is sufficient to avoid a refund. The possibility that succeeding stockholders will bear the cost of what was done under former ownership is inherent in any purchase of a corporate business. Successor stockholders must take the possibility of loss as well as the possibility of undisclosed profit when they succeed to the interest of the prior stockholders.

Mokeen states that its gas leases are owned by 16 separate small investors, that one of the original wells has been abandoned and that all except three producing sands require compressors to deliver at contract pressures. It urges that the investors should not be burdened with the cost of an accounting. It appears to be most greatly concerned with the question of accounting for royalty payments. We have already determined that that part of the excessive rates which was paid out in royalty payments need not be refunded. The remaining accounting expense does not appear as great as to be a ground for avoiding refunds. It must be pointed out that, with two exceptions, Mokeen appears to have produced more gas under its docket than was produced under any other docket in this case. It does not appear that the accounting cost would be a disproportionate burden on the operation.

Procedure

In view of the foregoing, the producers other than Glen A. Martin, *et al.*, will be ordered to file refund computations in accordance with this opinion. All amounts collected in excess of 15 cents per Mcf are to be refunded with the exception of (1) amounts attributable to the excess above 15 cents per Mcf and paid out by the individual producer in royalty or overriding royalty payments and (2) amounts so attributable paid out in state production taxes which cannot now be recovered by way of credit or in any other manner. These refunds computations are to be served upon all intervenors in this proceeding as well as the Commission staff. It does not appear at this time that the amounts involved in connection with taxes and royalty overpayments would justify the expense and delay of a hearing, especially in view of the behest of the Supreme Court in *United Gas Improvement Company* v. *Callery Properties, Inc.*, *supra*, and *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 155 that the payment of refunds should be directed "at the earliest possible moment consistent with due process." In the case before us we have accepted the factual statements of the producers at their face value, and these statements have not been contradicted by any intervenor. Under these circumstances no one will be deprived of due process if the proposed procedure is followed.

Producers, if any, which elect to petition for rehearing, will each have the opportunity to allege any additional facts which, if substantiated, would indicate that specific amounts of money have been paid out and cannot, either in practice or as a matter of law be recovered. The producer should include in his factual statement the precise amounts involved, the persons to whom payment was made, when payment was made and the reasons why recovery cannot be had. If it is claimed that recovery cannot be had as a matter of law the cases or statutes upon which the producer relies should be set forth. In the event the factual statements are accepted by the Commission or found upon hearing to be correct, they may further reduce the refund obligation here established. While it seems unnecessary to constitute a hearing upon the facts so far alleged, if it becomes necessary for a hearing to be held the entire body of facts should be developed, including those alleged with respect to taxes and royalties which we have accepted here because it does not appear that the time and expense of a hearing would be justified merely to establish the facts as to the small sums over which there might be controversy. If hearings are found to be necessary, the producers will be required to establish the facts showing that particular taxes or royalties are in fact not recoupable.

Interest

Interest will be required at the usual rates upon all amounts to be refunded to the extent such amounts were retained by the producer or used for his own benefit. To the extent such amounts were paid to others but are recoverable with interest, the legal rate of interest allowable on such recovery will be required in connection with the refunds ordered. Since it does not appear that interest will be recoverable on amounts paid out for state production taxes, no interest will be required on refunds to the extent such refunds include recoupable overpayment of such taxes, unless such refunds are delayed beyond the time fixed for such refunds to be made.

Glen A. Martin

A different situation obtains with respect to *Glen A. Martin, et al.* (Martin) in Docket No. G-18639. On November 22, 1960, 24 FPC 979, the Commission issued an order granting Martin a permanent certificate at 16 cents per Mcf. Thereafter an application for rehearing was filed by Public Service Commission of the State of New York on December 22, 1960. The Commission granted rehearing on January 19, 1961. In March 1961 Martin commenced delivery of gas. The fact that rehearing was pending put Martin upon notice that the rate of 16 cents per Mcf was subject to change. Martin had no temporary certificate nor was there any determination of the Commission upon which he had a right to rely prior to the issuance of a permanent certificate to him at 15 cents on August 30, 1962. There is certainly no inequity to Martin in requiring him to refund excessive amounts collected by him at a time when he was on notice that the rate allowed in the order of November 22, 1960 was subject to revision as the result of the granting of rehearing.

Martin makes the further contention that the order of August 30, 1962 was a final order which established that there would be no refunds for the period prior to the date of that order in Martin's case. Examination of the order, however, discloses that this is not the fact. The question of refunds for Martin's deliveries prior to the time of that order was never considered. The order is completely silent on this point; it purports to deal only with the price to be set forth in the permanent certificate. By no stretch of the imagination can this be held to be a final order of the Commission that no refunds would be required of Martin. Accordingly, Martin will be required to make refunds of all amounts collected by him in excess of 15 cents per Mcf during the period in question, with interest at seven percent per annum.

The Commission orders:

(A) As a condition of the certificate granted in each of the dockets listed in Appendix A hereto, the certificate holder shall file within 60 days of the effective date of this order a report of the amounts collected by said certificate holder in excess of 15 cents per Mcf at 14.65 psia, less any amount by which payments of royalties and overriding royalties were increased by reason of the difference between 15 cents per Mcf and the rates actually collected, and also less any amounts by which payments of state production taxes, not now recoupable by credit or in any other manner, were increased by reason of said difference. Interest to the date of this order shall be added at the rate of 6 percent per annum on all such excess amounts collected prior to March 1, 1960, and at the rate of 7 percent per annum on all such excess amounts collected on or after March 1, 1960, except that no interest shall be included on refunds to the extent state production taxes, paid but recoupable, are included in such refunds, and interest shall not exceed the legal rate recoverable by the producer on that portion of the amount of any refund which was in fact paid over by the producer, not for his own benefit, to any third party.

(B) Glen A. Martin, *et al.*, in Docket No. G–18639 shall file within 60 days of the effective date of this order a report of the amounts collected by them in excess of 15 cents per Mcf at 14.65 psia. Interest shall be included at the rate of seven percent per annum to the date of this order.

(C) Each report required by ordering paragraphs (A) and (B) shall set forth the amount of refund related to each subject rate schedule, (showing separately the principal and applicable interest, with the reasons for differing rates of interest on different portions of the principal), the basis used for such determination, the period covered and a letter from South Texas Natural Gas Gathering Company agreeing to the correctness of the amounts.

(D) Copies of all filings made pursuant to ordering paragraphs (A) and (B) hereof shall be served at the time of filing upon all participants who within 45 days of the issuance of this order shall so request in writing, and upon South Texas Natural Gas Gathering Company.

(E) Each certificate holder listed in Appendix A hereto, and certificate holder Glen A. Martin, *et al.*, shall retain the amounts shown in the reports required under ordering paragraphs (A) and (B) subject to further order of the Commission directing the disposition of those amounts. If any such certificate holder elects to commingle these retained refunds with its general assets and use them for its corporate purposes, it shall pay interest thereon at the rate of 5½ percent per annum on all funds thus available from the date of the filing of the refund report to the date on which they are paid over to the person ultimately determined to be entitled thereto in a final order of the Commission. If the certificate holder elects to deposit the retained refunds in a special escrow account, the certificate holder shall tender for filing on or before the date of the filing of the refund report an executed Escrow Agreement, conditioned as set out below accompanied by certificate showing service of a copy thereof upon each of its jurisdictional customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be entered into between the certificate holder and any bank or trust company used as a depositor for funds of the United States Government and the agreement shall be conditioned as follows:

(1) Certificate holder, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in a special escrow account, subject to such Agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or an agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be made out of the escrow account.

(5) Such bank or trust company shall report to the Secretary of this Commission quarterly, certifying the amount deposited in the trust account for the quarterly period.

Commissioner O'Connor *concurring in part* and *dissenting in part.*

O'CONNOR, *Commissioner, concurring in part* and *dissenting in part:*

The result of the decision rendered today is to clear the Commission's dockets of a most difficult and vexatious matter. As noted in the majority's opinion, compelling problems with regard to our authority in this area resulted in delay over a six-year period. There is no further necessity for withholding decision. Briefs and Fact statements have been requested, and, of the nine producers remaining in this proceeding[1], six have filed briefs and statements. No responses in opposition to the allegations have been received from any intervenor or from Staff. Accepting these statements at face value, as the majority purports, we are in a position to proceed to decision. The particular issue here, the only one remaining in the many in-line determinations of the Commission, involves over 200 outstanding dockets. Only eleven dockets are disposed of today, so that a consolidated hearing of all dockets would be useful. With the understanding that each docket is decided on its own equities, no prejudice accrues to persons who have not yet been heard.

---

[1] There are eleven dockets, excluding Glen A. Martin, Docket No. G-18639. The latter docket involves a separate problem, and I concur in its disposition.

The sole issue in this matter is whether, upon a "broad and penetrating analysis of the factors pro and con,"[2] this Commission should exercise its "awesome powers"[3] over the natural gas producing industry to order refunds of certain amounts collected under temporary certificates which were without specific refund conditions, but which were specifically interpreted to require no refunds for "equitable considerations."[4] By the Court's mandate, we must, "with the assistance of the parties," proceed to "enumerate all equitable considerations involved" by a proper exercise of the broad authority lodged with this agency. A thorough explanation is thus required either as to the propriety of our initial determination of this issue, or as to the reasons for our error in excusing refunds under such unconditioned temporaries. It serves no useful purpose to restrict our inquiry by the mere forensic that this matter involves no more than is required in an in-line proceeding. It is much more.

For the reasons discussed below, it is my opinion that recoupment and refund of taxes and royalties should be excused, that further equitable considerations dictate excusing refunds in the small producer dockets here involved, and that, in any event, no refunds should presently be ordered. Such a course of action, while not prescribing refunds now, would constitute the proper decision on the merits within the permissible procedural ambit.

* * * * * * *

At the outset one important point must be clarified. The majority opinion avoids equitable considerations by the clever manipulation of citing court decisions which they would have others believe compel today's refund order. Those decisions are irrelevant to the equities in this matter. Today's order speaks of the necessity to "make immediate refunds," ignoring the requirement that whatever be done be "consistent with due process."[5] The latter requirement has repeatedly been emphasized to call "for fresh reminder that courts must not substitute their notions of expediency and fairness for those which have guided the agencies to whom the formulation and execution of policy has been entrusted * * * ."[6] It is to be hoped this agency still has control of its dockets in order that it determine initially what course of action would be most appropriate.[7] Furthermore, it bears emphasizing, in view of the majority's concern with haste, that this Commission does not usually act with compulsive speed to order refunds. If the majority's postulation be correct, then surely we are required to reconsider unanimous earlier determinations that potential refunds under increased filings need not be decided until area rates are established.[8] There the equities are with deferral. Here, too, the same result is proper because there is nothing before us to permit a proper determination of what amount should, within the parameters of just and reasonable, be refunded.

---

[2] *P.S.C.* v. *F.P.C.* (the *Skelly* case), 329 F. 2d 242, 250 (CADC–1964), cert. den., 377 U.S. 963 (1964). It should be noted that the Commission's brief opposing certiorari stated "It is entirely possible, however, that the Commission, after reviewing all pertinent factors, will again reach the conclusion that refunds are inappropriate."

[3] *United Gas Pipe Line Co.* v. *F.P.C.*, 350 F. 2d 689 (CA5–1965); affirming *United Gas Pipe Line Co.*, 31 FPC 1180, cert. granted 383 U.S. 924 (1966).

[4] *Skelly Oil Company*, 28 FPC 401, 412 (1962); see also 1065 at 1069 (on rehearing).

[5] *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 155 (1962).

[6] *Railroad Commission of Texas* v. *Rowan & Nichols Oil Co.*, 310 U.S. 573, 581 (1940).

[7] Compare the action taken in *Dorchester Gas Producing Co.*, 32 FPC 1339 (1964), aff'd. 353 F. 2d 162 (CA3–1965), cert. den., 383 U.S. 969 (1966).

[8] See, *e.g.*, *Slade Inc.*, 29 FPC 11 (1963).

The majority, however, chooses to disguise this Commission's duty. Thus, the opinion declares, on the substantive argument that refunds should not be required where the producer has not recovered his direct costs assignable to a single lease, that the Supreme Court has already determined this is not equitable, citing *U.G.I.* v. *Callery Properties, Inc.*[9] Unfortunately for the opinion of today, the specific issue was not even before the Court. *Callery* declared that, in determining an in-line price, the Commission is not required to consider company-wide costs. It did not say it would be equitable to ignore direct lease costs. The opinion was directed, not to what evidence the Commission, in its discretion, could consider; instead, it determined that, as a matter of law, cost evidence did not have to be considered. Furthermore, the *Callery* litigation did not involve the broader issue now before us.[10] In *Callery* there were no unconditioned temporaries. In the instant matter the Circuit Court has required a thorough examination of the merits. Since equity means to consider a less restrictive ambit of rights than in the expedient in-line proceeding, the equitable basis for today's opinion cannot reside in precedent.

None of the above settles the problem now before us. Whether there are equitable considerations to support our earlier determination that the producers had the better case in this matter must be decided; however, it cannot be found in the majority opinion where equity has been considered in terms of individual impact, area pricing policies, or other regulatory policies. To the contrary, when the equities are explored in depth, there are substantial considerations in support of our prior determination.

It bears recalling, at this point, what we held before, that there "is no basis for ordering refunds for the period * * * during which the producers were receiving the higher prices unconditionally authorized in their temporary certificates."[11] Or, "The essence of our conclusion on this point is that it would be inequitable to require the producers to make refunds where they were issued temporary certificates in general language * * *.[12] Or, as we stated with regard to reliance, a factor we should consider here, "Movants ignore the fact that producers and pipelines have already acted upon the temporary authority as issued and have undoubtedly expended considerable funds in justifiable reliance thereon."[13] Or, as we further stated, "We would be in a position of having induced the producers to dedicate their gas to interstate market in the absence of conditions, and of then imposing more stringent conditions upon them."[14] In my opinion the Commission had compelling substantive reasons for making these representations.

* * * * * * *

Turning first to the matter of taxes and royalties, when due consideration is given the equities, it is clear no refunds should be required where portions of the amounts here in question are held by third parties. Recoupment from these non-jurisdictional recipients can, in no way, be assured by this Commission. We should recognize the many difficulties inherent in recovering these sums, or of the resultant disruption to third parties in no way involved in the matter before us. In addition, such a rule commends itself for reasons of administrative feasibility.

---

[9] 380 U.S. 931 (1965).

[10] It should be emphasized that the producers are not precluded from relitigating the Commission's powers here for the Commission brief opposing certiorari specifically preserved the point.

[11] 28 FPC at 413.

[12] 28 FPC at 1069.

[13] *Amerada Petroleum Corp.*, (order denying motion to impose price conditions in temporary certificates) 29 FPC 218 (1963).

[14] *Ibid.*

Taxes are particularly compelling. The production tax here is but seven percent, and, while small in amount in this matter, it looms large in the social welfare purposes to which it is dedicated. The disruption inherent in its recoupment to state fiscal policy should not be permitted.

Royalty payments also present equities against refund. Non-participating third parties, with no reason to assume a different conclusion, have received sums of significance on an individual basis. Not only would undue disruption be forced upon the royalty owner were recoupment required; in addition, the potential litigation burden on the producer would be justified in but a few cases. Successor royalty owners or funds now held by estates further militate in favor of this equity. Finally, there is no need to add to the burden of administration by requiring recoupment.

To the extent, therefore, the majority would excuse taxes and royalties, I concur in their determination.[15]

* * * * * * *

My fundamental disagreement with the majority order, in addition to their refusal to consider the equities in the guise of judicial precedent, is with their refusal to view this matter as anything other than an in-line proceeding. Unfortunately for their position, it involves considerably more, none of which has been presented to the Court. In no in-line proceeding have we represented that equitable considerations might excuse refunds; in no in-line proceeding have we even considered the equities in ordering refunds; and in no in-line proceeding do we attempt to make a penetrating analysis of the equities. A facile abandonment of an earlier determination is seldom warranted. Here we have ordered briefs and pleadings on the issue, with no apparent limitation on what might be considered equitable. Based upon these briefs we should go beyond the limited evidence relied upon in an in-line proceeding.

Some background here is helpful.

At the end of 1960, this Commission was able to formulate for the first time what was to become a relatively concise program for the regulation of independent producers.[16] It has proven acceptable.[17] Plagued during most of the previous decade with the monumental task of regulating independent producers, the Commission was confronted with an Executive Advisory Committee recommending very limited regulation,[18] with long congressional hearings, supported by the Commission,[19] with approval by Congress of the legislation.[20] Following veto for reasons unassociated with the merits of the bill,[21] there were continued congressional efforts at reconsideration with severe budgetary limitations upon the Commission's powers. In addition, under apparent judicial compulsion,[22] the Commission was attempting to determine individual company costs for regulatory purposes, an approach which was ultimately to be rejected. At the same time the Commission was evolving a method of regulation relying upon market prices.[23] To summarize, during a good part of the decade there was considerable uncertainty as to how to proceed. With area regulation inaugurated in 1960, further long delays were foreseeable, and the industry was confronted with severe impacts upon its ability to plan financially for the long interim period. It was, in part, to assuage this uncertainty that every effort was made by the Commission to indicate some assurances to the producing industry that it could rely upon our actions. The importance of this effort cannot be downgraded. Our representations as to unconditioned temporaries were part of this overall picture, and, at least, up until the new departures intimated today, stability of prices for temporary authorizations continued to be accepted policy. In our recent area rate decision, we repeatedly emphasized price control and price stability.[24] It has been an accepted and necessary part of producer regulation. Reliance is one equity not precluded by the Court here,[25] although the majority indicates no interest in the matter.

---

[15] I note my specific dissent from the majority's ambivalence on the matter of excusing taxes paid.

[16] Statement of General Policy No. 61–1, 24 FPC 818 (1960).

[20] H.R. 6645, 84th Cong. 1956 (approved February 6, 1956).

[21] H.R. 6645 was vetoed by the President on February 17, 1956, because of "arrogant lobbying," in a few instances.

[22] See, *e.g.*, *City of Detroit* v. *F.P.C.*, 230 F. 2d 810 (CADC–1955), cert. den. 352 U.S. 829 (1956).

Furthermore, during the period up until last August, we did not know what the revenue requirements of the industry were. The reasonable market prices could easily be determined, as numerous in-line cases established. At the present, however, we know costs are not out of line with markets.[26] We know that during most of the last two decades the possibility exists that producers were not even recovering their costs, as was clearly established for one major producing area of the nation.[27] For this reason, where the equities are in balance, the better approach is to defer refunds until cost certainty can attach to our actions.

This background requires we not order refunds where the individual impact would be too great. It is part of the equitable consideration. It is part of the reliance we can, and should, consider here. It is part of the arguments which have been presented to us in this proceeding without response. It is to the effect that so far as individual equities are concerned, no refunds are required. If the pleadings here are accepted at face value certain equities are obvious.

First, the producers in six of the eleven dockets here before us are small producers.[28] Their unchallenged allegations indicate costs have not been recovered. Their argument for separate consideration is fully supported by the policy for the Permian Basin.[29] There small producers are largely exempted from the regulatory burden. They are not required to make quality adjustments, even though the difference appears to be at least two million dollars per year for the future, with a much larger potential refund excused. We there emphasized the equities with the small producers,[30] and indicated such persons should be freed from many filing requirements as well as many rate reduction considerations. The same reasons for excusing refunds, particularly the allegedly heavy accounting burden, should apply here.

---

[23] Statement of General Policy, *supra*.

[24] *Area Rate Proceeding*, *supra*, at p. 188.

[25] See also *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 270 F. 2d 404 (CA10–1959), where the court there required "such certainty as to allow the exercise of choice upon [the producers'] part."

[26] Compare Permian Basin guidelines of 16.0 cents and 11.0 cents, with area rates of 16.5 cents and 14.5 cents.

[27] In the *Area Rate Proceeding*, *supra*, average revenues for flowing gas in 1960 of 12.7 cents should be compared with costs for flowing gas of 14.5 cents. Economic costs for new gas-well gas were considerably higher.

[28] Based on volumes reported in F.P.C., Sales by Producers of Natural Gas to Natural Gas Pipeline Companies 1963.

Contrary to the majority opinion, which purports to know of no suggestion of special treatment for small producers, the following allegations are clear: "Equity does not permit the exaction of refunds from a small producer in these circumstances * * *" [Brief of George H. Coates, at pp. 4–5]. And: "[It] would be an extreme injustice * * * for a very small operator who has no staff of accountants * * * to make the required refunds." [Brief of Mokeen Oil Co., at p. 6]. Special treatment because of size has been suggested by these participants. The majority's oversight underscores the propriety of a consolidated hearing on the refund issue in order that the issues be fully explored.

The necessity to the small producer of the temporary certificate is far more compelling than it is to the large producer. The large producer can often take emergency sales into a relatively extensive nonjurisdictional system, including refinery, recycling, gathering, or intrastate sale operations, or he can at least better afford the payments required in the absence of production. The small producer cannot do this. He is the person who most needs the temporary, and he is the person who most needs a firm price. In large measure, our representations were most important to him. It is significant that two-thirds of the producers here are small producers. In addition, it is clear the small producer performs an extremely useful function for the entire industry. As the person best situated to take full advantage of exploration incentives, he is most useful to the larger producers in sharing the risks, particularly for the marginal development or for wildcatting.

These equities are compelling. They are made conclusive, to my mind, by the arguments and allegations alleged herein. Thus, of the small producers here consolidated, all allege peculiar operating circumstances which compel their being excused. Virtually all indicate no notice was had of potential refund. One has incurred great costs in developing the particular volumes committed to interstate commerce. Another two have gone out of the business completely, with records lost and liability uncertain. One owes less than $1500 in refunds. The others variously allege important operating considerations and financial impact on their limited reserves if refunds be ordered. Commensurate with our earlier decision in this docket and with our decision in *Permian* we should excuse the refunds here in question.

But the inquiry is not ended. Forced as the majority view themselves to order refunds now, and based upon the briefs filed in this matter, we should set up an exemption procedure for the producers in this docket who have not recovered the on-lease costs. At least one producer here makes this allegation. We have no basis for assuming his costs on that lease have not been recovered. Rather, if we accept the allegation at face value, we must assume he is correct. We have a reasonable basis for proceeding without becoming enmeshed in the individual company cost proceeding. The regulation under certificate authority extends almost solely to particular sales. It involves no more than individual leases. Where the producer does not recover his costs at that lease, which costs are readily ascertainable from various required reports, then equitable considerations compel his being excused. The showing must be made by him. In view of our prior determination, it is the preferred manner of according to the parties the opportunity for a thorough examination as required by the mandate here.

* * * * * * *

---

[29] *Area Rate Proceeding, supra,* at pp. 234–236.

[30] Citing with approval from Examiner Wenner's discussion in his intermediate decision at pp. 328, 329.

The following procedure is the most equitable resolution of the issue before us: First, all taxes and royalties should be excused. Second, the small producer should be excused. Third, any producer who can show that his lease costs for the sale covered by his certificate here docketed have not been or are not being recovered, should be excused. Fourth, since the docket of the producers involve minimal amounts, it would be preferable to excuse them also; nevertheless, the most equitable alternative is to delay refunds until the just and reasonable rate design for the pricing area here is determined, which determination is probable within a relatively short period.

This procedure is entirely commensurate with our handling of increased rate filings. It permits of a thorough reconciliation of the equities which are with the producers. It represents an accommodation to the likelihood the industry may not be recovering its just costs. It avoids individual company cost cases completely. It is within the Commission's authority to control its docket. It represents a determination of how this specific matter, presently pending on review of other dockets in numerous courts, is to be handled. While recognizing the possibility of the equities of consumers and others, it also protects the producers in their interest in using the small amounts here subject to refund to explore for and develop the reserves which are continually necessary. So far as balancing equities are concerned, since over 60 percent of the amounts here involved are used for exploration and development,[31] the small benefit to the consumer resulting from refunds of the small amounts here[32] is far outweighed by the necessity for continuing stable exploration programs.

It is noteworthy here that this Commission has stabilized prices for the consumer. We are not required to rend asunder our prior representations in order to provide a possible windfall to consumers or others at the expense of a similar price stability for the producer. Instead, what is ordered today is an exercise of a refund bias, in disregard of our duty in the matter to consider all the equities. In effect, it represents a one-way exercise of our authority. There is no equity in so proceeding with regard to the most important single item of our regulatory effort. A producer may realize great variations in revenues, even with a firm price, because of numerous negotiated terms and conditions of service, which this Commission does not consider. By upsetting the price, particularly after we had promised it could be relied upon, we subject him to vagaries too great to support reversal of that position for *ex post facto* appropriation of his resources without benefit of full consideration of his equities.

For these reasons, I dissent from the majority opinion's substantive determinations issued this day, concurring only with their excusing, to the extent they may so determine, taxes and royalties.

---

[31] The cost analysis in the *Area Rate Proceeding, supra,* at p. 192, indicates exploration and development costs of 10.76 cents, where total cost are 16.5 cents.

[32] The potential refund approximates $150,000, an amount of less than three ten-thousandths of one percent of the price paid by consumers. The potential refund to consumers would be eight thousandths of a cent. As a matter of equity, on balance, the far greater individual impact on the producers here consolidated compels deferral to compare the area rates with the industry's overall revenue expectations, rather than commencing individual company cost investigations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TENNESSEE-TEXAN OIL COMPANY, DOCKET NO. G-16867; TIDEWATER OIL COMPANY, DOCKET NO. G-16908

ORDER TO SHOW CAUSE

(Issued June 1, 1966) *

The question involved is the same as that presented in *Skelly Oil Company, et al.*, Opinion No. 492, issued this day, *supra* p. 849. The two producers in the instant proceeding were issued temporary certificates at 18.2304 cents per Mcf. These temporary certificates contained no refund conditions. Thereafter by order dated April 22, 1963, 29 FPC 784, the Commission issued permanent certificates to these producers conditioned upon an initial price of 15 cents per Mcf. The Commission order did not require the two producers to make refunds of the amounts collected by them in excess of 15 cents per Mcf during the period when the temporary certificates were in effect. After appeal by Public Service Commission of the State of New York to the United States Court of Appeals for the District of Columbia, a stipulation was entered into by joint motion filed in that court September 26, 1963, providing that the disposition of the case should be governed by the disposition in the *Skelly* case. After the Court of Appeals had reached its decision in the *Skelly* case,[1] the court entered an order on February 11, 1964 that the present case be remanded to the Commission for proceedings consistent with the opinion of the Court of Appeals in *Skelly*. Certiorari was denied by the Supreme Court at the same time certiorari was denied in the *Skelly* case.

We know of no reason why a disposition should not be made of the remaining two dockets in this proceeding in the same manner as the dockets involved in *Skelly Oil Company, et al.*, Opinion No. 492. We think that the proceeding can be expedited by requiring the two producers to show cause why an order should not issue requiring them to file refund computations in accordance with the principles set forth in Opinion No. 492. The producers here involved will have the opportunity of course, to show that the facts in one or both dockets differ from those in the dockets dealt with in Opinion No. 492.

In view of the foregoing it is necessary and appropriate for the purpose of administering the Natural Gas Act that the parties listed in the caption be required to show cause, if there be any, why they should not be required to file refund computations in accordance with the principles set out in Opinion No. 492, and thereafter to make refunds to the extent indicated by such refund computations and in the same manner as provided in Opinion No. 492.

The Commission orders:

(A) Tennessee-Texan Oil Company, in Docket No. G-16867 and Tidewater Oil Company, in Docket No. G-16908 shall show cause, if there be any, in writing, within 60 days of the issuance of this order, why they should not be ordered to file refund computations in accordance with the principles set forth in Opinion No. 492, issued this day, and to make the refunds shown to be due in the manner provided in Opinion No. 492.

(B) Further procedures will be established by subsequent orders of the Commission herein. Service of any and all documents filed by Tennessee-Texan

---

*Order issued July 21, 1966, denying motion to vacate or stay, 36 FPC 146.

[1] *Public Service Commission of State of New York v. F.P.C.*, 329 F. 2d 242, cert. den. 377 U.S. 963.

Oil Company and Tidewater Oil Company in response to this order to show cause shall be made upon all intervenors in this proceeding, upon United Gas Pipe Line Company, and upon the Commission staff.

Commissioner O'Connor disagreed with the show cause order to the extent inconsistent with his separate views in *Skelly Oil Company, et al.*, Docket No. G-18638, *et al.*, Opinion No. 492 issued this day, *supra*, p. 859.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP66-77 AND CP66-167

ORDER GRANTING CONDITIONAL WITHDRAWAL OF APPLICATION, CONDITIONAL WITHDRAWAL OF OPPOSITION AND PETITION TO AMEND

(Issued June 1, 1966)

On September 17, 1965, Texas Eastern Transmission Corporation (Texas Eastern), filed in Docket No. CP66-77 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of 6,000 Mcf/d of Winter Service gas to United Gas Improvement Company (UGI), and the increase by 920 Mcf/d of its sales to York County Gas Company (York). Petitions to intervene were filed by The Manufacturers Light and Heat Company (in opposition) on October 20, 1965, and by UGI (in support) on October 29, 1965. By order issued December 13, 1965, the Commission granted these petitions to intervene and set April 19, 1966, for a prehearing conference.

On November 29, 1965, Texas Eastern filed in Docket No. CP66-167 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of 6,000 Mcf/d of Winter Service gas to Manufacturers for a one year period commencing on the date of such authorization, which application was granted by the Commission on December 16, 1965. The application in Docket No. CP66-167 followed a prehearing conference held on November 22, 1965, at which the above-named parties and Staff agreed to a settlement whereby Texas Eastern would sell 6,000 Mcf/d of Winter Service gas to Manufacturers, which would, in turn, sell 6,000 Mcf/d of Winter Service gas to UGI.

By order of the Presiding Examiner issued April 15, 1966, the prehearing conference in Docket No. CP66-77 was postponed to May 3, 1966. On May 3, 1966, the prehearing conference convened, at which time Texas Eastern filed in Docket No. CP66-77 a conditional withdrawal of its application, and Manufacturers filed in that Docket a conditional withdrawal of its opposition. Both filings were expressly conditioned on the Commission's authorization of Texas Eastern's petition to amend its application in Docket No. CP66-167 to extend its temporary authorization of one year for a 20-year period commencing December 16, 1965. The result of these filings is that: (a) Texas Eastern has withdrawn its application in Docket No. CP66-77 to serve UGI directly; (b) Manufacturers has withdrawn its opposition to Texas Eastern's application in Docket No. CP66-77 to serve UGI and York; and (c) Texas Eastern has petitioned the Commission to extend for a period of twenty years the one year authorization granted in Docket No. CP66-167. Accordingly, Manufacturers and Texas Eastern have agreed that Texas Eastern will serve the additional 920

Mcf/d to York requested in Docket No. CP66–77, and Texas Eastern will sell an additional 6,000 Mcf/d to Manufacturers, which will sell 6,000 Mcf/d to UGI, pursuant to the authorization Manufacturers received in Docket No. CP65–149.

These proceedings do not involve the construction of any new facilities. The rates charged by Texas Eastern to Manufacturers and York are Texas Eastern's 60 day Winter Service Rates on file with the Commission. Similarly, the rates charged by Manufacturers to UGI are Manufacturers' 50 day Winter Service on file with the Commission.

Notice of the application in Docket No. CP66–167 was published in the Federal Register on May 21, 1966 (31 F.R. 7417). No notices or petitions to intervene were filed in response thereto.

At a hearing held on May 26, 1966, the Commission on its own motion made a part of the record in these proceedings the record compiled at the prehearing conference of May 3, 1966 in Docket No. CP66–77, which sets forth a description and explanation of the authorizations sought, and upon consideration of the record,

The Commission finds:

(1) Texas Eastern Transmission Corporation, a Delaware Corporation, having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as found in Docket No. G–880, 6 FPC 191 (1947).

(2) Texas Eastern's proposed sale of 6,000 Mcf/d to The Manufacturers Light and Heat Company and 920 Mcf/d to York County Gas Co. is subject to the jurisdiction of the Commission.

(3) The proposed sales are required by the public convenience and necessity.

(4) Texas Eastern Transmission Corporation's withdrawal of its application as to UGI in Docket No. CP66–77, and The Manufacturers Light and Heat Company's withdrawal of its opposition in Docket No. CP66–77 are required by the public convenience and necessity.

(5) Texas Eastern Transmission Corporation's amendment of its application in Docket No. CP66–167 is required by the public convenience and necessity, and accordingly should be granted.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) Texas Eastern Transmission Corporation's withdrawal of its application in Docket No. CP66–77 is granted insofar as it relates to UGI.

(B) The Manufacturers Light and Heat Company's withdrawal of its opposition in Docket No. CP66–77 is granted.

(C) Texas Eastern Transmission Corporation's amendment to its application in Docket No. CP66–167 is granted.

(D) Certificates of public convenience and necessity are issued to Texas Eastern Transmission Corporation authorizing the sale of 6,000 Mcf/d of Winter Service gas to The Manufacturers Light and Heat Company and 920 Mcf/d of Winter Service gas to York County Gas Company for a period of twenty years commencing December 16, 1965.

(E) The certificates issued by paragraph (D) above and the rights granted thereunder are conditioned upon Texas Eastern Transmission Corporation's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE DAYTON POWER AND LIGHT COMPANY, DOCKET NO. E-7268

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued June 2, 1966)

The Dayton Power and Light Company (Applicant), filed an application with the Federal Power Commission on February 4, 1966, seeking an order pursuant to Section 203 of the Federal Power Act authorizing the acquisition of the electric facilities of the City of Miamisburg, Ohio.

Applicant is incorporated under the laws of the State of Ohio and is qualified to do business in that State with its principal place of business at Dayton, Ohio, and is engaged primarily in the generation, transmission, distribution and sale of electric energy in 24 counties in southwestern Ohio.

Miamisburg is an incorporated municipality under the laws of the State of Ohio and operates an electric utility system serving the City and some of the nearby farms. During 1964 it served 5,027 retail customers.

According to the application, the electric facilities of Miamisburg were offered for sale through a public bid procedure prescribed by Ohio law set forth in the Revised Code of Ohio. On July 6, 1965, the City Council of Miamisburg passed its Ordinance No. 1380 authorizing the advertisement for sale of the electric facilities of the City for not less than $4,695,350 to the highest bidder. Thereafter, the approval or disapproval of the Ordinance was placed on the ballot by referendum petition. On November 2, 1965, the electors of Miamisburg approved the Ordinance to sell. The Applicant which serves the surrounding areas and also supplies about 40% of Miamisburg's energy requirements submitted the highest and best bid. Under this bid, the Applicant proposes to purchase the facilities for a cash consideration of $5,156,560 plus $20,000 for estimated acquisition expenses. Miamisburg's electric facilities have an estimated original cost of $3,600,000 and an estimated accumulated provision for depreciation of $1,100,000, for an estimated depreciated original cost of $2,500,000. The Applicant's consideration of $5,156,560 plus $20,000 for estimated acquisition expenses is a total acquisition cost of $5,176,560, as of December 15, 1965. Of this total cost, $5,076,560 is considered as applicable to electric plant and $100,000 to supplies and fuel stock. On the basis of these amounts the purchase will create an electric plant acquisition adjustment of $2,576,560. The Applicant proposes to eliminate the entire amount of the acquisition adjustment by a debit to Account 216 Unappropriated Earned Surplus. In addition to the immediate cash payment, Applicant will pay rentals and provide services as follows:

(1) $550 per month rental for five years of the power plant site.

(2) Removal of all equipment from power plant building and vacation of premises at the end of five years.

(3) $100 per month rental for ten years of the substation site adjacent to the power plant.

(4) The City will adopt and Applicant will accept a street lighting ordinance establishing a rate for such service. Applicant will provide free street lighting service for the first three years after settlement date; service at one-fourth the ordinance rate in the fourth year; at one-half such rate in the fifth year; and at three-fourths such rate in the sixth year. The full rate will be charged thereafter.

Applicant represents that the acquisition of Miamisburg's facilities will permit their consolidation into one integrated system with resultant economies and increased reliability and according to the Applicant, Miamisburg will be afforded improved service resulting from Applicant's improvement of the existing facilities. Such improvements will include extension of the existing 12 kv distribution system to supplement the existing 4 kv and 12 kv systems. Applicant will establish a district business office and an electric operation center in Miamisburg and will provide customer service on a 24-hour basis. During 1964, average consumption of Miamisburg's residential consumers was 3,726 kwh while that of residential consumers of the Applicant's system was 4,255 kwh. It appears that Applicant has an opportunity to increase energy sales in the Miamisburg area. After the acquisition Applicant proposes to place in effect in Miamisburg its standard electric rates now in effect in other communities which it serves and the Applicant estimates that nearly all residential, industrial and governmental customers and about 80% of the commercial customers would receive some decrease in rates.

Written notice of the application has been given to the Public Utilities Commission of Ohio and to the Governor of that State. Notice was also published in the Federal Register on February 16, 1966 (31 F.R. 2800), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before March 4, 1966, file petitions or protests with the Federal Power Commission, Washington, D.C. 20426.

By letter to the Commission dated February 24, 1966, Harold L. Korn, Spokesman for the Committee for Keeping the Light Plant, requested that no action be taken until the Commission held a public hearing in Miamisburg. The Committee's complaint was that a former City ordinance required a higher price to be paid for facilities and that the City Council had not acted lawfully in accordance with the City ordinances. Subsequently, Harold L. Korn brought a taxpayer's suit in the Common Pleas Court of Montgomery County, Ohio, against the City of Miamisburg and its officers seeking to enjoin the City from contracting to sell the electric facilities. On March 8, 1966, the Court issued its decision finding that the City had acted lawfully and sustaining a motion of the defendants to dismiss the taxpayer's petition. The question of compliance with state laws and local ordinances is a matter for the State courts to decide and not this Commission. No other protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Federal Power Commission as heretofore described and set forth in the Commission's order issued December 21, 1964, *The Dayton Power and Light Company, Columbus and Southern Ohio Electric Company*, Docket No. E-7189 (32 FPC 1488).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Miamis-

burg, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7281

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued June 2, 1966)

By order issued May 23, 1966, 35 FPC 759, in the above-entitled matter, the Commission authorized Montana-Dakota Utilities Co. (Applicant), to issue and sell at competitive bidding $10,000,000, principal amount of First Mortgage Bonds, due 1986, subject among others, to the provisions set forth in paragraph (C) of that order as follows:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

Applicant, on June 2, 1966, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, setting forth, among other things, that it proposes to accept as providing the lowest annual cost of money to it, the bid of Equitable Securities Corporation, to purchase the proposed issuance of $10,000,000, principal amount of Bonds, for the price of 99.121% of principal amount, with an interest rate of 5⅞%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of paragraph (C) of the Commission's order issued May 23, 1966, in the above docket, and under the bid it proposes to accept for the Bonds, the price to be received by Applicant therefor and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above upon the terms and conditions and for the purposes specified in the application, as supplemented by the amendment referred to above, are authorized, subject only to the provisions of paragraphs (A), (B), (D), (E) and (F) of the Commission's order issued May 23, 1966, in the above docket.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL VERMONT PUBLIC SERVICE CORPORATION, PROJECT NO. 2487

ORDER ISSUING LICENSE (MINOR)

(Issued June 3, 1966)

Application was filed on October 29, 1964 by Central Vermont Public Service Corporation (Applicant) of Rutland, Vermont, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2487, known as the Hoosick Falls Project, located on the Hoosick River, a tributary of the Hudson River, in Rensselaer County, New York, in the vicinity of Hoosick Falls. No lands of the United States are affected by the project.

According to the application, the project began operation in 1890. The existing hydraulic turbines and generators were installed in 1925 and 1928. The turbines have a combined capacity of 1,510 horsepower.

Information furnished to the Commission by Applicant shows that the Hoosick Falls project, situated in the State of New York, is connected with Applicant's 46 kv transmission system at the Bennington substation, in southwestern Vermont, and that in 1964, for instance, the entire net generation from the Hoosick Falls project (1,768,503 kwh) was transmitted from New York to Vermont.

The Department of the Interior, in reporting on the application, advised that while special license provisions for public access, parking areas, fish passage facilities, or minimum flows, are not immediately necessary, future population growth and leisure time may make necessary development of the stream's fishery resources to meet the rising need for sport fishing. The Department recommended that any license for the project include the terms and conditions set forth in Form L-9 (32 FPC 577) and a special condition, in the interests of fish, wildlife, and recreation. Since Form L-9 is not applicable for inclusion in licenses for such as the subject project, we are including as a part of the license herein granted the terms and conditions set forth in attached Form L-12 which contains terms and conditions in the interests of the Department similar to those contained in Form L-9, and a special condition designated herein as Article 12.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of Health, Education, and Welfare has reported that the project has no adverse effect on water supply or pollution control, and none is expected.

The license herein granted shall have an effective date of May 1, 1965, the first day of the month in which the Supreme Court of the United States affirmed the Commission's findings and order asserting licensing authority over Taum Sauk Project No. 2277 by virtue of the effect of the hydroelectric project on the interests of interstate commerce by its utilization of non-navigable headwaters of a navigable stream to generate electric energy for an interstate power system (381 U.S. 90), and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.* (33 FPC 275), we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of these sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) The project affects the interests of interstate commerce.

(2) Applicant is a corporation organized under the laws of the State of Vermont, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign com-

merce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,400 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Federal Power Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Central Vermont Public Service Corporation (Licensee) of Rutland, Vermont, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of May 1, 1965 and terminating December 31, 1993, for the continued operation and maintenance of Hoosick Falls Project No. 2487, located on the Hoosick River in Rensselaer County, New York, and affecting the interests of interstate commerce, subject to the terms and conditions of the Act, insofar as not expressly waived herein, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Hoosick Falls Project consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States;

(ii) project works as follows: (1) a concrete dam approximately 220 feet long and 30 feet high surmounted by 2-foot flashboards, having a 150-foot spillway section and a concrete structure with sliding head gates; (2) a 16.3-acre reservoir with storage limited to hourly pondage; (3) a canal approximately 900 feet long and 75 feet wide (the north wall of which is an earth dike) having three trash racks at the powerhouse end and a 53-foot concrete spillway equipped with 2-foot flashboards located directly below the dam; (4) a powerhouse containing three vertical generating units with a combined capacity of 1,050 kw driven by three turbines with a combined capacity of 1,510 hp; (5) a 34.5 kv transmission line connecting the plant to the North Bennington substation; and (6) appurtenant electrical and mechanical facilities; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-12 (May 1, 1966) entitled "Terms and Conditions of License for Constructed Minor Project Affecting the Interests of Interstate or Foreign Commerce" (*infra*), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall, for the conservation and development of fish resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such fish facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the New York Conservation Department, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 13. The Licensee shall pay to the United States the following annual charge, effective May 1, 1965:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, $70.00 per annum.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to be waived, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

FORM L-12
(May 1, 1966)

TERMS AND CONDITIONS OF LICENSE FOR CONSTRUCTED MINOR PROJECT AFFECTING THE INTERESTS OF INTERSTATE OR FOREIGN COMMERCE

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. Except when emergency shall require for the protection of life, health, or property, no substantial alteration or addition shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct.

Article 3. The project, including its operation and maintenance and any work incident to additions or alterations authorized by the Commission shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall cooperate fully with said representative and shall furnish him such information as he may require concerning the operation and maintenance of the project, and of any such alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. Licensee shall submit to said representative a detailed program of inspection by the Licensee that will provide for an adequate and qualified inspection force for construction of any such alterations to the project. Construction of said alterations or any feature thereof shall not be initiated until the program of inspection for the alterations or any feature thereof has been approved by said representative. The Licensee shall allow said representative and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 4. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and provided further, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain under the license.

Article 5. There is reserved to the appropriate department or agency of the United States, or of the State or county involved, the right to take over, maintain, and supervise the use of any project road as a public road.

Article 6. The operations of the Licensee, so far as they effect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 8. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 9. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines to a condition satisfactory to the Commission's authorized representative and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 10. The right of the Licensee and of its transferees and successors to use or occupy waters, over which the United States has jurisdiction, under the license, for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 11. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly waived in the license.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COMMONWEALTH EDISON COMPANY AND CENTRAL ILLINOIS ELECTRIC AND GAS COMPANY, DOCKET NO. E-7275

ORDER PROVIDING FOR HEARING

(Issued June 3, 1966)

Upon consideration of the joint application submitted on behalf of Commonwealth Edison Company (Commonwealth) and Central Illinois Electric and Gas Company (Central) for authorization to merge their respective facilities and operations submitted March 2, 1966, the Commission deems it in the public interest to afford applicants and all other interested parties opportunity for oral hearings prior to disposition of the application on the merits. Important legal and policy considerations affecting this Commission's administration of its overall regulatory responsibilities under the Federal Power Act are presented by its determination as to whether the proposed merger is consistent with the public interest. These responsibilities embrace accounting, corporate, facility interconnection and coordination, financial and rate making considerations, Sections 202, 205, 206 and 301 of the Federal Power Act. And see also the Public Utility Holding Company Act, 15 U.S.C. 79, *et seq.*

Underlying our consideration in setting this matter for hearing is the Commission's view that the public interest and the requirements of the Federal Power Act will generally be best served by setting for hearing all applications requesting approval of the merger and consolidation of two or more Class A electric utilities[1]. In the near future a formal statement of this Commission's policy will be included as a part of the Commission's Rules of Practice and Procedure, Part II General Policy and Interpretations (18 CFR).[2]

As filed the joint application of Commonwealth and Central includes substantial supporting factual information. To date, the Commission has received comments unfavorable to the proposed merger transaction submitted upon behalf of the Utility Users League and named individuals[8]. Presumably, factual data included in the joint application will be submitted in support of the applicants' positions during the hearing provided herein. Additionally, the applicants and all interested parties should address themselves to the general considerations raised by the proposed merger and the overall requirements of the Federal Power Act: relating to the advantages and disadvantages of corporate integration to the respective customers of the facilities and operations of Commonwealth and Central balanced against the advantages and disadvantages arising from their present non-affiliated status or those which might result from increased coordination and operation of the properties of the two companies without corporate integration.

---

[1] Electric utilities having annual electric operating revenues of $2,500,000 or more.

[2] We note that the Illinois Commerce Commission similarly provides for hearings on mergers of this type.

To afford all parties and any prospective interveners opportunity to prepare for presentations at the oral hearing in this matter without unduly delaying our ultimate disposition of the joint application filed by Commonwealth and Central, we deem it necessary to prescribe certain procedural rulings governing the hearing as hereinafter provided. The Petition For Leave To Intervene submitted upon behalf of the Utility Users League and named individuals and the Answer thereto submitted upon behalf of Commonwealth and Central on April 14, 1966, will be considered subsequently together with any other petitions to intervene.

The Commission orders:

(A) A public hearing shall commence in a hearing room of the Federal Power Commission on July 11, 1966 at 10:00 a.m. (EDST), 441 G Street, Washington, D.C., to consider the issues raised by the joint application of Commonwealth and Central submitted in the above-entitled matter on March 2, 1966 and the issues set forth in the recital above. Any interested person, State or local public authorities desiring to participate in the hearing as provided herein shall submit petitions for leave to intervene or notices of intervention, as appropriate, on or before June 20, 1966, in accordance with Sections 1.8 and 1.37 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

(B) The Presiding Examiner shall convene a prehearing conference at the commencement of the hearing for purposes of receiving any factual stipulations, statements of position; and shall dispose of all prehearing procedural questions including the time for presentation of evidence and cross-examination thereof.

Commissioner Bagge *dissenting.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC., PROJECT NO. 2338

ORDER GRANTING CONTINUANCE AND DENYING MOTION FOR ADDITIONAL PREHEARING CONFERENCE AND STAY OF PROCEEDING

(Issued June 3, 1966)

In *Scenic Hudson Preservation Conference* v. *F.P.C.*, 354 F. 2d 608 (CA2), cert. denied, May 16, 1966, the Court set aside three orders of the Commission including the order of March 9, 1965 (Opinion No. 452, 33 FPC 428), granting a license to Consolidated Edison Company of New York, Inc. (Consolidated Edison, or Applicant) for the construction and operation of the Cornwall Pumped Storage Project, Project No. 2338. In accordance with the direction of the Court, the Commission, by its order of January 25, 1966, 35 FPC 151, fixed a hearing on remand, and it ordered a prehearing conference which was held in New York City on March 22 and 23, 1966.

---

[8] Petition For Leave To Intervene upon behalf of petitioners Utility Users League, Nickolas J. Barnes, Sidney J. Rosenberg and Harry R. Booth, received April 7, 1966.

Consolidated Edison applied for a license on January 29, 1963. The application, as amended on September 13, 1963, sought authorization to construct and operate certain project works, including a powerhouse, of the modified outdoor type, mostly underground, to be recessed into the base of the north face of Storm King Mountain on the Hudson River near Newburgh, New York. On May 31, 1966, the Applicant filed an amended application providing, among other things, for placing all powerhouse structures and facilities and the step up substation underground in the Village and Town of Cornwall, New York, near the previous powerhouse site.

At the prehearing conference in March, 1966, the Presiding Examiner prescribed a schedule for the filing of prepared direct testimony prior to the hearing and ruled that the hearing should commence in New York City on October 17, 1966. On April 15, 1966, the Scenic Hudson Preservation Conference, the Town of Putnam Valley, and the Sierra Club and the Atlantic Chapter of the Sierra Club, filed a motion, supported by other interveners,[1] that the dates designated by the Presiding Examiner for submission of prepared testimony and commencement of the hearing be vacated, that another prehearing conference be held, and that a stay be granted for all purposes.

At the prehearing conference the Applicant indicated its intention to study the feasibility of an underground powerhouse and stated it proposed to file any amended license application providing therefor by April 29, 1966. The Presiding Examiner fixed dates, including those for the filing of direct testimony, on the assumption that the amended application would be filed on April 29, 1966. However, as the Applicant did not file the amended application until May 31, 1966, it is appropriate that the interveners opposing the project be given a month's extension of time in which to file their direct case.[2]

The requests for a stay and for another prehearing conference were based on the fact that at the time the motion was filed a petition for certiorari had been filed by the Applicant and was then pending. On May 16, 1966 certiorari was denied by the Supreme Court. No substantial reason has been advanced for another prehearing conference or for a stay of the proceeding. If for other reasons, based on the amended application, the moving parties feel that another prehearing conference should be held, they are, of course, free to make application to the Presiding Examiner. At the prehearing conference the Presiding Examiner prescribed a procedure substantially as hereinafter provided. For the convenience of the participants this procedure is outlined below with the dates adjusted in accordance with this order, including the date for the commencement of the hearing.

---

[1] The Secretary of the Interior and the following other interveners supported the motion: Town of Philipstown; Philipstown Citizens Association; the Cortlandt Conservation Association, Inc., and the Hudson River Fishermen's Association.

[2] The Presiding Examiner ruled that prior to the hearing interveners in opposition to the project shall serve testimony on (1) gas turbines as an alternative to the project; (2) air pollution; (3) the impact of project facilities (including overhead transmission lines) on scenic beauty, community planning and recreational resources; (4) possible seepage from the project reservoir; (5) the general safety of dike structures.

It was also ruled at the prehearing conference that Scenic Hudson and other interveners in opposition to the project might defer their testimony on the following subjects (until after that of the Applicant, the Secretary of the Interior, and the staff had been received): (1) alternative power sources (other than gas turbines but including interconnections); (2) underground transmission cost; (3) fish protection; (4) Hudson River development, including alternative hydroelectric power sites.

The Commission finds:

(1) The dates set forth in the procedural schedule prescribed by the Presiding Examiner should be adjusted to permit interveners in opposition to the project an additional month to prepare their direct testimony.

(2) The motion of the Scenic Hudson Preservation Conference, the Town of Putnam Valley, and the Sierra Club and the Atlantic Chapter of the Sierra Club for another prehearing conference and for a stay of this proceeding should be denied.

The Commission orders:

(A) The motion of the above-named interveners for another prehearing conference and for a stay of this proceeding, is hereby denied.

(B) The filing schedule in this proceeding, and the date of commencement of the hearing are as follows:

1. The Applicant and interveners supporting the application shall file by September 7, 1966, with the Secretary of the Commission an original and ten copies of all testimony, including qualifications of the witnesses, and exhibits to be presented in Applicant's direct case.
2. The Secretary of the Interior and interveners opposing the project shall file with the Secretary, by October 13, 1966, an original and ten copies of all direct testimony and exhibits including qualifications of witnesses.
3. The direct case of the staff of the Commission shall be filed by October 27, 1966.
4. All motions to strike shall be filed with the Presiding Examiner by November 3, 1966, with replies to such motions to be filed by November 10, 1966.
5. Copies of all filings specified herein shall be served on all other parties.
6. On November 14, 1966 the hearing in this proceeding shall commence in New York City.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE NORTHERN ELECTRIC COOPERATIVE, DOCKET NO. E-6670

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued June 3, 1966)

The Northern Electric Cooperative (Northern), a corporation organized and existing under the laws of the State of Montana, with its principal place of business at Opheim, Montana, filed an application on January 21, 1966 for a supplemental order, pursuant to Section 202(e) of the Federal Power Act, authorizing an increase in the amounts of electric energy which Northern is presently authorized to transmit from the United States to Canada.

By Commission order issued August 10, 1965 in the above docket, (34 FPC 481), Northern was authorized to transmit electric energy from the United

States to Canada at three points on the international border between the United States and Canada as follows:

Line No. 1: 24,000 kilowatt-hours per year at a rate of transmission not to exceed 24 kilowatts;

Line No. 2: 18,000 kilowatt-hours per year at a rate of transmission not to exceed 20 kilowatts; and

Line No. 3: 36,000 kilowatt-hours per year at a rate of transmission not to exceed 35 kilowatts.

Northern now seeks authorization to transmit electric energy from the United States to Canada in the following amounts and at the following rates of transmission:

Line No. 1: 30,000 kilowatt-hours per year at a rate not to exceed 24 kilowatts;

Line No. 2: 25,000 kilowatt-hours per year at a rate not to exceed 20 kilowatts; and

Line No. 3: 42,000 kilowatt-hours per year at a rate not to exceed 35 kilowatts.

The amounts of electric energy which Northern proposes to export like those amounts presently exported pursuant to the aforementioned authorization are to be transmitted to the Province of Saskatchewan, Canada, from points within the State of Montana over Northern's three 7.2 kv single phase lines which, as indicated above, are designated as Line No. 1, Line No. 2, and Line No. 3, respectively. These lines are covered by a Permit signed by the Chairman of the Federal Power Commission on December 12, 1956, as modified by Commission order issued April 17, 1963 (29 FPC 768), all in the above docket.

According to the application, the increased amounts of electric energy will be used by Northern to meet the expanding electric requirements of its retail customers in Canada.

The Fort Peck Project of the United States Government will continue to be the source of the electric energy which is exported by Northern.

Inasmuch as the electric energy exported by Northern at each of the three points on the United States-Canadian border is supplied from the same source, we are hereinafter authorizing the total amount of energy which Northern may export over its three lines without specifying the maximum amount of energy which may be exported over each line. In granting this authorization we have considered the anticipated growth in the electric requirements of Northern's Canadian customers as well as the pending request of Northern.

Written notice of the application has been given to the Board of Railroad Commissioners of the State of Montana and to the Governor of that State. Notice of filing of the application has also been given by publication in the Federal Register on April 20, 1966 (31 F.R. 6077), stating that any person desiring to be heard or to make any protest with reference to the application should, on or before April 26, 1966, file with the Federal Power Commission, Washington, D.C. 20426, a petition or protest. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) The transmission of electric energy from the United States to Canada, as limited herein and as hereinafter authorized, will not impair the sufficiency of electric supply within the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

(2) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) Northern is hereby authorized to transmit electric energy from the United States to Canada in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which Northern is hereby authorized to transmit from the United States to Canada over Line Nos. 1, 2, and 3 shall not exceed, in total amount, 150,000 kilowatt-hours per year, at a transmission rate not to exceed 100 kilowatts. The transmission rate shall be the maximum monthly rate of transmission as determined from the sum of the non-coincidental peak deliveries over Line Nos. 1, 2, and 3. The energy which Northern is hereby authorized to export shall be transmitted over the facilities specified in the Permit signed by the Chairman of the Federal Power Commission on December 12, 1956, as modified by Commission order issued April 17, 1963, as referred to above.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Permit signed by the Chairman of the Federal Power Commission, referred to in Paragraph (B) above.

(D) Northern shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules and regulations or orders issued by the Commission.

(E) Northern shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted from the United States to Canada over each of the afore-described three lines pursuant to the authority herein granted; shall make, keep, and preserve full and complete records with respect to the movement of such energy; and shall furnish in triplicate to the Commission, with respect to such transmission of energy, reports annually on or before February 15 showing (with respect to each of the afore-described three-lines) the total kilowatt-hours delivered, the maximum kilowatts of transmission, and the consideration received therefor during each month of the preceding calendar year.

(F) This authorization to transmit electric energy from the United States to Canada shall not be transferable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Northern.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) The authorization herein granted shall supersede that heretofore granted by Commission order issued August 10, 1965, referred to above.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-298

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 6, 1966)

On March 21, 1966, Central Illinois Public Service Company (Applicant) filed in Docket No. CP66-298 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant up to 401 Mcf of natural gas per day for resale and distribution in the Village of Nebo, Pike County, Illinois, and environs, as more fully set forth in the application.

Applicant will construct and operate a 2-inch lateral pipeline extending approximately 4.1 miles south from a metering and regulating station to be constructed by Respondent to the Village of Nebo, Illinois. Applicant will also construct a town border station at or near the corporate limits of Nebo and a natural gas distribution system to serve Nebo and its environs.

The total estimated volumes of natural gas required to meet Applicant's annual and peak day requirements during the initial three years of proposed operations are as follows:

	First year	Second year	Third year
Annual (Mcf)	28,110	30,385	41,900
Peak day (Mcf)	268	376	401

Applicant states that the service requested will not increase its present contract demand of 110,000 Mcf per day of gas supply from Respondent.

The total estimated cost of the facilities to be constructed by Applicant is $90,160, which will be financed from internally generated funds.

Applicant has accepted a gas distribution franchise granted to it by the Village of Nebo and a certificate of public convenience and necessity issued by the Illinois Commerce Commission authorizing the construction, operation and maintenance of the facilities.

Respondent was notified of the filing of the application by letter dated March 23, 1966. No answer has been received from Respondent.

Due notice of the filing of the application and opportunity for hearing thereon was published in the Federal Register on April 5, 1966 (31 F.R. 5388). No protest, petition to intervene or notice of intervention has been filed.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation with its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued September 23, 1942, in Docket Nos. G-200 and G-207 (3 FPC 273).

(2) Applicant is a public utility company in the State of Illinois and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish physical connection of its transportation facilities with the facilities proposed by Applicant and to sell and deliver up to 401 Mcf per day of its present contract demand obligation to Applicant for resale and distribution in the Village of Nebo, Illinois, and environs, as hereinbefore described and as more fully set forth in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 401 Mcf per day of its present contract demand obligation to Applicant for resale and distribution in the Village of Nebo, Illinois, and environs, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 30 days thereof.

(D) Respondent shall execute and file with the Commission an amended service agreement with Applicant in accordance with the Commission's Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL VERMONT PUBLIC SERVICE CORPORATION, PROJECT NO. 2488

ORDER ISSUING LICENSE (MINOR)

(Issued June 6, 1966)

Application was filed on October 29, 1964 by Central Vermont Public Service Corporation (Applicant) of Rutland, Vermont, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed project No. 2488, known as the Bradford Hydroelectric Project, located on the Waits River, a tributary of the Connecticut River, in the Village of Bradford, Orange County, Vermont. No lands of the United States are affected by the project.

According to the application, the project began operation in 1908, and the existing hydraulic turbine of 600 horsepower and two generators with a capacity of 180 kilowatts each were installed in 1922.

Information furnished the Commission by Applicant shows that the Bradford Project and Applicant's Taftsville Project No. 2490, both of which are situated in eastern Vermont, connect to Applicant's 46 kv interconnected system which extends from Applicant's unlicensed Carvers Fall hydroelectric project in New York, across Vermont, and into New Hampshire at Cornish and Claremont, and includes an interconnection with New England Power Company at Charlestown, New Hampshire. In 1964 for instance, power was transmitted both ways on Applicant's 46 kv system between Ascutney, Vermont, and Claremont, New Hampshire.

The Department of the Interior, in reporting on the application, advised that while special license provisions for public access, parking areas, fish passage facilities, or minimum flows, are not immediately necessary, future population growth and leisure time may make necessary development of the stream's fishery resources to meet the rising need for sport fishing. The Department recommended that any license for the project include the terms and conditions set forth in Form L-9 (32 FPC 577) and a special condition, in the interests of fish, wildlife, and recreation. Since Form L-9 is not applicable for inclusion in licenses for such as the subject project, we are including as a part of the license herein granted the terms and conditions set forth in attached Form L-12 which contains terms and conditions in the interests of the Department similar to those contained in Form L-9, and a special condition designated herein as Article 12.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of Health, Education, and Welfare has reported that there is insufficient information available for judging the effect of the project on water quality, and recommended that any license for the project should provide for future modification of the license in the interest of improving water quality, as provided in Article 13.

We are pleased that the applicant has seen fit to file applications for minor licenses to cover projects such as these. We note that the instant project, similar to many other projects in this category, is a small one constructed many years ago. It may be that the operation of projects of this nature may well become uneconomic before the license expires as its operating costs increase and alternative sources of power become less expensive. However, we are confident that the licensee will file an application to surrender the license for the project at such time as this situation occurs, thereby permitting its removal or converting its use to other purposes, such as recreation, stream flow regulation, or water supply purposes.

The license herein granted shall have an effective date of May 1, 1965, the first day of the month in which the Supreme Court of the United States affirmed the Commission's findings and order asserting license authority over Taum Sauk Project No. 2277 by virtue of the effect of the hydroelectric project on the interests of interstate commerce by its utilization of non-navigable headwaters of a navigable stream to generate electric energy for an interstate power system (381 U.S. 90), and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.* (33 FPC 275), we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of these sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) The project affects the interests of interstate commerce.

(2) Applicant is a corporation organized under the laws of the State of

Vermont, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 480 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Federal Power Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Central Vermont Public Service Corporation (Licensee) of Rutland, Vermont, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of May 1, 1965 and terminating December 31, 1993, for the continued operation and maintenance of Bradford Hydroelectric Project No. 2488, located on the Waits River in Orange County, Vermont, and affecting the interests of interstate commerce, subject to the terms and conditions of the Act insofar as not expressly waived herein, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Bradford Hydroelectric Project consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interests therein are owned or held by the Licensee or by the United States;

(ii) project works as follows: (1) a dam constructed of large cut stones capped with concrete, approximately 200 feet long, with a maximum height of 70 feet, having a 116-foot spillway section, five stanchion sections adjacent to the north abutment, and a concrete structure housing a set of trash racks and head gates; (2) a 6.3-acre reservoir; (3) a steel penstock five feet six inches in diameter extending 128 feet to a six-foot diameter surge tank and 80 feet of five-foot diameter penstock between the surge tank and the powerhouse; (4) a powerhouse equiped with one 600 hp horizontal turbine with two wheels and two draft tubes which drives two generators having a capacity of 180 kw each; and (5) appurtenant facilities; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-12 (May 1, 1966) entitled "Terms and Conditions of License for Constructed Minor Project Affecting the Interests of Interstate or Foreign Commerce" (*supra*, p. 875), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall, for the conservation and development of fish resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such fish facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Vermont Fish and Game Board, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 13. The Commission reserves the right to determine at a later date, after notice and opportunity for hearing, what actions shall be taken by Licensee, to improve water quality at the project.

Article 14. The Licensee shall pay to the United States the following annual charge, effective May 1, 1965:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, $24.00 per annum.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL VERMONT PUBLIC SERVICE CORPORATION, PROJECT NO. 2490

ORDER ISSUING LICENSE (MINOR)

(Issued June 6, 1966)

Application was filed on October 29, 1964 by Central Vermont Public Service Corporation (Applicant) of Rutland, Vermont, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed Project No.

2490, known as the Taftsville Project, located on the Ottauquechee River, a tributary of the Connecticut River, in Windsor County, Vermont, in the vicinity of Taftsville. No lands of the United States are affected by the project.

According to the application, the project began operation in 1910. The existing hydraulic turbine with a capacity of 675 horsepower and the generator with a capacity of 500 kilowatts were installed in 1943.

Information furnished the Commission by Applicant shows that the Taftsville Project and Applicant's Bradford Project No. 2488, both of which are situated in eastern Vermont, connect to Applicant's 46 kv interconnected system which extends from Applicant's unlicensed Carvers Fall hydroelectric project in New York, across Vermont, and into New Hampshire at Cornish and Claremont, and includes an interconnection with New England Power Company at Charlestown, New Hampshire. In 1964, for instance, power was transmitted both ways on Applicant's 46 kv system between Ascutney, Vermont, and Claremont, New Hampshire.

The Department of the Interior, in reporting on the application, advised that while special license provisions for public access, parking areas, fish passage facilities, or minimum flows, are not immediately necessary, future population growth and leisure time may make necessary development of the stream's fishery resources to meet the rising need for sport fishing. The Department recommended that any license for the project include the terms and conditions set forth in Form L-9 (32 FPC 577) and a special condition, in the interests of fish, wildlife, and recreation. Since Form L-9 is not applicable for inclusion in licenses for such as the subject project, we are including as a part of the license herein granted the terms and conditions set forth in attached Form L-12 which contains terms and conditions in the interests of the Department similar to those contained in Form L-9, and a special condition designated herein as Article 13.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of Health, Education, and Welfare has reported that there is insufficient information available for judging the effect of the project on water quality, and recommended that any license for the project provide for future modification of the license in the interest of improving water quality, as provided in Article 14.

The Vermont Department of Water Resources has expressed its opinion that the project may have some effect on water quality.

The license herein granted shall have an effective date of May 1, 1965, the first day of the month in which the Supreme Court of the United States affirmed the Commission's findings and order asserting licensing authority over Taum Sauk Project No. 2277 by virtue of the effect of the hydroelectric project on the interests of interstate commerce by its utilization of non-navigable headwaters of a navigable stream to generate electric energy for an interstate power system (381 U.S. 90), and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of these sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) The project affects the interests of interstate commerce.

(2) Applicant is a corporation organized under the laws of the State of Vermont, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 670 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Federal Power Act:

Sections 4(b), except the second sentence thereof; 4(e) insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14; except insofar as the power of condemnation is reserved; 15, 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Central Vermont Public Service Corporation (Licensee) of Rutland, Vermont, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of May 1, 1965 and terminating December 31, 1993, for the continued operation and maintenance of the Taftsville Project No. 2490, located on the Ottauquechee River in Windsor County, Vermont, and affecting the interests of interstate commerce, subject to the terms and conditions of the Act, insofar as not expressly waived herein, which Act is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Taftsville Project No. 2490 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined;

(ii) (1) a concrete dam approximately 220 feet long and 16 feet high containing a spillway section and on the west end a concrete structure housing head gates and trash racks; (2) a spillway about 194 feet long topped by 18-inch wood flashboards; (3) a reservoir about 16.6 acres in size with about 30 acre-feet useful storage; (4) a rectangular concrete penstock 11 feet high, six feet eight inches wide, and approximately 36 feet long; (5) a powerhouse containing one vertical turbine with a capacity of 675 hp connected to a generator having a capacity of 500 kw; (6) appurtenant facilities; and

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–12 (May 1, 1966) entitled "Terms and Conditions of License for Constructed Minor Project Affecting the Interests of Interstate or Foreign Commerce" (*supra*, p. 875), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge, effective May 1, 1965:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $33.50 per annum.

Article 13. The Licensee shall, for the conservation and development of fish resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such fish facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Vermont Fish and Game Board, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 14. The Commission reserves the right to determine at a later date, after notice and opportunity for hearing, what action shall be taken by Licensee, to improve water quality.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G-8932

ORDER AMENDING ORDER AUTHORIZING IMPORTATION OF NATURAL GAS

(Issued June 6, 1966)

On April 5, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. G-8932 a petition pursuant to Section 3 of the Natural Gas Act to amend the order accompanying Opinion No. 289 (14 FPC 157) by authorizing the importation of additional quantities of natural gas for a limited period of time, all as more fully set forth in the petition.

In a separate proceeding, Petitioner has applied to amend the order in Docket No. G-8932, and has filed an application in Docket No. CP66-315 seeking authorization to construct and operate facilities to transport an additional 200,000 Mcf/d (at 14.9 psia), in two increments of 100,000 Mcf/d each, of natural gas purchased from Westcoast Transmission Company (Westcoast).

In the instant proceeding, Petitioner seeks authorization to import at its existing Sumas, Washington, import point on the international boundary between the United States and Canada up to 50,000 Mcf/d (at 14.9 psia) of natural gas in addition to the presently authorized quantity of 300,000 Mcf/d. The additional quantity will be purchased from Westcoast and transported at the international boundary and in the United States through existing facilities. The additional quantity will be purchased on an interruptible basis through December 31, 1966, or until Westcoast is prepared to deliver 400,000 Mcf/d (at 14.9 psia) to Petitioner at the Sumas import point, whichever occurs first.

By amending order issued December 10, 1965, 34 FPC 1443, Petitioner was authorized to import up to 50,000 Mcf/d on an interruptible basis in addition to the presently authorized quantity of 300,000 Mcf/d. Said authorization expired on April 30, 1966. By the authorization requested herein, the authorization would be extended until December 31, 1966, or until an additional firm quantity may be authorized as otherwise proposed.

It appears to be consistent with the public interest to permit the importation of the additional quantity of gas as requested. However, since the additional gas is for interruptible service, a situation could arise in which higher costs would be assigned to firm service due to the effect of the purchase of the additional quantity on purchased gas costs and peak day deliveries; and, therefore, the authorization hereinafter granted will be appropriately conditioned to require the adjustment of costs and sales used by Petitioner in any future rate proceeding.

After due notice no petition to intervene or protest to the granting of the petition has been received.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and consistent with the public interest to authorize Petitioner to import an additional quantity of natural gas on a limited basis.

The Commission orders:

(A) The order accompanying Opinion No. 289 is amended by authorizing Petitioner to import an additional quantity of natural gas on a limited basis as hereinbefore described and as more fully described in the petition herein, and in all other respects said order shall remain in full force and effect.

(B) In any future rate proceeding Petitioner shall adjust the costs and sales offered in evidence in said proceeding by eliminating therefrom the purchased gas costs it may incur due to the additional purchases authorized herein and by eliminating therefrom the additional peak day and annual sales it may make as a result of the additional service it can render with the additional quantity of natural gas authorized to be imported.

(C) The authorization issued herein is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, ET AL., DOCKET NO. CP64-211, ET AL.

ORDER EXTENDING TIME FOR CONSIDERATION OF QUALITY STATEMENTS

(Issued June 6, 1966)

The Commission in Opinion No. 484 issued January 6, 1966, 35 FPC 40, required each producer applicant, other than Socony Mobil Oil Company, Inc., to file a quality statement for each contract involved therein. The opinion also provided that where the quality statement reflected full agreement between the seller and El Paso Natural Gas Company, the purchaser under these contracts, it was to be deemed accepted unless the Commission within 60 days after such filing ordered otherwise. By order issued April 11, 1966, 35 FPC 486, herein the time for consideration by the Commission of these quality statements was extended to June 6, 1966.

Further time is needed for the consideration of the quality statements thus far submitted. We shall therefore extend the time for consideration to June 30, 1966.

The Commission orders:

The time for consideration by the Commission of the quality statements heretofore filed by the producer applicants in these proceedings is extended to June 30, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP66-130

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 6, 1966)

On October 26, 1965, Mississippi River Transmission Corporation (Applicant) filed in Docket No. CP66-130 an application, as supplemented on December 20, 1965, January 18, 1966, and April 13, 1966, pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, acquisition from Storage Corporation and operation of certain natural gas facilities and the development, testing and operation of an underground natural gas storage field, all as more fully set forth in the application.

Storage Corporation is a wholly-owned subsidiary company of Applicant. Storage Corporation's activities have been limited to testing to determine the suitability of the St. Jacob Field area of Madison and St. Clair Counties, Illinois, for storage and to the development of the storage facilities, including the injection of cushion gas. Applicant will assume direct control of and further develop the field by means of the following specific program.

Applicant will acquire the assets of Storage Corporation, consisting almost entirely of its interests in or related to the St. Jacob Field, through liquidation of Storage Corporation. In exchange for the assets of Storage Corporation, Applicant proposes to cancel the indebtedness of Storage Corporation to Applicant and to completely cancel all of its stock.

Applicant will acquire through this proposed liquidation approximately 290 leases from landowners in the St. Jacob Field area covering approximately 12,000 surface acres (together with all gas in storage) and 15 gas injection, withdrawal and observation wells together with the equipment and facilities installed therein.

The storage field is described as being separated into the north and south enclosures. Recent developments in the north area produced evidence that the St. Peter formation is capable of storing gas and for the two years ended September 30, 1965, approximately 2,500,000 Mcf have been injected. Initial developments in the south area were not favorable because injected gas migrated into other formations.

The total recorded amount of the fixed assets of Storage Corporation as of June 30, 1965, was $2,938,179.

Applicant also seeks authority to drill or complete the drilling of six additional gas input and withdrawal and observation wells, to construct 26,800 feet of additional field lines, to install 1,100 horsepower additional compressor facilities, a liquid separator, dehydration facilities, regulators, meters and other miscellaneous and appurtenant facilities, and otherwise to develop and operate the field as a natural gas storage facility, as more fully set forth in the application. The cost of these facilities and development work is estimated by Applicant to be $2,500,800, which is to be financed from available funds.

A temporary certificate was issued to Applicant on December 17, 1965, authorizing the construction and operation of certain of the proposed field lines and the installation of 550 compressor horsepower of the 1,100 horsepower requested, along with certain appurtenances and regulators. Storage Corporation was also authorized to sell natural gas to Applicant for a one-year period.

Due notice of the filing of the application in this proceeding was published in the Federal Register on November 17, 1965 (30 F.R. 14392), and notice of the filing of December 20, 1965, was published on January 8, 1966 (31 F.R. 278). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on June 2, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein and upon consideration of the record,

The Commission finds:

(1) Applicant, Mississippi River Transmission Corporation, a Delaware corporation with its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 29, 1960, in Docket No. CP60-95 (24 FPC 1020).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the acquisition, construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The acquisition, construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Mississippi River Transmission Corporation authorizing the acquisition, construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (d)(2), (d)(3) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized to be acquired and constructed shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(D) The certificate issued by paragraph (A) above is further conditioned upon Applicant's receiving all necessary state approvals of the proposed merger.

(E) The certificate issued by paragraph (A) above is further limited and conditioned, as follows:

1. *North Area*

a. Applicant is authorized to drill an additional 6 wells in the north area, bringing the total number of wells to 14.

b. The maximum inventory of natural gas to be stored in the St. Peter sandstone in the north area of the field shall not exceed 4,800,000 Mcf at 14.73 psia.

c. Applicant is authorized to inject and withdraw natural gas from the north area as proposed.

2. *South Area*

a. Applicant is authorized to rework the existing wells in the south area of the field and to carry out additional testing of the St. Peter sandstone in order to determine the cause of previous gas leakage.

b. Applicant is authorized to utilize the S-1 well in conjunction with testing and developing the Mt. Simon sandstone for gas storage purposes.

c. Not more than $330,400 shall be expended for cushion gas to be injected into the St. Peter and Mt. Simon sandstones.

(F) Applicant shall submit to the Commission semiannual reports (to coincide with the end of each injection and withdrawal season) containing the following information:

1. *North Area*

a. The daily volumes of gas injected into and withdrawn from the St. Peter formation during the period and the volumes of gas in the aquifer at the end of each month.

b. A tabulation of wells drilled, cleaned or recompleted, with subsea elevations of formations and casing settings.

c. Any pressure surveys conducted during the period of gas wells and water levels in observation wells (by individual wells).

d. A map of the storage project showing the location of the wells, the latest revised structure contours, and the location and extent of the gas bubble.

e. Reports shall continue until the storage inventory volumes have reached the maximum permitted in this order or until otherwise ordered by the Commission, whichever first occurs.

2. *South Area*

a. Data required under paragraphs (F) 1 a, b, c and d, above, for the north area whenever applicable to the St. Peter and Mt. Simon reservoirs in the south area.

b. Results of any tracer program by which leakage of any gas may be determined. If leakage of gas exists, the report should show the estimated total volume of gas leakage, the monthly volume of any recycled gas and the estimated remaining inventory of gas in the original formation at the end of the period.

c. Reports shall continue to be filed through a three-year period and thereafter until the St. Peter or Mt. Simon reservoirs in the south dome, or both, are either certificated for regular service or abandoned, unless otherwise ordered by the Commission.

(G) The accounting treatment of the investment of Applicant in the St. Jacob Storage Field prior to July 1, 1965, shall be as follows:

1. The $84,267 gas cost applicable to gas losses in the South Area shall be charged to Account 216, Unappropriated Earned Surplus.

2. The $15,217 applicable to return paid to Applicant which is included in the gas costs related to the North Area shall be charged to Account 216, Unappropriated Earned Surplus.

3. The balance of the cost of the St. Jacob Storage Field, $2,838,695, shall be retained in Account 186, Miscellaneous Deferred Debits, pending final accounting determination to be made after the success or failure of the storage project is determined.

(H) No part of the acquisition cost of the St. Jacob Storage Field is to be included in any future rate base calculation until a final determination is made regarding the success or failure of the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66–244

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 6, 1966)

On February 1, 1966, Panhandle Eastern Pipe Line Company (Applicant), filed in Docket No. CP66–244 an application and supplementary data on April 14, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation and sale of natural gas in interstate commerce, all as more fully set forth in the application as supplemented.

Applicant seeks authorization to increase its peak day capacity by approximately 150,000 Mcf to a total of 2,284,000 Mcf daily through the installation of the following facilities:

(a) approximately 145.7 miles of 30-inch and 36-inch main pipeline loop, representing a continuation of Applicant's fourth main pipeline, in the states of Kansas, Missouri, Illinois and Indiana,

(b) 20,050 compressor horsepower to be installed in seven existing main line compressor stations on Applicant's system,

(c) approximately 61.7 miles of 12-inch, 16-inch and 22-inch service lateral loops to be installed at various points on Applicant's present system,

(d) measuring station revisions and other appurtenances in conjunction with this proposed system expansion.

The increased pipeline capacity will be utilized in the sale of 127,000 Mcf daily to 33 of its present customers and three new customers, Hamilton Natural Gas Company, City of Herman and Western Indiana Public Service Company, Inc. Deliveries to the City of Herman and Western Indiana Public Service were ordered in Docket Nos. CP66–24 and CP65–380, respectively. Also included are volumes for which Section 7(a) applications have been filed by Hamilton Natural Gas Company (1,331 Mcf daily) in Docket No. CP66–87, and by Missouri Utilities Company (4,897 Mcf daily) in Docket No. CP66–230. The remaining 23,000 Mcf per day of unallocated capacity will be reserved for future Section 7(a) service and increasing demands of existing customers.

After due notice of the application published in the Federal Register on February 16, 1966 (31 F.R. 2801) petitions for leave to intervene were filed jointly on February 25, 1966, by Fuels Research Council, Inc., National Coal Association and United Mine Workers in opposition to the application, and by The Ohio Fuel Gas Company and Michigan Gas Utilities Company on February 28, 1966, Central Illinois Electric and Gas Co., on March 2, 1966, and Central Illinois Public Service Company on March 13, 1966, not in opposition to the application. The City of Fulton, Missouri filed on March 4, 1966, a motion to consolidate the proceeding with Docket No. CP66–50, or in the alternative to grant it leave to intervene in Docket No. CP66–244. Notices of withdrawal of petitions to intervene were filed by the City of Fulton on March 16, 1966 and by Fuels Research Council, Inc., *et al.*, on May 23, 1966. No other petitions to intervene, or notice of intervention or protest to the granting of the application have been filed.

At a hearing held on June 2, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The proposed construction and operation of facilities and the transportation and sale of natural gas by Applicant as hereinbefore described and as more fully described in the application and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid construction and operation of facilities and the transportation and sale of natural gas are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(2), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to the Applicant in this proceeding authorizing the construction and operation of facilities and the transportation and sale of natural gas, as hereinbefore described and as more fully described in the application, as supplemented, and exhibits in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(2), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 12 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-323

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 6, 1966)

On April 8, 1966, Panhandle Eastern Pipe Line Company (Applicant), filed in Docket No. CP66-323 an application pursuant to Sections 7(b) and 7(c) of the Natural Gas Act for permission and approval to abandon by sale certain facilities, and for a certificate of public convenience and necessity authorizing the construction and operation of measuring and regulating facilities on its Danville, Illinois lateral, all as more fully described in the application.

Applicant proposes to abandon by sale and transfer as per letter agreements of December 13, 1965:

(1) Approximately 10,524′ of its 12″ Danville lateral (F5–296) together with the various related appurtenances, 9-farm taps (presently served by the Town Gas Company) and measuring and regulating station, all located in Vermilion County, Illinois, to Illinois Power Company.

(2) Approximately 54,385′ of its 4″ Lincoln lateral located in Logan County, Illinois, together with the various related appurtenances and 8-farm taps (presently being served by Town Gas Company) to Central Illinois Electric and Gas Company.

(3) Approximately 9,915′ of its 4″ Greenfield lateral located in Hancock County, Indiana, which lies downstream of Applicant's existing measuring and regulating station together with the various related appurtenances, to Greenfield Gas Company.

and to construct and operate:

A measuring and regulating station on the northern end of its remaining portion of the 12-inch Danville lateral (F5–296) in order to continue service to Illinois Power.

The proposals of Applicant will provide each distribution company with a portion of Applicant's lateral facilities, and alter the points of delivery from Applicant to Illinois Power, Central Illinois and Greenfield Gas. Applicant states the proposals will simplify its operations and will provide each of the companies with an opportunity to service urban areas from the portions of the lines to be sold, without having to construct new mains. Nine farm tap customers which are now being served by Town Gas Company from the portion of the 12-inch Danville lateral which is to be acquired by Illinois Power and the eight farm tap customers which are now being served also by Town Gas Company from that portion of the 4-inch Lincoln lateral which is to be acquired by Central Illinois will continue to receive their respective service from Illinois Power and from Central Illinois according to the December 13, 1965, and January 3, 1966, agreements of Illinois Power with Panhandle and with Town Gas Company, respectively, and according to the December 13, 1965, and January 20, 1966, agreements of Central Illinois with Panhandle and with Town Gas Company, respectively.

The cost to Applicant of the new measuring and regulating stations is estimated at $70,000, which Applicant proposes to finance from treasury cash.

Illinois Power and Central Illinois have applied to the Illinois Commerce Commission for authority to purchase and operate the facilities they intend to acquire from Applicant and to continue service to the farm tap customers.

Greenfield Gas and Panhandle have jointly applied to the Public Service Commission of Indiana for authority, respectively, to purchase and to sell the proposed portion of the Greenfield 4-inch lateral.

No service will be abandoned. No existing customer of Panhandle will be adversely affected.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, has been filed.

At a hearing held on June 2, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) The facilities proposed to be abandoned by Applicant, as hereinbefore described and as more fully described in the application filed in this proceeding, are used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such abandonment is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment by sale of the aforesaid facilities is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(4) The proposed construction and operation of facilities as hereinbefore described and as more fully described in the application filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The aforesaid proposed construction and operation of facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Permission for and approval of the abandonment by Applicant of the facilities by sale as hereinbefore described, and as more fully described in the application and exhibits filed in this proceeding, are granted.

(B) A certificate of public convenience and necessity is issued to Applicant, Panhandle Eastern Pipe Line Company, authorizing the construction and operation of facilities, all as more fully described in the application, upon the terms and conditions of this order.

(C) The certificate issued by paragraph (B) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(D) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within ten days of such abandonment.

(E) The transfer of ownership, and construction of the metering facilities shall be completed and placed in actual operation six months from the date of Commission's order (Section 157.20(b)).

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Carl E. Bagge.

SOHIO PETROLEUM COMPANY, DOCKET NO. G–17012

ORDER DENYING APPLICATION FOR REHEARING OR RECONSIDERATION

(Issued June 6, 1966)

On May 5, 1966, Sohio Petroleum Company (Sohio) filed an application for rehearing and alternatively a motion for reconsideration of certain of the conditions attached to the temporary certificate issued to Sohio in the above-captioned proceeding by the Commission's letter–order issued April 8, 1966. That order permitted Sohio to sell residue gas (from casinghead gas) to El Paso Natural Gas Company from the Spraberry area, Reagan County, Texas, under its FPC Gas Rate Schedule No. 45 as proposed in the application for certificate.[1]

The conditions to which Sohio has referred are as follows:

(1) The initial rate shall be that provided in the rate schedule accompanying the certificate application or the applicable base area rate (14.5¢ per Mcf at 14.65 psia) as adjusted for quality, measured at the plant tailgate, pursuant to ordering paragraph (B) of the Commission's Opinion No. 468, 34 FPC 159, as modified, whichever is lower.

(2) No increase in rate may be filed prior to January 1, 1968, except in compliance with a specific order of the Commission, for a rate in excess of the applicable area rate as determined pursuant to the Commission's Opinion No. 468, as modified, or pursuant to later order of the Commission.

(3) The filing, within 90 days from the date of initial delivery, of a Rate Schedule-Quality Statement as specified by ordering paragraph (F) of the Commission's Opinion No. 468, as modified, as a supplement to the rate schedule reflecting the rate determined in (1) above.

(4) If the quality of the gas, as measured at the plant tailgate, delivered hereunder at any time deviates from the quality standards set forth in ordering paragraph (B) of Opinion No. 468–A, 34 FPC 1068, so as to require a downward adjustment to the existing rate, a notice of change in rate must be filed pursuant to the provisions of Section 4 of the Natural Gas Act; *provided, however*, that adjustments reflecting changes in Btu content shall be computed by the applicable formula and charged without the filing of a notice of change in rate.

Sohio contends, among other things, (1) that such conditions are erroneously tied to Opinion No. 468 as the opinion is currently under review and subject to revision or modification by the United States Court of Appeals for the Tenth Circuit; (2) that since Docket No. G–17012 is consolidated in the Show Cause proceeding in Docket No. AR61–1, issued August 5, 1965, 34 FPC 424, the price, quality and moratorium conditions should be established by the Show Cause proceeding; and (3) that Sohio would consider accepting conditions which provide for a 16.0¢ per Mcf rate, a refund obligation with interest at 7% per annum from the date of initial deliveries down to 14.5¢ per Mcf, after adjusting for quality, as may be prescribed in the Show Cause proceeding, and a rate increase moratorium to January 1, 1968, for any rate in excess of that determined by the Commission in the Show Cause proceeding.

We do not find Sohio's arguments convincing. Similar arguments were made in *Union Oil Company of California*, Docket No. CI65-683, and were rejected in our order issued on December 20, 1965, 34 FPC 1505. The outcome of the pending court review of Opinion Nos. 468 and 468-A may affect the initial rate at which we permanently certificate Sohio's sale after the hearing we have ordered in our Show Cause proceeding, but the pendency of that appeal does not affect our conclusion that the prices we arrived at in the Permian case should serve as the guideline prices for new sales in lieu of the prices we had previously set in Statement of Policy No. 61-1. Similarly the existence of appeals from our Permian decision has not resulted in our reverting to an 11 cent increased rate ceiling prescribed in the Policy Statement in lieu of the higher prices set by Opinion Nos. 468 and 468-A.

---

[1] This temporary relates only to acreage covered by the supplemental contract of February 1, 1966, between Sohio and El Paso.

Sohio has been authorized under the subject temporary to collect prior to any hearing on its application the applicable new guideline rate established in the light of our Permian opinion.[2] In our Show Cause proceeding, Sohio will be afforded an opportunity to show why some higher price is warranted. In the meantime, if it wishes to operate on an emergency temporary certificate prior to the time when all interested parties can have their opportunity to state their cases, it must do so pursuant to the reasonable conditions we have imposed.

The Commission orders:

For the reasons set forth above, Sohio's application for rehearing or reconsideration of the Commission's letter-order of April 8, 1966, in Docket No. G-17012 is denied.

---

[2] The temporary issued to Sohio on May 21, 1964, authorizing a 16¢ rate for other sales in this same proceeding was granted prior to the Commission's Permian decision.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

KNOXVILLE UTILITIES BOARD, ET AL. v. EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP65-4

ORDER CLARIFYING AND AMENDING OPINION NO. 488

(Issued June 7, 1966)

By Opinion No. 488 and order issued April 19, 1966, 35 FPC 534, we determined the just and reasonable rates to be charged by East Tennessee Natural Gas Company from and after our decision and until changed by further order. The specific rates for the various rate schedules were set out in Appendix C to the Opinion. By ordering paragraph (C), East Tennessee was placed under obligation to continue to flow-through to its customers all refunds and rate reductions received from its supplier, Tennessee Gas Pipeline Company (TGP),[1] as agreed in the settlement approved December 16, 1960, 24 FPC 1079.

By a filing made May 10, 1966, Knoxville Utilities Board, *et al.* requested that the Opinion be clarified in a manner as hereafter set out. On May 11, East Tennessee, filed an application for rehearing also seeking the same clarification and, in addition, citing as error our adoption of the examiner's deduction of $60,000 from system operating expenses for the estimated savings in labor costs arising from the automation of certain compressor stations.

---

[1] Formerly Tennessee Gas Transmission Company.

The rate design contained in Appendix C to Opinion No. 488 was based on staff exhibits in the record showing purchased gas costs from TGP and revenues of East Tennessee at the rate levels operative October 1, 1964. In so doing we inadvertently failed to reflect the effect of a TGP rate reduction which became effective January 1, 1965. This rate reduction was intended to be reflected by the provision of ordering paragraph (C), the substance of which was concurred in by East Tennessee. Accordingly, we will reflect TGP's reduced rates in the rates prescribed for East Tennessee.

The further revision requested in East Tennessee's application for rehearing will be granted. East Tennessee points out that the compressor station labor portion of the total operations expense in the cost-of-service is only $28,306 and that deducting $60,000 from this allowance would result in a negative figure. However, neither in the initial decision nor in our opinion was there any indication that the deduction was to be made from this subaccount. Nevertheless, we note that the total transmission operation and maintenance expense allowed for the Virginia extension was $138,900. This includes labor and supplies and expenses in operating and maintaining both the transmission pipeline and the compressor stations, as well as all appurtenant facilities. Upon further consideration we are of the opinion that the compressor station automation which formed the basis of the $60,000 adjustment is not likely to reduce the estimated expenses by over 40 percent. Additionally, we note that East Tennessee's witness reviewed the prior Virginia extension expense estimates in light of the automation and concluded that, overall, they were still valid. We also note that our staff, whose cost-of-service we largely adopted, made no expense adjustment for the automation.

East Tennessee further shows that the purchased gas cost and the labor station expense adjustments offset each other and, consequently, do not affect the prescribed rates. Accordingly, those rates will be affirmed.

The Commission orders:

(A) The request for clarification filed May 10, 1966, by Knoxville, *et al.* and the request filed May 11, 1966, by East Tennessee Natural Gas Company are granted.

(B) The rates set out in Appendix C to Opinion No. 488 are affirmed.

OPINION NO. 494

CHATTANOOGA GAS COMPANY v. EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP65-3

OPINION AND ORDER REDUCING MAXIMUM DAILY DEMAND

(Issued June 8, 1966)*

Syllabus

1. Provision imposing a 40,000 Mcf daily contract demand obligation on Chattanooga is unjust and unreasonable and should be modified as herein prescribed. Pp. 904–905; 913.
2. Private contracts cannot restrict the Commission in the fulfillment of its certification responsibilities under the Natural Gas Act. P. 904.

---

* Initial decision appears on P. 909. Memorandum Opinion No. 494–A and order issued July 29, 1966 denying rehearing and stay, 36 FPC 325. Petition to Review dismissed, see settlement order issued November 14, 1966, 36 FPC 841.

3. Commission is not restricted from reviewing buyer's incremental needs because of contract provisions permitting wholesaler to deliver gas supplies above those presently delivered. P. 905.
4. To impose upon the Commission the obligations of the parties to a private contract would permit such parties to make determinations specifically delegated by Congress to the Commission. Pp. 905, 906.
5. While acceptance of service agreement legalizes activities thereunder, Commission disclaimer is notice that such acceptance does not constitute agency decision regarding public interest considerations involved in supplying future increments of a gas market. P. 906.
6. Sole supplier clause in gas purchase contract is unjust and unreasonable and cannot be allowed to stand. Pp. 908, 909.
7. Within the meaning of *Sierra Pacific Power Co.*, authorization to file any appropriate partial requirements contract is required by the public convenience and necessity. P. 908.
8. In a proceeding arising under Sections 4(a), 4(b) and 5(a) of the Natural Gas Act, Commission *reduces* maximum daily demand in gas contract.

Norman T. Hayes, Jr. and *J. David Mann, Jr.*, for Chattanooga Gas Company.

William S. Tarver and *Hugh J. Morgan, Jr.*, for Southern Natural Gas Company.

H. F. Aby and *Harold L. Talisman*, for East Tennessee Natural Gas Company.

James L. Bomar, Jr., for Knoxville Utilities Board, United Cities Gas Company, Volunteer Natural Gas Company, Cleveland Natural Gas Company, Athens Utility Board, Citizens Gas Utility District, Cookeville Gas Department, Elk River Public Utility District, Englewood Natural Gas System, First Utility District of Maury County, Gallatin Natural Gas System, Harriman Utility Board, Jefferson-Cocke Utility District, Lenoir City Utilities Board, Lewisburg Gas Department, Livingston Gas Department, Loudon Utilities Board, Madisonville Gas Company, Marion County Natural Gas Company, Middle Tennessee Utility District, Oak Ridge Utility District, City of Rockwood Natural Gas Company, Sevier County Utility District, City of Sweetwater, and Unicoi Natural Gas Utility District.

R. J. Connor, Thomas F. Ryan, Jr. and *William N. Bonner, Jr.*, for Transcontinental Gas Pipe Line Corporation.

Samuel B. Ross for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLACK, *Commissioner:*

This proceeding involves a complaint filed by Chattanooga Gas Company (Chattanooga) under Sections 4(a), 4(b) and 5(a) of the Natural Gas Act seeking relief from certain provisions in its August 1, 1959 contract with East Tennessee Natural Gas Company (ETN), its sole natural gas supplier at present. The challenged provisions provide in pertinent part:

> * * * Seller (ETN) agrees to sell and deliver to buyer (Chattanooga), and Buyer agrees to purchase and receive from Seller * * * Buyer's requirements of natural gas up to 40,000 Mcf per day * * * (Art. I, p. 1, Exh. 9)

and:

> Buyer agrees that it will not purchase gas, natural or manufactured, from any source other than Seller, and also that it will not manufacture

gas for use or sale, except as expressly authorized by this contract. (Art. I, p. 3, Exh. 9)[1]

Chattanooga seeks to have the 40,000 Mcf maximum daily contract demand reduced to its actual billing demand at the close of this record of 31,558 Mcf per day.[2] Chattanooga contends this reduction is necessary to permit it to purchase additional firm gas from a second supplier, claiming that ETN's prices and service standards hinder its expansion. Chattanooga submitted evidence that Farmer's Chemical Association, its principal industrial customer, is actively seeking other supply sources. To alleviate this situation, Chattanooga has executed a precedent agreement with Southern Natural Gas Company (Southern) and Southern has applied to the Commission for a certificate authorizing the extension of its facilities and the sale of gas to Chattanooga. Transcontinental Gas Pipe Line Corporation (Transco) and ETN have each filed similar proposals to service Chattanooga's needs over its present 31,500 take. These proposals have been consolidated in a comparative certificate proceeding.[3]

In support of its objection to the above-cited contract provisions Chattanooga points out that: (1) Its purchases from ETN have always approximated its billing demand level of 31,558 Mcf rather than the 40,000 Mcf contract demand; and (2) ETN does not have the capacity to maintain a sustained supply of 40,000 Mcf per day and, in fact, has not constructed any facilities in reliance on the contract demand.

ETN is opposed to any relaxation of the provision requiring Chattanooga to take a minimum of 40,000 Mcf a day from it before buying from another supplier. ETN argues that Chattanooga has received the protection of a 40,000 Mcf per day contract demand since 1956, and should not be relieved of that obligation merely because of the possibility of getting gas at a cheaper price from another supplier. Staff and Southern, an intervener, support Chattanooga.

In an initial decision issued April 20, 1965, Examiner Arthur Fribourg recommended reduction of the 40,000 Mcf per day contract quantity to 31,500 Mcf and the complete elimination of the sole supplier provision from the contract on the grounds that the limitation precluded Commission consideration of the proposals pending in the comparative proceeding. The Examiner also (1) denied Staff's request that the sole supplier provision be stricken from all of ETN's service agreements since there is nothing in this record that such a provision is unreasonable as to its other customers; and (2) refused to require ETN to extend its partial requirements schedule since ETN has promised to do so if and when a new supplier is certificated.

We agree with the Examiner's conclusion that the provision imposing a 40,000 Mcf daily contract demand obligation on Chattanooga is unjust and unreasonable. Private contracts cannot restrict the Commission in the fulfillment of its certification responsibilities under the Natural Gas Act. Accordingly, if the 40,000-Mcf limitation would effectively prevent the Commission's considering all of the relevant factors bearing on the gas supply for the Chattanooga market, it could not be recognized as binding upon us. To the extent the Examiner thought otherwise, we disagree with him. The question presented in this case, however, is not whether the contractual provision can act as an inhibition on the Commission, but rather whether as a matter between the parties the contractual provision is unjust and unreasonable and should be set aside or modified pursuant to the provisions of Section 5 of the Act. Whether any action by us in this context is necessary or that any action on the contract would lie should the Commission disregard the contract provisions in its certification action is doubtful. However, in order to remove uncertainty which might inhibit the effectuation of what we have concluded would best serve the public interest, we shall exercise our authority over the contractual provision under Section 5 of the Act.

---

[1] Art. I, p. 4, Exh. 9 affords Chattanooga the right to use its own gas generating equipment (propane-air) whenever, in Chattanooga's sole judgment, the use of such equipment is either necessary or desirable.

[2] All volumes are at 14.9 psia.

[3] See *Transcontinental Gas Pipe Line Corp., et al.*, Docket No. CP64–270, *et al.*, Opinion and order issued concurrently herewith, *infra*, p. 917.

We conclude, for the following reasons, that the provision in the contract requiring Chattanooga to purchase its natural gas requirements up to 40,000 Mcf per day is unjust and unreasonable and should be modified to limit Chattanooga's obligation to a maximum of 31,558 Mcf (at 14.9 psia), plus an additional 2,400 Mcf per day, as hereafter described, during such periods as the United States Army purchases gas at this approximate level from Chattanooga for use in its Volunteer Army Ammunition Plant.

Although Chattanooga's firm requirements have approached and even exceeded 40,000 Mcf,[4] the record indicated that its maximum takes of firm gas from ETN during the years 1961–1963 have remained stable between 31,196 Mcf and 31,558 Mcf,[5] which has been supplemented by Chattanooga's use of peak shaving equipment in which it has considerable investment.

Subsequent data filed by ETN of which we take judicial notice indicate that Chattanooga's takes during 1964 and 1965 have been comparable.[6] It is true that Chattanooga has on a temporary emergency basis purchased gas supplies above the 31,500 Mcf level. This occurred once in 1958, when Chattanooga's peak shaving equipment malfunctioned and its demand rose to 35,438 Mcf. Subsequent increased takes have also taken place during January and February of 1966, due to abnormally cold temperatures and snow conditions which prevented the transportation of propane to supply depleted peak shaving supplies.[7] It is evident that Chattanooga's incremental market growth will require additional gas over and above the 31,500 Mcf per day firm takes.

Chattanooga's maximum market requirements and the best method of supplying its incremental needs is not before us in this proceeding. The only issue here is whether the Commission is bound to restrict review of Chattanooga's incremental needs because of the existence of contract provisions permitting the wholesaler to deliver gas supplies above those presently delivered to Chattanooga. We hold that it is not.

Adherence to the present 40,000 Mcf limitation would preclude Commission review of the full range of public interest considerations bearing on 8,000 Mcf of the total incremental gas supply required by the Chattanooga market. The examiner rightly pointed out that although "* * * the instant proceeding has nothing to do with the merits of the proposals * * * they cannot even be heard * * *" if we recognize the higher limitation. While consideration must be given to the equities of the parties, the rights of the consuming public cannot be ignored.

This is a private contract to which the Commission is not a party. To impose upon the Commission the obligations of the parties would permit the parties to make determinations specifically delegated by Congress to this Commission.

---

[4] 39,794 Mcf in 1962 and 44,650 Mcf in 1963.

[5] Exhibit 14, Sch. 2A.

[6] ETN files on an annual basis FPC Form No. 2 setting out actual peak day deliveries to Chattanooga. The Form 2 figures are at a pressure of 14.9 psia which corresponds to the pressure applicable to the 40,000 Mcf contract limitation. In 1964, the actual peak day delivery was 31,673 Mcf and in 1965, it was 31,976.

[7] See p. 908 of this opinion.

It is true that ETN has submitted for filing with the Commission service agreements with Chattanooga which have increased the contract demand from 25,000 Mcf to 40,000 Mcf per day.[8] All have been accepted for filing with the express statement that the acceptance does not constitute a waiver of Section 7 of the Natural Gas Act, constituted Commission approval or was a recognition of contractual rights.[9]

While acceptance legalizes activities under the contracts, the disclaimer specifically notifies the parties that the acceptance for filing does not constitute a Commission decision regarding the public interest considerations involved in supplying future increments of a gas market.

Nor is there evidence of the parties having placed any reliance upon the 40,000 Mcf limitation.[10] In fact ETN has admitted in the comparative proceeding of which we take judicial notice that it would be physically impossible to supply the 40,000 Mcf on a sustained basis with existing facilities.[11] Chattanooga, on the other hand, has elected to rely on its peak shaving equipment for service above the 31,500 level.

The record also shows that the 40,000 Mcf provision has no revenue or cost significance to ETN since Chattanooga pays a monthly demand charge based on its actual maximum take during the preceding 12-month period. In addition ETN's argument that Chattanooga has had the protection of the 40,000 Mcf contract demand is more illusory than real. As previously indicated ETN has not constructed the facilities required to provide the 40,000 Mcf. The recent increased takes of Chattanooga illustrate this fact.[12]

---

[8] ETN was first certificated to serve the Chattanooga market in *East Tennessee Natural Gas Company,* 7 FPC 5 (1948). Thereafter, service agreements were filed setting out the contract demand. The first service agreement dated August 25, 1950, and effective retroactively to July 29, 1950, provided a 25,000 Mcf per day contract demand. (Tr. 3108) In 1955 this contract demand was changed to 33,600 Mcf per day. (Tr. 3108) In 1956 this contract demand was changed to 40,000 Mcf per day which contract demand remains in force today. The contract was changed in 1959 but this susequent change provided for a new delivery point rather than a new contract demand. (Tr. 1431.)

[9] The disclaimer in substance reads as follows:

This acceptance for filing shall not be construed as a waiver of the requirements of Section 7 of the Natural Gas Act, as amended; nor shall it be construed as constituting approval of the service agreement or of any rate, charge, classification, or any rule, regulation or practice affecting such rate or service contained in your tariff; nor shall such acceptance be deemed as recognition of any claimed contractual right or obligation associated therewith; and such acceptance is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against your company.

[10] Since 1956 and the signing of the contract containing the 40,000 Mcf limitation ETN has not submitted any market requirements in any other proceeding before the Commission indicating actual or estimated takes for Chattanooga above 33,431 Mcf. We take judicial notice of Docket Nos. G-11107, G-18877, CP60-94, CP63-247, CP64-165 and CP65-120, which represent Tennessee Gas Transmission's (supplier of ETN) 1957 through 1965 system expansions. These expansion applications are devoid of data regarding Chattanooga's markets which is indicative of nonreliance. It should be noted that the 1964 TGT expansion application for a design day increase of 22,060 Mcf per day to ETN was based on ETN's Virginia expansion (Docket No. CP64-21) in 1964, 32 FPC 158. TGT's application incorporated ETN's data in ETN's Virginia proceeding by reference. ETN's data in the expansion is especially revealing and we take judicial notice of ETN's Exhibit I, Schedule 2 at page 1 which stated that the actual peak firm day sales of Chattanooga were 31,438 Mcf, 31,196 Mcf and 31,431 Mcf during 1960, 1961 and 1962, respectively. In this exhibit ETN also estimated that the peak firm sales for the years of 1963 through 1966 for Chattanooga as being 31,431 Mcf, 31,930 Mcf, 32,431 Mcf and 32,931 Mcf, respectively. The latter figures have been adjusted to reflect the 14.9 psia applicable to the contract containing the 40,000 Mcf limitation. The figures appearing in the exhibit are somewhat higher since they were based on a pressure of 14.73 psia.

[11] Docket No. CP64-270, v. 23, at pp. 2457-59 where ETN's witness states that its maximum capacity for Chattanooga would be 34,000 Mcf per day on a sustained basis.

The record shows that ETN has held itself ready to provide service to the 31,500 level, and that Chattanooga has in fact accepted that service. Further, this Commission in the various proceedings before it has recognized ETN's rights and obligations in providing service at this level. We shall continue to do so.

There has arisen a new problem relating to this market which should be disposed of in this proceeding. In the course of oral argument in the comparative proceeding, of which the opinion and order are issued concurrent herewith, the Counsel for the Department of the Army reported a new, emergency gas requirement of the Army for service at Chattanooga in connection with the current military operations. Counsel for East Tennessee assured the Commission, as did Chattanooga, that every effort would be made to insure the maintenance of adequate service to the Army for the duration of this emergency requirement. In order that there may be no dispute as to the legal basis and obligations pertinent to this service, we shall recognize the East Tennessee-Chattanooga contract demand, as otherwise established herein, in the additional amount of 2,400 Mcf per day for so long as the Army shall continue to require this new service.

Staff also argues that the sole supplier clause in Article I of the service agreement (the second provision set out on page 903 of this opinion) is unlawful. By its terms it constitutes an absolute bar on Chattanooga's right to "purchase gas * * * from any source other than the seller" including increments over and beyond those it has presently contracted to take from ETN. So construed there would be grave doubt as to whether the provision, which would preclude the Commission from ever determining that a second supplier would better serve the public convenience and necessity, would be consistent with public policy as expressed in the Natural Gas Act. See *Lynchburg Gas Co.* v. *Federal Power Commission*, 336 F. 2d 942 (CADC–1964); *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 169 F. 2d 881 (CADC–1948), certiorari denied 335 U.S. 854.

We do not need to consider here, however, whether there may be situations in which a sole supplier clause could validly preclude an additional pipeline from supplying gas to the original pipeline's customer, since ETN expressly disclaims any intent to have the sole supplier clause in its service agreement with Chattanooga have any such effect. Instead, it argues that the provision must be read in context of the 40,000 contract demand provision discussed above, and operates in lieu of a minimum billing requirement in ETN's standard rate schedule. It is not at all clear how the sole supplier clause serves to achieve this objective. As ETN recognizes, as long as it remains Chattanooga's sole supplier no minimum quantity limitation is necessary; given another supplier the clause is meaningless as a protective device. Presumably, however, it could be argued that the clause operates to preclude the buyer (Chattanooga) from taking any additional gas from a new supplier until it first purchases the full amount of its contract demand from ETN. Assuming this to be the case, however, we believe it clear that any such 100 percent load factor requirement (even one contingent on the purchaser's taking that much gas from all sources)[13] is unjust and unreasonable and cannot be allowed to stand.

---

[12] The recent increased demand has been met by ETN by securing 7,000 Mcf per day through an emergency interconnection with Texas Eastern Transmission Corporation and by the installation of temporary compressors under an emergency authorization. We take official notice of a letter dated January 31, 1966, from T. K. Davis, President of ETN, to the Commission outlining the volumes purchased by ETN from Texas Eastern and two letters dated January 21 and 31, 1966, informing the Commission of the emergency installation of portable compressors pursuant to Sec. 157.22 of our Rules and Regulations. A request for a 30-day extension to continue operation of the compressors was granted by letter-order dated April 14, 1966.

We wish to make clear that, when a new supplier is certificated to serve a particular distributor, there may well be circumstances in which the existing pipeline will be able to show that public convenience and necessity involved in its continuing operations, with respect to that and other customers, require action to protect against any substantial loss of the volume of sales it had been making to the distributor securing a new source of gas. The solution to this problem lies not in any additional restriction, such as that attempted here, but in a properly tailored partial-requirements clause—such as ETN itself has put into effect in Zone 3, where it is a second supplier. To make this clear, our action herein will be expressly made subject to the right (which ETN would in any event have) to file, pursuant to the provisions of Section 4 of the Act, any such partial-requirements tariff—including provisions therein specifying minimum takes approximating the average volumes it has been selling to Chattanooga—as it can justify within the meaning of the rule laid down in the *Lynchburg* case, *supra*.[14] And while we doubt that any contractual inhibition on such a filing exists under the Mobile doctrine,[15] we shall herein expressly find that, within the meaning of the test of the *Sierra Pacific Power Co.* case,[16] authorization to file any appropriate partial-requirements contract is required by the public convenience and necessity.

The remaining issues are procedural. On June 28, 1965, ETN filed a motion and brief for leave to file a reply to Staff's brief opposing exceptions. Objections to the motion were submitted by Chattanooga and Southern Natural. Upon examination, we find that the matters covered in the motion and brief were amply discussed in ETN's exceptions to the initial decision. Moreover, replies to briefs opposing exceptions are not provided for in our Rules of Practice and Procedure. We do not believe that waiver of our rules is required in these circumstances. The motion is denied.

The second relates to ETN's recently filed motion to reopen the proceeding and to dismiss the complaint. ETN alleges that Chattanooga's takes during the months of January and February have increased to a maximum of 43,782 Mcf and have held constant in a range of 39,000 to 43,000 Mcf during the last and first week of January and February, respectively. ETN argues that these increases indicate that Chattanooga's requirements are substantially equal to the 40,000 Mcf contract demand and there is no reason for reducing the contract provisions. Chattanooga and Southern filed answers opposing the reopening of the record.

We deny ETN's motion for the reasons set out in this opinion. Even if Chattanooga's requirements have increased as alleged by ETN the motion must be denied since a private contract cannot prevent Commission consideration of the method best suited to meet Chattanooga's incremental market growth.

---

[13] It is to be noted that ETN never has contended that Chattanooga must take up to 40,000 Mcf of gas from it in preference to gas from Chattanooga's peak shaving (propane) operations.

[14] We see no basis for staff's exception to the examiner's failure to *order* ETN to file a partial-requirements rate schedule. This is a matter for ETN to decide for itself.

[15] *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*, 350 U.S. 332 (1956).

[16] *Federal Power Commission* v. *Sierra Pacific Power Co.*, 350 U.S. 348 (1956).

The Commission further finds:

(1) ETN is a "natural-gas company" subject to the provisions of the Natural Gas Act, and the sales of natural gas for resale which are the subject of this opinion and order, are sales of natural gas in interstate commerce and are subject to the jurisdiction of this Commission.

(2) The provisions of the gas sales contract are unjust and unreasonable under Section 5(a) of the Natural Gas Act to the extent that they require Chattanooga to purchase its first 40,000 Mcf per day of natural gas from ETN.

(3) The gas sales contract referred to in paragraph (2) above will not be contrary to the requirements of the Natural Gas Act if the maximum daily demand is limited to a volume of 31,558 Mcf at 14.9 psia or 31,922 Mcf at 14.73 psia, plus the additional volume of 2,400 Mcf per day to be delivered by Chattanooga to serve the requirements of the Volunteer Army Ammunition Plant.

(4) The sole supplier provision appearing in Article I at p. 3 and set out on page 903 of this opinion is in its entirety contrary to the requirements of the Natural Gas Act.

(5) Except as otherwise granted herein, the exceptions to the initial decision should be denied.

The Commission orders:

(A) Any and all provisions of the existing gas sales contract (service agreement) between ETN and Chattanooga under which the former agrees to sell and the latter agrees to buy the latter's full requirements of natural gas up to 40,000 Mcf per day, or which limit to a maximum of 40,000 Mcf per day the former's obligation to sell and the latter's obligation to buy, or which describe such obligation as the "maximum daily demand," are hereby modified by substituting "33,958 Mcf" (at 14.9 psia) for "40,000 Mcf," said modifications to be effective from and after the date of issuance of this Opinion and order and to continue in effect until otherwise ordered by this Commission.

(B) The sole supplier provision appearing in Article I at p. 3 and set out on page 903 of this opinion is void and is ordered stricken.

(C) Within 30 days after the date of issuance of this Opinion and order ETN shall file a supplement to its currently filed service agreement reflecting the changes ordered in paragraphs (A) and (B) above, said supplement to be subject to the approval of the Commission.

(D) ETN may file a partial-requirements rate schedule for service in its Zone 1, satisfactory to the Commission, as provided for in the Opinion.

(E) The motion filed by ETN for leave to file a reply to staff's brief opposing exceptions is denied.

(F) The petition of ETN to reopen the proceedings is denied.

(G) Except as herein granted, the exceptions to the Examiner's decision are denied.

(H) The Examiner's decision, to the extent consistent herewith, is hereby adopted as part of this Opinion and order.

INITIAL DECISION

OF THE PRESIDING EXAMINER MODIFYING CONTRACT FOR SALE OF NATURAL GAS

(Issued April 20, 1965)

FRIBOURG, *Presiding Examiner:* Complainant Chattanooga Gas Company (Chattanooga) is a distributor of natural gas in and near the city of Chattanooga, Tennessee. It seeks relief from certain provisions of the contract under which it buys natural gas from its sole supplier, East Tennessee Natural Gas Company. Chattanooga now takes, as a firm service demand from East Tennessee, a maximum of 31,500 Mcf per day out of its entitlement of 40,000 Mcf. It asks relief from those provisions of the agreement which prohibit it from obtaining gas in excess of 31,500 Mcf from sources other than East Tennessee.

The contract constitutes the service agreement which is on file with the Commission. Two of its provisions are challenged. The first provides that Chattanooga will purchase its

> * * * requirements of natural gas up to 40,000 Mcf per day, for delivery by Buyer in the municipality of Chattanooga, Tennessee or within the contract area shown on the attached map.

The second provides:

> Buyer agrees that it will not purchase gas, natural or manufactured, from any source other than Seller, and also that it will not manufacture gas for use or sale, except as expressly authorized by this contract.

It also asks that East Tennessee be required to offer Chattanooga, when Chattanooga desires it, a new service agreement in the form provided for CPR (contract partial requirements) service with a contract demand not in excess of the peak day firm deliveries by East Tennessee to Chattanooga during the immediately preceding twelve months.

The contract under which Chattanooga buys from East Tennessee is dated August 1, 1959, and supersedes one dated September 13, 1956 with which it is identical except for a change in delivery point, not material here. Prior agreements go back to 1950, when service was commenced on a basis of a firm peak day demand of 25,000 Mcf, which was increased to 30,100 Mcf in 1954 and to 40,000 Mcf in 1956. There have been lengthy negotiations between the two companies over a period of years, but the relationship has been an uneasy one. Among other difficulties, witnesses cite Chattanooga's problem in retaining its largest customer for interruptible gas, Farmers Chemical Association, which, they say, cannot afford to buy firm gas and suffered excessive curtailments of interruptible. The loss of this customer would be a severe blow to Chattanooga, which derives about one-eighth of its total revenues from Farmers Chemical.

Chattanooga's proposed answer to this and other difficulties is to begin buying natural gas from an additional supplier. It has signed a precedent agreement with Southern Natural Gas Company. Transcontinental Gas Pipe Line Corporation (Transco) has also asked this Commission for authorization to extend its facilities and sell gas to Chattanooga. Chattanooga, though it supports Southern's proposal, would find Transco's acceptable if the Commission approves it. Both proposals are being heard in a certificate proceeding, Docket No. CP64–270, *et al.* A proposal by East Tennessee for an increase in its capacity which would result in, among other things, additional service to Chattanooga, is also being heard in the same proceeding. East Tennessee argues that Chattanooga is in no danger of loss of Farmers Chemical as a customer, since all the pending proposals include sales to Chattanooga for resale to Farmers Chemical. However, East Tennessee's witness testified that East Tennessee approached Farmers in August, 1964, with regard to the possibility of a direct sale, and it seems clear that the present situation is not a comfortable one for Farmers.

Chattanooga urges several grounds in support of its complaint. It argues first, that this Commission has the power to modify the contract language involved and should do so in order that it may act properly in the pending certificate case, or future certificate cases. Second, it argues that the challenged provisions violate public policy as expressed in the antitrust laws, in particular Section 3 of the Clayton Act. Third, the territory served by Chattanooga would benefit from an additional source of natural gas. And fourth, the tariff as it now stands is discriminatory in that partial requirements service is available to East Tennessee's jurisdictional customers in Virginia but not in Tennessee, while the schedule under which Chattanooga now buys is available in Tennessee but not in Virginia.

Intervener Southern Natural takes the position that East Tennessee's interpretation of the tariff as requiring Chattanooga to buy up to 40,000 Mcf per day from it before buying elsewhere is unjust and unreasonable, not in the public interest and contrary to East Tennessee's past and present methods of doing business. It argues for something which Chattanooga does not ask either in its complaint or in the relief sought in its briefs, namely, that the present tariff, properly interpreted, gives Chattanooga the right to switch from the "G" schedule, which it is now on, to a "CR" schedule with a contract demand of approximately 31,500 Mcf, without extending its existing service agreement. (In its reply brief, Chattanooga mentions this for the first time, but apparently only to show the errors in East Tennessee's arguments on the reasonableness of the tariff, rather than as an affirmative basis for such relief.)

East Tennessee argues with vigor that the present contract is a legal and binding one arrived at through free negotiation, that Chattanooga had tried to obtain an even larger commitment from East Tennessee, and that the present 40,000 Mcf figure was reasonable when negotiated in 1956 and renewed in 1959. Chattanooga, it says, has received the benefits of the contract for years and should not now be relieved of its obligations, and it further argues that differences existing among East Tenessee's charges are not unreasonable or unduly discriminatory and that there is no antitrust violation. It states that it will file a partial requirements schedule in Zone 1 (Chattanooga's zone) should a second supplier be certificated, and that in that event Chattanooga would be bound only up to the 40,000 Mcf figure.

Staff argues that the "monopoly provision" of the service agreement should be held unlawful and that East Tennessee should be required "to tender for filing a new 'form' of service agreement subject to the Commission's review and approval," that East Tennessee should be required to offer Chattanooga a CR service contract, and that it should also be required "to tender for filing a CPR, partial requirements rate schedule in Zone 1, subject to Commission's review and approval as to its terms." Staff chose not to file any answering brief in response to the contentions of the other participants.

Discussion of the Issues

Chattanooga, as the complainant, has the burden of proof. Its first step is to show that the Commission has the power to grant the relief requested. East Tennessee challenges this. The Examiner has no doubt of the correctness of Chattanooga's position in this regard, for the following reasons.

Section 5(a) of the Natural Gas Act requires that when the Commission finds that a contract affecting a rate charged by a jurisdictional pipeline to a distributor is unjust, unreasonable, unduly discriminatory or preferential, it must determine what is a just and reasonable contract and fix it by order.

There is no conflict between this plain language of the Act and any of the cases decided under it. East Tennessee says that Chattanooga's proposal "would make a mockery of contracts under the Act in the light of the express ruling in *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp.*" This is not so. The relief sought is not inconsistent with the *Mobile* case. That case upholds the integrity of contracts as between the parties thereto. It holds that the Act "* * * does not give natural gas companies the right to change their rate contracts by their own unilateral action." *Id.*, 350 U.S. 332, 337. It also recognizes the Commission's "* * * power to review rates and contracts made in the first instance by natural gas companies and, if they are determined to be unlawful, to remedy them." *Id.*, p. 341. And again, "* * * denying to natural gas companies the power unilaterally to change their contracts in no way impairs the regulatory powers of the Commission, for the contracts remain fully subject to the paramount power of the Commission to modify them when necessary in the public interest." *Id.*, p. 344. East Tennessee's position to the contrary is plainly without merit. Any contract subject to the Act is subject to revision in accordance with the Act.

We turn then to the question whether the provisions of the contract are unjust, unreasonable, unduly discriminatory or preferential. A positive finding to this effect is a prerequisite to a change. A mere finding that the proposed relief would result in a reasonable contract would be insufficient. *Federal Power Commission* v. *Sierra Pacific Power Co.*, 350 U.S. 348.

In considering the reasonableness of the challenged provisions of the contract, it is important to realize that they do not affect any sale of gas now under way. East Tennessee does not sell, and Chattanooga does not buy, any gas above 31,500 Mcf, and sales up to that amount would be left undisturbed by the relief demanded. The provisions embody, not an agreement to buy from anyone, but rather an agreement *not* to buy from anyone except East Tennessee, and they would come into effect only in the event that Chattanooga needs more gas than it now takes.

What we have, then, is an agreement by East Tennessee to supply Chattanooga with additional gas if needed, up to 40,000 Mcf, and by Chattanooga not to turn to anyone else for additional supplies up to that figure. The question is whether this agreement is unjust, unreasonable, unduly discriminatory or preferential in the circumstances here presented.

Those circumstances include the fact that other proposals to supply an additional quantity of gas are now pending before another Examiner. There is no suggestion that these proposals are frivolous or not worth consideration, yet East Tennessee's position, if sustained, would prevent them from being considered, however much the public convenience and necessity might require the certification of one or another of them. The instant proceeding has nothing to do with the merits of the proposals, but unless relief is granted here they cannot even be heard. If they are not in the public interest they will presumably be denied. East Tennessee's position therefore could be effective only to block a proposal which the public convenience and necessity requires; a proposal not so required would fail in the ordinary course of the certificate proceeding. To urge that it should not even be heard is an invitation to the Commission not to regulate.

Such an invitation betokens a situation that is unjust and unreasonable. This is so not because of any attitude of the Commission towards regulation but by reason of the purposes of the Natural Gas Act. Section 7(g) of the Natural Gas Act expressly empowers the Commission to grant certificates to serve an area already being served by a natural gas company. Private persons cannot contract to strip the Commission of this power. In *Lynchburg Gas Co.* v. *Federal Power Commission*, 336 F. 2d 942, Judge Washington said (at pp. 949–50):

> * * * the welfare of the ultimate consumer is the acknowledged desideratum of the Natural Gas Act. * * * Investors in the natural gas industry, although granted an *opportunity* for a "fair return," are by no means guaranteed freedom from risk or competition. Such assurance would, in a case such as this, deprive competitors of the right to compete, inhibit efficient allocation of resources and deny ultimate consumers the lowest prices to which they are entitled.

The "welfare of the ultimate consumer" is eroded by contracts designed to prevent consideration of proposals which the public convenience and necessity may require, and the Natural Gas Act is not a shield for such agreements. The *Lynchburg* opinion just cited quotes the following passage from *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 169 F. 2d 881, 884, cert. denied 335 U.S. 854:

> [N]othing in the Natural Gas Act suggests that Congress thought monopoly better than competition or one source of supply better than two, or intended for any reason to give an existing supplier of natural gas for distribution in a particular community the privilege of furnishing an increased supply.

We need not consider here what factors might come into play if the aim of this litigation were to shift a current sale from one pipeline to a competitor. This complaint is concerned with the present obstacle to the furnishing of an increased supply. The furnishing of the current one is unaffected, there being no attempt to change the source with respect to the amounts of gas Chattanooga is now buying.

The foregoing considerations lead to the conclusion that the contract as it now stands is unjust and unreasonable, and the Examiner so holds.

This holding is made in the light of the provisions of the Natural Gas Act, leaving aside considerations of antitrust law. It cannot be said whether or not a record full enough to permit an analysis of the "line of commerce" and the "relevant market of effective competition" would result in a finding of an antitrust violation. See *Tampa Electric Co.* v. *Nashville Coal Co.*, 365 U.S. 320. The most that can be said here is that this record does not permit such a finding, and Chattanooga's claim in this regard is held to be not proved. The findings, conclusions and order in this decision therefore rest on the Natural Gas Act alone.

Chattanooga's argument that the territory it serves would benefit from an additional source of gas is not properly raised in this proceeding. That question will be decided in the certificate case. The basic question here is whether there should be a certificate proceeding at all. During this hearing the Examiner refused to receive evidence offered by East Tennessee tending to show the economic effect of proposals now pending in the certificate proceeding. Had he received it and used it as a basis for denying the requested relief, it would have been a prejudgment of the certificate proceedings. However cogent the evidence may have been with respect to the pending proposals, it could not be accepted to show their lack of merit since their merits are not here in issue. Counsel for Southern Natural, in arguing the motion to strike, had the following colloquy with the Examiner regarding exhibits showing the impact of the proposals on East Tennessee and an exhibit showing comparative costs of gas under the pending proposals:

> Mr. MORAN: * * * Mr. Examiner, as Mr. Bomar has just said and as I think you said, if you grant Chattanooga Gas every bit of the relief they ask in this proceeding, that is not going to get Southern Natural or Transco

> into Chattanooga. There are some folks across the hall that have something to say about that, and East Tennessee is over there having a lot to say about it. Consequently, let us not litigate the impact situation twice and the gas cost issue twice when it is being litigated over there, because—
>
> PRESIDING EXAMINER: The question here is whether or not you should be allowed to go across the hall.
>
> Mr. MORGAN: That is correct. * * * The impact studies are in the wrong forum.

As for Chattanooga's remaining argument to the effect that the tariff is discriminatory in denying partial requirements services which are available in other areas, it will be seen that the relief granted, though based on grounds heretofore stated, disposes of this complaint as well.

East Tennessee's arguments that the contract was reasonable when written and renewed, and that Chattanooga, having received the benefits for years, should not now be allowed to shed the correlative obligations, is not to the point. It ignores the present and future public convenience and necessity, which the Commission is bound by law to consider. Whether a contract should be revised cannot be decided solely in the light of its fairness as between the parties at some time in the past. The public has an equity. This contract is unjust and unreasonable at the present time because it would bar Commission consideration of proposals which may reasonably result in lower prices to the ultimate consumer.

Relief

The Act requires that when the Commission, after hearing, finds a contract to be unjust or unreasonable, it shall determine the just and reasonable contract to be thereafter observed and enforced and shall fix it by order. We proceed to the question of what relief is just and reasonable.

The General Terms and Conditions of East Tennessee's tariff (which are made a part of the various rate schedules) set forth a "standard form of service agreement" to be entered into by buyers taking firm service. The contract between East Tennessee and Chattanooga followed the form and provides in part as follows:

> * * * Seller agrees to sell and deliver to Buyer, and Buyer agrees to purchase and receive from Seller * * * Buyer's requirements of natural gas up to 40,000 Mcf per day, * * *
>
> Under no circumstances shall Seller be obligated to sell and deliver to Buyer or Buyer be obligated to purchase and receive from Seller in any one day a maximum quantity of natural gas in excess of 40,000 Mcf; * * *
>
> Buyer agrees that it will not purchase gas, natural or manufactured, from any source other than Seller, and also that it will not manufacture gas for use or sale, except as expressly authorized by this contract. * * *

Striking the last-quoted sentence above, and replacing "40,000" with "31,500" wherever it appears in the contract[1] would be a grant of the requested relief. For the following reasons, the Examiner finds this result to be just and reasonable.

It is undisputed that Chattanooga's present takes are substantially up to a maximum of 31,500 Mcf per day. Therefore the other customers of East

---

[1] In Article II of the contract the "Max. Daily Demand" is referred to as 40,000 Mcf.

Tennessee would be unaffected by such a change. It is significant that these customers, who intervened in this proceeding, sided with Chattanooga rather than with East Tennessee. These so-called "East Tennessee Intervenors" filed, in lieu of a brief, a statement of position in which they said:

> * * * Chattanooga Gas Company should in this proceeding be granted the right to purchase gas from a second source of supply, subject to the certificating provisions of the Natural Gas Act in appropriate proceedings.

Consequently, it is concluded that the relief is reasonable as to East Tennessee's customers.

There is no contention here that East Tennessee's rates are unreasonable. Presumably if that company goes on selling the same amounts of gas at the same price as before, it will not have been deprived of its right to a reasonable return. Should it later claim that its rates are inadequate, the road to relief is open.

One may wonder why, if Chattanooga is to be relieved of the exclusivity provisions of the contract to the extent of allowing a new supplier to have his proposal considered, East Tennessee should not be relieved of the prohibition against selling in Chattanooga's area. The short answer is that East Tennessee has not asked for such relief even if Chattanooga is given the relief it asks. Second, the Act requires that modifications in a contract be made only after hearing, and this proceeding has not been concerned with this point. It is possible that in a complaint by East Tennessee seeking such relief, Chattanooga might advance considerations against it which it had no cause to advance here. Third, the present record provides no basis for holding this provision to be unjust and unreasonable, because in the absence of any proposal by East Tennessee to sell in Chattanooga's area, the prohibition against doing so has no effect. If it has no effect, it cannot be held to be unjust or unreasonable. Fourth, if at any time East Tennessee makes such a proposal, it can follow the same road to relief that Chattanooga has traversed here.

The foregoing considerations make it clear that the relief is reasonable to East Tennessee itself with respect to both what it provides and what it does not provide. The only change in East Tennessee's position is that the exclusivity feature is being stricken from a sale it is not now making and may never make, *i.e.* the sale to Chattanooga of volumes between 31,500 and 40,000 Mcf.

Staff urges that the exclusive requirement provisions of East Tennessee's form of service agreement causes undue discrimination against all those of its customers who are subject to it, and would require East Tennessee "to tender for filing a new 'form' of service agreement subject to the Commission's review and approval." There is nothing in the record to show that other customers are discontented with their present agreement, that the agreement is unjust and unreasonable with respect to them, that the quantities they have contracted for are excessive, or that their obligation to East Tennessee with respect to their present purchases deprives them of any desired freedom of action for the future. It may well be to their benefit to continue their present relationship with East Tennessee. In any event, the present record shows no reason to disturb that relationship. If any of them desires to disturb it, he may make his own showing.

Neither is it necessary to require East Tennessee "to tender for filing a CPR, partial requirements rate schedule in Zone 1, subject to Commission's review and approval as to its terms," as Staff would have it do. East Tennessee has already said it would do that when a new supplier is certificated, but the relief herein granted makes that unnecessary, and avoids further Commission proceedings. Nor does any reason appear for ordering East Tennessee to offer Chattanooga CR service, which Chattanooga has not asked for but which Staff says should be offered it. All parties concede that Chattanooga has the right to contract for CR service. East Tennessee claims that if it does so its contract demand must be 40,000 Mcf per day, but the basis for this claim would no longer exist if Chattanooga is relieved of the 40,000 Mcf exclusive requirements provision in its present contract. The relief Staff proposes in this respect would be pointless even if Chattanooga wanted it.

FINDINGS AND CONCLUSIONS

The Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated:

(1) The contract between East Tennessee and Chattanooga for the sale of natural gas is subject to the jurisdiction of the Federal Power Commission by virtue of the Natural Gas Act, including Section 5(a) of that Act.

(2) Said contract is unjust and unreasonable to the extent that changes therein are prescribed in the following order.

ORDER

It is ordered,

(A) that any and all provisions of the service agreement under which East Tennessee agrees to sell and Chattanooga to buy Chattanooga's requirements of natural gas up to 40,000 Mcf per day, or which limit to a maximum of 40,000 Mcf per day, East Tennessee's obligation to sell and Chattanooga's obligation to buy, or describing said obligation as a "maximum daily demand" shall be modified by substituting "31,500 Mcf" for "40,000 Mcf,"

(B) that any and all provisions of said service agreement whereby Chattanooga agrees not to purchase natural gas from any source other than East Tennessee, and that it will not manufacture gas for use or sale, except as expressly authorized by said service agreement, shall henceforth be void and of no effect, and

(C) that East Tennessee shall, within 45 days after the date of this decision and order, tender to Chattanooga a new service agreement identical with the present one except for the modifications hereinabove ordered, and upon Chattanooga's execution thereof not later than 15 days after said tender, shall forthwith file said new service agreement with this Commission in substitution for the present one.

ARTHUR H. FRIBOURG,
Presiding Examiner.

OPINION NO. 493

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–270; SOUTHERN NATURAL GAS COMPANY, CP64–259, CP64–314; EAST TENNESSEE NATURAL GAS COMPANY, CP65–66; TENNESSEE GAS TRANSMISSION COMPANY, CP64–165; CITY OF BUFORD, GEORGIA, CP65–11, CP65–20; CITY OF SUGAR HILL, GEORGIA, CP65–10, CP65–19; CITY OF AUSTELL, GEORGIA, CP65–74

OPINION AND ORDER GRANTING IN PART AND DENYING IN PART APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND REMANDING PROCEEDINGS

(Issued June 8, 1966)*

Syllabus

1. Approval of Southern's applications for service to Chattanooga in preference to competing applications for initial or increased service to this market area is required by present and future public convenience and necessity. Pp. 919; 924; 945.
2. Proposals for additional service to the Atlanta area should not be certificated on this record—proceedings are remanded to permit Southern and Transco to support their applications consistent with findings here. Pp. 920; 926.
3. Where issues have been fully tried and briefed, it is appropriate to resolve them and so avoid duplicate effort at remanded proceedings. [*infra* note 4]. P. 926.
4. In remanding issue of additional service to Atlanta area, Commission finds Transco's proposal superior to Southern's and that certification of the former would have no significant impact on Southern. Pp. 926; 928.
5. Transco's historic policy of not constructing lateral extensions does not preclude it from changing such policy providing new policy is reasonable and non-discriminatory. P. 926.
6. In a proceeding arising under Section 7 of the Natural Gas Act, Commission *grants in part* and *denies in part* applications for certificates of public convenience and necessity and *remands* proceedings.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

This is a comparative proceeding on competing applications for certificates of public convenience and necessity filed pursuant to Section 7(c) of the Natural Gas Act proposing sales for resale of natural gas within the States of Tennessee and Georgia, and seeking authorization for the installation of the facilities necessary therefor. The case also involves certain applications under Section 7(a) of the Act for orders directing the establishment of new delivery points.

The principal controversies are raised by competitive proposals to serve additional volumes of natural gas to Chattanooga Gas Company (Chattanooga) and Atlanta Gas Light Company (Atlanta Gas). In the Chattanooga market, East Tennessee Natural Gas Company (East Tennessee) is now the sole supplier. Chattanooga seeks a second supplier. Transcontinental Gas Pipe Line Corporation (Transco) in Docket No. CP64–270 and Southern Natural Gas Company (Southern) in Docket No. CP64–314 have made mutually exclusive proposals to serve Chattanooga, while East Tennessee in Docket No. CP65–66 has proposed additional service to the Chattanooga market. Atlanta Gas, which distributes gas to communities throughout Georgia, is currently supplied primarily by Southern, but it also purchases gas from Transco and South Georgia Natural Gas Co. In this case, Atlanta Gas proposes to purchase additional volumes from Transco at three new delivery points or, if this application is denied, from Southern.

Southern and Transco also request authority to meet the additional gas requirements of the Water, Light and Sinking Fund Commission of the City of Dalton, Georgia (Dalton), a community presently served by Southern, and of Atlanta Gas at the Ringgold delivery point in northwestern Georgia. Transco requests authorization to serve the initial requirements of Intercoastal Gas Corporation (Intercoastal) which proposes new gas service to five communities in northwest Georgia. Determination of these matters and of the service requests by the Georgia cities whose applications have been consolidated in these proceedings (City of Buford, City of Sugar Hill and City of Austell) depend in large measure on the determinations made with respect to the Transco and Southern proposals to serve Chattanooga and Atlanta Gas.

The proceedings are before us at this time for decision following oral argument heard May 3, 1966, on exceptions to Examiner Ames W. Williams' initial decision issued December 21, 1965, *infra*, p. 930.[1] In essence, the examiner granted Southern authority to serve Chattanooga, denying the competitive proposals by East Tennessee and Transco, and also substantially denied both Southern's and Transco's requests to serve additional gas to Atlanta Gas. He would, however, grant Transco a permanent certificate to deliver 15,000 Mcf daily to Atlanta Gas, which gas Transco has been delivering under a temporary authorization. He directed Southern to deliver the gas supply requested by Intercoastal. The applications by the Cities of Buford, Sugar Hill and Austell were denied since these are dependent upon either the authorization of the facilities sought by Transco at Docket No. CP64-270 or those involved in Southern's North Atlanta line proposal in Docket No. CP64-314, both of which were denied. In granting the application of Southern to become a co-supplier with East Tennessee to the Chattanooga market, the examiner imposed conditions requiring the filing of an agreement between Southern and Chattanooga binding Chattanooga to a third-year contract demand volume of not less than 29,000 Mcf per day and, in addition, submission of a second agreement by Chattanooga guaranteeing East Tennessee that it will maintain purchases of firm gas of not less than 31,500 Mcf at an annual load factor of 67 percent.[2]

The details of the various projects and the services proposed are set out in full in the examiner's decision and need not be restated. They are referred to herein only insofar as necessary to reflect properly the bases for our decision.

For the reasons discussed below, we find that the examiner was correct in granting Southern's applications in Docket Nos. CP64-295 and CP64-314 authorizing the proposed service to Chattanooga and denying the competing applications by Transco and East Tennessee for initial or increased service to this market area. The new service to Intercoastal and the additional gas requested by Dalton will be ordered supplied by Southern. Insofar as the proposals by Southern and Transco for additional service to Atlanta Gas in the Atlanta area are concerned, we conclude that neither application should be certificated on the record as made, but that the proceedings should be remanded to permit the parties to support their applications or amendments thereto, consistent with our findings herein.

---

[1] Exceptions to the examiner's decision were filed by Austell Natural Gas System, Knoxville Utilities Board, *et al.*, Southern, Atlanta Gas, East Tennessee and Transco. Briefs opposing exceptions were filed by Intercoastal, Chattanooga, Southern, Staff, Atlanta Gas, Transco and East Tennessee. Other filings made since the date of issuance of the initial decision consist of a renewal of an appeal by East Tennessee from rulings of the examiner and answers thereto by Southern and Staff, and an amended petition by East Tennessee to reopen the proceedings, with answers thereto by Chattanooga, Southern and Transco. Southern also submitted a reply to the last-described answer of Transco.

[2] The volume of 31,500 Mcf is an approximation. The actual volume intended by the parties, both herein and in the Docket No. RP65-3 proceedings, is 31,558 Mcf per day at 14.9 psia, which is equal to 31,922 Mcf at 14.73 psia.

The Chattanooga Market

Both Southern and Transco propose to sell 29,000 Mcf of gas per day to Chattanooga and substantial additional sales within Georgia from their proposed lateral extensions. East Tennessee opposes the applications and proposes to increase its deliveries to Chattanooga by enlarging its existing facilities to add 41.5 miles of 24-inch pipeline running from a point on its 22-inch North Line near Oak Ridge, Tennessee, to a point on its 16-inch Topside-Bristol line near Jefferson City, Tennessee. The estimated cost is $4,160,000. East Tennessee has stated that the proposed facilities would increase its system's peak-day capacity by 22,141 Mcf.[3] Unlike the proposals of Southern and Transco, East Tennessee does not request authority to serve any new markets but only to serve the additional requirements of certain existing customers.

The principal purpose of the three applications is to provide increased quantities of gas to Chattanooga. Chattanooga seeks additional firm gas of 29,000 Mcf per day in the third year and both Southern and Transco propose to supply these volumes. Of this 29,000 Mcf, Chattanooga expects that its major customer, Farmers Chemical Association, Inc. (Farmers), a fertilizer manufacturer, will take 20,000 Mcf per day of firm gas. East Tennessee's primary proposal, however, is that Farmers needs only 65 percent firm gas and that the other 35 percent can be interruptible; it contends that its proposed facilities addition to increase its daily design capacity by 22,141 Mcf, of which 12,464 Mcf per day would be allocated to Chattanooga for resale to Farmers, would be fully adequate to meet the needs of this industrial customer.

Since 1956 East Tennessee has had a contract with Chattanooga under which Chattanooga must obtain its entire natural gas requirements, or at least those volumes up to 40,000 Mcf per day, from East Tennessee. However, the maximum billing demand reflected in the record, or the maximum quantity of firm gas actually taken by Chattanooga prior to the recent winter heating season[4] has been only slightly in excess of 31,500 Mcf at an annual load factor of 67 percent. As noted in the initial decision, the contract between East Tennessee and Chattanooga, and the requirements imposed thereby on Chattanooga, as well as the alleged limitations on the authority of this Commission in adjudging the instant applications under the terms of Section 7 of the Natural Gas Act, have been the subject of a collateral proceeding at Docket No. RP65-3. Final consideration of the issue presented in that docket had been delayed pending the oral argument herein. Concurrent with our issuance of this opinion and order, we are issuing our decision in that proceeding, *supra*, p. 902, reducing Chattanooga's contractual obligation to take gas from East Tennessee to 33,958 Mcf per day for the duration of the Army load at Chattanooga and 31,558 Mcf per day thereafter at 14.9 psia (see pp. 923–924, *infra*). Accordingly, we have here considered the relative merits of the various proposals as they relate to the ability of the applicants to supply the anticipated future needs of Chattanooga above that amount.

---

[3] All volumes are at 14.73 psia.

[4] The experiences of the 1965–1966 winter, which are the subject of the East Tennessee petition to reopen the proceedings, as answered by Chattanooga, Southern and Transco, are considered separately. We have also excluded the exceptional circumstance of February 17, 1958, when Chattanooga's take of firm gas rose to 35,438 Mcf because of a break-down of its peak-shaving plant.

As noted above, the facilities proposed herein for construction by East Tennessee would add 22,141 Mcf per day to its peak-day capacity. Both in the hearing before the examiner and in the oral argument before the Commission, East Tennessee admitted that its existing system allowed for a maximum of only approximately 34,000 Mcf per day to Chattanooga,[5] or 6,000 Mcf short of the maximum daily demand heretofore specified in the Chattanooga-East Tennessee service agreement. It is apparent that the project here proposed by East Tennessee would not be capable of supplying 29,000 Mcf per day of firm gas to Chattanooga above the volumes historically supplied and capable of being supplied as found by us both here and in the Docket No. RP65-3, Opinion No. 494, *supra*. Although East Tennessee has proposed additional service to Chattanooga for resale to Farmers on a 65 percent firm and 35 percent interruptible basis, and has designed its present application to include only such facilities as would permit the daily delivery of the 65 percent firm gas,[6] the record establishes that the proposal for less than all firm service would not meet the needs of Farmers. Since it is in competition with two other applications which will provide the firm gas needs of Chattanooga's customers, we find that the East Tennessee application is not best suited to meet the additional gas requirements in the Chattanooga market. For this reason, the application will be denied.

On January 27, 1966, East Tennessee filed a renewal of appeal from rulings of the examiner rejecting certain proffered evidence. The evidence in question consists of a large number of exhibits and testimony intended to show: (1) that East Tennessee has committed itself to make a voluntary rate reduction of 2-cents per Mcf in its demand-commodity rates and 1-cent per Mcf in its single part rates in its Zones 1 and 2 if it is certificated to continue to serve the entire natural gas requirements of Chattanooga; (2) the extent of the benefit which would thereby be occasioned on East Tennessee's customers; (3) that the certification of a second supplier to Chattanooga will have an adverse impact on East Tennessee and its customers; (4) answering evidence to the effect that Farmers can use part firm-part interruptible service rather than needing all firm; and (5) evidence to show that East Tennessee could revise its proposal to supply economically all firm gas to Chattanooga for Farmers.

We have decided that the evidence offered by East Tennessee is relevant to the determination of the issues in this proceeding and should be considered by us. We have done so and find that the examiner's recommended denial of the East Tennessee application remains unaffected. Even if, as stated by counsel for East Tennessee, the proposed rate reduction is to be in addition to the recent reductions ordered by us in Opinion No. 488,[7] the resultant rate is still considerably higher than the rate to be charged Chattanooga by Southern under its OCD-3 rate schedule. We do not minimize the rate reduction which would enure to the benefit of East Tennessee's other customers. However, this factor alone cannot justify the grant of an application which is clearly inferior to other competitive proposals. Insofar as the impact study is concerned, the assumption is that Chattanooga will reduce its purchases to an annual 48 percent load factor. The evidence shows, however, that Chattanooga has, and at the time of East Tennessee's presentation had, been on record as committing itself to continue firm purchases for the future at an annual load factor of no less than 67 percent, as well as to maintain its billing demand of approximately 31,500 Mcf.

---

[5] Transcript, vol. 23, pp. 2457–2459. The estimate of the deficiency stated by East Tennessee at the oral argument (Transcript, vol. 37, p. 3847) was considerably higher, being in the range of "approximately 10 to 12 thousand Mcf per day." The 34,000 maximum capability at Chattanooga from the existing system is confirmed in Exhibit No. 7 to the application in Docket No. CP64–21, wherein we certificated East Tennessee's Virginia Extension and of which we here take administrative notice, showing maximum possible deliveries of 33,817 Mcf per day to Chattanooga.

[6] Exhibit 112, Sch. 11.

[7] *Knoxville Utilities Board, et al.* v. *East Tennessee Natural Gas Co.*, issued April 19, 1966, 35 FPC 534.

Respecting Item (4), the record fully supports Farmers' need for all firm gas. East Tennessee's answering evidence to the contrary, while relevant, does not convince us that East Tennessee's application, which involves part firm and part interruptible service to Farmers, is adequate and should be granted in preference to Southern's application.

The answering evidence offered by East Tennessee which was intended to show that East Tennessee could, if necessary, revamp its proposal so as to supply all firm gas to Chattanooga for resale to Farmers and the evidence offered to rebut the revenue deficiency showing was for a project not contemplated by the East Tennessee application as filed. The evidence in the record, and the testimony of East Tennessee's witnesses and counsel conclusively shows that long before its own application was filed East Tennessee was aware that Southern was proposing all firm service to Farmers and that Farmers desired this service. Contrary to its allegation East Tennessee could not have been surprised, when, as the hearings began, Farmers affirmed its need for firm gas. East Tennessee had ample opportunity, if it so desired, to submit an amendment to its application to provide this service. Apart from the untimeliness of this evidence and the fact that it was offered "as a matter of demonstration only" we have nevertheless considered it but believe it does not establish that East Tennessee could supply the present needs of Chattanooga in a manner superior to that now before us in the Southern application.

Following the filing of the exceptions to the initial decision and the briefs in opposition thereto, East Tennessee requested that the record be reopened for the purpose of taking into account additional evidence regarding the recent increased takes of firm gas by Chattanooga beginning in January 1966 and continuing through the months of February and March 1966. This evidence is similar to material filed by East Tennessee in the Docket No. RP65-3 proceeding and shows that Chattanooga's takes during January increased to a daily high of 43,782 Mcf and held constant in a range of 39,000 to 43,000 Mcf per day through the first week of February. East Tennessee, in the oral argument, noted that Chattanooga's takes have remained substantially above 31,000 Mcf on many days since that time. From this East Tennessee argues that Chattanooga's demand has already increased and that there is no longer any validity to Chattanooga's claim that it will be unable to grow if a secondary source of natural gas is not certificated.

Answers in opposition to East Tennessee's petition were filed by Chattanooga and Southern. Neither objects to the receipt into evidence of the material offered by East Tennessee. They disagree vigorously, however, with the inferences and the conclusion drawn therefrom by East Tennessee. Both Chattanooga and Southern argue that the increased takes by Chattanooga are fully explainable. They note that the period referred to by East Tennessee was at a time when a large area of the eastern seaboard was experiencing an extended and almost unprecedented cold spell and that Chattanooga was faced very early in the period with an acute shortage of propane.[8] Also, because of the wide geographical area covered by the cold spell, Chattanooga was unable to procure or receive deliveries of additional propane supplies. Since it was impossible to augment its depleted supply of propane, Chattanooga alleges that it had no alternative but to permit its demand on East Tennessee to rise to the record figures.

Chattanooga also observes that East Tennessee encountered significant difficulties during this same period in obtaining sufficient gas to meet the unprecedented demand and that it was able to effect the increased deliveries, in part, only by obtaining 7,000 Mcf per day of emergency gas from Texas Eastern Transmission Corporation and installing temporary compressor facilities.

In the absence of any objection to the receipt of the temperature and daily delivery information contained in East Tennessee's petition, we will permit this evidence to come into the record. However, reviewing this material in the light most favorable to East Tennessee, we cannot find thereby that the increased taking of firm gas by Chattanooga was anything other than an emergency measure to meet an emergency situation. When adjusted for the reduced operations by Chattanooga of its peak-shaving plant, its purchases from East Tennessee are not shown to have been higher than the quantities reflected in the market data previously of record.

East Tennessee observes in its petition that the foregoing does not serve to explain why Chattanooga continued to purchase volumes far in excess of 31,500 Mcf per day throughout the latter days in February 1966 when temperatures had become warmer. It is apparent, however, that once Chattanooga had recorded a new billing demand of over 40,000 Mcf per day, this new figure became the applicable billing demand for the succeeding 12-month period and further takes up to such maximum do not result in the incurrence of any additional demand charges. Thus, until the instant proceedings and those at Docket No. RP65-3 were resolved, it has been to Chattanooga's benefit to restrict the operation of its propane plant and to take as much firm gas as needed from East Tennessee up to the newly established maximum.

By letters dated October 13 and November 12, 1965, the Department of the Army advised the Commission that a portion of the Volunteer Army Ammunition Plant at Chattanooga was to be reactivated for the production of ammunition. Although the letters indicated that a supply of firm gas would be needed, there was no statement as to the amount of gas which would be required. At the May 3 oral argument, the Army's counsel stated that the plant had been ordered to full production the previous week, that activation is expected by August and that maximum output will be achieved by January 1, 1967. At that time no precise figure for the amount of gas needed could be given. Counsel for the Army stated that a firm figure would be secured as soon as possible and that the parties would be advised thereof. By a letter dated May 6, 1966, copies of which were furnished to all parties, the Army advised that the reactivation of the ammunition plant would necessitate a net increase of 2,400 Mcf per day in the Chattanooga market requirements over those set out in the record in these proceedings.

The gas volumes now required by the Army were unknown at the time the projected market estimates and market requirements for the Chattanooga area were prepared by the applicants in this case. All parties agree, however, that this gas must be supplied to the Army, or its contractor, when it is needed by them and that no delay can be occasioned. Counsel stated that the Army had been assured by Chattanooga and East Tennessee that the gas would be made available by them. In our opinion, the gas needed by the Army should be supplied by Chattanooga from volumes sold to it by East Tennessee since in all probability Southern's facilities as herein certificated will not have been extended to Chattanooga by the date forecast for the initiation of this service. Moreover, it is questionable whether Southern will have adequate excess capacity deliverable at Chattanooga in the third year of operation, beyond the volumes here certificated, sufficient to continue the supply of the Army's requirements and the increasing quantities of firm gas forecast to meet the needs of Farmers. Accordingly, Chattanooga's reduced contract demand with East Tennessee will include the additional 2,400 Mcf of gas per day needed by the Army.[9]

---

[8] Whereas Chattanooga might otherwise have relied on the full 13,500 Mcf per day capacity of its propane-air equipment, its actual peak shaving averaged less than 3,000 Mcf per day.

The portion of the Transco application dealing with the service to Chattanooga must be denied because Transco's Zone 1 rate does not apply to its proposed sales to Intercoastal, Dalton, Atlanta Gas at Ringgold and Chattanooga, as fully explained by the examiner whose findings and conclusions on this issue we adopt. Under Transco's applicable Zone 2 rates, we conclude that Southern's proposal is superior to that of Transco.

The need for the additional quantities of gas proposed herein for the Chattanooga market has been fully established. Approval of Southern's application for the Chattanooga line in preference to that of East Tennessee is required, we believe, by the present and future public convenience and necessity. Southern's lower rates will permit Chattanooga to expand its sales and enable it to compete more effectively with alternative energy sources, particularly low-priced TVA power. In this connection, Chattanooga has indicated that a lowering of its retail rates reasonably may be expected to result from certification of Southern's proposal. Only by certification of Southern will Chattanooga be in a position to provide the service its customers require, specifically the needs of Farmers for firm gas. In addition, certification of Southern will put East Tennessee in a position promptly to meet the needs of the additional requirements of the Army at Chattanooga without having to curtail the requirements of its existing customers. We further find that neither East Tennessee nor its other customers will be disadvantaged by our certification of Southern.

Southern's line as here certificated will consist of the new 1,100 horsepower Bell Mills compressor station, 49.2 miles of 14-inch loop line to Rome, Georgia, and approximately 50 miles of 12¾-inch pipeline from Rome to Chattanooga. While the examiner found that the deliveries to Chattanooga would have to be made outside the boundaries of the State of Tennessee, we agree with Southern's statement in its exceptions that there is nothing in its tariff which prohibits it from crossing the state line. Accordingly, this conclusion of the examiner will not be adopted.

As part of its proposal, Chattanooga made a commitment to continue to purchase from East Tennessee a contract demand of 31,922 Mcf per day at 67 percent load factor, which represents its historic purchases. The purpose of this offer is to protect East Tennessee's other customers from the results of a drastic reduction in the volume of East Tennessee's sales to Chattanooga. In view of this commitment, any condition to this effect is unnecessary, as we have previously held.[10] While Knoxville, *et al.* did not object to certification of a second supplier for Chattanooga, they contend that Chattanooga should be required to maintain purchases at the 1964 level of its firm and interruptible takes from East Tennessee, thereby guaranteeing a load factor of 94 percent. However, 27 percent of this load is the interruptible volumes formerly purchased for the service to Farmers, which will now be supplied by Southern, and as to which the only facility constructed by East Tennessee was a meter station at a total cost of $20,000. Moreover, as noted by the examiner, no authorization was issued by us respecting the interruptible sales made by East Tennessee to Chattanooga and there is no contract in the Commission's files under which either East Tennessee is obligated to make these sales or Chattanooga obligated to purchase such interruptible gas. In our opinion, there is no justification for requiring Chattanooga to maintain its contract demand purchases above the level which existed at the time the basic record was made, particularly since the record makes clear that East Tennessee can substantially replace its interruptible sales to Chattanooga with sales to other customers.

---

[9] We note in passing that this action is consistent with East Tennessee's position in its second amendment to its petition to reopen filed May 25, 1966.

The other facilities requested by Southern in Docket Nos. CP64–259 and CP64–314 will be certificated with the exclusions made by the examiner. Leaving aside the Atlanta market, the remaining market requirements were either accepted or fully supported and the facilities and services to be supplied are reasonable and necessary. The service proposed to be rendered to Intercoastal and the additional allocations for Dalton and for Atlanta Gas at Ringgold will be authorized for the reasons fully expressed by the examiner. As noted in the initial decision, Intercoastal has stated its willingness to purchase gas from Southern if Southern is certificated as the second supplier to Chattanooga. Southern has stated its willingness to accept a condition requiring such service. Although Dalton originally had requested the Commission to order Southern to purchase the existing 42-mile Rome-Dalton line, the order was denied by the examiner and Dalton's counsel, at the oral argument, stated that Dalton was no longer pursuing the request.

No exception was filed to the examiner's denial of the petition by Tennessee Gas Transmission Company[11] for amendment of the order in Docket No. CP64–165, and the denial will be confirmed. All other exceptions and petitions for review and reopening heretofore filed respecting these issues are denied, except as herein granted. We turn our attention now to the consideration of the proposals for additional service to the Atlanta market.

The Atlanta Market

Atlanta Gas and Transco executed a precedent agreement whereby Transco would supply an additional 40,000 Mcf of gas per day[12] in increments with deliveries to be made from Transco's proposed Monroe-Chattanooga extension at Ball Ground, Cumming and Suwanee. Atlanta Gas also entered into a precedent agreement with Southern for the purchase of 20,000 Mcf of gas per day, also in increments, from Southern's proposed North Atlanta lateral, provided that Transco did not receive authorization in Docket No. CP64–270, or otherwise was unable to perform.

---

[10] *East Tennessee Natural Gas Co.*, Docket No. CP64–21, Opinion No. 435, issued July 17, 1964, 32 FPC 158.

[11] Now Tennessee Gas Pipeline Company, a Division of Tenneco Inc.

[12] The 40,000 Mcf per day includes the temporarily authorized deliveries of 15,000 Mcf daily.

For the reasons hereafter stated, we conclude that additional service to Atlanta of the type proposed by Transco may be warranted. However, since Atlanta Gas failed to make a sufficient showing regarding the extent of the additional needs of the Atlanta area, and since Transco failed to adequately develop its proposal to serve Atlanta, this aspect of the case must be remanded. Nevertheless, since certain of the issues have been fully tried and briefed, it is appropriate to resolve them at this time and so avoid duplicative effort at the remanded proceeding.

We agree with the examiner's observation that the market evidence submitted by Atlanta Gas has a tendency to obfuscate rather than to delineate its actual requirements. There are three successive sets of exhibits on this subject. Some list contract demand volumes of Atlanta Gas by calendar years, while others list peak day purchases for a 12-month period beginning September 1. It is difficult, at best, to compare the data in these exhibits as among themselves, and to Atlanta's purchases from Transco. While the evidence does seem to indicate that increasing volumes of gas are required in the metropolitan Atlanta area, it is not possible to determine from the record with any assurance just what these requirements are. It was never actually explained, for example, why Atlanta Gas required 40,000 Mcf per day if Transco's application were granted but only 20,000 Mcf per day if Southern's were authorized.

The examiner did find that Atlanta Gas had established a need for an additional supply of 15,000 Mcf of gas per day. No party has taken exception to this finding and we will adopt it. Transco is presently supplying these volumes under temporary authority issued October 16, 1964. Since the issue of service to Atlanta is to be remanded, we will not permanently authorize these volumes, at least at this time. At the remanded proceeding we anticipate that the parties will demonstrate with reasonable clarity a base period from which estimated requirements should be measured and a listing of contract demand volumes applicable to Atlanta Gas during the base period, showing total volumes and those applicable to the Atlanta market only. Data in similar form should be included for project requirements and purchases.

From the standpoint of rate level, the availability of storage and peak shaving service, and general delivery area, Transco's proposal to serve what appear to be the additional requirements of Atlanta Gas is superior to that of Southern. In addition, Transco's proposal would permit Atlanta Gas to extend service to seven cities in the area without natural gas. Service to those communities has been found to be in the public interest by the Georgia Public Utilities Commission. While Southern's proposal also involves service to seven new communities, this does not persuade us that Southern's application is superior.

The examiner held that Transco's historic policy of not constructing lateral extensions necessitated denial of its proposals in this proceeding. It is conceded that Transco historically has followed a policy of not constructing such extensions. However, this past practice does not preclude Transco from changing its policy providing its new policy is a reasonable one which it is willing and able to follow on a consistent and non-discriminatory basis.[13]

Surely, it would not be sensible to bind a pipeline to past practices which may be unreasonable or uneconomic in today's increasingly competitive situation. And, if a company is ever to be able to change its policy, such change reasonably should be allowed in a certificate proceeding.

---

[13] Transco has already filed to change its lateral line policy in Docket No. CP66-150.

The record in this case discloses no significant adverse impact on Southern from certification of Transco. Despite specific requests, Southern made no showing on the record that idling of its facilities would result. Moreover, Southern admitted that its net revenues from Atlanta Gas would steadily increase. Southern complains that it is improper to consider its overall revenues from Atlanta Gas, which relates to purchases for areas other than from the Atlanta area. However, Atlanta Gas is one customer which pays one bill to Southern. Under the somewhat unique arrangement between the parties, Atlanta Gas' bill is computed on the basis of its contract demand at each delivery point. However, Atlanta Gas has what seems to us to be the necessary contractual right to shift demands among its delivery points when such changes do not require additional construction by Southern, or result in a net decrease. For some years, it is clear Atlanta Gas has exercised this right, which Southern does not contest, to shift its contract demand from delivery points in the Atlanta area to those serving other Georgia communities.

Transco's application herein requests authority to construct 22.7 miles of 26-inch loop along its mainline system, 35.09 miles of 30-inch loop along its gathering system in Southern Louisiana and a 126-mile lateral extension from its mainline at Monroe, Georgia to the Georgia-Tennessee border near Graysville, Georgia, as well as miscellaneous meter and regulator facilities. With these facilities, Transco proposed to deliver and sell a total of 81,935 Mcf per day, principally to Chattanooga and Atlanta from its proposed lateral, which has a capacity of 128,483 Mcf per day without the construction of any compression or looping along the lateral. Despite Staff's timely request for a showing on how Transco would serve Atlanta if not certificated to serve Chattanooga, Transco refused to respond until the hearing was concluded. For the first time in its reply brief to the examiner, Transco included appendices taken from the data in the record showing the economic feasibility of terminating its proposed lateral at Ball Ground and serving only Atlanta Gas. Adjusting these appendices, which were also included in Transco's exceptions, to reflect annual sales of 8,800,000 Mcf, as forecast by Atlanta Gas, an incremental rate of return of about 5½ percent results. This data is conservatively predicated on incremental facilities whose capacity greatly exceeds the needs of Atlanta Gas. Nevertheless, there was no opportunity to test these exhibits at the hearing, and we are unable to determine, on the basis of this record, just what facilities would or should be constructed if Transco were certificated.

For these reasons, the application of Transco and Southern to provide additional service to Atlanta Gas for the Atlanta area will not be granted, and the issue of additional service to Atlanta will be remanded for further proceedings consistent with this opinion.

The Commission further finds:

(1) Southern, East Tennessee, Transco and Tennessee Gas Transmission Company (Tennessee Gas Pipeline Company, a Division of Tenneco Inc.) are engaged in the transportation of natural gas in interstate commerce and the sale in interstate commerce of natural gas for resale for ultimate public consumption and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities which Southern proposes to construct and operate, as described in its applications in Docket Nos. CP64–295 and CP64–314, will be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction

and operation of such facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Southern is able and willing properly to do the acts, to make the sales and to perform the services proposed by it in Docket Nos. CP64-259 and CP64-314, and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The facilities referred to in paragraph (2) above are adequate and appropriate to render the services which Southern is hereinafter authorized to provide.

(5) The construction and operation of the facilities and the new sales of natural gas proposed by Southern in the aforesaid applications and as herein approved are required by the public convenience and necessity and certificates therefor shall be issued as hereinafter ordered and conditioned. Those portions of the application in Docket No. CP64-314 wherein Southern seeks authorization for the construction of the North Atlanta line and the proposed service to be rendered therefrom, and the related portion of the proposed Macon to Atlanta loop, should not here be granted.

(6) The public convenience and necessity require (a) that the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the certificates hereinafter issued to Southern and to the exercise of the rights granted thereunder, and (b) that the time within which the facilities authorized by this order shall be constructed and placed in actual operation shall be fixed at six months from the date of issuance of the order herein.

(7) The authorization herein granted to Southern and the conditions imposed thereon are necessary and required by the public convenience and necessity.

(8) A proposal of the type advanced by Transco for additional gas sales to Atlanta Gas in the Atlanta market area is superior to the North Atlanta lateral proposal of Southern.

(9) Transco's tariff, as now filed, and its historic lateral line policy, or absence thereof, does not bar the certification of a proposal of the type herein considered for service to Atlanta Gas.

(10) The record does not establish that there would be any significant impact on Southern from the certification of the proposed sales by Transco to Atlanta Gas.

(11) While estimates based on data presently of record indicate that Transco's proposal for service to Atlanta Gas in the Atlanta market may be economically feasible, the record does not establish with the necessary specificity the facilities which would be necessary and appropriate to provide the service, or the economic justification thereof, and these aspects of the proceeding must therefore be remanded. Accordingly, Transco's application in Docket No. CP64-270 should not here be granted.

(12) The application of East Tennessee in Docket No. CP65-66 should be denied. The 2,400 Mcf per day firm natural gas requirements of the Volunteer Army Ammunition Plant, as set out in the letter from the Department of the Army to the Commission dated May 6, 1966, should be supplied by Chattanooga from gas purchased from East Tennessee.

(13) The petition of Tennessee Gas Transmission Company (Tennessee Gas Pipeline Company, a Division of Tenneco Inc.) in Docket No. CP64-165 should be denied.

(14) In view of the remand of the application by Transco in Docket No. CP64–270. and the North Atlanta line proposed by Southern in Docket No. CP64–314. the applications of the City of Buford, Docket Nos. CP65–11 and CP65–20, City of Sugar Hill, Docket Nos. CP65–10 and CP65–19, and City of Austell, Docket No. CP65–74, for orders directing service under Section 7(a) of the Natural Gas Act should be deferred.

(15) Except as herein granted, all exceptions to the initial decision and motions to reopen the proceedings should be denied.

(16) The examiner's decision, to the extent not inconsistent herewith, should be adopted as part of this opinion and order.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued, upon the terms and conditions of this order and subject to all the pertinent provisions of the Natural Gas Act and the Commission's Regulations thereunder, authorizing Southern Natural Gas Company to construct and operate the facilities proposed in Docket Nos. CP64–259 and CP64–314, except as such authorization has been heretofore limited in finding paragraph (5), all as more fully set out in Southern's applications and in the record in these proceedings.

(B) The certificate of public convenience and necessity issued by paragraph (A) above is subject to the following terms and conditions:

(1) Within 30 days of the date of issuance of this opinion and order Southern shall file an executed service agreement with Chattanooga, subject to the approval of the Commission, wherein Chattanooga shall agree to a third-year contract demand for the purchase of firm gas under Southern's rate schedule OCD–3 of not less than 29,000 Mcf per day;

(2) Within 30 days from the date of issuance of this opinion and order Chattanooga shall submit an agreement signed by Farmers Chemical Association providing for the purchase by Farmers of a firm peak day volume of at least 20,000 Mcf and an annual volume of approximately 6,935,000 Mcf in the second year;

(3) Southern shall construct and operate such transmission facilities as shall be necessary to supply Intercoastal Gas Corporation with a firm third-year peak volume of 2,613 Mcf, the deliveries of which are hereby authorized;

(4) Southern shall deliver to the Water, Light and Sinking Fund Commission of the City of Dalton, Georgia a total firm third-year peak volume of 20,000 Mcf;

(5) Southern shall deliver to Atlanta Gas Light Company at the latter's Ringgold delivery point a firm third-year peak volume of 4,770 Mcf;

(6) The certificate herein issued to Southern shall be accepted in writing and under oath within 30 days of the date of issuance of this order. The general terms and conditions set forth in paragraphs (a), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of such certificate and to the exercise of the rights granted thereunder;

(7) The facilities authorized herein shall be constructed and placed in operation within six months from the date of issuance of this order.

(C) Transco's request for authorization to provide service to Chattanooga is denied; in all other respects decision on the application filed in Docket No. CP64–270 is deferred.

(D) The proceedings relative to the proposals for the delivery of additional gas to Atlanta Gas for use in the Atlanta market area are remanded to afford the parties an opportunity to perfect their applications, or amendments thereto, consistent with our findings herein; the applications of the City of Buford, Docket Nos. CP65–11 and CP65–20, City of Sugar Hill, Docket Nos. CP65–10 and CP65–19, and City of Austell, Docket No. CP65–74 are also deferred.

(E) Pursuant to the authority conferred upon the Federal Power Commission by the Natural Gas Act, particularly Sections 7 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act (18 CFR, Chapter I), a supplemental hearing shall be held in these proceedings consistent with our opinion and order herein, as prescribed by the following:

(1) Amendments to existing applications, and new applications to be consolidated in the remanded proceeding, must be filed with the Federal Power Commission on or before August 1, 1966; and notices or petitions to intervene in such applications may be filed with the Commission on or before August 22, 1966.

(2) Presiding Examiner Ames W. Williams, or any other officer or officers of the Commission designated by the Chief Examiner for that purpose (see delegation of authority, 27 F.R. 4276, etc.) shall establish the procedures to be followed in the remanded proceeding, including the setting of dates for a prehearing conference or hearing as early as may be appropriate after August 22, 1966.

(F) The application of East Tennessee Natural Gas Company in Docket No. CP65–66 is denied.

(G) The petition of Tennessee Gas Transmission Company (Tennessee Gas Pipeline Company, a Division of Tenneco Inc.) in Docket No. CP64–165 is denied.

(H) The certificates herein issued are not transferable and shall be effective only so long as the respective applicant continues the acts and operations hereby authorized in accordance with the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) Except as herein granted, the exceptions to the examiner's decision and motions to reopen the proceedings are denied.

(J) The examiner's decision, to the extent not inconsistent, is hereby adopted as part of this Opinion and order.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued December 21, 1965)

WILLIAMS, *Presiding Examiner:*

The instant consolidated proceeding pursuant to Commission order of October 6, 1964, involves competitive applications filed under Section 7(c) of the Natural Gas Act (Act) for certificates of public convenience and necessity by Transcontinental Gas Pipe Line Corporation (Transco), Southern Natural Gas Company (Southern) and East Tennessee Natural Gas Company (East Tennessee); a petition under Section 16 of the Act by Tennessee Gas Transmission Company (Tennessee Gas) for the modification of the certificate of public convenience and necessity previously issued in Docket No. CP64–165; applications under Section 7(a) of the Act by the Cities of Buford and Sugar Hill, Georgia (Buford) (Sugar Hill), for orders requiring either Transco or Southern to supply new delivery points and a similar application by the

City of Austell, Georgia (Austell), requiring Southern to provide a new delivery point. Southern's application in Docket No. CP64–259 was filed on April 29, 1964, and seeks authorization to construct and operate additional compressor units at three existing north line compressor stations costing approximately $492,000 for the purpose of increasing system delivery capacity by 16,000 Mcf per day, an amount the applicant deems necessary to meet unexpected increases in the firm requirements of present customers during the 1964–1965 heating season.

Southern's application in Docket No. CP64–314, embracing construction and facilities costing some $28,377,920*, was filed on June 30, 1964, for the purpose of increasing the system capacity by 180,000 Mcf per day. The expansion is designed to meet increased requirements of the applicant's current customers at existing delivery points; the requirements of present and prospective customers at new delivery points to be located on the projected North Atlanta and Chattanooga lines and to transport larger volumes of gas through the applicant's South Louisiana Supply System.

Transco's application in Docket No. CP64–270 was filed on May 8, 1964, supplemented on June 29, 1964, and amended on September 18, 1964. In the application, as supplemented, Transco requested authorization to construct and operate, at an estimated cost of $20,100,000, 103 miles of 30 and 36-inch pipeline loops in the States of Louisiana, Mississippi and Alabama for the purpose of increasing its main line capacity by 80,149 Mcf per day and a new 60-mile 20-inch pipeline extending about halfway from its main line near Monroe, Georgia, to Chattanooga, Tennessee.

In its amended application, Transco seeks authorization to construct and operate 57 miles of 30 and 36-inch pipeline loops in the States of Louisiana, Mississippi and Alabama to increase main line capacity by 47,045 Mcf per day and a new 126-mile 20 and 16-inch pipeline extending from the main line near Monroe, Georgia, to Chattanooga, Tennessee. The estimated cost of construction and facilities in the amended application is stated as $17,800,000 and the expansion will serve market requirements of 81,935 Mcf per day.

The amended application was filed concurrently with the withdrawal of an application filed May 8, 1964, by the Georgia-Tennessee Gas Corporation (Georgia-Tennessee) in Docket No. CP64–272. In such application Georgia-Tennessee proposed to construct and operate a 72-mile pipeline extending from the terminus of Transco's originally proposed 60-mile extension at Sharp Top, Georgia, to Chattanooga, Tennessee, for the purpose of directly supplying Farmers Chemical Association Inc. (Farmers Chemical), with gas to be obtained from Transco. Farmers Chemical, a fertilizer manufacturer, is presently Chattanooga Gas Company's (Chattanooga Gas) largest customer.

East Tennessee's application in Docket No. CP65–66 filed on September 10, 1964, seeks authorization to construct at a cost of $4,160,000 and operate a 24-inch pipeline loop, approximately 41.5 miles in length, within the State of Tennessee which will increase its main line delivery capacity by 22,141 Mcf.

The Section 7(a) applications of Buford and Sugar Hill filed on July 9 and 20, 1964, against Transco and Southern, respectively, seek a new delivery point from either supplier. Austell's application was filed on September 16, 1964, and requests that Southern be required to provide a new delivery point from its proposed North Atlanta line.

Southern filed an application on September 9, 1964, for a temporary certificate in Docket No. CP64–259 which was granted by the Commission on

---

*Hearing Exhibit 50 shows the estimated cost of facilities to be $27,621,254.

October 2, 1964, subject to certain conditions subsequent. On September 25, 1964, Transco, in Docket No. CP64–270, also filed an application for a temporary certificate requesting authorization to supply Atlanta Gas Light Company (Atlanta Gas) with an additional firm supply of 15,000 Mcf per day of gas at existing delivery points commencing December 1, 1964. A temporary certificate was issued on October 16, 1964. On February 23, 1965, Southern filed an application for a temporary certificate in Docket No. CP64–314 requesting authorization to construct and operate certain compressor units. Permission to construct, but not operate, such units was granted on April 13, 1965.

Transco made application for a temporary certificate on May 5, 1965, in Docket No. CP64–270 to construct and operate certain facilities including a 16-inch lateral to Tryon, North Carolina, without prejudice to the rights of competing applicants in this proceeding, and to renew the temporary authority to supply Atlanta Gas with CD–1 sales of 15,000 Mcf per day previously granted by the Commission on December 1, 1964. On June 21, 1965, Transco filed a supplement to such application wherein it requested authorization to substitute CD–3 service of 55,000 Mcf per day for Consolidated Edison Company of New York, Inc. (Con Edison), in lieu of the presently authorized GSS service of 55,000 Mcf per day.

The Commission on June 25, 1965, approved the continuation of the temporary authorization of sales to Atlanta Gas but denied the construction of the Tryon lateral and the substitution of CD–3 service to Con Edison.

On July 9, 1965, Southern filed its second application for a temporary certificate, requesting authority to loop its existing Rome branch line. On August 30, 1965, 34 FPC 655, the Commission authorized Southern to construct but not operate the requested loop line.

On October 19, 1965, 34 FPC 1172, The Commission authorized Southern to operate the facilities, construction of which had already been approved in the before-mentioned first and second temporary certificate applications.

The Commission has permitted at various times the intervention of the following parties in this proceeding: Southern, Chattanooga Gas, East Tennessee, Carolina Pipeline Company, Knoxville Utilities Board, *et al.* (East Tennessee Interveners), Buford, Sugar Hill, South Carolina Natural Gas Company, Alabama Gas Corporation (Alabama Gas), Mississippi Valley Gas Company (Mississippi Valley), Intercoastal Gas Corporation (Intercoastal), Atlanta Gas, Long Island Lighting Company, Con Edison, Savannah Gas Company, Austell, Brooklyn Union Gas Company, Public Service Electric and Gas Company, Transco, The Water, Light and Sinking Fund Commission of the City of Dalton, Georgia (Dalton), Philadelphia Gas Works Division of The United Gas Improvement Company, and the City of Chattanooga, Tennessee. The Public Utilities Commission's of the States of Pennsylvania, Tennessee and North Carolina filed notices of intervention.

Prior to the initial hearing the parties stipulated that the proposals of Transco, Southern and East Tennessee can be financed in accordance with the manner described by the respective witnesses of the applicants; that the estimated costs of the facilities proposed by such applicants appear to be reasonable and that estimated recoverable reserves and the deliverability therefrom by each such applicant are not disputed insofar as the geological data utilized for the derivation of the reserves and the deliverability estimates are concerned.

Formal hearings began on November 9, 1964, and were concluded on April 13, 1965. The record consists of 3,737 pages of transcript, 212 exhibits and 36 items by reference.

The Markets Involved

There are two main competitive market areas concerned: namely, Chattanooga and Atlanta. The first, involving prospective sales to Chattanooga Gas in the range of 29,000 Mcf per day is the primary objective of the three competing applicants. Two of the applicants, Southern and Transco, seek to gain access to this prize and the third, East Tennessee, presently in possession, desires to maintain the *status quo*. The second market area involves sales to Atlanta Gas, Dalton and Intercoastal. Here, the field of applicants is reduced to two: Transco and Southern.

With respect to the Chattanooga market, East Tennessee has enjoyed the advantage of a contract with Chattanooga that requires the latter to purchase all its natural gas requirements from the former up to 40,000 Mcf per day. Without going into the details of the contract, it should be noted that a collateral proceeding, Docket No. RP65-3, was devoted entirely to the question of whether or not the provisions of such contract between East Tennessee and Chattanooga are unjust, unreasonable, unduly discriminatory or prejudicial. The issue was subsequently resolved in the affirmative by Presiding Examiner Arthur H. Fribourg in an initial decision issued on April 20, 1965, *supra*, p. 909.

The undersigned Examiner ruled early in this proceeding that he would be bound by the relative findings enunciated in Docket No. RP65-3 and the instant decision accordingly assumes that the modification of the total requirements provision in the contract between East Tennessee and Chattanooga Gas so as to permit the certification of an additional source of gas supply to the latter is in the public interest. Such assumption enables this Examiner to consider the three competing applications to serve the Chattanooga area upon the basis of their respective merits and to discard the alternative proposals made by Southern and Transco which were predicated upon the maintenance of the exclusive dealing feature of the contract.

The Chattanooga Market

Chattanooga Gas, a distributor of natural gas in the Chattanooga, Tennessee area, has been receiving its sole supply of natural gas from East Tennessee since 1950. During the first decade of service Chattanooga Gas' cost of gas, computed at a 70 percent load factor, has increased from 32.1 cents to 50.4 cents per Mcf while, since 1954, its number of customers has inversely but not necessarily in proportion, declined. This unfortunate state of circumstances was substantially ameliorated early in 1963 when operations commenced by the Farmers Chemical fertilizer plant at Tyner, Tennessee. Interruptible service was supplied to this new purchaser through a 10-inch pipeline built by Chattanooga from a point on East Tennessee's 12-inch line and during the fiscal years ending on August 31, 1963 and 1964, Chattanooga sold to Farmers Chemical 1,801,000 Mcf and 2,837,000 Mcf of interruptible gas, respectively.

Frequent interruptions by East Tennessee during the first winter, however, caused Farmers Chemical to become dissatisfied with the interruptible service and to seek a means of obtaining a firm natural gas supply at a more advantageous rate than could be negotiated by Chattanooga from its supplier.

At this time, Chattanooga's contract with East Tennessee entitled it to take up to 40,000 Mcf per day but the billing demand was established at 31,500 Mcf and at a load factor of approximately 67 percent.[1]

---

[1] A billing demand of 31,897 Mcf per day was established on December 19, 1963.

Chattanooga being unable to procure firm service from East Tennessee at an attractive rate for the benefit of Farmers Chemical, induced the latter in December 1963 to sign a long-term contract with Georgia-Tennessee. In an effort to forestall the impending loss of this important customer, Chattanooga, in turn, approached Southern as a possible second source of supply.

Southern reciprocated by filing an application in Docket No. CP64–314 offering to extend a pipeline to connect with Chattanooga's facilities and to deliver up to 29,000 Mcf. Because Southern's rate was lower than that proposed by Georgia-Tennessee, the latter withdrew its application and, as previously stated, Transco supplemented its application in Docket No. CP64–270, offering to extend its proposed line all the way to Chattanooga and to supply firm service at its CD–1 Rate Schedule.

Chattanooga's market presentation, relied upon by both Southern and Transco, contemplates continuing purchases from East Tennessee in the amount of 31,500 Mcf per day at a load factor of 67 percent and purchases from Southern (the second source of supply preferred by Chattanooga) in the amount of 23,000 Mcf in 1966, 28,000 Mcf in 1967 and 29,000 Mcf in 1968. Of the 1968 volume, Chattanooga expects that 20,000 Mcf will be taken by Farmers Chemical since the latter has indicated that under favorable rate conditions it will execute an agreement for this amount of firm service.

Mr. Glenn D. Rucker, testifying on behalf of Farmers Chemical, affirmatively stated that while it is, of course, possible to operate his plant with interruptible service, a firm supply of natural gas is necessary for optimum production and future plant expansion. Therefore, such service is earnestly desired.

While it is obvious that Chattanooga's desire for a second and cheaper source of supply is principally motivated by anxiety to keep Farmers Chemical as a customer, it was demonstrated that the high cost of East Tennessee gas and the lower cost of electricity has adversely affected Chattanooga's growth with respect to the attachment of industrial and residential customers.

Chattanooga also maintains that under present circumstances it cannot deliver more gas in the part of its distribution system where it is most needed because the maximum pressure at which it can operate its propane plant has been reached. In order to overcome this difficulty, Chattanooga would be required to spend more money in constructing facilities to increase its take from East Tennessee than it would to attach Southern as a second supplier.

In opposing Chattanooga's quest for a second source of supply, East Tennessee has adopted the anomalous attitude that Farmers Chemical does not require all firm service or volumes in the range of 20,000 Mcf in order to profitably manufacture nitrogenous fertilizer. In support of this gratuitous premise, East Tennessee offered the testimony of Mr. Joseph T. Moody, an employee of the Tenneco Chemical Company, a Tennessee Gas subsidiary, who was without personal knowledge of the operations or management objectives of the Farmers Chemical plant.

The East Tennessee Application

East Tennessee's position-in-main in this proceeding is (1) that the public convenience and necessity requires that it remain the sole supplier of natural gas to Chattanooga and (2) that the requirements of Farmers Chemical can and should be met on the basis of 65 percent firm deliveries and 35 percent interruptible.

Upon the assumption that this position will find favor, East Tennessee proposes to construct and operate some 41 miles of 24-inch pipeline loop and appurtenant facilities in the State of Tennessee so as to increase its main line daily design capacity by approximately 22,141 Mcf. The location of the proposed facilities will be from a point on East Tennessee's 22-inch north line near Oak Ridge to a point near Jefferson City, Tennessee, on its 16-inch Topside to Bristol line. East Tennessee proposes to utilize the additional capacity, costing $4,160,000, to render additional service to most of its existing resale "flat rate" customers, direct industrial customers—Aluminum Company of American and Bowaters Southern Paper Company, and Chattanooga. East Tennessee does not propose to construct the requested facilities until 1966 and contemplates using in the interim, additional unallocated capacity alleged to exist in the Tennessee system and for which a petition for the amendment of Commission's order of July 13, 1964, 32 FPC 114, in Docket No. CP64–165 has been filed by Tennessee.

East Tennessee does not, however, propose the construction of any facilities or demonstrate the ability through the utilization of unallocated capacity from Tennessee, to render service to Chattanooga that will enable the latter to offer Farmers Chemical any more than 65 percent firm and 35 percent interruptible service.

Presiding Examiner Fribourg's decision in Docket No. RP65–3 voiding the exclusive dealing provisions of the current service agreement between Chattanooga and East Tennessee nullifies East Tennessee's primary position in this proceeding. Likewise, East Tennessee's contention that the requirements of Farmers Chemical can and should be met on the basis of 65 percent firm and 35 percent interruptible cannot be accepted in the light of unequivocal testimony by Mr. Glenn Rucker, General Manager of Farmers Chemical, to the effect that interruptible deliveries are a hazardous and costly alternative to firm service and do not, consequently, meet the requirements of Farmers Chemical.

In the absence of any overriding conflict with the public interest, it appears to this Examiner that the choice of service is and should remain a prerogative of the purchaser and not become a dictate of the seller.

East Tennessee has also failed to prove that an adequate supply of gas is available from Tennessee Gas to meet the requirements of its proposal since Tennessee Gas' petition to amend the order in Docket No. CP64–165 requests permission to deliver an additional peak day volume of only 1,938 Mcf to East Tennessee. Assuming the approval of such petition, East Tennessee would have a total peak day entitlement of 205,895 Mcf which amount falls short by some 15,000 Mcf of the total amount of gas required to support the instant proposal.

Assuming also that Tennessee Gas would be certified to supply East Tennessee with 220,781 Mcf of gas, the record fails to demonstrate the capability of Tennessee Gas to furnish the necessary pressures required to move such a quantity into the East Tennessee system.

While application in Docket No. CP65–66 states that the facilities requested will enable East Tennessee to serve the additional requirements of Chattanooga, Aluminum Company of America, Bowaters Papers Company and other unspecified customers, the record shows that the specified amounts are not, in fact, additional quantities because at least two of the customers (Alcoa and Bowaters) have been receiving such quantities of firm gas since 1964 and regardless of the outcome of this proceeding will continue to receive the contract amounts.

In prognosticating the impact upon East Tennessee of the possible loss of the interruptible gas sales to Chattanooga for resale to Farmers Chemical, the parties to this proceeding have used as an initial base the estimated sales for the year 1964 in the amount of roughly 2,800,000 Mcf. Staff and Southern claim that the cross-examination of Mr. Cantrell,* elicited the witness' opinion that one-half of the projected loss could be sold to other interruptible customers by minimizing curtailments. East Tennessee, on the contrary, avows this claim is a misinterpretation of the evidence. The pertinent cross-examination relied upon by the parties appears at Transcript 3073–74 as follows:

> Q. If East Tennessee should lose the interruptible sales now made to Chattanooga Gas for delivery to Farmers Chemical, would not a substantial portion of that gas be utilized to minimize curtailment of other interruptible customers?
>
> A. *On the one hand, you could look at it that this would be true* and it would also tend to increase our total purchase gas cost because we would be operating at a lower load factor, and so the net effect would be harmful to East Tennessee.
>
> Q. Couldn't you sell that gas elsewhere?
>
> A. Mr. Tarver, if we knew where else we could sell some gas, we would do it. We have looked over our area and we don't know of any market to replace this right now.
>
> Q. Couldn't you sell on curtailment days to your existing interruptible customers gas equal to the amount of the Farmers Chemical sales, assuming you lose the Farmers Chemical sale of interruptible gas?
>
> A. We could not sell on the 20 days of minimum curtailment 2,800,000.
>
> Q. But you could sell approximately half of that on those curtailment days to your present interruptible customers?
>
> A. *If you look at it on a day-to-day basis, yes, I could sell on those days*, but the net result on a year-to-year operation would be a loss, and that is the only way you can look at it. [*Italic supplied.*]

The italicized portion of the first answer quoted above is directly responsive, but the remainder, in the opinion of the Examiner, is a *non sequitur*. Purchasing gas at a lower factor does not increase total purchased gas cost. The response to the second question must be interpreted in the light of the "elsewhere," meaning other than interruptible customers. The last answer affirms that one-half of the gas could be sold to other interruptible customers, but that there would still be the loss in sales of 1,400,000 Mcf on an annual basis, and the consequent loss in revenue less incremental expenses.

On the basis of these responses it is concluded that the impact determination must be made on the loss of one-half of the contemplated sales to be made to Farmers Chemical, since it is proposed herein to recognize the established firm service billing demands imposed on East Tennessee by Chattanooga. Such recognition, however, must be consistent with the provisions of East Tennessee's rate schedule, and will provide for a guaranteed annual load factor of 67 percent by Chattanooga in a new partial requirement schedule herein ordered. Since Chattanooga will be held to a maximum demand of

---

*Franklin M. Cantrell, Jr., Vice President, East Tennessee Natural Gas Company.

32,345 Mcf,[2] no consideration need be given to Chattanooga's firm purchases, or to total "gross margin"[3] to measure impact.

The interruptible sales made by East Tennessee to Chattanooga for resale to consumers including Farmers Chemical, are made under the terms of Rate Schedule I–1, Interruptible Service. The official files of the Commission do not, however, reveal the existence of a contract covering interruptible service supplied by East Tennessee to Chattanooga nor does the tariff of East Tennessee contain a form of service agreement covering interruptible sales. The "AVAILABILITY AND APPLICABILITY AND CHARACTER OF SERVICE" provisions in the I-1 Rate Schedule include terms governing the application of a distributor to make a proposed interruptible sale but it is also clear that such terms provide for the service to be made available and to be purchased on a "when, as and if" basis, *i.e.* without commitment on the part of either the seller or buyer.

Under these circumstances, East Tennessee's claim that it must be assured a profit on its total existing market, including the interruptible portion thereof, is based upon the erroneous assumption of a continuing and binding obligation of the distributor and that the distributor only must guarantee to the pipeline its profit from such interruptible sales. Such a position is patently without merit where there is no covering contractual obligation unless public convenience and necessity considerations would force a conclusion to the contrary.

Using the methods followed in Appendix C of the East Tennessee brief and Appendix A to the Staff brief, the Examiner finds that due to the loss of sales by East Tennessee to Chattanooga for resale to Farmers Chemical in an annual volume of approximately 1,400,000 Mcf the net income of East Tennessee would be reduced by approximately $75,000. This sum represents a deficiency of only 1.4 mills per Mcf on the estimated 1964 sales of East Tennessee assuming the loss of one-half the Farmers Chemical load. Such an impact is *de minimis*.

In view of the foregoing, there is obviously no economic justification for the construction of the facilities requested. The Examiner therefore finds that the application in Docket No. CP65–66 is not required by public convenience and necessity and is hereby denied. Likewise, the petition by Tennessee Gas for the modification of the certificate of public convenience and necessity previously issued in Docket No. CP64–165 is rejected.

The Atlanta Market

The market evidence submitted by the parties fails to substantiate the alleged need by Atlanta Gas for more gas in the Atlanta area and the evidence offered by Atlanta Gas, Exhibits 66, 125, 126 and 127 has a tendency to obfuscate rather than to delineate its actual requirements. This is particularly true with respect to page 8, Section 3 of the supplemental sheets to Exhibit 66, which depicts revisions to the Atlanta area forecast for the 1967-68 year.[4] The final supplement to this material is Exhibit 127. The last exhibit and the information included in Exhibit 66, Section 4, page 1A, show the maximum day requirements for the Atlanta area to be purchased from Southern and Transco under contract demand rate schedules for the 1963-1964 year to be 283,490 Mcf and 19,267 Mcf respectively, or a total of 302,757 Mcf.[4a] The maximum day requirements to be purchased under the same schedules from the same suppliers for the 1967-1968 year are, however, estimated to be 258,470 Mcf and 59,267 Mcf respectively, or a total of 317,737 Mcf including the estimated requirements for the Suwannee, Cuming and Ball Ground areas. Thus, Atlanta Gas' forecast of increase in total contract demand service over current quantities is only 14,980 Mcf.

---

[2] Established February 2, 1965.

[3] The term "gross margin" as utilized by East Tennessee is the difference between the revenues it receives from a distributor (Chattanooga) under all sales made at various rate schedules to that distributor and the incremental cost of purchased gas (including compressor fuel and control and line losses) required to make the various sales. East Tennessee's concept of "gross margin" is particularly inapplicable at this juncture because the validity of the rates used to compute revenues is before the Commission at this time in a Section 5(a) proceeding, *Knoxville Utilities Board, et al.* v. *East Tennessee Natural Gas Company*, defendant, in Docket No. RP65–4, 35 FPC 534, following the issuance of an Examiner's decision thereon on August 23, 1965, at p. 546.

The remainder of the gas supply for the Atlanta area of Atlanta Gas for the 1967-1968 period is shown in Exhibit 127 to consist of purchases from Transco under its GSS Rate Schedule (General Storage Service), for only 50 days' use of maximum requirement of such purchases, and under its LNG Rate Schedule (Liquefied Natural Gas) for five day's use of maximum requirement; unassigned gas volumes indicating approximately 58 days' use of maximum requirements; and liquefied petroleum gas used apparently for shaving sharpest peaks. Obviously the gas in these three categories is substantially different in availability from firm contract demand service. On the basis of this evidence the Examiner concludes that the market requirements of Atlanta Gas show a need of but 15,000 Mcf additional per day of contract demand service through the 1967-1968 winter heating season, the very quantity being delivered by existing facilities under temporary authority granted to Transco by Commission order of December 1, 1964.

Atlanta Gas supports its position to purchase 40,000 Mcf of additional gas per day from Transco by cutting back on Atlanta area purchases from Southern, claiming that such a cut back is not a decrease as such, but rather the transfer of contract demands from one area or billing group to another as permitted under Southern's tariff. There has been no evidentiary showing on the part of Atlanta Gas that there has been an actual transfer of the 25,000 Mcf of daily requirement or any part thereof to another area or billing group; rather, that company has relied upon an increase in total requirements from Southern at all delivery points to becloud a reduction in contract quantity in the Atlanta area. The fact remains that Atlanta Gas is proposing a decrease in purchases from Southern for the Atlanta area of approximately 25,000 Mcf per day, a proposal which would deprive Southern of substantial sales and revenues from an existing market which it has supplied for many years, on the basis of a tariff provision of doubtful validity under today's intense competition among pipelines for "new" markets.

---

[4] Atlanta Gas Exhibit No. 66, both in its original form and as revised, contain peak day and annual volume supply data for actual and estimated periods disclosing purchases from Transco at load factors considerably in excess of 100 percent under its contract demand schedules, a seemingly impossible result. Further complexity is introduced by the listing of annual volumetric purchases from Transco of Rate Schedule GSS gas which would be available upon the purchaser's releasing contract demand gas for storage and later return. The sum of the two volumes increases the load factor of CD purchases.

[4a] Atlanta Gas' 1963-1964 Contract Demand from Southern of 283,490 Mcf was purchased under Southern's Rate Schedule CD-3 which contained a 90% billing ratchet. However, on November 1, 1964, when Atlanta Gas changed from Rate Schedule CD-3 to Rate Schedule OCD-3, under which the billing demand is the contract demand, it increased slightly its Atlanta area Contract Demand from Southern to 283,762 Mcf. Consequently, whether 1963-64 or 1964-65 is used as the base year for Atlanta Gas' Atlanta area Contract Demand from Southern, the result for all practical purposes is the same.

This Examiner is not convinced that the management of Southern would include in the General Terms and Conditions of its tariff a provision such as that in the section entitled "Decreases in Contract Demand," which is intended to or can be interpreted to permit a purchaser to transfer any portion of an existing load to a second supplier.* Furthermore, what is determinative at this point in a competitive application is not controlled solely by the terms contained in the tariff of a supplier, but rather in the opinion of the courts what is appropriate in the particular situation. In *United States* v. *El Paso Natural Gas Co., et al.*, 376 U.S. 651, 660, 12 L. Ed. 2d 12 (1964), the court stated:

> * * * Once the Commission grants authorization to construct facilities or to transport gas in interstate commerce, once the distributing contracts are made, a particular market is withdrawn from competition. *The competition then is for the new increments of demand that may emerge with an expanding population and with an expanding industrial or household use of gas.*

The Transco Application

As previously noted, Transco's application, Docket No. CP64–270, filed in conjunction with the application of Georgia-Tennessee, proposed the construction of facilities costing $20,100,000. Upon withdrawal of the latter application, Transco amended its application so as to extend the proposed 60-mile Georgia line some 66 additional miles in order to directly serve Chattanooga. It is alleged by Transco that newly discovered capacity already existing in its system ** will permit the entire undertaking, including the 66-mile additional pipeline, to be built for $2,300,000 less than the facilities embraced in the original application.

The projected improvements will make available third-year sales of 40,000 Mcf per day to Atlanta in the Atlanta area; 4,770 Mcf per day to Atlanta at Ringgold; 2,615 Mcf per day to Intercoastal; 5,550 Mcf per day to Dalton and 29,000 Mcf per day to Chattanooga, all under Transco's CD–1 Rate Schedule, except the sales to Intercoastal where the G–1 Rate Schedule will apply.

Transco's exhibits and testimony relating to economic feasibility of its proposed expansion, as amended, are based upon serving markets requiring 81,935 Mcf of capacity per day but it proposes to construct facilities which increase its system delivery capacity by only 47,045 Mcf per day. The remainder of the needed capacity, 34,890 Mcf per day, is excess capacity recently "discovered" following tests which revealed system capability in excess of design. Thus incremental revenues are based upon sales at a maximum of 81,935 Mcf per day but investment and operating costs for such sales reflect capacity additions of but 47,045 Mcf per day. Any feasibility study based on such figures is of little assistance to the Examiner or the Commission to weigh the merits of the competitive proposals of Transco and Southern. There can be no parity between the competing proposals in any real sense; and there are no data available to permit a determination of the investment and operating costs of the newly found capacity in the Transco system. However, an analysis of the competing projects is not required in view of factors heretofore or hereafter discussed which are more susceptible to determination of public convenience and necessity.

---

*The increasing number of competitive certificate applications before this Commission emphasizes the necessity of scrutinizing tariff provisions in general which permit transfer of contracted demands among delivery points or billing groups and with the resulting contravention of the Commission's certificate authority. In the case of Southern, further difficulty is introduced by the fact that it has always received "open end" certificates from the Commission. As stated by counsel for Southern (Tr. 1119):

> Under Southern's method of operation the Commission authorizes the construction and operation of facilities rather than the sales of specific volumes of gas to particular customers. * * *

The hearing record amply discloses the problems arising out of interpretation of the portion of Southern's Tariff relating to Decrease in Contract Demand as shown on First Revised Sheet No. 40 in Sixth Revised Volume No. 1. If Southern so desires, it can take appropriate action to remove the ambiguities and inconsistencies therein revealed. The matter of "open end" certificates should, however, as a matter of policy, be of more than passing concern to the Commission.

** Witness Charles E. Schorre testified that the aditional capacity is 38,137 Mcf per day.

Other aspects of the Transco presentation which raise most serious doubts as to the merits of its proposed extension from Monroe to Chattanooga relate to tariff and rate schedule provisions and company policy in making lateral extensions. Transco proposes to construct a line 126 miles in length which would be perpendicular to its existing main lines. The revenues calculated to be received from the sales to be made from this extension are computed on the basis of the rates applicable in Zone 1 of the Transco system.

Transco's policy witness, R. Stewart Bruns, Jr., Vice President in Charge of Marketing, testified at length that it was not the policy of the company to make lateral extensions, and the rate schedules of the company contained availability provisions which required prospective customers to build facilities to connect with its main line system. In rebuttal, Transco engaged an independent consultant, Benjamin Schiffer, to contradict the direct testimony of its policy witness by contending there is nothing in the terms of the rate schedules applicable to contract demand or general service in Zones 1 and 2 that would require a customer to build the facilities necessary to connect with Transco's large diameter main line system. The evidence, however, shows that Transco has not built and did not intend to build lateral lines in these zones. Even though the wording of the "Availability" clauses of the schedules might be interpreted by some to permit lateral construction, the fact remains that the company has not done so and customers have had to build laterals at their own expense.* The Examiner is convinced that Transco's historical experience militates against the construction of laterals or main line extensions and the evidence advanced in this proceeding is insufficient to demonstrate the abandonment of the established precedent. Also, if permitted in this instance, the departure would obviously discriminate against existing customers who were in the past required to build facilities to reach Transco's main line.

Assuming, *arguendo*, that the line to Chattanooga could be constructed without deviation from past practices or from the provisions of the rate schedules, Southern and Staff have raised an issue as to the validity of applying Zone 1 rates to the sales proposed to be made to Intercoastal, Dalton, Atlanta at Ringgold, and Chattanooga. These parties contend that the Availability provision of the CD–1 and G–1 schedules applies to sales made to a purchaser "the pipe line or distribution system of which connects with or can be made to connect with Seller's main transmission system between the discharge side of Seller's Compressor Station No. 5 located near Eunice, Louisiana and the

---

See: Transco's Rate Schedule X–9, FPC Gas Tariff, Original Volume No. II, effective April 1, 1954, and approved by James B. Henderson, Vice President (Transco), wherein it is stated: " * * This commitment is made pursuant to your (Transco's) policy that all laterals to serve your (Transco's) customers will in the future be paid for by the customer."

Georgia-South Carolina State Boundary; * * *" (Southern's Brief, page 145). The parties also contend that if sales were made to the four above-listed purchasers at Zone 1 rates there would be discrimination against Zone 2 customers who require a lesser number of miles of haulage but who pay the higher Zone 2 rates.

Implicit in a zoned pipeline system is the consideration that the distance of transmission is a fundamental determinant in establishing costs and rates among zones. In *Northern Natural Gas Company*, 14 FPC 11, 24, the first pipeline case which examined in depth the establishment of zone boundaries and rate zone differentials, the Commission set out principles to be followed in the future. The pertinent parts of the Opinion bearing upon the case at hand and which are controlling here are as follows: first, the Commission pointed to the relation of distance and cost factors saying,

> As previously stated, it is a simple economic fact that the delivery cost of natural gas increases in close proportion to the length of the transmission line of any given size. Therefore, unless other circumstances are present which outweigh the importance of the length of transmission required to effect delivery, the distance factor is the prime determinant of the cost of rendering service. Since in our view of this record there are no such circumstances present to counter-balance the distance factor, we conclude that the distance of transmission required to effect deliveries at the various points of sale by Northern reflects with reasonable accuracy the relative cost of providing service to its customers. We further find and conclude that Northern's present practice of demanding and collecting uniform rates throughout the length and breadth of its area of service for the sale of natural gas for resale is unjust, unreasonable, unduly discriminatory, and preferential. This practice results in the shifting of transmission cost from those whose service requires its incurrence by reason of the greater transportation distances to others who are not responsible for such cost—and who are not benefited correspondingly.

The Commission next found that zoning was required as follows:

> Having found and concluded that Northern's present uniform rate practice is unlawfully discriminatory and preferential, there is to be determined the manner in which the discrimination and preference may be most properly eliminated. In theory, the ideal, non-discriminatory, and non-preferential rate structure would be one designed to assess each point of sale and delivery with the total of the various cost components incurred in the rendering of service to each point. But any attempt to arrive at such perfection would be not only delusory,[16] but also impracticable and infeasible from both the management and regulatory point of view. In the circumstances of this case, the only practical and reasonable approach to an equitable solution is the establishment of service zones—with rate differentials—as urged by the Proponents of zoning and the Staff.

>
> * * * * * * *
>
> Under each of these plans, including that found most proper by the Decision, determination of the zone in which a particular sale is made would be fixed by the point on the main line from which the lateral line enabling such sale takes off. All of Northern's sales of gas for resale are effected at the city gates of the communities served. In most instances these sales are made at the termini of lateral lines branching from the

> main line transmission facilities. Thus, the total distance of transmission to each point of delivery is represented by the aggregate of the mileage of transmission through both the main line and the lateral line serving each point of sale. As a result, as is elaborately pointed out by the Opponents, under each of these methods of zoning the total mileage of transmission to certain points in zones closer to the source of supply is greater than the mileage to other points of sale in zones farther removed from the source. Under each of the plans considered, including the Examiner's, deliveries to certain points requiring the greater mileage of transmission would be made at the lesser rate.
>
> The foregoing is sufficient in our view to condemn each of these methods on zoning. * * *

The following quotations from the same decision have direct significance in relation to the total miles of haul to the proposed points of delivery on the Chattanooga line, regardless of whether such line is termed a lateral or a main line extension.

The Commission then established zones which it considered to be reasonable: namely,

> Considering the foregoing, and all other facts of record, it is our opinion that the most appropriate and practicable method would be the establishment of three zones on Northern's system with zone boundaries as depicted on the map following this page.[18] (Illustration in this instance is more desirable—and more effective—than description.) This plan, in our view, provides the most effective and equitable basis for eliminating the present unlawful discrimination and preference.
>
> As noted previously, the Bushton Compressor Station is the last point of input of gas into the main-line facilities. Under this plan, the service area north of the Bushton station, wherein more than 99 per cent of the jurisdictional sales are made, is divided into three zones which are as nearly equal as they can reasonably be so far as transmission distances are involved. Zone 1 embraces all sales requiring transmission to the point of delivery, including that made through lateral lines, for a distance of 191.0 miles beyond the Bushton station. Sales made at points south of the Bushton station, including sales in the so-called Argus System, also fall within Zone 1. All sales made on the west leg of the system requiring transmission up to a distance of 190.43 miles beyond the Zone 1 northern boundary and all sales made on the east leg of the system requiring transmission up to a distance of 190.15 miles beyond the Zone 1 boundary fall within Zone 2. Sales falling in Zone 3 require transmission for a maximum distance of 180.8 miles on the west leg and 183.0 miles on the east leg beyond the northern boundary of Zone 2. As estimated for the year 1954, jurisdictional sales in Zone 1 would amount to 2,508,100 Mcf, of 1.07 per cent of the total of such sales, 103,620,800 Mcf or 44.17 per cent in Zone 2, and 128,459,300 Mcf or 54.76 per cent in Zone 3.
>
> ---
>
> [18] These three zones encompass the whole of Northern's system north of the Oklahoma-Kansas boundary, which is the area in which all of its sales are made. It would seem appropriate also to designate the area south of the Oklahoma-Kansas line where Northern has facilities as "Zone A."

The evidence of record shows that Transco's Zone 2 begins at the Georgia-South Carolina boundary which is 62 miles downstream from the point of takeoff of the proposed Monroe to Chattanooga line. It also shows a number of deliveries made by Transco to communities in South Carolina which require a lesser number of miles of haulage than if gas were delivered to Chattanooga.

As compared with the 62 miles of haulage from Monroe to the Zone 2 border, the following are the mileages to proposed delivery points on the Monroe-Chattanooga line:

	Miles
Intercoastal—Fairmount	76
Intercoastal—Ranger	81
Intercoastal—Ellijay	90
Intercoastal—Chatsworth	100
Dalton	109
Atlanta Gas—Ringgold	120
Chattanooga	126

On the basis of the foregoing the Examiner concludes the rates applicable to the sales proposed to be made by Transco to Intercoastal, Dalton, Atlanta Gas at Ringgold, and Chattanooga are its Zone 2 rate schedules. Since the proposed sales by Transco to Chattanooga Gas are acceptable to the latter company for its stated market requirements only if Transco's Zone 1 rates are in effect, there is no demonstration by Transco of a market in Tennessee.

In summary, the Transco application with the exception of the 15,000 Mcf per day presently being delivered to Atlanta Gas must be denied. First, because construction of the proposed lateral from Monroe to Chattanooga with the resulting sales in the north Georgia area at Zone 1 rates would discriminate against existing customers and secondly, because the record discloses no evidence of a market for such sales at Zone 2 rates.

The Southern Application

Southern's application in Docket No. CP64-314, seeks authorization to construct and operate facilities to enable it to increase system capacity by 180,000 Mcf per day to a total of 1,711,000 Mcf, of which 32,145 Mcf will be excess capacity in the third year of operation. The facilities proposed to be constructed include (1) 27,660 horsepower of additional compression at new or existing stations on the South Louisiana Supply System required for the transportation of the additional volumes of sales to be made; (2) six new compressor stations on Southern's south line having a total rating of 62,900 horsepower; (3) 3,210 horsepower of additional compression at existing stations on Southern's north line; (4) 35.0 miles of 14-inch loop on the Macon-Atlanta line; (5) a proposed North Atlanta lateral line consisting of 45.5 miles of 16-inch line, and (6) the Chattanooga line which includes one new 1,100 horsepower compressor station, 49.2 miles of 14-inch loop line extending from the takeoff point on the north line to the vicinity of Rome, Georgia, and 62.8 miles of 12¾-inch line reaching from Rome to the Georgia-Tennessee border in the vicinity of Chattanooga.

Southern's application in Docket No. CP64-259, with the exception of a small additional allocation to Dalton amounting to some 1,450 Mcf per day, is not in controversy.

The applications in Docket Nos. CP64-259 and CP64-314, as previously mentioned, are designed to increase Southern's system capacity by 16,000 and 180,000 Mcf per day, respectively. Such increased capacity will supply the forecast 1967-1968 firm requirements of present and proposed customers and, in addition, provide excess capacity of 32,145 Mcf per day. The market requirements were fully supported except as to the requirements of Atlanta Gas from the proposed North Atlanta line. No question was raised as to the market requirements of Southern's customers who are in a non-competitive position as between Transco and Southern, while the needs of the competitive market, exclusive of Atlanta Gas' Atlanta area which has heretofore been decided, have been relied upon by both Transco and Southern.

Intercoastal, an intervener in these proceedings, did not file an application for delivery of gas by Southern and the route of Southern's proposed Chattanooga line does not pass in the immediate vicinity of the towns in which Intercoastal proposes to distribute gas. Intercoastal prefers and has executed a contract to purchase gas from Transco, but is willing to buy its needs from Southern provided the latter is authorized to build a line to Chattanooga.

Satisfactory evidence was presented by Intercoastal as to the markets it proposes to serve, as to feasibility, and its ability to finance its project.[5] The evidence clearly shows that the five communities to be served will benefit by the introduction of gas service and such service should be authorized if not inconsistent with the interests of other segments of the public. The Staff, however, recommends that gas service to Intercoastal be denied because "there is no application or petition seeking an allocation of gas from Southern by Intercoastal pending before the Examiner in the instant proceeding." Intercoastal's reply brief argues that the matter of service from Southern has been present in the proceeding since the inception of Southern's formal participation. The Examiner agrees.

There is no doubt that, under the circumstances presented here, the Commission can, by appropriate condition, require Southern to supply Intercoastal. Section 7(e) of the Natural Gas Act; *Natural Gas Pipeline Company of America*, 17 FPC 85, 87; *Houston Texas Gas and Oil Corp.*, 17 FPC 303, 309; *Northern Natural Gas Company*, 11 FPC 174, 187.

Southern's President, Mr. C. P. Rather, testified that Southern would accept such a condition and another Southern witness[6] presented, as an exhibit, a map (Exhibit 118) showing the required service could be provided by a line taking off from Southern's proposed Chattanooga line near Dalton and running Southeasterly to Chatsworth, Ranger and Fairmont. The cost of the required facilities is estimated to be approximately $600,000. The proposed line would be 30 plus miles long and would consist of 4½ inch, 3½ inch and 2⅜ inch pipe and would have a delivery capacity substantially in excess of third-year firm peak day requirements of 2,613 Mcf. Although Intercoastal would prefer that the line be of larger capacity, the record shows the projected sizes to be ample.

Transco objects to service to Intercoastal by Southern, contending the operation of the connecting line to be uneconomical. Southern admits this to be a fact but takes the position that the Intercoastal facilities must be considered as an integral part of Southern's entire project and, as such, will have little effect on the total economics involved. Southern's Exhibit 35, page 11, and Exhibit 55, Schedule 13, page 1, demonstrate the effect of including the Intercoastal line with the Docket No. CP64–314 facilities would reduce the rate of return for the the entire system gas operations by approximately 0.02 of one percent and rate of return attributable to the proposed facilities by 0.3 of one percent. Service to Intercoastal will, therefore, not impose an undue burden on Southern's other customers.

In this respect the Commission stated in *Southern Natural Gas Company, et al.* (Docket No. CP63–26, *et al.*), 31 FPC 789, 796, as follows:

---

[5] The Georgia Public Service Commission found Intercoastal's project feasible and in the public interest.

[6] William T. Ivey, Chief Statistician and Planning Engineer.

> We do not believe that it is the function of this Commission to bar a pipeline under our jurisdiction from extending natural gas service, and the benefits to be derived therefrom, to an area not presently being served solely on the ground that the revenues expected to be produced by the third year of operation may not quite measure up to the return the Commission has allowed on the existing system operations. Rather, the extension of branch lines for the purpose of filling in existing service areas is to be encouraged wherever and whenever possible, provided that no undue burden is placed on the existing customers. Construction of new facilities of the type herein applied for may, for a time, somewhat reduce the overall systemwide rate of return.

Also, there is little more justification for considering service to Intercoastal separately from the rest of the project than there is to require service to Dalton or Atlanta Gas at Ringgold be shown separately as economically feasible. The primary means by which all of the services in the area, including Intercoastal, are to be rendered is through the medium of a single lateral extending from Rome to Chattanooga; the smaller diameter pipe which will bring gas to the five towns in Appalachia that Intercoastal proposes to serve is not of controlling importance since the cost is only $600,000 as compared with $2,871,400, the cost of the proposed line from Rome to Chattanooga. Since Southern has stated the proposed method of serving Intercoastal is the most economical, it must be assumed that a change in Southern's design in order to extend its Rome to Chattanooga line to the east along the route proposed to be traversed by Transco is more costly and will produce no additional revenues.

The Examiner concludes that it is proper to view the facilities required to serve Intercoastal as an integral part of the service which Southern proposes for Chattanooga and the northwest Georgia area and, therefore, public convenience and necessity dictates that Southern be required to extend the proffered service to Intercoastal.

Southern's agreement with Atlanta Gas to provide service from the North Atlanta line was made contingent upon Atlanta Gas being unable to purchase an additional 40,000 Mcf per day from Transco in the event of Transco's failure to receive a certificate in these proceedings. The Examiner has determined that Transco's application should be denied except to the extent of permanently certificating 15,000 Mcf per day as presently authorized by the Commission under the temporary certificate. Since the market evidence shows there is no need for greater contract demand quantities in the Atlanta area of Atlanta Gas than the aforementioned 15,000 Mcf per day, there is obviously no need to authorize the construction of the North Atlanta line.[7] Southern's contract demand quantities with Atlanta Gas for the Atlanta area consequently will remain in effect and it will not lose the 25,292 Mcf per day in sales which would have occurred had Transco been authorized to make the additional deliveries to Atlanta Gas of 40,000 Mcf per day.

The record also shows that if the North Atlanta line is not certificated it will be unnecessary for Southern to build 12.76 miles of the proposed 35 miles of 14-inch loop on its Macon-to-Atlanta line. Elimination of these two items will reduce Southern's projected investment by $3,168,241.

Transco raises two minor points concerning the facilities Southern proposes to construct. First, it claims that Southern's design of the northwest Georgia-

---

[7] In Southern's reply brief it asserts, "It was to prevent this situation (the reduction in contract demand by 25,292 Mcf per day) that Southern proposed to Atlanta Gas the construction of the North Atlanta line.*" (Footnote omitted.)

Chattanooga line will leave only 2,745 Mcf per day of excess saleable capacity if Intercoastal is to receive service. By contrast, Transco's proposal to serve the same area would provide excess capacity of 46,548 Mcf per day above third-year requirements of 43,385 Mcf per day "* * * thus permitting Transco to serve increased requirements beyond the third year without any additional investment cost."

The Examiner might agree with the first point if it was not for the fact that Transco admits in its brief that additional requirements above third-year estimates could be served through Southern's construction of additional facilities. On the other hand, it is not possible to read from the record that the market requirements of northwest Georgia will increase by more than 100 percent and justify the Transco proposal as a prudent investment.

The second point in the Transco brief is that while it has no direct interest in the question of excess capacity on Southern's system, it wishes to protect its position that such excess capacity should not be installed for the express purpose of making "overrun gas" available.

Mr. Ivey testified without contradiction that the facilities proposed in Docket No. CP64–314 will increase Southern's daily design delivery capacity by 180,000 Mcf and provide excess capacity of 32,145 Mcf per day. It would, therefore, be inconsistent with the best interest of Southern and its customers to preclude making sales of "overrun gas" during a period in which the excess capacity will gradually be transferred to firm customers as contract demand quantities. In *Southern Natural Gas Company, et al.*, Docket No. CP63–26, *et al.*, *supra*, the Commission, at page 793, stated:

> * * * In past Southern expansions the Commission has approved programs providing for first-year capacity well in excess of existing contract requirements and, most recently,[5] substantially in excess of its estimated third-year daily delivery obligations. In each instance the firm contract demand has built up within a short time to utilize almost the entire increased design capacity. A comparison of the average estimated increase of 36,341 Mcf in firm peak-day market requirements for 1963–64, 1964–65, and 1965–1966 with actual experience of Southern in the preceding 10-year period, where the firm contract daily delivery obligation increased at an average rate of 71,159 Mcf in each season, indicates little basis for concluding that any overbuilding of capacity will result from approval of the proposed addition to main line facilities.
>
> ---
>
> [5] *South Georgia Natural Gas Company, et al.*, Docket No. G–9892, *et al.*, Opinion No. 325, 22 FPC 211 (1959). The Commission there stated:
>
> > Southern's system in its design and operations differs from many other pipeline systems; over the years as Southern's pipeline has grown, the excess capacity on its system has varied from a substantial amount to very little, due perhaps to the disparate character of its system and operations, among other facts. The amount of excess capacity resulting from its present proposals [57,000 Mcf] appears to be reasonably within the range it has experienced in the past. This amount may reasonably be expected to decline as the company's operations continue. [22 FPC at p. 215.]

The Examiner's position here in allowing excess capacity to be built is entirely consistent with the position taken by him in *Natural Gas Pipeline Company of America*, Docket No. CP63–174, decision issued October 22, 1964, in which he found unallocated capacity of less than 1.2 percent of the Applicant's total transmission capacity does not appear to be unreasonable. (33 FPC 545 at 556.)

The following quotation from Opinion No. 379 is dispositive of the need for Southern's making "overrun gas" sales:

> Southern serves an area of the United States which does not experience prolonged periods of cold weather, and consequently has a high percentage

of sales or industrial use, either directly or through its resale customers, to balance its firm loads for domestic and commercial use. Approximately 50 percent of Southern's jurisdictional deliveries are for resale to industrial customers, with residential and commercial firm loads operating at about 30 percent annual load factor. Of its total system deliveries, approximately 25 percent is sold directly to industrial customers, the bulk of such sales being on an interruptible basis. Economic operations of Southern's system requires the maintenance of these industrial loads,[28] which have been built up on the basis of the rate patterns heretofore evolved through a series of rate settlements approved by the Commission.

---

[28] The importance of industrial sales to Southern's system operations is heightened by the fact that Southern has no available underground storage facilities. Southern must therefore either market its minimum commitments for purchased gas or pay for gas not taken. During the test year Southern's total volume of purchased gas exceeded its minimum take-or-pay requirements by only 2.3 percent. (*Southern Natural Gas Company,* Docket Nos. G–20509 and RP60–15, 29 FPC 323, 348–349.)

The foregoing constitutes a clear showing on the part of Southern of the adequacy of the facilities here proposed, excepting the North Atlanta line and associated loop facilities on the Macon-to-Atlanta line heretofore excluded.

Southern's Exhibit 55, Schedule 7, shows a 10.6 percent rate of return on the cost of the total facilities proposed to be constructed in these proceedings for the third year of operations while its Exhibit 57–B, Schedule 1, shows revenues in excess of the cost of service of $385,000 for the North Atlanta line, $402,000 for the Rome to Chattanooga line, and $1,271,000 for other sales or a total of $2,058,000.

Transco, East Tennessee and Staff object to one or more of the methods used by Southern in determining economic feasibility including: exaggerated revenues, improper income tax computations, understatement of purchased gas and produced gas costs, failure to attribute sufficient costs to the competitive services, etc., as set forth in briefs. Transco's Exhibit 139 and the testimony relating thereto are claimed to portray the adjusted revenues, cost of service and rate of return on rate base attributable to Southern's proposed facilities in Docket No. CP64–314, including Intercoastal, after making the adjustments to Southern's Exhibit No. 57–B deemed proper by Transco to conform to its concept of a proper cost of service. Transco shows a presumably correct rate of return of 6.91 percent on the proposed facilities.

While the Examiner does not agree with many of the adjustments made by Transco, it is an anti-climax to discuss these matters following the feasibility showing in the rebuttal case. It is true, of course, that Exhibit No. 140 of Transco does indicate a rate of return of but 5.48 percent on the Rome to Chattanooga line after making its adjustments to Southern's cost of service and it shows a revenue deficiency of $183,000, an amount that could hardly be claimed a burden upon the total company estimated third-year sales of some 463,000,000 Mcf. It must be noted that such deficiency was arrived at by a method of proration of costs among the several lines and in complete disregard of the actual facility costs properly attributed to the lines by Southern's witnesses. The Examiner believes that an incremental cost showing as required by Section 157.14(a)(16), (i) and (ii) of the Regulations under the Natural Gas Act relates solely to the *cost* of the proposed facilities rather than to some proposed allocation of such costs. As shown by Appendix A to Southern' reply brief, if the actual cost of lines were substituted in Transco's Exhibit No. 140 in place of the allocated costs, the return on the Rome to Chattanooga line would be 6.82 percent, or 0.32 percent greater than the rate of return used in the feasibility study.

In viewing the overall feasibility study, it is noted there is 32,145 Mcf per day of excess capacity proposed to be built into the system and that Southern has not assigned any revenues to such capacity in its feasibility studies. As noted, *supra*, the Commission has found that such excess capacity has normally been taken up by firm customers. Thus, it is entirely logical to anticipate that the past experience of Southern will be repeated and the excess capacity used to serve its customers before the end of the third-year period, making the project more economically beneficial to Southern and its customers than is shown by Southern's exhibits.

Finally, the Examiner takes notice of the Commission's Notice of Proposed Statement of Policy issued November 2, 1965, in Docket No. R-293, wherein it is stated:

> The Commission has considered these matters in light of its recent experience and has decided to adopt a policy of encouraging the established pipeline companies subject to its jurisdiction to plan their future expansions so as to provide reserve capacity in the order of one year's growth. The costs associated with such reserve capacity that has been certificated would be considered a prudent investment in any rate proceeding. We believe the construction and operating savings resulting from longer-range planning and other advantages previously mentioned would offset the small addition to the rate base.

The feasibility of Southern's proposals as heretofore adumbrated is, in the opinion of the Examiner, fully demonstrated.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including briefs and arguments of counsel, it is found and concluded in addition to all other findings and conclusions contained herein that:

(1) Southern, Transco, East Tennessee and Tennessee Gas are "natural-gas companies" within the meaning of the Natural Gas Act.

(2) The facilities which Southern proposes to construct and operate, as described in its applications in Docket Nos. CP64-259 and CP64-314, will be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission and the construction and operation of such facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The facilities referred to in paragraph (2) are adequate and appropriate to render the services which Southern proposes, and which Southern is hereinafter authorized to provide.

(4) Southern is able and willing properly to do the acts, to make the sales and to perform the services proposed by it in Docket Nos. CP64-259 and CP64-314, and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the facilities and the new sales of natural gas proposed by Southern in the aforesaid applications and as herein approved are required by the public convenience and necessity and certificates therefor shall be issued as hereinafter ordered and conditioned.

(6) The public convenience and necessity require (a) that the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the certificates hereinunder issued to Southern and to the exercise of the rights granted thereunder, and (b) that the time within which the facilities authorized by this order shall be constructed and placed in actual

operation shall be fixed at one year from the effective date of the final order herein.

(7) The application of Transco in Docket No. CP64–270 is denied except as to the increment of 15,000 Mcf per day being supplied to Atlanta Gas pursuant to the temporary certificate granted by the Commission on December 1, 1964.

(8) The application of East Tennessee in Docket No. CP65–66 is denied.

(9) The petition of Tennessee Gas in Docket No. CP64–165 is denied.

(10) Except for that portion of Southern's application in Docket No. CP64–314 dealing with the construction of the North Atlanta lateral, the service to be rendered therefrom, and the construction of the related portion of the proposed Macon to Atlanta loop, all of which are denied, the applications of Southern in Docket Nos. CP64–259 and CP64–314 are authorized subject to the conditions that (1) within 20 days of the Commission's final order herein, Southern shall file an acceptable executed service agreement with Chattanooga Gas binding the latter to an established third-year contract demand of not less than 29,000 Mcf per day and (2) an agreement executed by Chattanooga, and served upon East Tennessee guaranteeing to the latter, purchases by Chattanooga of a contract demand of not less than 31,500 Mcf per day at an annual load factor of 67 percent and (3) Southern will complete the necessary construction to render service to Intercoastal.

(11) The authorization herein granted to Southern and the conditions imposed thereon are necessary and required by the public convenience and necessity.

(12) The certification of Southern along with the necessary conditions imposed thereon will not result in any detriment, economic or otherwise, to East Tennessee or the East Tennessee Interveners.

(13) In view of the denial of authorization to construct any of the facilities proposed by Transco in its application in Docket No. CP64–270 and Southern's North Atlanta line in Docket No. CP64–314, all applicants or 7(a) interveners seeking service from said facilities, with the exception of Intercoastal, must be denied, namely: City of Buford, Docket Nos. CP65–11 and CP65–20; City of Sugar Hill, Docket Nos. CP65–10 and CP65–19 and the City of Austell, Docket No. CP65–74.

(14) The matter concerning the purchase of the 42-mile lateral by Southern from Dalton is not a proper issue in this proceeding and the latter's request for the imposition of a condition requiring the purchase of such line is rejected.

(15) Since the filed Southern tariffs apparently do not provide for deliveries within the State of Tennessee, the certificate authorized herein shall not be construed as permitting deliveries of natural gas to Chattanooga Gas within the boundaries of the State of Tennessee.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or upon its own motion, as provided by the Commission's Rules of Practice and Procedure that:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Southern Natural Gas Company to construct and operate the proposed facilities as hereinbefore approved and subject to the terms and conditions specifically attached thereto.

(B) A certificate of public convenience and necessity be and the same is hereby issued to Transcontinental Gas Pipe Line Corporation with respect to the 15,000 Mcf per day now being supplied to Atlanta Gas Light Company pursuant to a temporary certificate.

(C) The certificates issued to Southern and Transco shall be accepted in writing by a responsible official of the respective corporations, and the general terms and conditions set forth in paragraphs (a), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of such certificates, and to the exercise of the rights granted thereunder.

(D) East Tennessee Natural Gas Company shall file a partial requirement rate schedule, satisfactory to the Commission, not less than sixty days before the commencement of service by Southern Natural Gas Company to Chattanooga Gas Company, which schedule shall contain a contract demand of not less than 31,500 Mcf per day at an annual load factor of 67 percent.

AMES W. WILLIAMS,
Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CHAMPLIN PETROLEUM COMPANY, DOCKET NO. RI62-233, ET AL.[1]

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING NOTICES OF CHANGE, SEVERING AND TERMINATING PROCEEDINGS AND REQUIRING REFUNDS

(Issued June 10, 1966)

On April 12, 1966, Champlin Petroleum Company (Champlin) filed an offer of settlement pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, and consistent with the provisions of the Second and Seventh Amendments to the Statement of General Policy No. 61-1 (18 CFR 2.56).[2] The proposal involves proposed rate increases for seventeen sales of natural gas made by Champlin to natural gas pipeline companies in fields located in the states of Kansas, Oklahoma and Texas. Each of the proposed increased rates were suspended by order of the Commission, and placed in effect, subject to refund, after the statutory suspension period by Champlin filing a motion and appropriate refund assurance in accordance with Section 4 of the Natural Gas Act.

Champlin proposes to:

(1) Delete all periodic price increase provisions from the subject rate schedules.[3]

(2) Extend the term to April 12, 1971, of any contract involved herein which has a remaining term of less than five years from April 12, 1966.[4]

(3) Reduce rates in Texas Railroad Commission District Nos. 2, 4, and 6 to a settlement rate of 15.0¢ per Mcf. The sales in Kansas and Oklahoma

---

[1] The other dockets involved in Champlin's proposal are set forth in the appendix hereto.

[2] The 50% signatory interest of Socony Mobil Oil Company, Inc., in sales under Champlin's FPC Gas Rate Schedule No. 27, which is involved in Docket No. RI65-196, is not included in this settlement. Socony has filed a certificate application in Docket No. CI66-1037 and a rate schedule to cover its interest in this sale, as well as a motion to be made a respondent in Docket No. RI65-196. Action has not yet been taken on these filings.

[3] Favored-nation and other indeterminate rate provisions were previously deleted from these contracts in accordance with the Commission order issued June 27, 1960, in Docket No. G-9277, *et al.*, 23 FPC 861.

[4] This is applicable to Champlin's FPC Gas Rate Schedule Nos. 2, 9 and 53.

(Other) will continue at the currently effective 12.0¢ per Mcf rate with no reduction in rate.

(4) Reserve the right to file for any contractually authorized increases in tax reimbursement.

Approval of Champlin's offer of settlement will result in an estimated refund of monies collected subject to refund of $343,000, including interest, through February 28, 1966.

We believe that Champlin's settlement proposal is in the public interest and shall approve the same. However, we desire to make it clear that acceptance of Champlin's offer of settlement shall not be construed as approval of any future increased rate that may be filed in accordance with its reservation of the right to file increases to cover future tax increases, and is without prejudice to any findings or order of the Commission in any future proceeding involving Champlin's rates and rate schedules. Additionally, for all of the reasons set forth in *Humble Oil & Refining Company*, Docket No. G–9287, *et al.*, 32 FPC 49, we shall require Champlin to deposit the refund monies in a special escrow account or to commingle the retained refunds with its general assets pending future order of the Commission.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the offer of settlement filed with the Commission by Champlin on April 12, 1966, is consistent with the Second and Seventh Amendments to the Statement of General Policy No. 61–1, as amended, 18 CFR 2.56, and approval thereof as made effective and hereinafter ordered is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act.

The Commission orders:

(A) The offer of settlement filed with the Commission by Champlin on April 12, 1966, is approved in accordance with the provisions of this order.

(B) Champlin shall file, within 30 days from the date of issuance of this order, notices of change in rates under its FPC Gas Rate Schedules to reflect the settlement rates and executed contract amendments in accordance with the terms of its settlement proposal, as approved herein. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Champlin shall compute the difference between the rates collected subject to refund and the settlement rates for the sales for which it proposes to make refunds with applicable interest to February 28, 1966, and shall within 45 days from the date of issuance of this order submit a report to the Commission, with a copy to its jurisdictional pipeline purchasers, setting out the amount of refunds (showing separately the principal and applicable interest) the bases used for such determination, the period covered, and ten days thereafter shall submit to the Commission a copy of a letter from its jurisdictional pipeline purchasers agreeing to the correctness of such amounts.

(D) Champlin shall retain the amounts shown in the report required under paragraph (C) above, subject to further action of the Commission directing the disposition of those amounts.

(E) Champlin may deposit the retained refunds in a special escrow account, and shall tender for filing within 60 days of the date of issuance of this order an executed Escrow Agreement, conditioned as set out below, accompanied by a certificate showing service of a copy thereof upon its jurisdictional pipeline customers. Unless notified to the contrary by the Secretary within 30 days from the date of filing thereof, the Escrow Agreement shall be deemed to be satisfactory and to have been accepted for filing. The Escrow Agreement shall be entered into between Champlin and any bank or trust company used as a depository of funds of the United States Government and the Agreement shall be conditioned as follows:

(1) Champlin, the bank or trust company, and the successors and assigns of each, shall be held and formally bound unto the Federal Power Commission for the use and benefit of those entitled thereto, with respect to all amounts and the interest thereon deposited in the special escrow account, subject to such agreement, and such bank or trust company shall be bound to pay over to such person or persons as may be identified and designated by final order of the Commission and in such manner as may be therein specified, all or any portion of such deposits and the interest thereon.

(2) The bank or trust company may invest and reinvest such deposits in any short-term indebtedness of the United States or any agency thereof or in any form of obligation guaranteed by the United States which is, respectively, payable within 120 days as the said bank or trust company in the exercise of its sound discretion may select.

(3) Such bank or trust company shall be liable only for such interest as the invested funds described in paragraph (2) above will earn and no other interest may be collected from it.

(4) Such bank or trust company shall be entitled to such compensation as is fair, reasonable and customary for its services as such, which compensation shall be paid out of the escrow account to such bank or trust company. Said bank or trust company shall likewise be entitled to reimbursement for its reasonable expenses necessarily incurred in the administration of this escrow account, which reimbursement shall be paid out of the escrow account.

(5) Such bank or trust company shall report to the Secretary quarterly, certifying the amount deposited in the bank or trust company for the quarterly period.

(F) If Champlin elects to commingle the retained refunds with its general assets and use them for business purposes, it shall notify the Secretary of the Commission of its intention so to do within sixty days of the issuance of this order, and shall pay interest on such monies at the rate of 5½% per annum from the date of issuance of this order to the date on which they are paid over to the person or persons ultimately determined to be entitled thereto by final order or orders of the Commission.

(G) Upon notification by the Secretary of the Commission that Champlin has complied with the terms and conditions of this order, the settlement rates set forth in the Appendix shall be effective as of the date of issuance of this order; the proceedings in Docket Nos. RI62-233 (only insofar as RI62-233 pertains to Rate Schedule No. 42), RI62-242 RI63-206, RI63-214, RI64-200, RI64-375 (only insofar as RI64-375 pertains to Rate Schedule Nos. 4, 17, and 21), RI65-196 (except for the 50% interest of Socony Mobil Oil Company, Inc. as covered under Champlin's Rate Schedule No. 27), RI65-197 and RI65-198 shall terminate; Docket Nos. RI64-375, RI65-196 (except for the 50% interest of Socony Mobil Oil Company, Inc. as covered under Champlin's Rate Schedule No. 27) and RI65-198 shall be severed from the Area Rate Proceeding, Docket No. AR64-2; and Docket Nos. RI62-242, RI62-233 and RI63-214 shall be severed from the Area Rate Proceeding, Docket No. AR64-1, all without further order of the Commission.

(H) The acceptance by the Commission of Champlin's offer of settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Champlin and is without prejudice to claims or contentions which may be made by Champlin, the Commission staff, or any affected party hereto, in any proceedings.

GEORGIA POWER COMPANY, DOCKET NOS. E-7099 AND E-7193

ORDER EXTENDING TIME FOR FILING RATE SUPPLEMENTS IN COMPLIANCE WITH COMMISSION OPINION NO. 487

(Issued June 10, 1966)

By paragraph (A) of Opinion No. 487 in this docket, issued March 30, 1966, 35 FPC 436, the Commission ordered Georgia Power Company, Atlanta, Georgia, to file within 75 days (by June 13, 1966) rate schedule supplements to its rate schedules for resale service to each of its 50 wholesale municipal customers consistent with the Commission's findings and order in the Opinion. By amendment filed May 9, 1966, to an Application for Rehearing filed April 28, 1966, Georgia Power requested a Stay of the Commission's order pending court appeal. On May 26, 1966, Opinion No. 487-A, 35 FPC 818, the Commission denied the Application for Rehearing and the Motion for Stay.

On June 9, 1966, Georgia Power filed a Motion For Interim Stay in the Court of Appeals for the Fifth Circuit. The Commission finds that it is appropriate to carry out the purposes of the Federal Power Act to extend the time for filing of the rate schedule supplements ordered in paragraph (A) of Opinion No. 487 to and including June 28, 1966, solely in order to afford time for the Commission and other parties to respond to Georgia Power's motion for stay and for the Court to hear oral argument on the motion if it so desires.

The Commission orders:

The time for filing rate schedule supplements by Georgia Power Company in compliance with the Commission's Opinion No. 487 is extended to and including June 28, 1966.

CHARLES L. REED, LOUIS FABIAN, ET AL., DOCKET NO. CI66-16

ORDER ADOPTING PRESIDING EXAMINER'S INITIAL DECISION

(Issued June 10, 1966)*

Syllabus

In a proceeding under Section 7(b) of the Natural Gas Act, Commission *allows* producers to abandon intermediate sale to middleman where producer has built own lateral out to interstate pipeline purchaser and proposes to sell to latter direct, at no increase in cost to interstate purchaser or consumer.

John S. Bailey, Jr., for Charles L. Reed, Louis Fabian, *et al.*, a partnership.

H. R. Jackson, C. W. Jackson and *Herman S. Harvey, Jr.* for Penova Interests.

Agnes Mae Wilson for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

In this proceeding, the applicant Charles L. Reed, Louis Fabian, *et al.* has filed for permission under Section 7(b) of the Natural Gas Act to abandon the sale of gas from certain leases in Ritchie County, West Virginia, to a joint enterprise known as the Penova Interests. The Penova Interests now resell the gas to Consolidated Gas Supply Corporation, and Reed, Fabian, *et al.* now proposes to sell the gas directly to Consolidated at the guideline price.

---

*Initial decision appears on p. 955.

Presiding Examiner William L. Ellis granted the application for abandonment to become effective upon Reed, Fabian, *et al.* completing arrangements with Consolidated for the sale of gas, the issuance of the certificate by the Commission, and the commencement of delivery and service.

No exceptions have been filed to the examiner's initial decision by any party to these proceedings. The examiner's decision reviews the facts and reaches, in our opinion, a proper determination.

The Commission finds:

Upon consideration of the evidence of record in these proceedings, the briefs filed and the examiner's decision, we are of the opinion that the examiner's decision should be adopted as our own.

The Commission orders:

The initial decision of the presiding examiner issued herein on May 2, 1966, is hereby adopted and such decision shall become effective as the decision of the Commission as of the date of issuance of this order.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON A PRODUCER'S APPLICATION TO ABANDON A SALE

(Issued May 2, 1966)

ELLIS, *Presiding Examiner:*

I

NATURE OF THE CASE

An independent producer of natural gas in West Virginia asks the Commission's permission under the Natural Gas Act to "abandon" (*i.e.*, to cease) his sale of gas to an intermediate gatherer or transporter in order that the producer can sell at a higher price to the interstate pipeline which now buys the gas from the intermediate. The latter's protest now has been withdrawn.

II

PROCEDURAL RECORD

The producer's application was filed in July of 1965 and promptly was made the subject of a public notice by the Federal Power Commission. When the intermediate buyer filed a letter of protest, the Commission set the case for hearing by order of December 6, 1965, which took place on March 1, 1966. The final date for briefing was April 25, by which time the only brief filed was an initial one on behalf of the producer who wants the Commission's permission to abandon. Instead of a brief, the intermediate buyer filed the following letter of withdrawal of his protest and opposition:

> This is to advise you that Penova Interests hereby withdraws its opposition to the formal request made by Louis Fabian for approved cancellation of his contract with Penova in the above-captioned matter.
>
> Our decision to withdraw from this case is based upon circumstances which preclude Penova from undertaking the time and expense necessary to making an effective presentation of our position in opposition to the requested cancellation.

In doing so, however, we wish to extend our very deep appreciation to you for the cooperation and courtesy tendered to us and to our counsel, Mr. Harvey.

We trust this letter will suffice for the purpose of our withdrawal and would appreciate your acknowledgment of it as such.

III

LEGAL QUESTION

The withdrawal of the buyer's protest eliminates much of the problem of the case, but the producer's obligation to continue service remains, by operation of the Natural Gas Act, until there issues the Commission order requested. Under Section 7(b), 15 U.S.C. 717 f(b), such an order requires a finding either that the gas supply is depleted (not here involved) or else "that the present or future public convenience or necessity permit such abandonment." (Note the statutory finding is not quite like the similar one needed for the original certification of a proposed sale of gas, under Section 7(e), where, for such a license, the Commission must find that the sale will be "required" [not permitted] by the public convenience "and" [not or] necessity.)

Accordingly, while it is not herein found that the public interest *requires* the action sought, it is found below that the abandonment requested will not militate against the public interest, under the circumstances and subject to the condition included in the order subjoined.

IV

PRODUCER DATA

The applicant here is a partnership described as "Louis Fabian, Charles L. Reed, John M. Lord, *et al.*" of Minneapolis. Four years ago this group succeeded to the oil and gas leases on the Mayme Golden or Golden acreage in Ritchie County, West Virginia, and took over the sale of gas being made therefrom under a 1952 contract between the Oxbow Oil and Gas Company, as producer, and the "Penova Interests" as the buyer. In the next year, 1963, the Fabian producers also signed with the same buyer a separate contract covering a part of the same acreage, and the producer's present application covers the delivery programs described in both contracts. Both sales contracts were for a year-to-year term, subject to cancellation 90 days before the end of any year, and both were "canceled", or rather terminated, in writing in November 1964, to be effective March 1, 1965. However, the actual delivery and sale have continued to date, not under the contract but in the light of the continued service obligation imposed by Section 7 of the Natural Gas Act.

The Messrs. Fabian, *et al.*, sell for 19 cents per Mcf, in an area where the Commission's guideline rate or ceiling applicable is 25 cents (FPC Regulations, Section 2.56). Twenty-five cents is the "going" rate paid by the largest pipeline buyer, the Consolidated Gas Supply Corporation, for gas brought out to their lines, and that is the rate which the Fabians' buyer (Penova Interests) receives from Consolidated. Hence the contest here is, or was, whether the intermediate buyer should continue to receive the 6-cent margin between 19 cents and 25 cents, or whether the producer should earn and receive the full amount himself.

The amount in issue is not large because the five wells now on the lease produce only 16,069 Mcf per year (T15), so the Fabians' gross sale is $3,053 and Penova's resale price is about $4,000, and the net question is whether the Fabians should continue to sell to Penova for a little over $3,000 per year or should be permitted to abandon the sale in order that they can qualify for and effect a sale to Consolidated for about $4,000.

Apparently unaware of the incidence of the Federal law, the Fabians, after serving notice of the termination of their sales contract, proceeded to construct a pipeline for the one and one-eighth mile distance out to the Consolidated Gas Supply Corporation line, at a cost of $6,285 for a two-inch line (T63). It was built in anticipation of the present sale termination and of a new sale direct to Consolidated. It then came to attention that an order such as here applied for would first be necessary. Indeed, it seems then to have been learned for the first time that the producer needs a certificate of public convenience and necessity to make his sale in interstate commerce, but no such certificate has yet been applied for or issued to the producers. (This hiatus does not debar consideration of their abandonment petition, *J. M. Huber Corp.* v. *F.P.C.*, 236 F. 2d 550 (CA3–1956).

At first, there was some talk that economic necessity moves the producer to seek this relief, because the return on the investment is not a reasonable one and it amounts to an undue economic hardship. It turns out they do not mean it is a loss operation, and it was noted further that the producer has not chosen to file and collect an increased price, though free to do so for over a year now, subject of course to suspension here and establishment of its fairness. *United Gas Pipe Line Company* v. *Memphis Light, Gas and Water Division*, 358 U.S. 103, 112; *Sunray Mid-Continent Oil Company* v. *F.P.C.*, 364 U.S. 137, 155 (1960). In that circumstance, and with such a limited ground asserted for relief, further inquiry into the actual cost of service was cut off at the hearing. *Pacific Northwest Pipeline Corp.* (1959), 22 FPC 1091, affirmed, *California* v. *F.P.C.*, 296 F. 2d 348 (CADC–1961), rev. on other grounds, 369 U.S. 482 (1962).

As a matter of fact, the more pertinent representation by the producer was that the lease has a number of drilling sites available, at least ten, and their development is not an attractive prospect at 19 cents but would be promising at 25 cents. Upon this potential of production for the public and consumer benefit, the affirmative case rests. (Brief, page 7).

V

INTERMEDIATE BUYER DATA

The buyer from the Fabians is a joint enterprise run by four trustees, under the cognomen, "Penova Interests". They operate a 90-mile transmission or perhaps gathering system of two- to four-inch lines, which brings the gas from the well of 61 producers and from some of their own, all of which they sell at five delivery points to the Consolidated Gas Supply Corporation. Their certificate issued in 1955, 14 FPC 1210, and their flat 25-cent sales rate (FPC Rate Schedule No. 1) is not so much what they elect to charge but what Consolidated elects to pay. The Fabian production amounts to a little over three percent of Penova's total business. Penova has been in this sort of business since 1926; their lines have long since been paid for and are 85 percent written off.

In their written protests and at the hearing, Penova raised the defense that their six-cent margin is little enough, all things considered, and the loss of even one account is naturally unwelcome. Their real apprehension was much broader—as word of this case gets around, their other substantial producers, such as those who furnish Penova as much as 100 Mcf per day, may seek to emulate the Fabians and build to the Consolidated pipeline on their own. This invidious trend might make Penova's remaining volume so much lower as to endanger and make infeasible their entire operation, with the fell result that the larger number of very small operators would be left with their modest wells and no market at all, a consummation unattractive to them as well as to the consuming public (but one not unknown to Appalachia, see *Medina Gathering Corp.*, 30 FPC 227, 244).

The defense so drawn would plainly be relevant and at least entitled to be weighed, but it fell apart for entire lack of proof or even of data from which such inferences could be drawn. Every opportunity was afforded—the Penova trustees appearing in *propria persona*—for evidence to be collected and submitted after the hearing. Instead, there arrived the quoted letter of April 1, which appears to withdraw the defense and the protest, if not the aggrievement of adversity. For the result is the abandonment will shift this much of the margin or price differential from the buyer to the producer; what further consequence this may bring cannot be foretold from this record.

VI

PIPELINE DATA

All of the gas production here involved is resold by Penova to the Consolidated Gas Supply Corporation (formerly Hope Natural), whose service includes a considerable proportion of sales in interstate commerce, see *Hope Natural Gas Company* v. *F.P.C.*, 320 U.S. 591. None of the parties seemed to be able to advise the forum as to the interstate or intrastate destination of the Fabian gas, and the certificate issued some years ago to Penova for their sale to *Hope*, 14 FPC 1210, is not very probative because it was issued on an application of September 27, 1954, which was made under protest and in challenge of the jurisdiction of FPC. However, from the record of another and recent case pertaining to the Consolidated system,[1] it was ascertained and stipulated at the hearing that the gas taken into the Consolidated line in this county in West Virginia is indeed conveyed and sold interstate, which establishes the question of Federal jurisdiction.

Consolidated is the dominant buyer in the region, and the applicant here testified that Consolidated has confirmed to him that they stand ready to buy his gas as soon as the permit so to do issues from the Federal Power Commission. The producer already has laid his line out to the Consolidated pipeline, and it is Mr. Fabian's representation that as soon as the abandonment order here issues he will seek permission to sell the gas to Hope (Consolidated) directly (T43). In other words, it is not a case of an abandonment which will affect the ultimate consumers, who will continue to receive the same gas at the same cost, 25 cents, which is apparently the pipeline's standard price and is also the Commission's guideline ceiling.

VII

INTEREST OF THE PARTIES

The "public convenience or necessity" which may or may not *permit* an abandonment includes the interest of the immediate parties as well as that of the consumers and indeed of the public generally. So far as the applicant-producer is concerned, this interest is obvious since the direct sale to Consolidated will increase his revenues from roughly $3,000 to $4,000 per year even without additional drilling. This means it will take more than six years for this increment to recover the cost of the new line to Consolidated, which tends to confirm the understanding that additional drilling and possible increased sales are in prospect. The betterment to the Fabians means an equal detriment to Penova, but they were free to protect themselves by a longer term contract if thought necessary. Penova's lines were evidently built in reliance upon their use in this business, but they have now been paid for and practically all written off, hence no reason now remains to require the producer to continue to share his business with them and to continue to accept a lower price than other producers are collecting who sell direct to Consolidated, when the circumstances are such that the producer is able, as a practical matter, to avoid the intermediate sale to the middleman. The third party in the case is Consolidated Gas, which was not here and as to which no difference of consequence is perceived. (This is the converse of *Shrewsbury Municipal Light Department* v. *New England Power Co.*, 32 FPC 373.)

---

[1] *Hope Natural Gas Company*, 33 FPC 150, affirmed *sub nom. Cities of Canton, et al.* v. *F.P.C.*, 360 F. 2d 521 (CADC–1966).

VIII

THE PUBLIC INTEREST

In a similar matter, the Commission permitted a producer's sale to be abandoned since the supply was being replaced otherwise, and the pipeline would "receive no less gas because of the abandonment." *Northern Natural Gas Co.*, 22 FPC 164, 170 (1959). The entire presentation here was upon the basis that the producer wants his gas to continue to go to Consolidated, has already built the line to make that sale, and stands ready to begin as soon as he gets a contract from Consolidated and a certificate from FPC, the gas to continue to come in to Consolidated's lines at the same price as at present. In that circumstance, the public interest and "convenience or necessity" do not militate against the abandonment, assuming the new sale begins at the same time, and in that sense it is concluded that the public convenience or necessity permit the abandonment to take place. This conclusion is buttressed by the evidence or at least substantial indication that the abandonment and new sale will motivate, indeed energize additional drilling, which makes promising the prospect of delivery for public consumption of a possibly larger volume than at present.

Accordingly, it remains only to fashion the order in such a way as to authorize the abandonment but to make it effective at the moment when, but only when, the new sale begins so that there will be no actual interruption of service.

FINDINGS AND ORDER

Based upon the record herein and the other materials noted above, it is hereby found and determined that the Fabian, *et al.*, partnership comprises a natural-gas company, whose sale of natural gas in interstate commerce for resale is subject to the jurisdiction of the Commission and is subject to both the certificate and the abandonment provisions of Section 7 of the Natural Gas Act; further, it is found that the abandonment of that sale, pursuant to the condition outlined below, is permitted by the public convenience or necessity.

ACCORDINGLY, SUBJECT TO REVIEW BY THE COMMISSION, *It is ordered*, That—

(A) Subject to (B) below, the partnership of Louis Fabian, Charles L. Reed, John M. Lord, and Others is hereby authorized to abandon and cease their sale of natural gas from the Mayme Golden lease in Ritchie County, West Virginia, to the Penova Interests, as described in the application filed in Docket CI66-16 and as set forth above, and to abandon any facilities used to make that sale.

(B) This order and permit become effective when and only when there

(1) the producer's completion of arrangements with the Consolidated Gas Supply Corporation for the sale of the same quantity of gas to Consolidated; Consolidated;

(2) the issue by Federal Power Commission, upon application to be filed by the Fabians, of a certificate of public convenience and necessity authorizing such a sale and the construction and operation of any facilities necessary to deliver the gas to Consolidated and effect the sale; and

(3) the actual commencement of delivery and service under that sale.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

DECLARATORY ORDER WITH RESPECT TO PROPOSED ADJUSTMENTS IN QUALITY STATEMENTS

(Issued June 13, 1966)

As provided in paragraph (F)(1) of Opinion No. 468, as amended, the producers listed in Appendices B, C and D have submitted quality statements reflecting the quality of gas under rate schedules pertaining to sales of gas in the Permian Basin Area and the price adjustments they have agreed to with their pipeline purchasers where the gas deviates from pipeline quality. The time period for filing these quality statements was extended to March 21, 1966, by the Tenth Circuit in its stay order issued January 20, 1966, in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*) A similar extension was granted by the Commission to any producer which had not obtained a court stay by order issued February 11, 1966, 35 FPC 211. The Commission by order issued April 29, 1966, 35 FPC 639, also extended the time to June 30, 1966, for its consideration of those quality statements submitted prior to the date of issuance of that order which reflected agreement between the producer and purchaser.

Under Opinion Nos. 468 and 468-A 34 FPC 159, 1068 the burden of making the initial determination of the appropriate price adjustments for deviations from pipeline quality gas was placed upon the producers and pipeline purchasers, subject to Commission approval. It was made clear in Opinion No. 468-A that normally agreements between the seller and buyer as to the proper amount of the quality adjustment which reflected a good faith effort to approximate the costs would be accepted. It was also pointed out that average costs might be utilized where cost data was not readily available for individual contracts.

There is no need to discuss here the different methods utilized by the three major pipeline purchasers in Permian (El Paso, Northern Natural and Transwestern) in the determination of the proper adjustments for their respective purchases which have been agreed to by the producers. These methods and the resulting unit costs of each pipeline for treating, dehydration and compression are set forth in Appendix A.

We conclude after careful review that the various methods reflect a good faith effort to approximate the costs involved and represent practical solutions to the variety of problems encountered by the different parties. We shall therefore approve the use of these methods, with the single exception discussed below relating to Northern Natural's use of a 90% annual capacity factor.

The quality statements set forth in Appendix B will also be accepted. They reflect either the sale of pipeline quality gas or appropriate agreed upon price adjustments utilizing the methods described in Appendix A where the sale of gas deviates from pipeline quality.

In computing treating, dehydration and compression costs, El Paso obtained the unit costs by dividing the total computed cost by the full annual rated capacity (100% annual capacity factor) of its plants or facilities. Transwestern also used the full annual capacity in computing its treating and dehydration costs whereas Northern Natural used a 90% annual capacity factor.[1]

The use of a 100% capacity factor by El Paso and Transwestern reflects their determination not to impose upon producers selling gas to them the cost attributable to the reserve or peaking capacity of their facilities. Such an approach is justifiable, we think, because the reserve capacity is intended for use in connection with future purchases of gas and for meeting peak loads of consumers.

In view of our acceptance of the 100% capacity factor for sales to El Paso and Transwestern, we shall also permit Northern Natural to utilize a 100% capacity factor. While Northern Natural has reached agreement with some of its producers on a 90% capacity factor level, other producers are contending that the 100% figure should be utilized, and it is our understanding Northern Natural would be agreeable to applying the higher figure to all producers. Use of a 100% load factor by all purchasers in the area would not only be beneficial to the producers involved but would place Northern Natural in a more equitable and competitive position in the area with respect to purchases of new gas. The effect, moreover, on the producer sales covered in Appendix C would be to reduce Northern Natural's overall cost applicable to purchased gas by an estimated $70,000 annually.[2] In these circumstances we will permit the producers listed in Appendix C[3] to submit new quality statements reflecting such lower costs.

The quality statements listed in Appendix D are acceptable except for the proposed upward adjustments for gas delivered at pressures in excess of 500 psig or for Btu content between 1000 and 1050. These adjustments are proposed to offset downward adjustments. As we have previously indicated, such upward adjustments are not permissible under our Permian Opinion.[4] We shall therefore require the producers in Appendix D to submit new quality statements reflecting the same adjustments utilized in the present quality statements, except for the improper upward adjustments.

---

[1] The approximate actual average annual capacity factor for treating plants in 1964 was 75% for El Paso and in the 70–80% range for Transwestern. Northern's various facilities had actual annual capacity factors ranging from 40% to 86%.

[2] The cost differential between 90% and 100% capacity factor for those producer sales where the producer and Northern Natural have not been able to agree on the appropriate price adjustment is an estimated $270,000 annually. Of the total $340,000 estimated reduction in cost, only an estimated $240,000 will be effective at this time because the contract rates of certain producers are below the applicable area rate.

[3] Appendix C covers only those producers selling gas that deviates from pipeline quality to Northern Natural which submitted quality statements reflecting agreement as to the appropriate price adjustment.

[4] Order issued March 23, 1966, in Area Rate Proceeding, Docket No. AR61–1 (*Phillips Petroleum Company*, Docket No. G–20405, 35 FPC 411).

The Commission orders:

(A) The quality statements listed in Appendix B are accepted.

(B) The quality statements listed in Appendix C are accepted, but the producers listed in that appendix may submit a new quality statement for each sale covered there within 30 days of the date of issuance of this order reflecting the treating, dehydration and compression costs of Northern Natural computed on the basis of a 100% capacity factor. Such quality statements shall comply with the requirements of paragraph (F)(1) of Opinion No. 468, as amended.

(C) The quality statements listed in Appendix D are accepted, except insofar as upward adjustments are proposed for gas delivered at pressures in excess of 500 psig or for Btu content between 1000 and 1050. The quality statements insofar as they propose such upward adjustments are rejected.

(D) The producers listed in Appendix D shall submit within 30 days of the date of issuance of this order a new quality statement for each sale covered there reflecting the same adjustments utilized in the present quality statement, except for the rejected upward adjustments described in paragraph (C) above. Such quality statements shall comply with the requirements of paragraph (F)(1) of Opinion No. 468, as amended.

(E) Any producer filing a new quality statement as provided in paragraphs (B) and (D) above shall also file a new refund report within 45 days of the date of issuance of this order to reflect any changes that may be necessary if the sale relating to such new quality statement is involved in a Section 4(e) suspension proceeding consolidated in Opinion No. 468. Such refund report shall comply with the provisions of paragraph (I) of Opinion No. 468.

Commissioner O'Connor noted his prior dissent to the treatment of the 50-Btu "gap" here, and re-emphasized the possibility, as he previously noted, of further adjustments in quality statements should revenue requirements equating to costs necessitate this; therefore, he would take no action on this matter pending judicial review and further analysis of the cost impact.

APPENDIX A

Table of treating, dehydration and compression charges

[1] Combined with CO_2 removal.

APPENDIX A—PART I

El Paso's Method of Costing for Quality and Delivery Pressure Deficiencies

Treating Cost for Sour Gas

El Paso prepared one cost of service for treating acid gas (gas containing H_2S and CO_2) based upon the combined costs of ten of its plants in the Permian Basin Area where the CO_2 content of the gas being processed was less than 3% (the allowable CO_2 content specified in Opinion No. 468). It also prepared separate costs of service for treating for each of three other plants in the Permian Basin where the CO_2 content exceeds the 3% allowed by Opinion 468.

The average plant investment used for determination of treating costs for the test year 1964 consisted of the functionalized investment for treating facilities as recorded in El Paso's books, plus some allocation of general plant. The average reserve for depreciation and depreciation expense were similarly determined. Working Capital included in the rate base was computed at 2% of Average Gross Plant Investment. Return on the rate base was computed at 6.125%, which was the rate of return allowed El Paso in settlement of its last rate case.

Operation and maintenance expenses and depreciation expense for the treating functions and field dehydration plants were taken directly from El Paso's records. Allocable Administrative and General expenses (A & G) were allocated on the basis of the ratio of: A & G labor to total labor; A & G Gas plant (excluding intangible and general plant) to total plant; and A & G functional operating expenses to total functional operating expenses.

Federal Income Tax was computed on the 48% corporate rate basis. Other taxes such as property taxes and franchise taxes were allocated on the basis of average gross plant investment. "Other revenues" were credited to the cost of service.

For two of the plants treating high CO_2 gas (content above 3% by volume) El Paso deducted the average treating costs above a 3% CO_2 content from all gas going into the plant containing CO_2 in excess of 3% CO_2 and no charges were made against gas having less than 3% CO_2.

Where dehydration is performed within the plant, the costs of dehydration were considered as part of acid gas treating costs and no separate costs or quality deductions for dehydration were made in these instances.

In order to obtain dehydration costs where dehydration is performed as a separate function, El Paso computed a cost of service for the year 1964 based on its dehydration plants in the Permian Basin Area. The same methods and rate of return used in computing the cost of service for treating were used in determining the cost of service for dehydration. Here again El Paso used the installed rated capacity of the facilities (use of a 100% annual capacity factor) to get a unit cost.

Compression Costs

To obtain a unit cost for compression, El Paso prepared a cost of service for 1964 based upon its field compression plants in the Permian Basin using the same methods and rate of return as was used in developing the treating costs.

The unit cost for compression was obtained by dividing the total costs by the average installed rated horsepower converted to brake horsepower hours available on an actual operating exeprience basis. The result was a unit cost per brake horsepower of 0.60¢.

Using a brake horsepower vs. delivery pressure curve for delivery pressures up to 500 psig, El Paso then computed delivery differentials from 50 to 500 lbs. on the basis of 25 lb. intervals and from 30 to 50 lbs. on 10 lb. intervals.

Method of Application of Deductive Charges for Quality and Delivery Pressure Deficiencies

Acid Gas Deductions (Sulphur and Carbon Dioxide)

For gas being processed through its Wasson and McElroy-Crane Plants, El Paso and the producers agreed to apply the unit cost of treating quality deficient acid gas as computed for each particular plant to the quality statement for the rate schedules involved.

For gas being processed through El Paso's complex of ten treating plants in the Permian Basin and its Terrell County Plant, deductive charges for sour gas and CO_2 gas computed on a basis of the average cost of treating 1% acid gas content, have been applied to the quality statements for the rate schedules involved on the basis of the degree of sourness (or CO_2 content in the case of the Terrell County Plant).

The standards announced in the Commission's Opinion were 10 grains of H_2S and 200 grains per Mcf of total sulphur and 3% carbon dioxide and unless the gas under a particular rate schedule exceeds one or the other of these standards, no deductive charges have been applied. El Paso and the producers have applied the deductions for sour gas on the basis of the total sulphur content having found that the relationship between H_2S content and total sulphur content were practically the same. However, if the total sulphur content exceeded 10 grains per Mcf but did not exceed 200 grains, a deductive charge was applied only if the H_2S content did exceed 10 grains.

The deductive charges were applied by first determining the sourness of the gas on the basis of the ratio of the measured grains of total sulphur content per Mcf to 6350 grains per Mcf of total sulphur content, the latter representing 1% sour gas by volume. Then the ratio was applied to the unit cost of treating the gas without accounting for shrinkage and fuel. The shrinkage and fuel charge was determined as a percentage of the area price or value of gas. Thus, a 1% sour gas would have a 1% by volume shrinkage. From the operation of the treating plants, the ratio of fuel volumes to shrinkage volumes was known (fuel is 69.43% of shrinkage volumes for El Paso's ten plant grouping). Accordingly, 1% sour gas would have a 1.69% fuel and shrinkage charge and this 1.69% factor was applied to the area base rate (16.5¢ for new gas, Texas and 14.5¢ for flowing gas, Texas) less the treating charge before fuel and shrinkage. If an upward Btu adjustment (above 1050) was applied to the gas, then no shrinkage charge was made but only a fuel charge was added since the Btu adjustment was applied on the basis of Btu content before treatment (but after liquid hydrocarbon removal) and the shrinkage is offset by the gain in Btu content.

Dehydration

El Paso's average unit cost of dehydration (0.10¢ per Mcf), was applied as a deductive charge to all gas containing more than 0.009 lbs. of water per Mcf if dehydration was performed and if it was performed separately from treating. There were some instances where gas contained more than 0.009 lbs. of water where dehydration was not performed because the gas was co-mingled with a stream that had a composite of less than 0.009 lbs. of water per Mcf.

Delivery Pressure

El Paso's computed costs of average system compression for 25 lb. intervals below the standard of 500 lbs. down to 50 lbs. with computed charge also for 40 and 30 lbs. were applied to the actual delivery pressure under each particular rate schedule. Generally, the charge was made for the nearest 25 lb. pressure interval but interpolation between intervals was used in some cases (usually for lower pressure such as 45 lbs.)

For gas delivered to El Paso at less than 500 lbs. but available at 500 lbs. or above, no deduction for delivery pressure was made in accordance with Opinion No. 468.

Btu Adjustment

In accordance with Opinion No. 468, an upward Btu price adjustment for gas having Btu content above 1050 was applied on the ratio of:

$$\frac{\text{actual Btu content of gas/cu. ft. above 1050}}{\text{1050 Btu}}$$

APPENDIX A—PART II

Transwestern's Method of Costing for Quality Deficiency Deductions

Transwestern determined its quality deduction charges on the basis of a cost of service for each of its treating plants and on the basis of the average of all its field (wellhead) dehydration facilities for dehydration service performed outside its plants. The cost of service computations were generally prepared consistent with the usual staff method of constructing a cost of service.

The rate base for each plant and for the field dehydration facilities consists of the 1964: (1) Average net investment in plant as recorded on Transwestern's books, (2) Average material and supplies, (3) 45 days (1/8) cash operating and maintenance expenses, (4) less the average of accrued Federal Income Taxes (44%), and (5) less a deduction for interest expense and amortization of debt discount expense available for income tax purposes but not properly chargeable for cost of service purposes (3.7% of plant). The return on rate base was computed on the basis of 6.67% which is the same as the rate of return used by Transwestern in the Gulf Pacific case and utilized by the staff in recent pipeline matters involving Transwestern.

Fuel costs included in the various cost of service computations were based on fuel consumption metered at the plant and valued at the base area rate without adjustment for deviations from the pipeline quality standards prescribed in Opinion Nos. 468 and 468-A.

Direct operating and maintenance expenses were 1964 costs, per books, plus some minor added costs to compensate for known changes in 1965 attributable to adjustments in the capacity of the plants which necessitated additional expenses for labor, chemicals or other related supplies. Indirect expenses allocated to operating and maintenance expenses consisted of expenses associated with the operation of the company's District V and Division II offices. These latter expenses were allocated on the ratio of their total to the total direct labor costs of each of the facilities served by those offices.

The depreciation expense provision for the year was based on a rate of 3.5% of the depreciable plant gross investment at January 1, 1965. Since the plants were constructed in late 1960 or 1961 the depreciation reserve runs around 12% to 14% at the beginning of 1965.

Expenses included as Administrative and General in each cost of service computation consist of direct charges for property insurance per books, and charges of 2% of total labor for injuries and damages and 9% of total labor for employee pensions and benefits.

Each cost of service computation includes a category identified as Taxes Other—which is comprised of Actual 1954 Ad Valorem Taxes (per books adjusted where appropriate for known additions to plant in 1965) and payroll taxes (FICA and unemployment) provided for on the basis of 3% of labor.

The Allowance for Federal Income Tax included in each cost of service was computed by starting with the return on rate base (6.67% of average net plant investment plus gross working capital, before tax accrual adjustment less 3.7% of gross plant in service January 1, 1965). (This represents a taxable income deduction for interest expense, amortization of debt and discounts available for tax purposes but not available for cost of service purposes). The figure thus determined, which represents taxable income after tax deductions, was then multiplied by 92.308% (48% corporate tax rate converted (49%÷52%=92.308%) to obtain the Federal Income Tax claimed).

Unit costs were determined for each plant and facility on the basis of the total computed costs divided by the design capacity (100% annual capacity factor) of the plant or facility. However, Transwestern advises that although during peaking periods some plants may run at 100% capacity for the year the average load factor would be between 70 and 80%.

Transwestern applied the derived unit cost of treating for a particular plant to the volumes of gas under a particular rate schedule going through such plant without regard to the degree of sourness of the gas. Transwestern had only one plant for removal of excessive carbon dioxide and the removal charge is computed on the full rated capacity volumes and applied under the one rate schedule involved. For gas having excessive water, Transwestern applied its average field dehydration charge of 0.2¢ per Mcf. No compression charges were needed or applied for Permian Basin sales to Transwestern.

APPENDIX A—PART III

Northern's Method of Costing for Quality and Delivery Pressures

Most all of Northern's plants and related facilities in the Permian Basin (Kermit Plant was built in late 1963 and 1964) were built in 1953 and therefore at the close of 1964 were about 45% depreciated. However, Northern, with the idea that the costs they were determining would pertain for some time, decided that for this purpose they would consider that their plants and facilities were 50% depreciated and computed their rate base and return on rate base on that premise. The average investment in material and supplies inventory for each facility plus an allocated portion of such items from area warehouses were included in their rate base determination. The portion of General Plant included in their rate base was determined by allocating total General Plant between all Permian Basin treating, dehydration and compression facilities and all its other system facilities on the basis of the ratio of such investment to plant investment and then further allocating the amount allocated to the Permian Basin facilities comprising the Permian Basin plant and facilities. To the composite investment, plus an allowance for 45 days (1/8) working capital Northern applied a rate of return of 6.5% which is the rate that has been used in rate and certificate matters involving Northern.

For its Federal Income Tax Allowance, Northern multiplied its computed return allowance less a deduction of 4.4% of 54 percent debt on plant, by 92.308% (48% corporate tax rate). (Return=52%, Taxes=48%, 48%÷52% =92.308%).

The operating expenses included in its computation of costs consisted of direct labor, supplies and expenses, fuel, Supervision and Administrative General expenses. Fuel charges, where applicable, were based upon metered volumes at the respective facilities priced at the average price Northern paid for gas at each respective facility in 1964 adjusted for deviations from Opinion Nos. 468 and 468-A quality standards. Supervision and Administrative and General expenses directly related to its Permian Basin facilities involved in treating cost determinations were selected by review and selection of those expense accounts which were applicable to such facilities and then allocating them on the basis of the ratios of such selected expenses to the direct labor expenses of the respective facilities. These supervision and A & G expenses represent part of district and home office expenses.

The current provision for depreciation was computed on the basis of 4 to 4½% of plant investment.

Taxes other than income taxes primarily consisted of ad valorem taxes for each facility recorded on Northern's books for 1964. Some taxes, minor in amount, were also included.

In determining its unit costs Northern divided its total computed cost for the respective facilities by 90% of the facilities design capacity.

Northern also advised that its costs were taken from their books as recorded for 1964 which was the latest complete year available at the time their determinations were made and that they made no attempt to normalize or include any items or allowance for 1965 changes.

Northern determined separate charges for treating sour gas, CO_2 removal, dehydration, or compression where more than one of these functions was performed in a facility.

As stated, Northern applied treating and compression costs in accordance with the percentage of volumes of gas under a particular rate schedule needing treating or compression. Thus, if 70% of the gas was sour, the plant unit cost of 0.58¢ for treating sour gas was reduced to 70% or 0.40¢ per Mcf. Dehydration costs were applied to the full stream volume, if the gas required dehydration.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65-49; UNITED FUEL GAS COMPANY, RP66-2; COLUMBIA GULF TRANSMISSION COMPANY, RP66-22

ORDER MODIFYING AND AFFIRMING ISSUANCE OF SUBPOENAS DUCES TECUM BY PRESIDING EXAMINER

(Issued June 13, 1966)*

The Presiding Examiner in these consolidated proceedings on May 8, 1966, issued subpoenas duces tecum to each of the three Respondents herein [1] and also issued subpoenas duces tecum to five of their affiliates in the Columbia Gas System.[2] The Examiner acted upon the application for issuance of the subpoenas filed by the Electric Company interveners [3] on February 1, 1966, as amended on April 8, 1966. The subpoenas direct Respondents and their five affiliates to produce books, records, studies, and data for inspection of the Electric Company interveners.[4]

These consolidated proceedings involve the proposed restructured tariffs filed by Seaboard and United Fuel and a rate investigation of Columbia Gulf's tariff. Although four of the five affiliated companies (excepting ServCorp) served with the subpoenas have also proposed restructured tariffs, the pending proceedings involving these proposals have not been consolidated for hearing herein.[5]

Upon motion of the Respondents on April 12, 1966, the Presiding Examiner granted a stay of issuance of the eight subpoenas pending their appeal to the Commission. On April 19, 1966, the Electric Companies filed a motion for oral argument of the appeal before the Commission, and Respondents on April 25, and May 5 filed answers in which they supported the request for oral argument.

In their original application for subpoenas duces tecum the Electric Companies requested there be made available to them thirteen items of data, computations, and studies, most of which were directed to all seven of the affiliated natural gas companies (only Item 12 was directed to ServCorp). Electric Companies state that the issues involved in these consolidated proceedings, to whch they contend the subpoenas are relevant and material, are: (1) the so-called "pooled gas supply" operations characteristic of the Columbia System is a factor significant to the rate proposals herein, making consideration of the operations of all seven affiliates essential to the proper cost allocations and rate designs of the three Respondents; (2) service discrimination in Seaboard's and United Fuel's offering of Winter Service volumes; and (3) possible rate discrimination between classes of jurisdictional customers.

---

*Rehearing denied by order issued July 29, 1966, 36 FPC 322.

[1] Atlantic Seaboard Corporation (Seaboard), United Fuel Gas Company (United Fuel), and Columbia Gulf Transmission Company (Columbia Gulf).

[2] The Manufacturers Light and Heat Company (Manufacturers), Home Gas Company (Home), Kentucky Gas Transmission Company (Kentucky Gas), The Ohio Fuel Gas Company (Ohio Fuel) and Columbia Gas System Service Corporation (ServCorp) are all interveners herein except Home and ServCorp. The latter has not been held to be a "natural-gas company" under the Natural Gas Act.

[3] Appalachian Power Company, Kentucky Power Company, Ohio Power Company and Wheeling Electric Company (Electric Companies).

[4] Appalachian Power Company was permitted to intervene in RP65-49 by order issued August 26, 1965, 34 FPC 593, application for reconsideration denied September 27, 1965, 34 FPC 970. All four Electric Companies were permitted to intervene in Docket No. RP66-2 by order issued January 27, 1966, 35 FPC 158.

[5] The Commission, by order issued January 27, 1966, 35 FPC 160, rejected Electric Companies' motion to consolidate the rate proceedings of the four affiliates.

In support of their inclusion of the "pooled gas supply" issue, the Electric Companies cite statements of witnesses and the Commission in prior proceedings. They also contend that they have found in the course of their inspection of Respondents' records various operational facts which indicate that the contract demands in the service agreements of United Fuel's customers may not reflect the actual operational situation. In support of the need for cost and operational data and studies backing up Respondents' *pro forma* 1966 revenue statements, Electric Companies assert that such data and material would provide the basis for ascertaining whether such revenues and the proposed rates are synchronized with the cost of service for such period.

The three Respondents and their affiliates filed their appeals of the issuance of the subpoenas on April 25, 1966, making two main points. They contend that the Presiding Examiner has erroneously found that all the data and material requested by Electric Companies have been shown to be relevant and material to the issues (pursuant to Section 1.23(a) of the Commission's Rules of Practice and Procedure) and are outside the scope of the hearings provided by Commission orders herein. The Respondents assert that since the Columbia System companies adopted contract demand rates, the practice of cutting back takes from United Fuel by its customers Manufacturers and Ohio Fuel has been discontinued except under force majeur conditions.[6] The Respondents further assert that much of the data and material are not available since large portions of the 13 items listed in the application for subpoena would require computations, compilations and studies which have not been made by them. The Electric Companies filed an answer to the appeals on May 5, 1966.

It appears that the Presiding Examiner issued the subpoenas after hearing oral argument on April 1, 1966, of substantially the same contentions presented in pleadings to us at this time. In addition to finding the requested data relevant and material, he ruled that Respondents and the four affiliates to whom the subpoenas are addressed are not required to make computations, compilations or studies, in the sense that if any of the data and material are not in existence at this time, the eight affiliates may not be compelled to produce such items applied for. In view of this ruling, the Electric Companies have successively withdrawn their requests for items wherever they have been shown that data and material were not available. According to Electric Companies' answer to the Respondents' appeal, filed May 5, 1966, they no longer expect ServCorp to produce "Item 12," "Columbia System daily dispatcher log sheets," the only item sought from ServCorp. Moreover, they have withdrawn their request for Item 13 as being non-existent, and for Items 1, 3 and 5 of the Application as having been previously provided by Respondents.

Upon our consideration of all the contentions of the Respondents, of their four affiliates, and of the Electric Companies, we cannot find that the Presiding Examiner erred when he found that the data and material requested, insofar as it is available and in existence without further computations or studies, are relevant and material to issues which may be raised by the parties in these consolidated proceedings. We furthermore, conclude that the subpoenas duces tecum issued by the Presiding Examiner, with the exception of the subpoena issue to ServCorp, should be affirmed and the Respondents' and their affiliates' appeals should be denied.

---

[6] In this connection, United Fuel on May 27, 1966, filed an agreement with Manufacturers providing for the latter to cut back its takes 50,000 Mcf per day for a 60-day period commencing May 16, to enable United Fuel to make up a storage deficiency, which agreement contemplates that both Manufacturers and Ohio Fuel will absorb the cut-back by increasing takes from their other suppliers. What the implications of this and Electric Companies' observations may be cannot be said to be irrelevant and immaterial to the consideration of the contract demands of United Fuel's customers or, as Electric Companies contend, the consideration of the Columbia System "pooled gas supply" as a factor in allocating costs and designing rates for the three Respondents.

The Commission orders:

(A) The subpoenas duces tecum issued by the Presiding Examiner on April 8, 1966, directing the three Respondents, Manufacturers, Home, Kentucky Gas, and Ohio Fuel to produce the data and material therein specified, are hereby affirmed.

(B) The subpoena duces tecum issued similarly to ServCorp is hereby rescinded.

(C) The Electric Companies' request for oral argument and the appeals of the Respondents and their affiliates are hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

BLACK MARLIN PIPELINE COMPANY, DOCKET NO. CP66-333

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On April 21, 1966, Black Marlin Pipeline Company (Applicant) filed in Docket No. CP66-333 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a pipeline extending from the Outer Continental Shelf in the Gulf of Mexico offshore of Texas Railroad Commission District No. 3 to points in the vicinity of Texas City, Texas, and the transportation of natural gas in interstate commerce, all as more fully set forth in the application.

Specifically, Applicant will construct and operate approximately 54 miles of 16-inch O.D. transmission pipeline extending from Federal Block 136 in the Gulf of Mexico to Texas City, Texas, and measuring and regulating facilities and appurtenances.

Applicant is a newly formed corporation which has been incorporated for the purpose of transporting natural gas which Union Carbide Corporation (Union Carbide) will purchase from Shell Oil Company's (Shell) interest in Federal Blocks 135, 136, 160 and 161 (known collectively as the Den Field) located in the Gulf of Mexico. Applicant will also transport gas from the Den Field for Phillips Petroleum Company (Phillips). Shell and Phillips are joint and equal owners of the Den Field, which is estimated to contain reserves in the amount of 405,000 Mcf (at 14.65 psia) in the portion of the field which is developed.

Applicant has entered into a General Gas Transportation Agreement with Union Carbide dated March 1, 1966. The agreement reserves a daily transmission capacity of 154,375 Mcf to Union Carbide. The Contract Quantity (minimum billing) is 123,500 Mcf per day. Natural gas purchased by Union Carbide from Shell is to be delivered to Black Marlin at the offshore metering station and redelivered by Black Marlin to Union Carbide at the latter's Texas City, Texas, plant.

The contract further provides that revenues obtained by Applicant for the transportation of natural gas for others, pursuant to a Limited Release of transportation space executed by Applicant and Union Carbide, are to be credited against Union Carbide's minimum bill obligations. To the extent that such released space is not used by others, the space remains available to Union Carbide.

A Limited Release arrangement has been entered into between Applicant and Union Carbide to permit Phillips to receive its share of production from the Den Field. Applicant states that Shell's sale of its production to Union Carbide has made it advisable for Phillips to arrange for separate disposition of its own share of the Den Field gas. This has been accomplished by the execution of the Limited Release by Union Carbide of a Contract Quantity and related Transportation Quantity to be made available by Applicant equivalent to the Daily Contract Quantity under the Shell Contract.

Applicant has entered into a Limited Gas Transportation Agreement with Phillips dated April 1, 1966. Applicant is obligated under the agreement to transport for Phillips volumes of natural gas from the Den Field up to the initial Transportation Quantity, to a point slightly downstream of Applicant's delivery point to Union Carbide, at Texas City.

After such transportation, Applicant will redeliver to Phillips the natural gas which will then be transported by an existing intrastate pipeline facility belonging to Pan American Gas Company (Pan American). Exemption of Pan American's intrastate transportation function is being granted concurrently herewith in Docket No. CP66–369, *infra*, p. 983, pursuant to Section 1(c) of the Natural Gas Act.

The transportation fee to be charged by Applicant to both Union Carbide and Phillips is 2.1 cents per Mcf. Applicant is also authorized under such agreement to retain any condensate removed from the gas stream by conventional lease separation after the gas enters its pipeline.

The volumes to be transported by Applicant pursuant to the above-described agreements are as follows:

	Mcf at 14.65 psia	
	Phillips	Union Carbide
Contract Quantity	55,600	67,900
Transportation Quantity	69,500	84,875

The estimated cost of the facilities to be constructed by Applicant is $6,500,000, which will be financed by $1,450,000, of equity funds supplied by stockholders and $5,050,000, from 12-year secured promissory notes.

Due notice of the filing of the application was published in the Federal Register on April 29, 1966 (31 F.R. 6518). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Black Marlin Pipeline Company, a Texas corporation with its principal place of business in Dallas, Texas, upon completion of the facilities and the commencement of operations proposed in the instant filing, will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation of the facilities and the transportation of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Black Marlin Pipeline Company, authorizing the construction and operation of the facilities and the transportation of natural gas as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and(f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(D) Applicant shall file copies of its transportation contracts with Union Carbide Corporation and with Phillips Petroleum Company pursuant to Section 154.52 of the Commission's Regulations under the Natural Gas Act, not less than 30 days nor more than 60 days prior to the commencement of the transportation service, as required in Section 154.22 of said Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLORADO INTERSTATE GAS COMPANY, DOCKET NOS. CP66-316 AND CP66-317, AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-318

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE SCHEDULE FOR FILING

(Issued June 13, 1966)

On April 6, 1966, Colorado Interstate Gas Company (Colorado Interstate) filed in Docket No. CP66-316 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities for the establishment of a new delivery point for sales of natural gas to Natural Gas Pipeline Company of America (Natural) and to increase the average daily contract quantity of firm deliveries to Natural, all as more fully set forth in the application.

Colorado Interstate seeks authorization for the following:

(1) to establish a new delivery point for sales to Natural under its Rate Schedule H-1 (to be revised) and to construct and operate the required measurement facilities,

(2) to increase the average daily contract quantity of firm deliveries to Natural under Rate Schedule F-1 from 134,000 Mcf of gas per day to 160,000 Mcf per day.

The proposed new delivery point in Docket No. CP66-316 for gas to be sold under revised Rate Schedule H-1 is in lieu of the one currently being used near Hooker, Oklahoma for deliveries under existing Rate Schedule H-1. Natural has advised Colorado Interstate its Hooker Compressor Station, which pumps both local production and the gas delivered by Colorado Interstate will soon be underpowered because of declining field pressures and that by diverting Colorado Interstate's gas to the new delivery point which is located on Natural's main transmission line, the need for additional compression facilities will be alleviated.

The total estimated cost of Colorado Interstate's proposed measuring facilities is $6,847, which will be financed from current working funds.

On April 6, 1966, Colorado Interstate filed in Docket No. CP66-317 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation and exchange of natural gas with Natural, all as more fully set forth in the application.

Colorado Interstate proposes in Docket No. CP66-316 to construct and operate the following facilities:

(1) a meter station and pipeline tap located at the point of interconnection of Applicant's 22-inch Mocane-to-Hooker pipeline with the main pipeline of Natural in Beaver County, Oklahoma;

(2) a meter station in Caddo County, Oklahoma, to be used to measure gas delivered by Natural to Public Service Company of Oklahoma (Public Service) for Colorado Interstate's account.

Colorado Interstate proposes in Docket No. CP66-317 to make a two-year direct sale to Public Service, which will use the gas for boiler fuel, primarily in the summer months, in its southwestern power plant near Anadarko, Oklahoma. Public Service has agreed to purchase a minimum volume of 1,500,000 Mcf and 2,500,000 Mcf in the first and second years, respectively. Colorado Interstate's maximum delivery obligation on any one day shall not be more than 15,000 Mcf in the first year and 30,000 Mcf in the second. All deliveries will be interrupted at Colorado Interstate's discretion.

Natural has agreed to deliver the volumes to Public Service for Colorado Interstate's account at the proposed interconnection in Caddo County. Colorado Interstate will reimburse Natural for the cost of installing the pipeline tap through which the deliveries will be made. Colorado Interstate further proposes to transport and deliver to Natural a volume of gas equal in thermal content to the volumes delivered by Natural to Public Service. This exchange gas is to be delivered through the proposed interconnection in Beaver County.

The total estimated cost of the facilities to be constructed by Colorado Interstate and the reimbursement by Colorado Interstate to Natural for the pipeline tap to be constructed by Natural in Caddo County is $41,870, which will be financed from current working funds on hand.

On April 6, 1966, Natural filed in Docket No. CP66-318 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the exchange of natural gas with Colorado Interstate, all as more fully set forth in the application.

Natural proposes in Docket No. CP66-318 to construct and operate a tap connection in Beaver County, Oklahoma on its Amarillo line at a point where Colorado Interstate's 22-inch Hooker line crosses Natural's Amarillo line, and to construct and operate a tap connection on its 26-inch Oklahoma extension pipeline in Caddo County, Oklahoma.

Natural states that in a precedent agreement dated February 3, 1966, Natural and Colorado Interstate have agreed, *inter alia*, that the delivery point for gas received by Natural from Colorado Interstate shall be changed from Natural's Hooker station to Natural's Amarillo line, and that Natural and Colorado Interstate will exchange natural gas, thus allowing Colorado Interstate to sell volumes of natural gas to Public Service. Natural further states that the parties have also agreed in said precedent agreement that Colorado Interstate's rate schedule H-1 shall be revised and that Natural will purchase increased quantities of gas from Colorado Interstate under that company's rate schedule F-1, said volumes to be delivered at existing delivery points.

Under the terms of an exchange agreement dated January 3, 1966, the parties have agreed that Natural will deliver up to 15,000 Mcf of gas per day to Public Service for Colorado Interstate's account during the first year of the proposed exchange and up to 30,000 Mcf per day during the remaining term of the agreement. Natural further states that volumes equal in thermal content to those which it delivers to Public Service will be delivered to Natural by Colorado Interstate in Beaver County, Oklahoma at the same delivery point in Beaver County, Oklahoma for which authority is requested by the instant application.

The total estimated cost of Natural's proposed construction in Docket No. CP66-318 is $16,900, which cost will be financed from funds on hand.

Colorado Interstate has filed concurrently Rate Schedule X-29 comprising Original Sheet Nos. 141 through 146 to its FPC Gas Tariff, Second Revised Volume No. 2, with its certificate application to cover the proposed exchange, and requests that it be made effective on the date certificate authorization is granted.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorizations, and upon consideration of the record,

The Commission finds:

(1) Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 7, 1958, in Docket No. G-9966 (20 FPC 694).

(3) The proposed construction and operation of facilities, transportation, exchange and sale of natural gas, as hereinbefore described and as more fully described in the applications and exhibits in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid proposed construction and operation of facilities, the transportation, exchange and sale of natural gas are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Colorado Interstate and Natural are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Colorado's and Natural's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) Certificates of public convenience and necessity are issued to Colorado Interstate and Natural authorizing the construction and operation of facilities, and the transportation, exchange and sale of natural gas as more fully described in the applications in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Colorado Interstate's and Natural's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation, exchange and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) Colorado Interstate's proposed Rate Schedule X–29 comprising Original Sheet Nos. 141 through 146 to its FPC Gas Tariff, Second Revised Volume No. 2 is accepted for filing effective on the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP66–297

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On March 21, 1966, Mountain Fuel Supply Company (Applicant) filed in Docket No. CP66–297 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 16.8 miles of 20-inch pipeline replacing an existing 8-inch pipeline between the Hiawatha and Powder Wash Fields in Moffat County, Colorado, all as more fully set forth in the application in this proceeding.

Specifically, Applicant will construct the proposed new line extending from the end of Applicant's existing 20-inch pipeline terminating in the Hiawatha Field eastward to the Powder Wash Field, together with appurtenant facilities. Because of a more direct route, the proposed new line will be approximately 0.4 of a mile shorter than the existing 8-inch line to be replaced.

Applicant states that the new facilities will remove the existing "bottle neck" between Powder Wash and Hiawatha and will enable Applicant to deplete the gas reserves in the fields east of Hiawatha ratably with the other reserves it owns or controls and, further, will increase the reliability of Applicant's peak day supply should a failure occur in other fields or other parts of its system. Applicant states further that the use of 20-inch pipe will enable Applicant to remove pipeline liquids by "on-stream ball cleaning" in one continuous operation from Powder Wash to the Nightingale Compressor Station.

The total estimated cost of the proposed facilities is $739,000, which cost will be financed out of funds on hand and from short term bank loans as may be required.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 15, 1940, in Docket No. G–154 (2 FPC 288).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the re-

quirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Mountain Fuel Supply Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PAN AMERICAN GAS COMPANY, DOCKET NO. CP66-369

DECLARATION OF EXEMPTION

(Issued June 13, 1966)

Pan American Gas Company (Applicant) filed an application on May 16, 1966, for exemption from the provisions of the Natural Gas Act, pursuant to Section 1(c) thereof, of natural gas facilities constituting its system in the State of Texas.

Applicant, a Delaware corporation with its principal place of business in Tulsa, Oklahoma, is engaged in the transportation and sale of natural gas in the State of Texas, from a transportation system located principally in Chambers, Harris and Galveston Counties, with separated segments in Matagorda, Brazoria and Jefferson Counties, Texas, connected with Valley Pipe Lines, Inc., and Lo-Vaca Gathering Company, respectively.

Applicant under an agreement dated March 30, 1966, with Phillips Petroleum Company (Phillips) will receive interstate natural gas from Phillips in the State of Texas (via Black Marlin Pipeline Company, Docket No. CP66-333, *supra*, p. 976) and will transport said natural gas through its principal system and will deliver equivalent volumes to Phillips at various points in the State of Texas.

All natural gas received by Applicant for transportation, and sale through its system is and will be consumed ultimately within the State of Texas, and all of its facilities so involved are located within said State.

The Railroad Commission of Texas has certified to the Federal Power Commission that it has regulatory jurisdiction over the rate and services and facilities of the Applicant and is exercising such jurisdiction.

Wherefore, the Commission declares, by reason of the foregoing:

> Pan American Gas Company is exempt from the provisions of the Natural Gas Act, and the orders, rules and regulations of the Commission issued thereunder.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PLACID OIL COMPANY, DOCKET NOS. G-13183, G-13184; J. R. FRANKEL, ET AL., G-13197; HASSIE HUNT TRUST, G-14109; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, RP65-31

ORDER REQUIRING REPORT OF INTENDED DISPOSITION OF REFUNDS AND REQUIRING RETENTION OF REFUNDS PENDING FURTHER ORDER

(Issued June 13, 1966)

By its order issued April 6, 1966, 35 FPC 477, the Commission prescribed the procedures to be followed by Transcontinental Gas Pipe Line Corporation (Transco), among others, in the disposition of certain refunds resulting from Commission Opinion Nos. 398 and 398-A, 30 FPC 283, 682. Since the issuance of the order of April 6, 1966, Transco has received refunds from other producers involved in these proceedings and it is appropriate that the same procedure be prescribed for those refunds.

The Commission orders:

Refunds which Transco has received and which it may hereafter receive from Placid Oil Company, Hassie Hunt Trust and J. R. Frankel, *et al.* pursuant to Commission Opinion Nos. 398 and 398-A shall be retained or distributed in the same manner as provided in paragraphs (C), (E), (F) and (H) of the Commission's order issued April 6, 1966 in Docket No. G-13183, *et al.*, with regard to refunds it received from The Superior Oil Company.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PLATEAU NATURAL GAS COMPANY, DOCKET NO. CP66-324

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On April 8, 1966, Plateau Natural Gas Company (Applicant) filed in Docket No. CP66-324 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Applicant will construct and operate the following additions and extensions to its interstate transmission system:

(1) 14 miles of 4-inch pipeline interconnecting its Coldwater and Wilcon irrigation systems,

(2) 12 miles of 6-inch pipeline interconnecting its Rehm and Sedan irrigation systems,

(3) 6 miles of 4-inch pipeline addition to the east end of its Wilcon irrigation system,

(4) 3½ miles of 4-inch pipeline extending its Coldwater irrigation system from Dallam County, Texas, into Cimarron County, Oklahoma, together with a meter station, to serve the east end of the distribution system of Felt Water Development Company, an existing resale customer of Applicant and

(5) 5 miles of 4-inch pipeline loop in Baca County, Colorado.

The five miles of 4-inch pipeline loop will be constructed on Applicant's existing Kansas-Colorado main pipeline in Baca County, Colorado, and provide a maximum of approximately 3,200 Mcf of gas per day of additional capacity. The other facilities will interconnect and extend Applicant's present irrigation system in Dallam County, Texas, and Cimarron County, Oklahoma. The irrigation facilities will be used to meet Applicant's increased market requirements as well as to provide irrigation service to new customers in Colorado, Texas and Oklahoma.

The 3½ miles of 4-inch pipeline and meter station in Cimarron County, Oklahoma, will provide an additional delivery point for sale for resale of natural gas on an interruptible basis to the Felt Water Development Company, an existing resale customer.

No change of rates is proposed. Applicant will continue its direct sale of natural gas for irrigation purposes at an average rate in the Panhandle Division of 35.091 cents per Mcf and in the Southern Division of 33.990 cents per Mcf.

Jurisdictional sales of natural gas will continue to be made under existing Rate Schedules I–1, GS–1 and IS–1 at rates of 23.5 cents per Mcf, 28.0 cents per Mcf and 21.5 cents per Mcf, respectively.

The total estimated cost of the facilities to be constructed by Applicant is $333,000, which will be financed from cash on hand and from the proceeds of short-term bank loans.

Due notice of the filing of the application was published in the Federal Register on April 22, 1966 (31 F.R. 6220). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Plateau Natural Gas Company, a Colorado corporation with its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued January 25, 1966, in Docket No. CP66–154 (35 FPC 153).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transporta-

tion of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Plateau Natural Gas Company, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

(D) Applicant shall make appropriate changes in its service agreements reflecting the herein proposed deliveries and delivery points.

(E) The certificate issued by paragraph (A) above is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ST. JOSEPH LIGHT & POWER COMPANY AND MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP66-338

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 13, 1966)

On April 27, 1966, St. Joseph Light & Power Company (Applicant) filed in Docket No. CP66-338 an application, supplemented on May 9, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order requiring Michigan Wisconsin Pipe Line Company (Respondent) to extend its gas transportation facilities, to make physical connection of its facilities with the facilities to be constructed by Applicant and to sell and deliver up to 700 Mcf of natural gas per day to Applicant for resale and distribution in Forest City and Oregon, Missouri, all as more fully set forth in the application.

Applicant states that approximately 13.5 miles of 4-inch lateral pipeline will be required, extending from a point on Respondent's existing transmission system near Bigelow, Missouri, in a southeasterly direction to a town border station at the northwest city limits of Forest City, Missouri. Approximately 2.3 miles of the proposed lateral pipeline will be constructed by Respondent pursuant to its "10-cent formula". Applicant will construct approximately 11.2 miles of the lateral pipeline, a regulating station, and the distribution systems in Forest City and Oregon, Missouri.

The estimated natural gas requirements for these communities during the initial three years of proposed operations are as follows:

	First year	Second year	Third year
Peak day (Mcf)	520	660	700
Annual (Mcf)	50,000	64,000	68,700

Respondent will render this service to Applicant pursuant to Respondent's FPC Rate Schedule SGS-1, which calls for a rate of 43 cents per Mcf during the first 30 months' development period and 44.6 cents per Mcf thereafter.

The estimated cost of the facilities to be constructed by Applicant is $386,800, which will be financed from internally generated funds.

Applicant was awarded franchises to provide natural gas service in Forest City and in Oregon by special elections held on November 23, 1965, in each city.

Applicant has also requested a certificate of convenience and necessity from the Missouri Public Service Commission. Consideration of that application will follow the issuance of this order.

On May 11, 1966, Respondent filed an answer to the application and stated that it has no objection to the proposal and will construct 2.3 miles of 4-inch lateral pursuant to its "10-cent formula", provided Respondent's application in Docket No. CP66-208 is first approved. A certificate of public convenience and necessity authorizing Respondent's proposed expansion was issued in Docket No. CP66-208 on May 24, 1966, 35 FPC 777.

Due notice of the filing of the application was published in the Federal Register on May 11, 1966 (31 F.R. 6925). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation with its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 30, 1946, in Docket No. G-669 (5 FPC 953).

(2) Applicant is a public utility company in the State of Missouri and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to extend its facilities, to establish a physical connection of its transmission system with the facilities to be constructed by Applicant and

to sell and deliver to Applicant up to 700 Mcf of natural gas per day for resale and distribution in Forest City and Oregon, Missouri, as hereinbefore described and as more fully described in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to extend its facilities, to establish a physical connection of its transmission system with the facilities to be constructed by Applicant and to sell and deliver to Applicant up to 700 Mcf of natural gas per day for resale and distribution in Forest City and Oregon, Missouri, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) The authorization granted by paragraph (A) above is conditioned upon Applicant's filing with the Commission proof of the issuance of the required authorization from the Missouri Public Service Commission.

(E) Respondent shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP66–309

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On March 28, 1966, Southern Natural Gas Company (Applicant) filed in Docket No. CP66–309 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation and delivery of natural gas, on an interruptible basis, to American Can Company doing business as Allison Lumber Company (Allison) for use in the latter's lumber mill near Bellamy, Alabama, all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate 3.2 miles of 2-inch lateral pipeline from a point on its main South Line in Sumpter County, Alabama, to Allison's plant, together with a measuring station at the terminus of said proposed line. Applicant and Allison have entered into a contract, dated February 23, 1966, providing for the sale and purchase of natural gas for the entire fuel requirements of Allison's mill (exclusive of the portion of such requirements as may be supplied by wood waste produced in the normal operation of the mill). These requirements are estimated to be 4,500 Mcf per day. Subject to certain possible adjustments as set forth in the contract, the rate for the proposed sale will be 32.1 cents per Mcf until Applicant has delivered to Allison 1,800,000 Mcf; after which the price will be reduced by 3.5 cents per Mcf.

Allison will utilize natural gas to produce steam for powering sawmill machinery and to operate lumber drying kilns. Allison has been using wood waste as a primary fuel; however, Allison now intends to use the wood waste as a raw material in the manufacture of a saleable product.

The estimated cost of the proposed facilities is $68,170, which cost will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the proposed transportation and delivery of up to 4,500 Mcf of natural gas per day by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the proposed facilities and to transport and deliver up to 4,500 Mcf of natural gas per day to Allison as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be constructed and placed in actual operation and the proposed transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within five months from the date on which this order issues.

(D) The certificate issued is granted on the express condition that the interruptible service authorized herein shall be curtailed or interrupted to the extent required to meet existing or future contracted maximum delivery obligations of Applicant for firm service to its customers.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP66-229

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On January 17, 1966, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP66-229 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in order to receive natural gas produced in the Hell Hole Bayou Field, Vermilion Parish, Louisiana, by Consolidated Gas Supply Corporation, Oil and Gas Futures, Inc. of Texas, Exchange Oil & Gas Company, Sinclair Oil & Gas Company, and North Central Oil Corporation (Consolidated, *et al.*), all as more fully set forth in the application in this proceeding.

Applicant proposes to construct and operate 12.5 miles of 12-inch lateral pipeline extending from a point on its 20-inch North Fresh Water Bayou pipeline to a delivery point in the Hell Hole Bayou Area, Vermilion Parish, Louisiana, and one meter station. The total estimated cost of these facilities is $800,000, which cost will be financed through the issuance of short term debt pending permanent debt financing.

Applicant and Consolidated, *et al.*, have entered into a contract dated September 28, 1965, providing for the sale and purchase of the subject gas.

On March 3, 1966, Applicant was issued a temporary certificate authorizing the construction and operation of the proposed facilities. On March 3, 1966, Consolidated, *et al.*, was issued temporary certificates in Docket Nos. CP66-225, CI66-494 and CI66-601 conditioned upon a total price of 20.625 cents per Mcf at 15.025 psia subject to Consolidated, *et al.*, refunding to Applicant from the date of initial delivery, with interest at seven percent per annum, any amounts collected in excess of the amounts resulting from the rate finally determined to be required by the public convenience and necessity in the respective dockets.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of March 30, 1949, in Docket No. G-859 (8 FPC 190).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the subject facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. G-9116 AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. G-9117

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On April 14, 1966, United Gas Pipe Line Company (United), and Transcontinental Gas Pipe Line Corporation (Transco), referred to as Petitioners filed in Docket Nos. G-9116 and G-9117 a petition to amend the order issued in said dockets on November 29, 1955, 14 FPC 1121, requesting authorization for the operation, as an emergency interconnection, of an existing point of interconnection between the Petitioners' pipeline facilities in Pike County, Mississippi, pursuant to an agreement between the parties dated June 1, 1955, as amended March 3, 1966, all as more fully set forth in the petition to amend.

By order issued in the instant dockets on November 29, 1955, Petitioners were granted certificates of public convenience and necessity authorizing the construction and operation of certain natural gas facilities in Walthrall County, Mississippi, to be used for the emergency exchange of natural gas under the terms of an exchange agreement between the Petitioners dated June 1, 1955 (United's Rate Schedule X–6 and Transco's Rate Schedule X–14).

On May 24, 1965, 33 FPC 1060, United and Transco, as joint Applicants in Docket No. CP65–308, were authorized to construct and operate facilities for two separate interconnections denominated (A) and (B), between their systems in Pike County, Mississippi for the exchange of gas under their exchange agreement of March 28, 1965. At point (B), 30-inch diameter lines of both Applicants are interconnected. At point (A) deliveries can only be reasonably made by Transco to United.

Petitioners state that the proposed additional point (B) will be used by them for the emergency exchange of natural gas under the existing agreement between the parties dated June 1, 1955, as amended, and will facilitate the exchange of gas under such agreement. Petitioners further state that at the appropriate time the amendatory agreement of March 3, 1966, will be filed with the Commission amending United's Rate Schedule X–6 and Transco's Rate Schedule X–14.

Due notice of the subject petition to amend and opportunity for hearing has been given by publication in the Federal Register on May 5, 1966 (31 F.R. 6760). No protest, petition to intervene or request for hearing has been filed concerning this amendment.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order issued November 29, 1955, in Docket Nos. G–9116 and G–9117 authorizing the construction and operation of certain facilities for the emergency exchange of natural gas, be amended so as to authorize the use of an existing point of interconnection of Petitioner's 30-inch lines (point (B) authorized in Docket No. CP65–308) in Pike County, Mississippi, as a supplemental delivery point for the emergency exchange of gas, as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued November 29, 1955, in Docket Nos. G–9116 and G–9117 is amended so as to authorize Petitioners to use the existing point of interconnection of their respective 30-inch lines (designated point (B) in our authorization of May 24, 1965, in Docket No. CP65–308) in Pike County, Mississippi, as a supplemental delivery point for the emergency exchange of gas, as requested herein.

(B) Petitioners shall file with the Commission within thirty days of the issuance of this order the amendatory agreement of March 3, 1966, amending United's Rate Schedule X–6 and Transco's Rate Schedule X–14.

(C) In all other respects said order shall remain in full force and effect.

(D) The amendment authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66-322

FINDINGS AND ORDER AFTER STATUTORY HEARING PERMITTING AND APPROVING ABANDONMENT

(Issued June 13, 1966)

On April 7, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66-322 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon certain natural gas facilities, all as more fully set forth in the application.

Applicant proposes to abandon two positive meters and appurtenant facilities which were originally installed to serve the following:

A. Gulf Refining Company's Orange National Bank Pump Station consisting of a positive meter station and appurtenances in Orange County, Texas, and

B. Miss-Lou Asphalt Company consisting of a positive meter station and appurtenances located at approximately Milepost 95.7 on Applicant's 16-inch Lirette-Mobile main pipeline in St. Tammany Parish, Louisiana.

Applicant states that the reason for the proposed abandonment is that the service to Gulf Refining Company was terminated effective November 1, 1965, by letter agreement between the parties dated November 9, 1965, and service to Miss-Lou Asphalt Company was terminated effective March 1, 1966, by letter agreement between the parties dated February 23, 1966. The facilities are, therefore, no longer required at their present locations.

The facilities to be abandoned will be used at other locations on Applicant's system when required or otherwise advantageously disposed of by Applicant.

After due notice, no petition to intervene, notice of intervention, or protest to the granting of the application has been filed.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in the order issued November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The facilities proposed to be abandoned, as hereinbefore described and as more fully described in the application herein, are used in the transportation of natural gas in interstate commerce subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) The proposed abandonment of the aforesaid facilities is permitted by the public convenience and necessity and approval thereof should be granted as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, are granted to Applicant.

(B) Applicant shall advise the Commission of the date of abandonment of the facilities as authorized in paragraph (A) above within 10 days of such abandonment.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP66–331

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 13, 1966)

On April 20, 1966, United Gas Pipe Line Company (Applicant) filed in Docket No. CP66–331 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale of natural gas to the City of New Summerfield, Cherokee County, Texas, for resale and distribution in New Summerfield and environs, all as more fully set forth in the application.

Applicant will construct and operate approximately 60 feet of 2-inch pipeline, a positive meter and regulator station and appurtenances in Cherokee County, Texas, near Milepost 32.5 on Applicant's 8-inch Longview-Boggy Creek to Huntsville pipeline. New Summerfield will construct and operate a natural gas distribution system to serve the potential customers in the City and the rural customers located along its pipeline in Cherokee County, extending from Applicant's proposed meter station to the City of New Summerfield.

The volumes of natural gas which are estimated to be required during the first three years of proposed operations are as follows:

	First year	Second year	Third year
Annual (Mcf at 14.9 psia)	25,900	29,400	34,850
Peak day (Mcf at 14.9 psia)	176	207	234

Applicant estimates the cost of construction of the facilities to be constructed by it will be $7,495, which will be financed out of current working funds.

Due notice of the filing of the application was published in the Federal Register on May 6, 1966 (31 F.R. 6806). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) United Gas Pipe Line Company, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued November 10, 1942, in Docket No. G–232 (3 FPC 863).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transporta-

tion of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the transportation and sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to United Gas Pipe Line Company authorizing the construction and operation of the facilities and the transportation and sale of natural gas as hereinbefore described and as more fully set forth in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation and the transportation and sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CRISP COUNTY POWER COMMISSION v. GEORGIA POWER COMPANY, DOCKET NO. E-7120

ORDER WAIVING INTERMEDIATE DECISION PROCEDURE

(Issued June 14, 1966)

This order waives the intermediate decision procedure and omits the initial decision of the Presiding Examiner. The settlement proposal of complainant, Crisp County Power Commission (Crisp County) and respondent, Georgia Power Company (Georgia Power) certified to the Commission by the Presiding Examiner on April 13, 1966 will be considered in the context of the whole record and briefs of all parties.

The Presiding Examiner certified the settlement proposal of complainant Crisp County and Georgia Power prior to rendering his initial decision. In doing so he also certified the complete evidentiary record, together with all other papers and filings.

This proceeding was initiated upon complaint of Crisp County filed August 8, 1963, seeking an interconnection and electric service from Georgia Power pursuant to Section 202(b) of the Federal Power Act. The settlement proposal was tendered following the conclusion of the hearings and submission of briefs to the Presiding Examiner. Comments upon the settlement proposal were submitted by Crisp County, Georgia Power and Commission staff. See Order Providing for Filing of Briefs on Settlement Proposal and Directing Immediate Temporary Emergency Interconnection and Service, issued April 22, 1966, 35 FPC 629, in the above-entitled matter.

By motion filed April 15, 1966, Commission staff requested waiver of the intermediate decision procedure pursuant to Sections 1.7(b) and 1.30 of the Commission's Rules of Practice and Procedure. Crisp County and Georgia Power did not respond to staff's motion. No other parties appear of record.

The Commission finds:

It is necessary and appropriate for the purposes of the Federal Power Act, and the rules and regulations thereunder, and due and timely execution of the Commission's functions require waiver of the intermediate decision procedure in the above-entitled matter.

The Commission orders:

The intermediate decision procedure is hereby waived and the initial decision of the Presiding Examiner is omitted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-294

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 14, 1966)

On March 18, 1966, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP66-294 an application, as supplemented on April 14, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a new delivery point for the sale and delivery of natural gas to Northern Illinois Gas Company (Northern Illinois) for resale and distribution in 49 communities in Illinois, all as more fully set forth in the application.

Specifically, Applicant will construct and operate a side tap on its main transmission pipeline, approximately 200 feet of 6-inch pipeline, a meter station and other appurtenant facilities, all in Rock Island County, Illinois, for the sale of natural gas to Northern Illinois. No authorization is requested for volumes above those heretofore authorized for sale to Northern Illinois.

Northern Illinois will resell and distribute natural gas to 49 communities located in Henderson, Hancock, Adams and Pipe Counties, Illinois.

The total estimated cost of the facilities to be constructed by Applicant is $19,700, which will be financed from funds on hand.

Due notice of the filing of the application was published in the Federal Register on April 5, 1966 (31 F.R. 5389). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, as supplemented, and exhibits, submitted in support of authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation with its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Natural Gas Pipeline Company of America, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized by paragraph (A) above shall be completed and placed in actual operation and the transportation of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, by September 1, 1966.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SOUTHERN CALIFORNIA EDISON COMPANY AND VALLEY POWER COMPANY, DOCKET NO. E-7271

ORDER AUTHORIZING ACQUISITION OF FACILITIES

(Issued June 14, 1966)

Southern California Edison Company (Edison) and Valley Power Company (Valley Power) filed a joint application with the Federal Power Commission on February 16, 1966, seeking an order pursuant to Section 203 of the Federal Power Act authorizing Edison to acquire the entire electric distribution system of Valley Power.

Edison is incorporated under the laws of the State of California and is qualified to do business in the States of Arizona and Nevada, with its principal place of business office at Los Angeles, California, and is engaged as a public utility in the business of furnishing electric service in 14 counties in the State of California and two counties in the State of Nevada. Valley Power is incorporated under the laws of the State of Nevada with its principal place of business at Gabbs, Nevada, and is engaged as a public utility in the business of distributing electric energy in the County of Nye, Nevada. It has no generation and purchases all of its electric energy requirements from Edison. It serves approximately 240 residential, 22 commercial, 9 pumping and 2 industrial customers. Valley Power is a subsidiary of Basic, Inc., a company engaged in mining and milling operations in Nye County, Nevada. Basic, Inc., presently purchases about 92% of Valley Power's available energy.

According to the application, Edison has agreed to pay Valley Power $95,000 for its electric distribution system and all other physical properties and assets, including all rights, privileges, franchises and titles held by Valley Power. According to the application, the original depreciated cost of the facilities to be acquired is approximately $34,368. The transaction will therefore result in the creation of an electric plant acquisition adjustment of approximately $60,632. Edison states that it proposes to eliminate this acquisition adjustment by a debit to Account No. 216, Unappropriated Earned Surplus. Edison states that the area served by Valley Power is completely surrounded by Edison's own service territory and Edison represents that the integration of Valley Power's territory into that of Edison will permit more orderly system planning and will prevent future duplication of facilities near the periphery of Valley Power's present territory. After the completion of purchase, Edison proposes to use such facilities for the same purposes for which they are presently being used by Valley Power and will continue Valley Power's then effective tariff schedules until such time as said schedules are changed in accordance with applicable laws and regulations.

Written notice of the application has been given to the California Public Utilities Commission, the Nevada Public Service Commission and to the Governors of these states. Notice of the application was also published in the Federal Register on March 9, 1966, (31 F.R. 4176), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before March 21, 1966, file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No protest or petition has been filed.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Federal Power Commission as heretofore described and set forth in the Commission's order issued July 31, 1961, entitled *City of Colton, California* v. *Southern California Edison Company*, Docket No. E–6821 (26 FPC 223).

(2) By the proposed transaction, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Valley Power, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of facilities by Applicant, as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

(4) The period of public notice in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall record the proposed transaction herein authorized and the facilities and properties referred to above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66–274

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 14, 1966)

On February 21, 1966, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP66–274 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a sales meter station and appurtenances to be used in the sale and delivery of natural gas to Virginia Pipe Line Company (Virginia Pipe), all as more fully set forth in the application.

Applicant will construct and operate the sales meter station at mile post 1409.63 on Applicant's 36-inch main transmission pipeline "C" near the community of Chatham, Pittsylvania County, Virginia. The meter station will be utilized as an additional point of delivery for the sale of natural gas for resale to Virginia Pipe, an existing customer of Applicant.

Virginia Pipe has requested the proposed new delivery point in order to serve residential and commercial customers within and adjacent to the community of Chatham. The estimated peak day and annual volumes of natural gas required during the third year of proposed operations are 300 Mcf and 55,000 Mcf, respectively. These volumes will be from present allocations of Applicant to Virginia Pipe which have been previously authorized by the Commission.

The total estimated cost of the facilities to be constructed by Applicant is $21,500, which cost will be initially financed by Applicant from its general funds. Applicant states that Virginia Pipe has agreed to reimburse Applicant in full for the entire cost of the facilities.

Due notice of the filing of the application was published in the Federal Register on March 9, 1966 (31 F.R. 4176). No protest, petition to intervene or notice of intervention has been filed in this proceeding.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order issued April 28, 1950, in Docket No. G–1277 (9 FPC 32).

(2) The facilities hereinbefore described and as more fully described in the application in this proceeding are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of said Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, Transcontinental Gas Pipe Line Corporation, authorizing the construction and operation of the facilities as hereinbefore described and as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable

Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized by this order shall be completed and placed in actual operation and the transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP66-256

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 15, 1966)

On February 4, 1966, Kansas-Nebraska Natural Gas Company (Applicant) filed in Docket No. CP66-256 an application and a supplement thereto on March 21, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the transportation of natural gas, all as more fully set forth in the application and supplement thereto.

Applicant seeks authorization for the construction and operation of the following facilities:

(a) approximately 29.5 miles of 3-inch pipeline extending from Eustis to Curtis, Nebraska, together with two town border stations,

(b) approximately 6.5 miles of 2-inch pipeline extending from an existing 12-inch pipeline in Cheyenne County, Nebraska, to Potter, Nebraska and one border station,

(c) approximately 64 miles of 4-inch pipeline between O'Neill and Ainsworth, Nebraska, together with seven town border stations and,

(d) approximately 29 miles of 6-inch pipeline to replace nearly an equal amount of 4-inch top-of-ground line between O'Neill and Clearwater, Nebraska.

Applicant states that these proposed facilities will be used to initiate natural gas service in the communities of Curtis, Farnam, Potter, Ainsworth, Atkinson, Bassett, Emmet, Long Pine, Newport and Stuart, Nebraska. Applicant will construct distribution systems in each of the communities and provide retail service to consumers therein. The replacement facilities are required to provide increased capacity on the existing lateral to which the longest of the new lateral lines will connect.

Applicant estimates the total requirements of the new service areas as follows:

Year of service	Requirements in Mcf @ 14.73 psia	
	Peak day	Annual
1966	1,875	70,500
1967	2,470	269,900
1968	2,930	335,900
1969	3,080	391,000

Applicant states that due to the size and location of the communities the estimated market will not be able to support the entire investment in branch line facilities required to provide service to them. Applicant will require a contribution from the retail customers in these communities. The contribution will be collected on an Mcf basis from all customers receiving service, over a 10 year period, at an average surcharge of from 20¢ to 28¢ per Mcf.

The total estimated cost of Applicant's proposed construction is $964,500, of which Applicant estimates $598,620 will be excess investment for which contribution will be paid. The initial costs will be paid out of current working capital.

The amount of contribution for each community is computed under a method approved by the Commission in Docket No. CP62-215 (Opinion No. 389, 29 FPC 1058), whereby the ratio between system net plant and system revenues, is multiplied by revenues (3rd year) from the branch line and subtracted from the actual cost of the branch line.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 10, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, and supplement submitted in support of the authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce by Applicant as hereinbefore described and as more fully described in the application and supplement are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities, and the transportation of natural gas in interstate commerce are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant, authorizing the construction and operation of facilities and the transportation of natural gas, all as more fully described in the application and supplement thereto.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, and the transportation of gas authorized in paragraph (A) above shall commence, as provided in paragraph (b) of Section 157.20 of the aforesaid Regulations within 9 months of the date on which this order issues.

(D) Applicant shall receive, as a contribution in aid of construction $133,415 from the customers in Curtis and Farnam, $15,930 from the customers in Potter and $408,120 from the customers in Ainsworth, Atkinson, Bassett, Emmet, Long Pine, Newport and Stuart.

(E) Applicant shall not include in its rate base any amounts it has expended for lateral construction for which it is entitled to receive reimbursement in the future from its retail customers.

(F) Three years and 60 days from the date of first rendering service to each community, Applicant shall file with the Commission a statement showing the actual volumes delivered in the third year compared with the estimate contained herein. If actual volumes exceed by more than 20 percent the estimated volumes, Applicant shall also submit for the Commission's approval a plan for reducing the contributions to conform to actual experience.

OPINION NO. 495

PACIFIC GAS TRANSMISSION COMPANY, DOCKET NOS. CP65-213, CP65-214, CP65-215

OPINION AND ORDER ISSUING CERTIFICATE AND AUTHORIZING IMPORTATION OF NATURAL GAS

(Issued June 15, 1966)*

Syllabus

1. Use of existing pipeline facilities to deliver additional gas will reduce unit cost. P. 1006.
2. Inadequacy of Canadian gas supplies would be relevant in determining whether a new pipeline should be built but not where existing facilities will be used to deliver additional gas. P. 1006.
3. Unlike *Rock Springs*, instant record does not show alternative methods for providing needed gas at rates and under conditions more advantageous than those proposed here. P. 1006.
4. Under circumstances here, benefits to be derived from granting applications exceed any alleged detriment to domestic petroleum industry or its exploration or development. Pp. 1006, 1007.
5. United States-Canadian relations render it unlikely that Canadian gas supplies will be cut off. P. 1007.
6. Mandatory Oil Import Program does not apply to gas importation—in any event, factors which gave rise to the Program do not operate to prevent authorization here. P. 1007.
7. Commission *rejects* suggestion that certificate be conditioned to require renegotiation of producer contracts to eliminate price escalation provisions. Pp. 1007, 1008; 1014–1018.

---

*Initial decision appears on p. 1009. Rehearing denied by order issued August 4, 1966. 36 FPC 377. Affirmed, *California Gas Producers Association, et al. v. F.P.C.*, 383 F. 2d 645 (CA9–1967).

8. Whether future gas supplies should be drawn from domestic sources will not be determined here; future Commissions cannot and should not be bound. P. 1008.
9. Rate of return and annual depreciation rate will not be revised here; in general this is better done in a rate proceeding. PP. 1008; 1023.
10. Oral argument is not necessary since this case does not provide a suitable context for debating general policies of importation restrictions. P. 1008.
11. General policy arguments are more properly presented where construction of new facilities is proposed to tap foreign gas supplies rather than where use is to be made of existing facilities. P. 1008.
12. In a proceeding under Section 7 of the Natural Gas Act, Commission *issues* certificate of public convenience and necessity and *authorizes* importation of gas.

Raymond N. Shibley, Richard H. Peterson, Malcolm H. Furbush and *John A. Sproul* for Pacific Gas Transmission Company.

Linward Shivers, Waggoner Carr, C. L. Snow, Jr. and *C. Daniel Jones, Jr.* for the State of Texas.

Richard E. Tuttle, J. Calvin Simpson and *Sheldon Rosenthal* for the People of the State of California and Public Utilities Commission of the State of California.

Robert E. Simpson for Washington Utilities and Transportation Commission, Idaho Public Utilities Commission and Public Utility Commissioner of Oregon.

Allan G. Shepard and *Larry D. Ripley* for Idaho Public Utilities Commission.

Henry F. Lippitt, II, for Oil Producer Agency of California, California Gas Producers Association and Jade Oil & Gas Company.

Edward G. Najaiko, C. Frank Reifsnyder and *Jeremiah C. Collins* for El Paso Natural Gas Company.

William I. Powell for Independent Petroleum Association of America.

Roger J. Nichols and *Eric W. Martens* for Southern California Gas Company, Southern Counties Gas Company of California and Pacific Lighting Gas Supply Company.

George J. Meiburger for Washington Natural Gas Company.

Robert Laughead for the City and County of San Francisco.

John Davenport for Texas Independent Producers & Royalty Owners Association, West Central Texas Oil and Gas Association and Permian Basin Petroleum Association.

Robert L. Russell and *John J. Keating, Jr.* for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

Ross, *Commissioner:*

On August 5, 1960, a certificate was issued to Pacific Gas Transmission Company (PGT) authorizing the construction and operation of a 614-mile section of 36-inch pipeline extending from the international boundary at Kingsgate, British Columbia to the Oregon-California boundary.[1] This section of pipeline was one portion of approximately 1400 miles of 36-inch pipeline connecting gas-producing fields in the province of Alberta to the facilities of Pacific Gas and Electric Company (PG&E) in northern California. PGT was originally authorized to deliver an average of 415,000 Mcf of gas per day to PG&E.

---

[1] *Pacific Gas Transmission Company,* Docket No. G–17350, 24 FPC 134.

In the present proceeding PGT has applied (Docket No. CP65-213) for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing the transportation and sale through the same pipeline of an additional 200,000 Mcf of gas per day, delivery of the first additional 100,000 Mcf per day to begin on November 1, 1966 and delivery of the second additional 100,000 to begin on November 1, 1967; the certificate would also authorize construction and operation of certain additional facilities necessary to transmit the additional volumes of gas. PGT is also applying (Docket No. CP65-214) under Executive Order No. 10485, dated September 3, 1963, for a Presidential Permit authorizing the construction, operation and maintenance of the pipeline required at the international boundary to permit the importation of the increased quantities of gas. PGT's third application herein (Docket No. CP65-215) is made under Section 3 of the Natural Gas Act for authorization to import natural gas from Canada.

Notices of intervention were filed by the State of Texas, the People of California and the California Public Utilities Commission (California PUC), the Washington Utilities and Transportation Commission, the Idaho Public Utilities Commission, the Public Utility Commissioner of Oregon, and the City and County of San Francisco (San Francisco). By order of May 25, 1965, the Commission granted intervention to El Paso Natural Gas Company (El Paso), Texas Independent Producers and Royalty Owners Association, Permian Basin Petroleum Association, West Central Texas Oil and Gas Association (the last three, filing a joint brief on exceptions, will be referred to as TIPRO, *et al.*), California Gas Producers Association, Jade Oil and Gas Company, and Oil Producers Agency of California (the last three, filing a joint brief on exceptions, will be referred to as California Producers), Independent Petroleum Association of America (IPAA), Southern California Gas Company, Southern Counties Gas Company of California, Pacific Lighting Gas Supply Company (the last three, filing a joint brief on exceptions, will be referred to as California Distributors), and The Washington Natural Gas Company.

After a hearing, the presiding examiner's initial decision was issued February 17, 1966, *infra* p. 1009. The examiner would issue PGT a certificate authorizing transportation and sale of the additional quantities of gas to PG&E and authorizing the importation of the gas from Canada. The initial decision states (pp. 1025-1026) that, since the original Presidential Permit issued August 5, 1960[2] granted permission to operate and maintain the facilities necessary to transport the gas across the international boundary, no amendment or additional Presidential Permit need be issued here.

Exceptions to the initial decision have been filed by the State of Texas, TIPRO, *et al.*, IPAA, and California Producers, all of whom oppose the issuance of the certificates sought by Pacific Gas Transmission Company. San Francisco and California PUC would approve issuance of the certificates but have excepted to the examiner's refusal to fix a lower rate of return (6⅛ percent) to PGT than the 6¼ percent allowed. They also except to the examiner's refusal to make a different computation of depreciation as affected by the net salvage which may be realized on the facilities. The Commission staff, while supporting the issuance of the certificates sought by PGT, has excepted to the refusal of the examiner to attach a condition requiring the renegotiation of certain prices to be collected for gas by escalation and to the further refusal of the examiner to require that "any future supplies of natural gas for the Pacific Gas and Electric Company market should come from domestic sources so that there may be some balance between the sources of supply" (Staff Brief on Exceptions, p. 9).

---

[2] *Pacific Gas Transmission Company*, Docket No. G-17352, 24 FPC 134, 143, Ordering Paragraph (D).

The regulatory bodies of Oregon, Washington and Idaho filed briefs opposing exceptions, as did California Distributors.

Oral argument has been requested by the State of Texas, TIPRO, *et al.*, IPAA and the California Producers.

We think that the exceptions to the examiner's initial decision must be denied and that the certificates applied for should be issued to the applicant. We are concerned here with already existing pipeline facilities which are not yet being utilized to their fullest capacity. The increased use of the existing pipeline facilities will reduce the unit cost of the gas supplied to California and will also reduce the unit cost of transportation of gas transported for El Paso and destined for the consumers in Washington, Oregon and Idaho. To refuse to issue certificates authorizing the importation, transportation, and sale of this additional gas would mean that some of the capacity of presently existing facilities would remain unused with resultant higher costs to the consumers in four states.

The arguments that have been made as to the inadequacy of the Canadian gas supplies, while they would be relevant to a determination of whether a new pipeline should be built, are not appropriate where existing pipeline facilities will be utilized to make delivery of the gas. Even if the Canadian supplies were shown to be too small to justify the construction of a new pipeline, it would seem desirable to allow already existing facilities to be used to bring out whatever gas may be available. In addition we think that there has been no showing that the Canadian supplies are inadequate. We considered this question before authorizing the construction of these pipeline facilities. We then determined that the sources of supply were sufficient to justify construction of facilities which, with relatively little additional construction, would have capacity to carry all present and proposed gas imports. Nothing has been presented here which would persuade us that our prior determination was erroneous.

Those opposing these applications state that a similar amount of gas could be made available by domestic producers and urge that as a matter of policy the importation of gas should be restricted. It is urged that the importation of natural gas has a depressing effect on the domestic industry, especially domestic exploration, and that domestic supplies should be utilized wherever possible in order to encourage domestic exploration and development as well as to benefit the American industry.

Unlike the *Rock Springs* proceeding,[8] the record in this case does not demonstrate that alternative methods exist for providing the needed volumes of additional gas at rates and under conditions more advantageous than those which will be achieved by certification of PGT's instant application.

The Commission will consider carefully in every case the effect of importations of natural gas upon the domestic industry and upon the exploration and development which may be needed to develop future gas supplies. In the circumstances of the present case, where the need of the market for additional gas is established, where the basic facilities to procure the Canadian gas have already been constructed, where no competing application for transportation and sale from an alternative domestic source has been filed by any pipeline, and where there will be a reduction in unit cost of service which will benefit the consumers of four states, we think the benefits to be derived from granting these applications far exceed any alleged detriments to the domestic petroleum industry or its exploration and development program. There appears to be little doubt that California will absorb all the gas which producers in California can make available to pipelines there. While ample supplies of gas are available in Permian Basin and other areas in the southwest, the facilities for bringing this gas to California in the amounts desired by consumers are not now available, nor can they be available for some time.

---

[8] *El Paso Natural Gas Co.*, 30 FPC 77 (July 12, 1963).

The suggestion is made that the Canadian supplies may be cut off and are therefore unreliable. We think that the close relationship between the United States and Canada renders it unlikely that this sort of difficulty will arise. Also, this is an argument more properly advanced at the time of an application to construct new pipeline facilities. That a supply may be cut off in the future is not an argument against using existing facilities to bring out gas up to the time any cut-off occurs, although it may be an argument against investing in new facilities.

We have previously considered the contention here advanced that the Mandatory Oil Import Program would require the denial of authorization to import natural gas for domestic use. *The Montana Power Company*, Opinion No. 486, 35 FPC 191 at pp. 194, 195. We conclude that the Mandatory Oil Import Program does not apply to the importation of natural gas. In any event, in the circumstances of this case, the factors, even if otherwise applicable, which gave rise to the Program, do not operate to prevent the authorizations sought by PGT.

Staff has suggested that the certificates be conditioned to require that Canadian producers supplying the gas to Canadian pipelines for transportation on a cost-of-service basis to PGT should submit to renegotiation of their contracts to eliminate price escalation provisions (based on weighted average field prices) for protection against possible price increases which would increase the cost of gas to PGT and, ultimately, the American consumer. Such a condition was not imposed when the present pipeline facilities were authorized, although 98 percent of the Canadian producers' contracts then contained such escalation provisions. See *Pacific Gas Transmission Company*, 24 FPC 134, 137. Later contracts do not contain these escalation provisions. About 54 percent of the reserves supporting the present proposed expansion were acquired under contracts without such escalation provisions. (The remaining 46 percent were acquired by extensions of existing contracts to cover reserves added by additional development in already dedicated fields). New reserves are acquired under contracts which do not contain such escalation clauses.

There has been a decline in the percentage of reserves covered by the escalation clauses in question, and it appears this decline will continue. A majority of the additional gas that is the subject of the present applications will be furnished under contracts which do not contain these escalation clauses, and this will have a retarding effect upon any potential price escalations. To require renegotiation of the producers' contracts, which we cannot directly control, might result in delay in obtaining the desired supplies of gas. There will be an immediate saving to American consumers when this gas is made available, and the potential price increase is some time in the future, if it occurs at all. We agree that it would be preferable if this type of escalation clause were not included in producer contracts, and its presence in contracts for new supplies would clearly be a factor in our consideration of any application for certification of pipeline facilities. In the circumstances here stated, however, we think the examiner was correct in his conclusion that the suggested condition not be included.

Staff has also suggested that it be here determined that future supplies of gas be drawn from domestic sources. We cannot bind future Commissions in their determinations as to what may best serve the public convenience and necessity in this regard, nor would it be wise to do so if we could. This is a question which should be passed upon in the light of the circumstances which may be presented at the time of a particular application to make use of particular reserves. Accordingly, it will not be predetermined here.

California PUC and San Francisco urge that the rate of return established in the 1960 certificate proceeding should be reduced from 6¼ percent to 6⅛ percent. The examiner and the Commission Staff are of the view that any revision of the rate of return should be dealt with in a rate proceeding. While there are occasions where rates may be dealt with in a certificate proceeding, in general it is preferable that the prompt issuance of a certificate not be delayed by hearing and consideration of rate revision issues. We think that there has been no such showing as would lead us to adjust the established rate of return in this proceeding. This ruling is without prejudice to any determination we may be called upon to make in a later proceeding.

For the same reasons, we approve the examiner's refusal to revise the annual depreciation rate and to reduce the dollar value of the plant to which depreciation is applied by 10 percent, the alleged net salvage on PGT's line.

We think that oral argument is not necessary in this case. In so ruling, we recognize the general question of policy as to whether restrictions should be placed upon the importation of natural gas, and, if so, what these restrictions should be, are matters of the greatest importance. This case does not, however, provide a suitable context in which to debate such general policies. General policy arguments would be more properly presented where the construction of new facilities is proposed to tap foreign gas supplies, rather than where the applicant seeks only to make use of existing facilities already authorized. The other questions which have been raised appear to have been fully presented by the briefs of the participants, and little benefit would be derived from oral argument as to them. The motions for oral argument will be denied.

The Commission finds:

(1) The applicant, Pacific Gas Transmission Company, is engaged in the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is therefore, a "natural-gas company" within the meaning of the Natural Gas Act. See *Pacific Gas Transmission Company*, 24 FPC 134, Finding (5) p. 140.

(2) The additional facilities proposed by Pacific Gas Transmission Company hereinabove referred to and more fully described in the Pacific Gas Transmission Company applications and the evidence herein, will be used in the transportation and sale of the additional quantities of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such additional facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Pacific Gas Transmission Company has an adequate supply of natural gas committed to it which will enable it to render the service herein authorized.

(4) The additional facilities proposed by Pacific Gas Transmission Company are adequate to render the supplemental service herein proposed.

(5) Pacific Gas Transmission Company is financially able to construct and operate the proposed additional facilities estimated to cost $13,857,000.

(6) A market exists for the proposed additional sales of natural gas by Pacific Gas Transmission Company to Pacific Gas and Electric Company.

(7) The Pacific Gas Transmission Company plan for rendering the additional service to Pacific Gas and Electric Company is feasible.

(8) Pacific Gas Transmission Company is able and willing, subject to the terms of this order, properly to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission promulgated thereunder.

(9) The construction and operation of the facilities proposed by Pacific Gas Transmission Company and its sales and transportation of the additional quantities of natural gas, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the present and future public convenience and necessity, and a certificate of public convenience and necessity should be issued therefor.

(10) The proposed importation of the additional quantities of natural gas proposed by Pacific Gas Transmission Company is subject to the jurisdiction of the Commission under the provisions of Section 3 of the Natural Gas Act.

(11) The importation of the additional quantities of natural gas proposed by Pacific Gas Transmission Company in its application is appropriate and consistent with the public interest and should be authorized upon the terms and conditions of this order.

(12) The terms of the existing Presidential Permit issued to *Pacific Gas Transmission Company* on August 5, 1960, 24 FPC 134, sufficiently provide for the proposed additional imports and no amendment or additional Presidential Permit is required.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to the Pacific Gas Transmission Company authorizing it to import from Canada an additional 100,000 Mcf per day of natural gas commencing on or about November 1, 1966, and an additional 100,000 Mcf per day of natural gas commencing on or about November 1, 1967 for transportation and sale to the Pacific Gas and Electric Company for resale, all as more fully described in the applications filed herein and the evidence received in these proceedings.

(B) The authorizations granted to Pacific Gas Transmission Company under paragraph (A) hereof are subject to the terms and conditions imposed upon the authorizations granted to Pacific Gas Transmission Company, *et al.*, by the order of the Commission issued August 5, 1960, 24 FPC 134, insofar as said terms and conditions are applicable, and the said terms and conditions shall apply with respect to the additional gas imported, transported and sold under the authorizations here granted.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION FOR A PRESIDENTIAL PERMIT AND UPON APPLICATIONS UNDER SECTIONS 3 AND 7 OF THE NATURAL GAS ACT

(Issued February 17, 1966)

FRAZEE, *Presiding Examiner:*

This proceeding concerns applications filed on January 12, 1965, and amended on March 31, 1965, by the Pacific Gas Transmission Company (PGT) seeking the requisite certificates, import and Presidential Permits, which would authorize it to install, construct and operate the additional facilities[1] necessary to import an additional 200,000 Mcf[2] of natural gas per day from reserves dedicated by producers in the Province of Alberta, Canada. PGT also seeks the authority to sell and deliver these additional imported volumes of natural gas to the Pacific Gas and Electric Company (PG&E) at the Oregon-California border, from which point the gas will be transported, distributed and sold by PG&E to its customers in central and northern California.

On May 25, 1965, the Commission issued an order herein granting interventions,[3] fixing dates for the filing of prepared testimony and supporting exhibits[4] and for a prehearing conference.[5]

At the prehearing conference held on July 22, 1965, dates were fixed for the filing of written motions, and replies thereto, directed to the admissibility of the filed prepared written testimony and supporting exhibits. The formal hearing was scheduled to convene on September 15, 1965.[6]

Numerous motions and replies thereto were filed, which were directed to the admissibility of all or portions of the prepared testimony and supporting exhibits filed by the State of Texas, the Permian Basin Petroleum Association, the People of the State of California and the Public Utilities Commission of the State of California; also to certain testimony offered jointly by the Oil

---

[1] On August 5, 1960, the Commission in *Pacific Gas Transmission Company*, 24 FPC 134, authorized PGT to construct and operate a 614-mile section, of a 1400-mile line, of 36-inch pipe extending from the Canadian-U.S. border (near Kingsgate, British Columbia) to the Oregon-California border to deliver to PG&E a daily contract quantity of 415,000 Mcf and a maximum daily demand of 454,000 Mcf of natural gas to be imported from the Province of Alberta, Canada, and delivered to PG&E for resale and distribution in its California market area. The cost of this line and its appurtenant facilities amounted to $116,940,000 (Ex. 45). The various regulatory agencies recognized, when they authorized the construction and operation of this 36-inch line, that it was oversized for the throughput of the initially certificated volumes of 415,000 Mcf per day. However, PGT there indicated that future authorizations would be sought to import additional volumes of natural gas to utilize the full capacity of the line.

[2] The 200,000 Mcf per day would be delivered to PG&E in two steps; the delivery of the first 100,000 Mcf/d would start on November 1, 1966 and the second 100,000 Mcf/d on November 1, 1967.

[3] Notices of intervention were filed by:

1. The State of Texas.
2. The People of the State of California and the Public Utilities Commission of the State of California.
3. The Washington Utilities and Transportation Commission.
4. The Idaho Public Utilities Commission.
5. The Public Utility Commissioner of Oregon.
6. The City and County of San Francisco.

Petitions to intervene were filed by:

1. El Paso Natural Gas Company.
2. Texas Independent Producers and Royalty Owners Association.
3. Permian Basin Petroleum Association.
4. West Central Texas Oil and Gas Association.
5. California Gas Producers Association.
6. Jade Oil and Gas Company.
7. Independent Petroleum Association of America.
8. Oil Producers Agency of California.
9. The Pacific Lighting Companies.
10. The Washington Natural Gas Company.

[4] Applicant, PGT, to serve its prepared testimony and supporting exhibits on all parties on or before June 21, 1965. The Intervenors, and the Staff of the Commission, to serve any answering testimony and supporting exhibits on all parties on or before July 15, 1965.

[5] On July 22, 1965.

[6] Tr. 1, p. 128, ln. 21.

Producers Agency of California, the California Gas Producers Association and the Jade Oil and Gas Company. These motions to exclude the proffered prepared direct testimony and supporting exhibits from the record herein were sustained.[7] However, each of the parties was permitted to make an offer of proof[8] as provided by Section 1.28(b) of the Rules of Practice and Procedure of the Commission.

A hearing was held at which an opportunity was afforded all parties desiring to do so to offer relevant and material evidence, and a substantial volume of such evidence was offered and received. Further, those desiring to do so were permitted to file briefs.

This transportation of natural gas from the producing fields of Alberta, Canada, to the consumers of PG&E in California, is an international project. The basic original construction, as previously mentioned, partly resulted from United States authorizations obtained by PGT in 1960.[9] The combined project operates through the joint effort of the following five internationally participating companies. These participants and their respective functions are described as follows:

1. The Alberta and Southern Gas Co. Ltd. (Alberta and Southern), incorporated under the Companies Act of Alberta, is a wholly owned subsidiary of PG&E. Its function is to purchase pipeline quality natural gas from producers in the Province of Alberta and arrange for its transportation in Alberta and through British Columbia to the International Boundary where the gas is sold and delivered to PGT.

The National Energy Board of Canada authorized Alberta and Southern, in the original phase of this international project, to export 458,750 Mcf of natural gas per day.

Alberta and Southern owns no transmission facilities. Its plant consists of physical property and equipment valued at $2,738,000 in 1964, which would not be increased as a result of the proposed increase in imports.

2. The Alberta Gas Trunk Line Company Limited (Trunk Line) was incorporated by a Special Act of the Alberta Legislature. Its function is the gathering and transporting, within the Province of Alberta, of the natural gas purchased at the tailgate of processing plants by Alberta and Southern. Trunk Line has constructed, and it operates, the facilities necessary to gather and transport[10] the natural gas authorized to be exported from the Province of Alberta and the Dominion of Canada and imported into the United States in *Pacific Gas Transmission Company*, 24 FPC 134. It will construct and operate the facilities required to transport the additional 200,000 Mcf per day

---

[7] Tr. 2, pp. 135–144.

[8] Tr. 8, pp. B and 993–995, the excluded testimony of the People of the State of California and the Public Utilities Commission of the State of California was marked as Exhibits 36 and 37 and rejected, but accepted as an offer of proof.

Tr. 11, pp. A and 1533–1534, the excluded testimony jointly sponsored by the Oil Producers Agency of California, the California Gas Producers Association and the Jade Oil and Gas Company was marked as Exhibit 52 and rejected but accepted as an offer of proof; also at Tr. 12, pp. A and 1739, 1760 a letter with attachments was marked as Exhibit 64 and rejected, but accepted as an offer of proof.

[9] For a discussion of the "Identity and Short Designation of Participants and Other Interests" see *Pacific Gas Transmission Company*, 24 FPC 144, 145 (the Examiner's decision) and the "Producers, Pipelines, and Public Authorities in Canada" at 24 FPC 134, 136 (the Commission Order).

[10] Trunkline's facilities consist of approximately 222 miles of receiving and delivery laterals and about 350 miles of main line extending from Alberta to the British Columbia border. Its investment in these in place facilities presently amounts to $82,638,000 (Ex. 45).

purchased by Alberta and Southern for export to the United States, which is the subject of these proceedings. Trunk Line has no corporate connection with any other company participating in this project, except that Alberta and Southern holds one share of Class B Group II common shares of Trunk Line.

3. The Alberta Natural Gas Company (Alberta Natural) was incorporated and authorized by a special act of the Parliament of Canada to transport natural gas in interprovincial and foreign commerce. It currently transports natural gas owned by Alberta and Southern and by Westcoast Transmission Company Limited (Westcoast) from a point in Alberta near the Alberta-British Columbia boundary through British Columbia to the International Boundary near Kingsgate, British Columbia. It will construct and operate the additional compressor facilities[11] necessary to transport the additional 200,000 Mcf per day which is the subject of this hearing. Two-thirds of the common stock of Alberta Natural is owned by PGT and the remaining one-third is owned by the public.

4. PGT, the applicant herein, was incorporated in August 1957, in the State of California (Exhibit 2) and has since been authorized to do business in the States of Oregon, Idaho and Washington. It is a "natural-gas company" within the meaning of that term under the Natural Gas Act. See *PGT*, 24 FPC 134, Findings (5), p. 140. It owns and operates the 614-mile section of the project pipeline from the International Boundary near Kingsgate, British Columbia, to the California-Oregon border which was authorized by this Commission in *PGT*, 24 FPC 134. PGT's actual investment costs for the construction of this line and its appurtenant facilities amounted to $116,940,000. PGT here seeks authorization to install, construct and operate the following additional facilities which, it alleges, will be required to transport the additional 200,000 Mcf per day:

(1) 8,250 additional horsepower of compression at its compressor station No. 4 near Sandpoint, Idaho.

(2) A new 10,000 horsepower compressor station No. 6 near Rosalia, Washington.

(3) A new 10,000 horsepower compressor station No. 9 near Ione, Oregon.

(4) A new 16,000 horsepower compressor station No. 11 near Madras, Oregon.

(5) A new 8,000 horsepower compressor station No. 14 near Bonanza, Oregon.

(6) Additional metering facilities at the existing metering station at the Oregon-California border.

(7) A maintenance base near Candon, Oregon.

(8) A gas control computer in its office building in Spokane, Washington.

(9) It will also change its impellers at its station Nos. 8 and 13, near Wallula, Washington and Diamond Junction, Oregon, respectively.

The estimated cost of the foregoing proposed construction is $13,857,000.

PGT purchases its gas from Alberta and Southern at the International Boundary pursuant to a contract dated January 31, 1961, as amended, and sells gas at the California-Oregon border to PG&E pursuant to a tariff on file with the Federal Power Commission. PGT also presently transports about 150,000 Mcf per day of an authorized maximum of 300,000 Mcf per day of natural gas, under contract as a common carrier, for the El Paso Natural

---

[11] Alberta Natural consists of 106 miles of pipeline in which it presently has an investment of some $32,637,000. Additional expenditures will be necessary for the facilities here requested.

Gas Company (El Paso) to points on the PGT line in the States of Washington, Idaho and Oregon as specified by El Paso and authorized by this Commission in *PGT*, 24 FPC 134. This gas is purchased by El Paso from Westcoast at the International Boundary.

The final portion of this international pipeline is owned and operated by PG&E and consists of 298 miles of main line beginning at a point of connection with PGT on the Oregon-California boundary and extending to Antioch, California. This section of the line originally cost $54,250,000. It is entirely within the State of California.

CANADIAN GAS SUPPLY

The applicant, PGT, obtains its entire gas supply from Alberta and Southern under an existing cost-of-service contract (Exhibit 4). No changes, except to increase the volumes, will be made in this contract as a result of the increase in imports herein proposed. The applicant, PGT, presented a gas supply witness who testified concerning the adequacy of the gas reserves dedicated to Alberta and Southern and the deliverability of these reserves. This witness estimated the total recoverable gas reserves of pipeline quality gas available to Alberta and Southern on November 1, 1964 to be 5,509,340 million cubic feet at 14.73 psia at 60 degrees Fahrenheit (Exhibit 1, page 1). His testimony classified these reserves as follows:

	Million cubic feet
Under contract	4, 574, 411
Under option	553, 513
Subtotal	5, 127, 924
Other available	381, 416
Total	5, 509, 340

The reserves "under contract" were attributed to acreage covered by contracts between producers in the Province of Alberta, Canada, and Alberta and Southern. "Under option" referred to those reserves underlying acreage committed to Alberta and Southern by options permitting it to purchase gas on specified definite conditions. It was stated that several of the fields have proved uncommitted reserves lying outside of the contract or option acreage. These reserves the witness classified as the "other available." The witness stated that, in his classification of reserves, he had not included in the "other available" category any reserves for those fields from which a competing pipeline is purchasing gas. From the testimony of this witness it was shown that the reserves presently available to Alberta and Southern are estimated to be sufficient to meet its estimated delivery requirements[12] for 17 years from

---

[12] The total delivery requirements of Alberta and Southern to PGT and to Montana Power Co. (24 FPC 134) were shown in Exhibit 1, and at Tr. 166, also at page 9 of the Staff Brief, to be:

	Annual	Daily
1965	164, 900	451. 8
1966	164, 900	451. 8
1967	206, 000	564. 4
1968	248, 900	681. 9

Footnote continues on following page.

and after November 1, 1964, and to have a life index of 23.1 years (Exhibit 1, page 5). It was further indicated that, considering only the proved contracted reserves which have a life index of 19.2 years, Alberta and Southern would have sufficient gas to meet its estimated delivery requirements for 13 years from and after November 1, 1964[13] (Exhibit 1, page 4). The adequacy of the gas supply to support the additional deliveries to PGT was not questioned. This reserve witness did not utilize a specific cutoff pressure although he estimated that generally the wells would produce up to 25 percent of their open flow. Eventually the shut-in well pressure will be less than the pipeline pressure. At this point compression will become necessary, which will increase the cost-of-service to the applicant and to the ultimate consumer.

CANADIAN GAS SUPPLY CONTRACTS

PGT, in support of its application for a certificate of public convenience and necessity submitted copies of the various gas purchase agreements utilized by Alberta and Southern to purchase gas from Alberta producers (Exhibit 6). Initially, in acquiring the gas for the project certificated at 24 FPC 134, Alberta and Southern utilized three types of contracts[14] and the gas acquired thereunder fell into the following categories:

Contract forms	*Percentage of gas supply (percent)*
A	77
B	21
C	2

Contract Forms A and B have the same schedule of prices. Contract Form C is used in the purchase of casinghead gas and the schedule of prices for such gas is lower (Exhibit 6, tr. 325). It was noted by the Commission in

---

The commitments of Alberta and Southern were shown (Exhibit 5; Tr. 336, Staff Brief p. 9) to be:

The Montana Power Company

	Maximum daily demand (Mcf)	Daily contract quantity (Mcf)
1965	32, 600	30, 000
1966	44, 000	40, 000
1967	44, 000	40, 000
1968	55, 000	50, 000

Pacific Gas Transmission

	Maximum daily demand (Mcf)	Daily contract quantity (Mcf)
1965	454, 000	415, 000
1966	552, 000	515, 000
1967	665, 000	615, 000
1968	665, 000	615, 000

[13] The Staff, at page 10 in its brief, states "Alberta and Southern can meet its total proposed requirements for a period in excess of 13 years as of January 1, 1965. Predicated upon its reserves actually under contract Alberta and Southern has shown a deliverability life of approximately 13 years (Ex. 1, p. 4)."

[14] Contract Forms A, B and C were discussed by Presiding Examiner Weston at 24 FPC 134, 160 and were approved by the Commission in its order, *supra*. These gas purchase contracts are set forth in summary form, and in full, Exhibit 6 on this record.

24 FPC 134, 137 "* * * that Alberta and Southern has entered into option agreements with several major producers covering areas containing both established and prospective reserves of great size. These agreements commit the producers to sell large additional volumes of gas at the same price as those in the present contracts, *when and as needed for the contemplated future expansion of this project.*" [Italic supplied.] Approximately 80 percent of the additional volumes here sought to be imported will come from the same fields from which the presently certificated import volumes are drawn. The reserves in these fields have increased by reason of additional development in areas covered by the original contracts and in other nearby areas not covered by the original contracts. The reserve appreciation in the fields covered by the original contracts[15] accounts for 46 percent of the reserves for the presently proposed expansion. The remaining 54 percent of the reserves are covered by a new form of contract—Form D—which provides for a set schedule of prices established for the entire term of the contract and not subject to renegotiation. The 54 percent of the reserves are located in fields from which Alberta and Southern does not presently purchase gas. The gas supplies for the initial, and this proposed supplemental, projects will, when certificated, fall into these new categories:

Contract forms	*Percentage of gas supply (percent)*
A	71
B	15
C	1
D	13

The pricing provisions in contracts Form A and Form B each contain in addition to fixed price escalations, certain renegotiation provisions beginning with the pricing period commencing July 1, 1968 and at each five-year interval thereafter during the term of the contract. These renegotiation provisions were eliminated from contract Form D under which gas purchases are currently being made.

As to the probable effect of these renegotiations on prices after July 1, 1968, the Vice President and General Manager of Alberta and Southern testified that export buyers of gas in Alberta were presently contracting for gas at prices both higher and lower than those being paid by Alberta and Southern but, in his opinion, the higher prices paid by others for export gas would not necessitate an upward renegotiation in Alberta and Southern's price. He does expect a request from the producers for a renegotiation and, if an agreement is not reached between the producers and Alberta and Southern as to price, the matter is then referred to arbitrators whose findings are final and binding on both the buyer and the seller.

The witness testified that the Province of Alberta has a statute which provides the authority for the regulation of prices paid producers for natural gas but that he knew of no regulations issued thereunder by Alberta regulatory authorities for the establishment of ceiling prices for the sale of natural gas for export.

A witness for the Texas Independent Producers and Royalty Owners Association (TIPRO), an intervenor, testified, in rebuttal, that he had personally negotiated and executed contracts for the sale of natural gas produced by him in Texas and in Alberta. It was his opinion the Form A and Form B contracts used by Alberta and Southern are "open-ended;" that renegotiation will inevitably result in prices higher than those specified in the periodic escalation schedules but that there was no way at this time to determine what the price will be following renegotiation.

---

[15] These reserves are acquired by operation of the terms of the original contract and the increase in daily contract quantity is simply recorded by an exchange of letters to that effect between the producer and Alberta and Southern, the buyer.

When it issued the original certificate on August 5, 1960, authorizing this project in 24 FPC 134 the Commission had this identical problem before it—98 percent of the gas there authorized to be imported was purchased under contracts Form A and B—and it said, at page 137:

> Beyond these limiting factors, there remains the primary responsibility of the Canadian authorities to regulate producer and pipeline rates in such a way as to insure that the mutual benefits of the project as a whole will continue. A careful review of the Canadian legislation, including the National Energy Board Act, the Alberta Pipe Line Act, and the Alberta Gas Utilities Act, and the determinations made thereunder with regard to this project, demonstrates that the Canadian regulatory authorities now have a comprehensive rate and certificate jurisdiction at least equal to our own, and broad enough, in letter and spirit, to give effect to the principles of international comity and mutual responsibility on which the continuing success of this project ultimately depends. This legislation embodies the same "just and reasonable" standards as are found in the Natural Gas Act and guarantees that the American and Canadian consumer will be treated alike.

Since the issuance of this order at 24 FPC 134, the Commission has determined that indefinite pricing escalation provisions of certain types in domestic producer contracts for the sale of natural gas in interstate commerce are contrary to the public interest. *The Pure Oil Co.*, 25 FPC 383, *affirmed*, 299 F. 2d 370; See FPC Order No. 174–B, 13 FPC 1576; FPC Order No. 232, 25 FPC 379, as amended by Order No. 232–A, 25 FPC 609; FPC Order No. 242, 27 FPC 339, and Section 154.91, *et seq.*[16] of the Commission's Regulations under the Natural Gas Act; also *F.P.C.* v. *Texaco Inc.*, 377 U.S. 33; *The Atlantic Refining Co.*, 32 FPC 17.

These Form A and Form B contracts contain another indefinite pricing provision which requires the purchaser, commencing with the year 1968, to give annual written notice to the seller showing the purchaser's weighted average cost per Mcf of gas purchased from fields located in whole or in part in Alberta. Should the buyer's weighted average cost per Mcf be higher than the price being paid to the seller then, in the following year, the buyer must make an appropriate price adjustment to seller to bring his price up to purchaser's weighted average cost for the previous year.

In accordance with the foregoing "open-ended" pricing provisions in the Form A and Form B contracts it was said by the Alberta and Southern gas supply witness that 86 percent of the contracts which underlie the gas supply after this proposed expansion would be renegotiated in 1968. This witness was of the opinion, however, that, should a higher price for some producers become effective as the result of renegotiation, the remaining producers would not subsequently invoke the weighted average price provision to obtain an increase in price per Mcf. The witness would concede, however, should an increase in price result from renegotiation it could trigger the weighted average price provision which would result in a general price increase. Since Alberta and Southern sells this gas to PGT on a cost-of-service basis which is reflected in the monthly billing statements, the impact of any price increase would be immediate.

---

[16] Particularly Section 154.93(c) which defines one part of the "permissible" provisions as being, "Provisions that, once in five-year contract periods during which there is no provision for a change in price to a specific amount (paragraph (b) of this section), change a price at a definite date by a price-redetermination based upon and not higher than a producer rate or producer rates which are subject to the jurisdiction of the Commission, are not in issue in suspension or certificate proceedings, and, are in the area of the price in question * * *"

Alberta and Southern have, what they refer to as, a "postage stamp" practice in negotiating for natural-gas reserves in Alberta. Under this practice each producer throughout the Alberta and Southern purchase system is paid the same price for similar gas. Thus, when additional gas is discovered the producer knows what price Alberta and Southern will pay for it. This lends incentive to a search for and the production of natural gas.

The foregoing renegotiation provisions contained in the Form A and Form B contracts are, quite obviously, contrary to the indefinite pricing provisions of Section 154.93 of the Commission's Regulations under the Natural Gas Act. Since Federal Power Commission jurisdiction does not extend to the Alberta and Southern gas purchase contracts with producers in Alberta, Canada, the Staff at pp. 30, *et seq.*, in its brief, discuss three alternative proposals in an attempt to resolve, or minimize, the possibility of a price increase as a result of contract renegotiations. The Staff proposals are:

(1) Grant the certificate to PGT.

(2) Deny the application.

(3) Condition the certificate to require Alberta and Southern, in the forthcoming renegotiations, to negotiate for the conversion of the Form A and Form B contracts to the new Form D contract.

Alberta and Southern appears to be fully aware of the possibility of price increases upon renegotiation and have therefore developed a new Form D contract which contains none of the renegotiation nor weighted average price increase provisions. Approximately 54 percent of the reserves supporting the present proposed expansion were acquired under the Form D contract. Under this contract there is a fixed schedule of prices for the life of the contract. (Exhibit 6). The remaining 46 percent of the reserves for this project were acquired by extensions of the original Form A and Form B contracts for reserves added by additional development in the already dedicated fields.

Alberta and Southern now uses the Form D contract exclusively for the purchase of new reserves. This contract appears to comply with Section 154.93 of the Commission's Regulations under the Natural Gas Act. The Commission, when it issued PGT its original certificate on August 5, 1960 (24 FPC 134), had these same Form A and Form B contracts under consideration and it there said at page 137:

> * * * The most important of these costs is the cost of purchased gas reflecting Canadian producer prices. In this connection it is worth noting that Alberta & Southern has entered into option agreements with several major producers covering areas containing both established and prospective reserves of great size. These agreements commit the producers to sell large additional volumes of gas at the same prices as those in the present contracts, when and as needed for the contemplated future expansion of this project. These reserve acreage contracts should have an important stabilizing effect on field prices in the foreseeable future * * *

The "additional volumes" of gas referred to in the above quotation account for 46 percent of the gas for this expansion project.

The Commission in 24 FPC 134, 137, commenting on the Alberta Gas Utilities Act, recognized it as being:

> * * * considerably broader and more detailed than the comparable provisions of the Natural Gas Act and its clarity and scope with reference to gas producers and processors should enable the Alberta Board of Public Utility Commissioners to avoid many of the difficulties we have experienced.

The Commission said, *supra*, it placed full faith and confidence in the Canadian authorities to determine and fix just and reasonable rates. The Alberta producers, by agreeing to sell additional supplies of gas for export to the U. S. under Alberta and Southern's Form D contract, and Alberta and Southern, in developing and using this contract instead of the previously used Form A and Form B contracts, each demonstrate their desire "to give effect to the principles of international comity and mutual responsibility" to the end that the consumer of natural gas will be protected against "unjust and unreasonable" prices. A certificate of public convenience and necessity will therefore be issued to PGT unconditioned insofar as the gas supply contracts are concerned.

FIELD PRICE OF GAS IN ALBERTA, CANADA

Initially the base price for pipeline quality gas was 13.50 cents per Mcf.[17] This initial base price has, under the fixed escalation provisions of the Form A and Form B contracts, increased to 17.0 cents per Mcf and it will increase a further 0.25 cents per Mcf on July 1, 1968 so that on that date the base price will be 17.25 cents per Mcf for pipeline quality gas of approximately 1080 Btu content. The new reserves acquired for this proposed expansion under the new Form D contract were obtained at an initial base price of 17.0 cents per Mcf. Therefore, when the gas commences to flow for this expansion of imports project, it will cost at the tailgate of the processing plant the same price per Mcf as is being paid currently for the initially certificated gas, namely, 17.0 cents per Mcf. The record here shows all of the gas purchased in Alberta by Alberta and Southern is of pipeline quality and delivered at the tailgate of the processing plants at a pressure base of 900 to 1000 psig. The revenues obtained from the sale of the by-products extracted from the raw gas stream entering the processing plants are retained by the producers since they own the gathering system and the processing plants.

OREGON-CALIFORNIA BORDER GAS PRICE

PGT's 36-inch pipeline was originally certificated with full knowledge it was oversized for the initial volumes to be transported, however, it was then understood the throughput capacity could be increased substantially at reasonable cost. In this proceeding the applicant seeks to take advantage of this additional throughput capacity. A PGT witness sponsored Exhibit 19 showing the cost of Canadian gas delivered to PG&E at the Oregon-California border delivery point. The following tabulation[18] shows the average cost in cents per Mcf of gas delivered to PG&E by PGT under its cost of service tariff:

---

[17] For a detailed discussion of the field prices of gas to Alberta and Southern see *PGT*, 24 FPC 134, 160–161, Presiding Examiner Weston's decision.

[18] From Exhibit 19, pp. 2 and 3, as modified at Tr. 1306, *et seq.* to give effect to the use of the double declining balance depreciation for tax purposes on the facilities proposed for installation in 1966 and 1967.

	Without the proposed expansion ¢ per Mcf	With the proposed expansion ¢ per Mcf	Incremental cost of the additional volumes ¢ per Mcf
1967	34.15	31.04	----------
1968	34.58	30.73	22.60
1969	34.49	30.91	23.36
1970	34.26	30.83	23.60

The certification of the increased volumes will materially decrease the delivered unit price of gas beginning with the year 1968 at the Oregon-California border from 34.58 cents to 30.73 cents, a reduction of 3.85 cents per Mcf, as illustrated in the above tabulation.

Natural gas is also transported on a cost-of-service basis by PGT for El Paso and its Canadian supplier, Westcoast. The El Paso gas is distributed in the Pacific Northwest States. The 1968 estimated transportation charge for the El Paso gas, without these additional volumes is estimated to be 7.10 cents per Mcf. However, with the increased volumes here sought, the 1968 transportation charge to El Paso would decrease to 5.76 cents per Mcf, a reduction of 1.34 cents per Mcf.

The following tabulation shows a comparison of the transportation charges for the El Paso gas:

	Without the proposed expansion [19]	With the proposed expansion [19]	Estimated reduction in transportation costs [20]
1966	6.17¢	6.08¢	[21] $46,000
1967	6.91¢	5.80¢	564,000
1968	7.10¢	5.76¢	681,000
1969	7.05¢	5.80¢	639,000
1970	6.95¢	5.85¢	564,000

[19] Tr. 1341, ln. 3, *et seq.*

[20] Tr. 1342, ln. 20, *et seq.*

[21] For two month's period November 1, 1966 to December 31, 1966.

The reduction in transportation charges to El Paso, as shown above, would amount to $2,494,000 during the period 1966–1970.

A petition to intervene was filed by El Paso on February 15, 1965; a supplemental petition to intervene was filed on May 7, 1965. In these El Paso alleged, *inter alia*, this Commission has authorized it to sell and deliver natural gas to PG&E at the Arizona-California border near Topock, Arizona, a firm maximum contracted daily demand of 1,025,000 Mcf (at 14.9 psia) under its Rate Schedule G; also, that this Commission authorized PGT to transport for El Paso in the United States, up to 150,000 Mcf per day of Canadian gas which El Paso purchases from Westcoast. By agreement between PGT and El Paso these volumes may be increased. El Paso was permitted to intervene (by order issued herein on May 25, 1965). At page 49, 1n. 20, of the Transcript, counsel for El Paso stated:

> Mr. REIFSNYDER. El Paso has no application in this case; El Paso has no unfilled capacity by which, we could make deliveries to Pacific Gas and Electric Company. Therefore, we are not a competing applicant in this case, it has not been El Paso who offered any testimony.

We have not filed any prepared testimony. That is all I think I can contribute.

PRESIDING EXAMINER. But El Paso did file a petition to intervene.

Mr. REIFSNYDER. That is correct.

PRESIDING EXAMINER. So El Paso is a party?

Mr. REIFSNYDER. That is right. We are a participant in the proceeding under the Commission's rule, and our petition to intervene clearly sets forth our interest in this proceeding.

Much ado was provoked in several briefs from a comparison, by a PGT witness on cross-examination, of the prices for natural gas delivered at the California border for delivery to PG&E by El Paso and PGT. No indication can be drawn, from the foregoing colloquy between the Examiner and counsel for El Paso, that El Paso either can or has the desire to make a proposal to supply the increased requirements of PG&E. El Paso was consistent in reiterating this position throughout the course of the hearing. (Tr. p. 425 and p. 1377.)

ECONOMIC FEASIBILITY

The economic structure of this entire international operation is geared to cost-of-service arrangements between the individual companies. These arrangements are designed to cover operating costs of the several companies and to realize a reasonable return on the depreciated plant investment.[22] There was no issue on this record in regard to the economic feasibility of the proposed project. As the Staff says in its brief, for an increase of approximately $30,000,000, which is slightly more than 10 percent of the total initial capital investment for the over-all international project, 50 percent more gas will be delivered to PG&E. Thus the feasibility of the entire project, because of the increased additional volumes that can be delivered for the 10 percent increase in capital investment, will redound to the benefit of the consumer in lower rates.

FINANCING

The estimated cost to PGT for additional facilities is $13,857,000. This investment will be financed from funds on hand on January 1, 1964, and from funds generated from operations and from bank loans. It was estimated these bank loans would be repaid in the three years period 1968 through 1970. There was no issue concerning the ability of PGT to finance the proposed expansion or as to the effect this financing would have on the PGT over-all financial plan.

MARKETS AND SUPPLY

There is no question PG&E will require large volumes of gas in the immediate future to supply its rapidly expanding market demand. The source of this additional supply of gas generated some problems to be considered.

The California Gas Producers Association, the Oil Producers Agency of California and the Jade Oil and Gas Company (hereinafter referred to as the California Companies), argue that PG&E, in its estimates of the future availability of California produced gas, fails or is unwilling to make, what the California Companies term "a realistic" estimate of the future availability of northern California gas. The California Companies claim their future exploration, together with the development of present fields, will be more than sufficient to supply the increased market demand of PG&E for at least one year, therefore the certification to import the additional quantities should be deferred for at least one year. The California Companies also complain about the terms of the contracts offered them by PG&E for the purchase of their gas production. They allege the contracts are not uniform since some require a 2 to 1 peak to minimum delivery while others require 3 to 1 and some require as much as 5 to 1. When the producer is unable to deliver these peak quantities then the contract demand is reduced to the quantity it is able to deliver. The PG&E rebuttal witness states the contractual provisions complained about predate the purchase of out-of-state gas and were not designed to make room for it. This witness further testifies it is the consistent policy of PG&E to make a market for California produced gas as it becomes available. The contracts contain take-or-pay provisions, therefore if California gas is available it will either be taken or paid for by PG&E. The witness stated there were but two problems in the utilization of California gas. First, the location or locations of the production, and second, the Btu content of the gas. The domestic gas purchased by PG&E from El Paso has a Btu content of 1090 and the Canadian gas has a Btu content of 1080 while, the witness states, the California gas varies greatly in heating value, the 1964 weighted average being 986 Btu.[illegible] The gas delivered by PG&E in the San Francisco-East Bay area is carefully controlled to approximate a 1075 Btu content. This necessitates a blending of the out-of-state gas with the California gas.

---

[22] The Canadian companies charge a 7.5 percent rate of return on their individual investments. See Exhibit 7, p. 34, Alberta Gas Trunk Line Company, Ltd., transportation agreement; also Exhibit 7, p. 24, the Alberta Natural Gas Company, transportation agreement.

The PG&E requirements, and the source thereof, are reflected in the following compilation:

Daily average gas supply (Exhibit 17, p. 9 of 9)

[MMcf]

	1965	1968	1970
California produced	608. 2	453. 5	328. 2
El Paso	1, 020. 3	1, 028. 9	1, 035. 8
PGT	416. 8	614. 4	614. 4
Storage	58. 1	10. 9	4. 9
Total	2, 103. 4	2, 107. 7	1, 983. 3

PG &E's forecast of average daily requirements (Exhibit 18, p. 7)

[MMcf]

1965	*1968*	*1970*
2, 162	2, 467	2, 632

The foregoing tabulation of the PG&E daily average gas supply and its estimated requirements in 1970, assuming the certification of the volumes here requested, reflect a need for approximately 650,000 Mcf additional (2,632.0—1,983.3=648.7 MMcf).

It is also shown from the PG&E daily average gas supply estimate above that the supply of California produced gas will be reduced in 1970 by approximately fifty percent (608.2—328.2=280.0 MMcf).

The California Companies argue this estimated reduction is unwarranted because, in their opinion, considerably more gas could be produced from their

---

[illegible] The three fields from which PG&E purchased the bulk of its California gas, and the Btu content, are the Rio Vista at 1045 Btu, the Grimes area at 1003 Btu and the Lathrop at 871 Btu (Tr. 1619).

fields for PG&E if the terms of the PG&E purchase contracts were modified. They allege that present production is governed by PG&E's takes under the minimum purchase provisions of their contracts whereas, it is alleged, prior to the certification of the original PGT import authorization PG&E purchased more than the minimum volumes provided by the contracts. They further allege that PG&E uses the California production for peaking, or swing, and if the sharp peaking provisions were removed from the contracts more gas would be available. PG&E's evidence shows the discoveries of dry gas in the California area, where it purchases gas, have been sporadic and that the discoveries have varied widely in Btu content. Therefore, PG&E, says it cannot safely rely upon estimated, but yet undiscovered, reserves in its planning for the acquisition of additional gas to supply prospective firm requirements. The PG&E witness said it would not be prudent to speculate on the possibility of future discoveries of California reserves from which to supply its customers, therefore it must make commitments to purchase known and available out-of-state reserves. The PG&E witness indicated the cost of the California produced gas, adjusted to 1,000 Btu dry basis and delivered by PG&E to its load centers would amount to approximately 11.0 cents per Mcf more than the Canadian gas similarly adjusted as to Btu, including the volumes here sought. Thus, if the importation of the first increment of 100,000 Mcf of Canadian gas were deferred for two years and California produced gas could be substituted, it was estimated the California customers of PG&E would be required to pay additional costs of some $8,030,000. The Commission made it abundantly clear, in its *Rock Springs* opinion, *El Paso Natural Gas Company, et al.*, 30 FPC 77 (1963), that in weighing the merits of a proposed project, the incremental cost of the proposed deliveries should be of primary importance.

To summarize, the PG&E witness says it is their policy to make a market for California produced gas and that over the years they have paid what they thought was an adequate price,[24] negotiated with the producers, that gave consideration to the load factor at which it acquires gas from out-of-state sources and other factors. The price paid California producers is comparable to the cost of gas to PG&E from underground storage. Therefore, PG&E says it will continue to make a market for the California produced gas, in lieu of underground storage, at comparable costs.

The following data, from the record, indicate that PG&E must curtail some of its industrial load in 1970 or before. This data reflects PG&E's dependence on California production.

PG &E peak day gas supply (Exhibit 17, p. 8 of 9)

[MMcf]

	1965-66	1968-69	1970-71
California production	1,321	1,047	765
El Paso	1,025	1,025	1,025
PGT	454	665	665
Storage	242	442	510
Total	3,042	3,106	[25] 2,899

---

[24] Upwards from 30.0 cents per Mcf at the wellhead.

[25] The differences between these totals and the correct sum of the totals of the numbers in the column above them, represent the pipeline operating tolerances as shown on Exhibit 17, p. 8 of 9.

PG&E peak day requirements (Exhibit 18, p. 10)

[MMcf]

1965	*1968*	*1970*
2, 678	2, 932	3, 185

Approximately one-third of PG&E's interruptible industrial load is used in steam electric plants (Exhibit 18, p. 2). These would be the first to be curtailed. They are equipped to burn oil.

From all the testimony it is clear that PG&E will not only require all of the usable[26] California gas available but also the volumes here sought to be imported to meet its reasonably anticipated future supply requirements. The Staff of the Commission arrived at this same conclusion in its brief (p. 19).

ENGINEERING FEASIBILITY

There was no issue raised as to the adequacy of the proposed additional facilities to render the service proposed by PGT in its application.

DEPRECIATION ISSUE AND NET SALVAGE

Since the beginning of operations of its transmission line, PGT has been charging depreciation expense as part of its cost of service at the rate of 4 percent annually. The 4 percent rate, applied to plant on a straight line basis, reflects the 25-year life of the Canadian export permits, which were originally due to expire on October 31, 1986.

This Commission in its original authorization (24 FPC 134) approved PGT's Rate Schedule PL–1 including the above 4 percent depreciation rate. It also provided as follows:

> At such time as the aforesaid export permit, export license, or both, are renewed, extended or supplemented or modified so as to prolong or shorten the authorized export period, the unrecovered cost of the said depreciable gas plant shall be determined and the annual depreciation expense redetermined by the same method. (Original Sheet No. 12 to Pacific Gas Transmission Company's Rate Schedule PL–1, Ex. 5, *Pacific Gas Transmission Company, et al., supra,* 24 FPC 134, 150).

The Commission thereby furnished a formula for application in this present circumstance. The Canadian export permit is to be extended for three years to October 31, 1989 in conjunction with the additional 205,000 Mcf to be transported daily by PGT.

The California Public Utilities Commission strongly objects to the present depreciation practice of PGT now in force, even though the extended life of the project will cause a reduction in the depreciation rate from 4 percent to 3.7 percent (Tr. 1001).

The witness for the California Commission would revise the annual depreciation rate to 3.25 percent (Tr. 1003), after applying a 10 percent net salvage to PGT's line. In effect, this witness would reduce the rate, conforming it with the longer life of the physical plant, and also reduce the dollar amount of plant by 10 percent, to which the depreciation rate is applied. In his view, to the extent of these reductions, the California consumers would no longer be overcharged for the cost of depreciating PGT's line.

---

[26] The Lathrop field has a maximum delivery in excess of the amount considered available, or usable, by PG&E. Because of its low—871—Btu content this gas must be blended with higher Btu gas to bring the weighted average Btu content up to delivery specifications of 1075 Btu for PG&E's market.

The Commission's Staff, in finding agreement with the position of PGT's witness, *i.e.*, a slight reduction in the rate of 4 percent to 3.7 percent, due to extending the life of the Canadian permits, believe the best forum for attacking the company's costs is one under proceedings of Sections 4 and 5 of the Act, namely, a rate proceeding.

The Examiner approves the Staff position. Opening the issue of depreciation, beyond what the company proposes, suggests that consideration might need to be given to other items in the cost of service. The Commission has clearly expressed its view in the original certificate case regarding any subsequent adjustment to the depreciation allowance.

The Examiner believes the depreciation expense issue is technical in nature and modification or adjustment requires the more appropriate forum the Staff recommends.

The Examiner, therefore, concurs with the company's proposal herein without a judgment as to its merits.

THE IPAA PROGRAM FOR A MORATORIUM ON THE IMPORTS OF NATURAL GAS

The Independent Petroleum Association of America (IPAA), an intervenor, is a well-known national trade association representing producers in every producing area in the United States. It opposes the issuance of an import certificate to PGT upon the theory that the importation of gas will decrease, or may even eliminate, the use of domestic gas, that the domestic supplies of gas in District V[27] have, and will continue to increase unless imported gas crowds it out of the market and, finally, to grant this import request would depress the search for and the use of domestic gas in District V and for these reasons would not be consistent with the public interest under Section 3 of the Natural Gas Act.

IPAA urges restrictions be placed on natural gas imports similar to those of the Mandatory Oil Import Program contending that imports, especially in California, are increasing at a faster rate than the increase in production. It is argued that restrictions on imports would increase the income of domestic producers which would create an additional incentive to explore for new reserves.

The question concerning California reserves and production, as well as the wellhead price being paid the California producer and the assurances of PG&E that it will make a market for California production of gas have been considered in some detail in other parts of this decision. No one here disputes the need of PG&E for additional gas to meet its market requirements. No one except PGT presented an application for authorization to supply the additional market requirements of PG&E. It is true that the State of Texas and TIPRO offered testimony, which was excluded from this record, indicating they had shut-in gas wells and uncommitted reserves from which the PG&E market requirements could be supplied, but they offered no program for transporting this shut-in gas or uncommitted reserves to the PG&E market. That California is an energy deficient state, and that the California markets must necessarily look more and more to out-of-state production for its future energy requirements, has been the consistent theme of California distributor and consumer witnesses before this Commission for years past. Such is the uncontroverted testimony of PG&E on this record.

Section 3 of the Natural Gas Act provides that the Commission, upon application, shall issue its order authorizing the importation of natural gas into the United States from a foreign country if, after a hearing, it finds the importation is in the public interest. Here PGT has shown by a preponderance of the evidence the need of PG&E for the gas, of the unreliability of California production for PG&E's expanding market, together with the feasibility of transporting the additional proposed volumes through its existing pipeline.

---

[27] Includes the States of Alaska, Arizona, California, Nevada, Oregon, Washington and Hawaii.

The Mandatory Oil Import Program recognizes, as did this Commission in *PGT*, 24 FPC 134, the close and friendly relationship between Canada and the United States and therefore exempted imports of oil from Canada into District V. No reference was made to the importation of gas. The Commission's guidelines and standards for the importation of natural gas from Canada have been unmistakably stated in *Northwest Natural Gas Company, et al.*, 13 FPC 221, 235; *American Louisiana Pipe Line Company, et al.*, 20 FPC 575, 591; *Pacific Gas Transmission Company, et al.*, 24 FPC 134, 135 and reaffirmed in its Opinion No. 486 in *The Montana Power Company*, issued February 8, 1966, 35 FPC 191. Nothing is found in this record which would cause this Examiner to impose the conditions requested.

The Staff recommends, if this import application is approved, any future supplies of natural gas for the PG&E market should come from domestic sources so that there may be some balance between the sources of supply. The People of the State of California and the Public Utilities Commission of the State of California oppose this recommendation. They argue that a further increment of gas from PGT might be the most economical supply available to PG&E and, if the Staff recommendation were adopted, PG&E would be precluded from making the import purchase thus forcing PG&E to pay higher prices for domestic gas which would increase rates to consumers. The Examiner approves the California position against the imposition of the Staff recommendation.

The People of the State of California and the Public Utilities Commission of the State of California,[28] The Washington Utilities and Transportation Commission, the Idaho Public Utilities Commission, the Public Utility Commissioner of Oregon, the City and County of San Francisco,[29] the Southern California Gas Company, the Southern Counties Gas Company of California and the Pacific Lighting Gas Supply Company, each support the PGT application. The El Paso Natural Gas Company does not object to the granting of a certificate to PGT. The Staff "concludes that the public convenience and necessity requires the issuances of the certificate requested pursuant to the Natural Gas Act." (Staff Brief, p. 49, conclusion.)

PRESIDENTIAL PERMIT

PGT also applies for a Presidential Permit for the construction, operation, maintenance and connection, at the International Boundary between Canada and the United States of the facilities for the importation of the additional quantities of natural gas from Canada which are required, or may be necessary, for the importation here proposed. The requisite facilities for the initial project were authorized by the Presidential Permit issued August 5, 1960, in Docket No. G-17352, *PGT*, 24 FPC 134, 143 Ordering Paragraph (D). The facilities there authorized are presently in use. The proposed expansion to increase imports by 200,000 Mcf per day will be accomplished by adding compressor capacity to the existing system. No other change or alteration of the existing facilities at the International Boundary is required.

---

[28] Except upon the issue of depreciation and net reserve.

[29] *Ibid.*

Since the existing Presidential Permit, *supra*, grants permission to construct, operate, maintain, and connect the facilities therein described for the purpose of transporting natural gas across the International Boundary in the amount, at the rate, and in the manner there authorized by the Commission and, since the application here is for permission to transport an additional 200,000 Mcf per day through the same facilities, no amendment or additional Presidential Permit is required. *Midwestern Gas Transmission Company, et al.*, Opinion No. 469, issued August 10, 1965, 34 FPC 457 at 460, 461; *The Montana Power Company*, Opinion No. 486, issued February 8, 1966, 35 FPC 191.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Examiner finds and concludes, in addition to the findings and conclusions hereinabove stated, that:

(1) The applicant, the Pacific Gas Transmission Company, is engaged in the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is therefore a "natural-gas company" within the meaning of the Natural Gas Act. See *Pacific Gas Transmission Company*, 24 FPC 134, Finding (5) p. 140.

(2) The additional facilities proposed by Pacific Gas Transmission Company hereinabove referred to and more fully described in the Pacific Gas Transmission Company applications and the evidence herein, will be used in the transportation and sale of the additional quantities of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such additional facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Pacific Gas Transmission Company has an adequate supply of natural gas committed to it which will enable it to render the service herein authorized.

(4) The additional facilities proposed by Pacific Gas Transmission Company are adequate to render the supplemental service herein proposed.

(5) Pacific Gas Transmission Company is financially able to construct and operate the proposed additional facilities estimated to cost $13,857,000.

(6) A market exists for the proposed additional sales of natural gas by Pacific Gas Transmission Company to Pacific Gas and Electric Company.

(7) The Pacific Gas Transmission Company plan for rendering the additional service to Pacific Gas and Electric Company is feasible.

(8) Pacific Gas Transmission Company is able and willing, subject to the terms of this order, properly to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission promulgated thereunder.

(9) The construction and operation of the facilities proposed by Pacific Gas Transmission Company and its sales and transportation of the additional quantities of natural gas, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the present and future public convenience and necessity, and a certificate of public convenience and necessity should be issued therefor.

(10) The proposed importation of the additional quantities of natural gas by Pacific Gas Transmission Company is subject to the jurisdiction of the Commission under the provisions of Section 3 of the Natural Gas Act.

(11) The importation of the additional quantities of natural gas proposed by Pacific Gas Transmission Company in its application is appropriate and consistent with the public interest and should be authorized upon the terms and conditions of this order.

(12) The terms of the existing Presidential Permit issued to Pacific Gas Transmission Company on August 5, 1960, 24 FPC 134, sufficiently provide for the proposed additional imports and no amendment or additional Presidential Permit is required.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) An unconditioned certificate of public convenience and necessity is hereby issued to the Pacific Gas Transmission Company authorizing it to import from Canada an additional 100,000 Mcf per day of natural gas commencing on or about November 1, 1966, and an additional 100,000 Mcf per day of natural gas commencing on or about November 1, 1967 for transportation and sale to the Pacific Gas and Electric Company for resale, all as more fully described in the applications filed herein and the evidence received in these proceedings.

(B) The unconditioned certificate of public convenience and necessity hereby issued is subject to the applicable terms and conditions of the order of the Commission issued on August 5, 1960 to the *Pacific Gas Transmission Company, et al.*, 24 FPC 134.

HARRY W. FRAZEE,
Presiding Examiner.

OPINION NO. 490-A

ST. MICHAELS UTILITIES COMMISSION AND COMMISSIONERS OF ST. MICHAELS, MARYLAND, ET AL., DOCKET NO. E-7114, ET AL.*

OPINION AND ORDER DENYING APPLICATIONS FOR REHEARING

(Issued June 15, 1966)

Syllabus

1. Municipally-owned and investor-owned complainants (Tariff Customers) do not merit same rates charged Cooperatives. P. 1028.
2. It is service characteristics such as those here and not organizational nature of Delaware Power's wholesale customers which justify their classification—municipalities and other wholesale customers possessing essentially similar characteristics are entitled to same consideration given Cooperatives. P. 1028.
3. Complainants sustain no competitive detriment by fact that Power System charges lower rates to Cooperatives than Tariff Customers since record shows no competition between the two groups. Pp. 1028, 1029.
4. Commission *rejects* Complainants' current contention that they are handicapped in competing for business against Power System because latter,

---

*For additional parties see Opinion No. 490 and order issued April 21, 1966, 35 FPC 591.

with Cooperatives, is engaged in program to stifle competition—complaints in proceeding contained no such allegations and no substantiating evidence was adduced at hearing. P. 1029.

5. Upon reconsideration, Commission *reaffirms* prior opinion and order and *denies* application for rehearing.

Chairman White *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

On April 21, 1966, the Commission issued Opinion No. 490 and accompanying order in the above-entitled proceeding, 35 FPC 591. Applications for rehearing of this Opinion and order have been filed under Section 313(a) of the Federal Power Act by the following: St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland (St. Michaels), the complainants in Docket No. E–7114; Stockton Light and Power Company (Stockton), the complainant in Docket No. E–7117; and City of Dover, Delaware (Dover), the complainant in Docket No. E–7175.

In general, the applications for rehearing advance arguments which are substantially similar to those relied upon previously in this case. These contentions were carefully considered by the Commission in its deliberations which culminated in Opinion No. 490 and order. Upon reconsideration, the Commission concludes that Opinion No. 490 and accompanying order are correct and should not be modified. The applications for rehearing afford no basis for disturbing the Commission's findings that the Delaware Power System's wholesale customers fall into two separate classifications, (1) Tariff Customers, including the complainants, and (2) Cooperatives, and that the rates charged by the Delaware Power System to these different classes of customers are just, reasonable and lawful.

Despite the contention of the municipally-owned and investor-owned complainants (Tariff Customers), that they merit the same rates charged the Cooperatives, the record in this proceeding plainly shows that the Cooperatives are distinguishable from the Tariff Customers particularly with respect to sparsity of service areas and service relationship with the Delaware Power System. It is significant that while the Delaware Power System makes delivery of electric service directly to the load centers of most of its Tariff Customers, the Cooperatives had to build their own transmission lines, at a cost of more than one-third of a million dollars, from their load centers to points on the Delaware Power System. In addition, the Cooperatives provide their own substations which take power at prescribed voltages, in contrast to the Tariff Customers, most of which have the substations provided by Delaware Power at voltages which are mutually agreeable. Also, the load characteristics of the Cooperatives as a group differ from those of most of the Tariff Customers in that the Cooperatives require less of their peak power demand coincident with the total system peak than do most of the Tariff Customers.

We emphasize that it is service characteristics such as those described above and not the organizational nature of Delaware Power's wholesale customers which justify their classification. Of course, municipalities, and other wholesale customers which possess essentially similar characteristics are entitled to the same consideration as that given the Cooperatives in this proceeding.

We note that the complainants sustain no competitive detriment by reason of the fact that the Delaware Power System charges lower rates to the Cooperatives than to the Tariff Customers since the record shows that there is no competition between these two wholesale groups. Further, the rate of return which the Delaware Power System receives on its sales to the Tariff Customers is no higher than that which it is entitled to collect. The Commission found on the record in this proceeding that a rate of return of 6 percent on Delaware Power System's wholesale business was fair and reasonable, and that the System was, in fact, receiving no more than 6 percent on its sales to its Tariff Customers.[1]

In their applications, the complainants have shifted the basis of their case to their current contention that they are handicapped in competing for retail, industrial business against the Delaware Power System because that System, in conjunction with the Cooperatives, is engaged in a program to stifle competition. These specifications of error must be rejected. This proceeding is on the complaints of the above-described parties whose pleadings contain no such allegations. No evidence was adduced at the hearings which substantiates them. To the contrary, despite the complainants' assertions that the Delaware Power System is engaging in a program to stifle competition, the record shows that the Delaware Power System affirmatively cooperated with Dover in making energy available to large industrial and military installations served by that city, and also accompanied rate reductions which it had negotiated with the Cooperatives with substantially similar rate reductions to the Tariff Customers.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the above-described applications for rehearing present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 490 and accompanying order on April 21, 1966, or which having now been reconsidered warrant any change or modification of said Opinion and order.

The Commission orders:

The applications for rehearing filed by the applicants, St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland, Stockton Light and Power Company, and City of Dover, Delaware, are denied.

Chairman White *not participating.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

YADKIN, INC., PROJECT NO. 2197

ORDER APPROVING REVISED PROJECT EXHIBIT M AND MODIFYING LICENSE

(Issued June 15, 1966)

On March 30, 1966, Yadkin, Inc., licensee for major Project No. 2197, filed application for Commission approval of a revised Exhibit M, sheet 6, dated

---

[1] The Delaware Power System's rate of return on its service to the Tariff Customers amounts to 5.68 percent when computed on the basis of staff's cost of service data, adjusted by the examiner's cost of service and allocation findings. On the basis of a twelve-month average peak responsibility allocation, and using staff's cost of service data, the rate of return is 5.87 percent. On the basis of the average-and-excess demand allocation method, and using staff's cost of service data, the rate of return is 6.07 percent, but this last figure is subject to reduction when the examiner's cost of service adjustments are taken into consideration.

March 15, 1966, to reflect the change in the turbine rating of the Narrows Development of the project that will result from the proposed rehabilitation plan for Unit No. 3 to be completed in 1967. The project is located on the lower Yadkin stretch of the Yadkin-Peedee River in Stanley, Montgomery, Davidson, and Rowan Counties, North Carolina.

The licensee proposes to replace the turbine runner of Unit No. 3, thereby increasing the turbine rating from 27,000 horsepower at 165 net head to 36,000 horsepower at 175 design head, and thus eliminate a vibration problem attributed to the turbine, which was installed in 1917, and increase the efficiency of the turbine by about 4 percent. This change should be shown in subparagraph (b)(3) of *Paragraph I* of the amended license as hereinafter set forth.

The Commission finds:

Revised Exhibit M, sheet 6, dated March 15, 1966, and filed with the Commission on March 30, 1966, conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit M, page 6, which is superseded, should be eliminated from the license for the project.

The Commission orders:

(A) The revised Exhibit M, sheet 6 mentioned in the above finding is hereby approved as part of the license for Project No. 2197, and the license Exhibit M, page 6 mentioned in the same finding is hereby eliminated from the license for the project.

(B) Subparagraph (b)(3) of *Paragraph I* of the amended license is hereby further modified to read as follows, effective as of April 1, 1966:

(3) The constructed Narrows Development located about 2 miles from Badin, North Carolina. A concrete dam composed of a gated spillway section, a non-overflow section and an intake section; a concrete by-pass spillway section separate from the main dam composed of a gated section and a non-overflow section; a concrete by-pass spillway channel about 1,300 feet long on the left bank around the powerhouse; a reservoir, about 7½ miles long extending to the proposed Tuckertown dam, with normal pool elevation 541.1 feet, an area of 5,355 acres and a usable storage of 128,937 acre-feet at a drawdown of 31.1 feet; four steel penstocks about 340 feet long; a separate powerhouse containing one 27,000-horsepower turbine and three 36,000-horsepower turbines direct-connected to generators having a total capacity of 96,500 kilowatts (Units 1 and 2, 24,750 kw; Unit 3, 25,000 kw and Unit 4, 22,000 kw); four transmission circuits operating at generator voltage (13,200 volts) connecting with the Badin substation; and appurtenant electrical and mechanical equipment.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBIA RIVER BASIN, HEADWATER BENEFITS, DOCKET NO. E-6384

ORDER APPROVING HEADWATER BENEFITS PAYMENTS

(Issued June 16, 1966)

This order approves proposed payments for headwater benefits provided by licensed hydroelectric projects in the Columbia River Basin to downstream non-Federal developments from January 1, 1949, through August 31, 1961. Section 13.1 of the Regulations under the Federal Power Act provides for such approval in lieu of a headwater benefits determination under Section 10(f) of the Act (16 U.S.C. 803(f)).

This is the last in a series of orders bringing headwater benefits payments in the Columbia River Basin up to date. We have found that no benefits accrued in the basin before January 1, 1949 (11 FPC 832). We have fixed payments to the United States for benefits provided by Federal headwater improvements from that date through August 31, 1964 (29 FPC 238, 31 FPC 1044, 33 FPC 300, 33 FPC 907, Order Terminating Proceeding on Rehearing issued February 11, 1966, 35 FPC 213). We have issued a bill, which has been paid, for payments to the United States for benefits accruing during the succeeding year, September 1, 1964, through August 31, 1965. We have approved payments to licensees for benefits provided by licensed projects to downstream non-Federal developments from September 1, 1961, through August 31, 1965 (29 FPC 238; 33 FPC 300, Order Approving Headwater Benefits Payments issued February 11, 1966, 35 FPC 212). After the present order, approving payments to licensees for 1949 through August 1961, headwater benefits determinations in the basin will be on a current basis.

By letter of August 20, 1964, the Commission stated that the non-Federal parties could await the determination of headwater benefits payments to the United States for 1949 through August 1961, before filing a settlement among themselves for the same period. The payments to the United States for this period were made final by the order of February 11, 1966, terminating the proceeding on rehearing of the order of April 30, 1965 (33 FPC 907). The settlement among the non-Federal parties designated below was filed by them jointly on March 16, 1966. The payments set forth in the settlement appear to be based on methods and practices generally similar to those used in the computation of payments to the United States for the same period. The payments are as follows:

Payers	Payees			
	The Montana Power Co.	The Washington Water Power Co.	PUD No. 1 of Pend Oreille Co.	PUD No. 1 of Chelan Co.
The Washington Water Power Co.	$125,900			
PUD No. 1 of Pend Oreille Co.	42,700	$7,200		
PUD No. 1 of Chelan Co. & Puget Sound P. & L. Co.	35,600	9,400	$1,123	
PUD No. 2 of Grant Co.	7,400	4,800	510	$5,100
Total	211,600	21,400	1,633	5,100

The payments shown above to The Montana Power Company and The Washington Water Power Company by PUD No. 1 of Chelan County and the Puget Sound Power and Light Company make allowance for interim payments in the amount of $8,800 to Montana Power and $11,400 to Washington Water Power. Chelan and Puget Sound were joint licensees of the Rock Island development, Project No. 943, during part of the period covered by the settlement. The payment to PUD No. 1 of Pend Oreille County includes payment for benefits provided by its Sullivan Lake development, Project No. 2225, for the period of September 1, 1961, through August 31, 1962, approval of which was not included in our order of February 6, 1963 (29 FPC 238).

The Commission finds:

The settlement agreement filed by the above-designated non-Federal parties on March 16, 1966, constitutes an effective and reasonable method of compensating licensees for headwater benefits provided in the Columbia River Basin to downstream non-Federal developments from January 1, 1949, through August 31, 1961.

The Commission orders:

The payments made pursuant to the settlement agreement filed by the above-designated non-Federal parties on March 16, 1966, are approved under Section 13.1 of the Regulations under the Federal Power Act with respect to headwater benefits provided in the Columbia River Basin by licensees to downstream non-Federal developments from January 1, 1949, through August 31, 1961.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, ET AL., DOCKET NO. CP64-211, ET AL.

ORDER WITH RESPECT TO QUALITY STATEMENTS

(Issued June 16, 1966)

The producers listed in the Appendix have submitted quality statements as required by Opinion No. 484 issued January 6, 1966, 35 FPC 40. The time period for consideration by the Commission of such quality statements was extended to June 6, 1966, by order issued April 11, 1966, 35 FPC 486, herein.[1] That order also advised the producers that no consideration would be given to the proposed upward adjustments for delivery of gas at a pressure above 500 psig contained in such quality statements.

The quality statements, which reflect full agreement between the respective sellers and El Paso Natural Gas Company (El Paso), are summarized in the Appendix. The treating costs and the methods used to determine such adjustments are the same as those used to determine adjustments in the quality statements submitted in compliance with Opinion No. 468.

For the reasons set forth in our order issued June 13, 1966, *supra*, p. 960, in Area Rate Proceeding, *et al.* (Permian Basin Area), Docket No. AR61-1, *et al.*, relating to quality statements submitted under Opinion No. 468, 34 FPC 159, we shall approve the adjustments set forth in the subject quality statements, except for the proposed upward adjustments for delivery pressure in excess of 500 psig. Accordingly, the applicable area rate under Opinion No. 484, effective as of the date of initial delivery, is 15.77¢ per Mcf at 14.65 psia for sales by Union and 15.91¢ per Mcf at 14.65 psia for sales by the other producers listed in the Appendix.

The Commission orders:

(A) The adjustments contained in the quality statements listed in the Appendix are accepted, except for the proposed upward adjustments for delivery pressure in excess of 500 psig.

---

[1] The time period was further extended to June 30, 1966, by order issued June 6, 1966, *supra*, p. 892.

(B) The applicable area rate under Opinion No. 484 is 15.77¢ per Mcf at 14.65 psia for sales by Union and 15.91¢ per Mcf at 14.65 psia for sales by the other producers listed in the Appendix effective as of the date of initial delivery.

APPENDIX

Docket No.	Applicant	H_2S (Grs./Mcf)	Sulphur (Grs./Mcf)	CO_2 (%)	H_2O (#/Mcf)	Delivery pressure
CI64-1085	Union Oil Company of California	----------	[1, 4] 34	[4] 3.18	[2] +0.009	[3] 1200

HUGOTON-ANADARKO AREA RATE PROCEEDING, DOCKET NO. AR64-1 AND PIPELINE PRODUCTION AREA RATE PROCEEDING, DOCKET NO. RP66-24

ORDER DENYING APPLICATIONS

(Issued June 16, 1966)

On April 13, 1966 the Commission issued its order severing from the Hugoton-Anadarko Area Rate Proceeding, Docket No. AR64-1, *et al.*, 35 FPC 497, the issues with respect to the appropriate method of pricing natural gas produced by pipelines and their affiliates which is delivered into the pipelines' transmission systems, establishing a separate proceeding entitled "Pipeline Production Area Rate Proceeding, Docket No. RP66-24," ordering a prehearing conference limited to dealing with gas produced in the future by pipelines, joining parties, and prescribing procedure. On May 13, 1966, applications for rehearing and reconsideration of such severance and procedure were filed by Colorado Interstate Gas Company, Natural Gas Pipeline Company of America, Panhandle Eastern Pipe Line Company, and by thirteen pipelines filing jointly under the name of Pipeline Group.[1] In the alternative, these applicants ask that they be permitted to introduce evidence as to all phases of pipeline production, and that the initial proceedings in Docket No. RP66-24 not be limited to gas to be produced in the future.

The Commission's order of April 13, 1966 was purely interlocutory and procedural. It did not determine any substantive rights of any party. An application for rehearing of such an order will not lie. The applications will therefore be treated as applications for reconsideration. Rules of Practice and Procedure, Section 1.30(e).

---

[1] By order issued May 25, 1966, 35 FPC 807, we have denied these pipelines' petitions to intervene as a group in the newly instituted pipeline production area rate proceeding, Docket No. RP66-24. The thirteen pipelines are, however, individual respondents in the proceeding.

We do not agree with the contention that the determination of the prices to be allowed pipeline producers will be delayed by the procedure adopted; on the contrary, we believe that a final determination will be reached expeditiously in the severed proceeding, and that the area rate proceeding will be resolved more quickly than would otherwise be the case. Applicants contend that they have expended time and money in presenting evidence before the severance, but little of the time and money will be wasted as a result of the severance. To the extent the evidence is relevant, it will be available in the severed proceeding.

Applicants aver that the Commission has committed itself to the view that the cost of service approach is inappropriate for pipeline producers as well as independent producers. This commitment is said to have been made by a unanimous Commission in Opinion No. 344, *Panhandle Eastern Pipe Line Co.*, 25 FPC 787, 794, and in the brief to the Supreme Court on that case, *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, October Term, 1963, No. 614.[2]

That this contention is completely unfounded is italicized by the following statement in that brief:

> We wish to make clear that the policy determination that a new approach is necessary to fixing the rates for gas production business of pipelines, enunciated in this decision, represented the views of the members of the Commission at that time, and that the present Commission, while giving intensive consideration to the problem, has not yet determined the extent to which the emerging area price techniques, which it intends to apply to independent producers, should also be applied to the production activities of natural gas pipelines. * * * But regardless of how the policy determination is ultimately resolved, the present Commission adheres to the position stated in the opinion here that it is legally free to depart from cost-of-service concepts in pricing a pipeline's gas production *to the extent that a record presents an adequate basis for moving to a more appropriate pricing basis.*

Thus, contrary to Applicant's basic contention, the Commission in this severed proceeding (RP66–24) is seeking a full and complete record on the specific issues determined by the Examiner to be relevant and material to the first phase of this proceeding (as denominated in our order issued April 13, 1966), in order to determine whether there is an "adequate basis for moving to a more appropriate pricing basis" for pipeline produced gas.

The Commission finds:

The assignments of error and grounds for reconsideration, leave to adduce additional evidence or alternative relief set forth in the applications filed May 13, 1966 by Colorado Interstate Gas Company, Natural Gas Pipeline Company of America, Panhandle Eastern Pipe Line Company and the pipeline producers known as the Pipeline Production Group present no facts or legal principles which would warrant any change or modification in the Commission's order of April 13, 1966.

The Commission orders:

The applications for rehearing, reconsideration, leave to adduce additional evidence or for alternative relief filed May 13, 1966 by Colorado Interstate Gas Company, Natural Gas Pipeline Company of America, Panhandle Eastern Pipe Line Company and the pipeline producers known as the Pipeline Production Group are denied.

---

[2] Panhandle's petition for a writ of certiorari was denied 372 U.S. 916.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITIES SERVICE GAS COMPANY, DOCKET NO. RP64-17

ORDER DENYING APPLICATION FOR REHEARING

(Issued June 17, 1966)

On May 18, 1966, the Secretary of the Army filed an application for rehearing of our Opinion No. 489 and accompanying order issued in the above-captioned proceeding on April 20, 1966, 35 FPC 571. We have considered the said application for rehearing with care, and have concluded that the assignments of error and grounds for rehearing contained therein set forth no new facts or principles of law which were not fully considered when we issued the said opinion and order or which, having now been considered, warrant any change in or modification of the said opinion and order.

The Commission orders:

The application filed by the Secretary of the Army on May 18, 1966, for rehearing of the Commission's Opinion No. 489 and accompanying order issued in this case on April 20, 1966, is hereby denied.

Chairman White *not participating.*

Commissioner Ross *dissenting.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE CONNECTICUT LIGHT AND POWER COMPANY, THE HARTFORD ELECTRIC LIGHT COMPANY AND WESTERN MASSACHUSETTS ELECTRIC COMPANY, PROJECT NO. 2485

ORDER GRANTING PETITION TO INTERVENE

(Issued June 17, 1966)

Petitions to intervene in the above-entitled proceeding on application for the proposed Northfield Mountain Hydroelectric project were filed on May 10, 1966, by the Holyoke Water Power Company and jointly by the Municipal Electric Association of Massachusetts, City of Chicopee, Town of Shrewsbury, and Town of Wakefield, Massachusetts.

On May 23, 1966, the applicants filed an opposition to the joint petition to intervene by the Municipal Association and the three individual Massachusetts municipalities, on grounds that their interest in the application is too remote and that the substantive questions in which the petitioners expressed an interest are not appropriate matters for the Commission's consideration of the application. Without at this time expressing any opinion on the merits of the matters in which the municipal petitioners have expressed an interest, we believe they may have substantive interests which could be affected by grant of the application and that their participation as interveners in the proceeding may be appropriate. See *Scenic Hudson Preservation Conference* v. *F.P.C.*, 354 F. 2d 608 (CA2-1965), certiorari denied, May 16, 1966; *Office of Communication of the United Church of Christ* v. *F.C.C.*, 19409 CADC, decided March 25, 1966.

The Commission finds:

The participation by the above-named petitioners in this proceeding may be in the public interest.

The Commission orders:

The petitioners are hereby permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission: *Provided, however,* That participation by petitioners shall be limited to matters affecting certain rights and interests specifically set forth in their petitions for leave to intervene; *And provided, further,* That the admission of the petitioners shall not be construed as recognition by the Commission that the interveners or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

TOWN OF MASON, TENNESSEE AND TRUNKLINE GAS COMPANY, DOCKET NO. CP66-209

ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued June 17, 1966)*

Syllabus

Commission *directs* Trunkline Gas Company, under Section 7(a) of the Natural Gas Act, to establish physical connection of its facilities with those proposed to be constructed by applicant and sell natural gas to applicant.

Jerald H. Sklar for the Town of Mason, Tennessee.

William J. LeBuhn for the Trunkline Gas Company.

Agnes Mae Wilson for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

On May 9, 1966, the Presiding Examiner, Seymour Wenner, issued an initial decision in this proceeding under Section 7(a) of the Natural Gas Act ordering Trunkline Gas Company to establish physical connection of its transportation facilities with facilities which the Town of Mason, Tennessee, proposes to construct and to sell natural gas to Mason for resale and distribution. No exceptions have been filed to the examiner's decision within the period provided in our rules.

The Commission further finds:

Upon consideration of the entire record in these proceedings, including the evidence adduced, the briefs filed, and the presiding examiner's initial decision, said decision should be adopted as the decision of the Commission in this case.

The Commission orders:

The initial decision of the presiding examiner issued herein on May 9, 1966, is hereby adopted and such decision shall become effective as the decision of the Commission as of the date of issuance of this order.

---

*Initial decision appears on p. 1037.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON APPLICATION UNDER SECTION 7(a) OF THE NATURAL GAS ACT

(Issued May 9, 1966)

WENNER, *Presiding Examiner:*

The Town of Mason, Tennessee, filed an application under Section 7(a) of the Natural Gas Act seeking an order directing Trunkline Gas Company (Trunkline) to establish physical connection of its transportation facilities with the facilities which Mason proposes to construct and to sell natural gas to Mason for resale and distribution therein.

Mason is a town of some 400 people, about 40 miles from Memphis. Trunkline's pipeline is a half mile away from Mason. The cost of constructing the connection and the distribution facilities is estimated at $70,000. The estimated daily requirement for the third year is 169 Mcf.

Trunkline does not oppose and Staff supports the application.

The parties have agreed to the following and it is so found:

1. Trunkline is a natural gas company;

2. Mason is legally authorized to engage in the local distribution of gas to the public;

3. The proposal will not place an undue burden on Trunkline;

4. The proposal will not compel Trunkline to enlarge its facilities;

5. The proposal will not impair Trunkline's ability to render adequate service to its customers. Trunkline's supply of gas is adequate for the purpose.

The real issue is whether the proposal is necessary or desirable in the public interest.

The benefits to consumers in Mason from introducing natural gas are convenience and cleanliness. While gas is more expensive than coal it is cheaper than electricity.

The engineering plans have been submitted by an experienced consulting firm that has successfully designed many similar systems. The hearing revealed no defects in the plans. The project is found to be feasible engineering-wise.

The estimates of customers, gas used, and cost are based on experience with similar systems and are reasonable.

The town has entered into a firm commitment with a well established financial house, M. A. Saunders and Company, Inc., to bid for revenue bonds in the required amount at an interest rate not exceeding 5 percent. The estimates show a ratio of net revenue to debt service based on 20 year totals of 2.27 to 1; and based on third year totals of 1.56 to 1. These estimates indicate a financially sound project.

It is concluded that the project is desirable in the public interest and that it is economically and financially sound.

In 1959 the Commission denied an application by Mason for gas service, 21 FPC 853. The prime objections were that Mason did not need the service and that the proposal was of doubtful financial soundness and could be a burden on the general taxpayers. The present project, unlike the former one, is to be financed solely out of revenue bonds which do not become a charge on the general revenues of the town. The area around Mason, though not Mason itself, has developed considerably since 1959. This is due in part to improved roads between Mason and Memphis and growing industrialization of the area. The benefits from having gas are considerable. The townspeople are familiar with the proposal and support it.

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission, that the application of the Town of Mason be, and it hereby is granted, and that Trunkline Gas Company establish physical connection of its facilities with the facilities to be constructed by the Town of Mason, and it is further

Ordered, that Mason be prepared to receive natural gas service from Trunkline within one year from the date of this order, and it is further

Ordered, that Trunkline sell and deliver to Mason the volumes of natural gas required to meet the third year maximum daily requirement of 169 Mcf, and it is further

Ordered, that Trunkline shall report to the Commission in writing the date of commencement of service to Mason.

SEYMOUR WENNER,
Presiding Examiner.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

HYDROELECTRIC LICENSE APPLICATIONS—EXHIBIT RELATING TO PROTECTION AND ENHANCEMENT OF FISH AND WILDLIFE RESOURCES, DOCKET NO. R-303

ORDER NO. 323

AMENDING SECTIONS 4.31, 4.41 AND 4.50 OF REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued June 17, 1966)*

On April 19, 1966, the Commission issued a notice of proposed rule-making in this proceeding (31 F.R. 6379, April 27, 1966) wherein it proposed to amend Part 4 Regulations under the Federal Power Act (18 CFR 4.41) to provide that an exhibit setting forth matters related to the conservation and enhancement of fish and wildlife resources affected by the project be filed as part of license applications for proposed projects of more than 2,000 horsepower installed capacity, and constructed projects for which a new license is sought under Section 15 of the Federal Power Act.

The exhibit will help expedite the processing of applications by identifying potential problems with respect to fish and wildlife resources and suggesting possible solutions thereto upon the filing of an application. It will also facilitate the Commission's compliance with the requirements of the Fish and Wildlife Coordination Act (16 U.S.C. §§ 661–666c) for consultation with the U.S. Fish and Wildlife Service, Department of the Interior and appropriate state fish and wildlife agencies on the conservation and enhancement of fish and wildlife resources affected by a project.

We received 32 responses to the notice: 23 of these[1] expressed unqualified approval of the proposed rule, and one opposed its adoption as unnecessarily duplicative of existing requirements.[2] The balance,[3] while generally supporting the rule, expressed certain reservations and suggested various modifications which we shall deal with below.

---

*Published in the Federal Register on June 24, 1966 (31 F.R. 8779).

[1] (1) State of New Hampshire, Fish and Game Department; (2) State of Montana, Department of Fish and Game; (3) State of Minnesota, Department of Conservation; (4) State of Idaho, Fish and Game Department; (5) International Association of Game, Fish and Conservation Commissioners; (6) Wildlife Management Institute; (7) Medical

The Southern California Edison Company, as well as The Montana Power Company, point to the possible duplication in Exhibit S of materials already required in Exhibit R. Although the subject of recreational facilities may relate to fish and wildlife, the problems relating to fish and wildlife obviously go far beyond those involved in a recreational plan and should be dealt with separately. Moreover, the conservation and enhancement of fish and wildlife is considered separately in legislation on this subject (16 U.S.C. 661–666c). We shall, however, provide that matters covered in Exhibit R need only be included in Exhibit S by reference.

Colorado Wildlife Federation, Inc. indicated its support for the rule so long as it is supplemental to the Fish and Wildlife Coordination Act and not in lieu of it. In this regard, we wish to make clear that the requirement for Exhibit S is not intended to supersede the provisions of the Coordination Act. It will, however, facilitate the Commission's compliance with those provisions. The Colorado Federation also suggested the addition of language to include areas affected by the project as well as those within the project boundary, in the preparation of Exhibit S. It is not our intention to exclude from consideration in the preparation of Exhibit S, fish and wildlife resources affected by the project which are outside of the project boundary, *e.g.*, hatcheries and releases for downstream fish resources. We are modifying the language of the proposed amendment to clarify this point.

The Puget Sound Power & Light Company objects to the portion of the proposed rule which would require an applicant to consider the enhancement of fish and wildlife resources, in addition to conservation, in the preparation of Exhibit S, asserting that (1) it is contrary to the established policy of providing solely for the conservation of fish and wildlife resources; (2) it shifts the responsibility for enhancement from the public in general to ratepayers of the licensee thereby imposing on them a financial burden for a function not properly chargeable to them; and (3) it would be difficult for a licensee to determine in advance the extent to which it would have to pay for the improvement of fish and wildlife resources. We do not agree that an applicant should limit itself to the consideration of conservation of existing fish and wildlife resources in the preparation of Exhibit S. While our prime objective is, of course, the conservation of fish and wildlife resources which may be affected by a hydroelectric project, it would indeed be shortsighted to overlook

opportunities which may present themselves for enhancing such resources or to fail to receive potential licensees to give consideration to these matters in the course of preparing their applications. In response to its second contention, where the enhancement of fish and wildlife resources is feasible in connection with the conservation of such resources, the licensee may be required to bear necessary costs therefor as it does all other reasonable costs associated with the project as licensed by the Commission under Section 10(a) of the Federal Power Act. As for determining in advance the cost for improving fish and wildlife resources, we are providing in the rule that Applicants furnish cost estimates, as part of the exhibit, with respect to all improvements proposed by the applicant. These estimates would not necessarily include those improvements which may be prescribed during the term of the license

The State of California-Resources Agency, Department of Fish and Game in its comment on the proposed rule has made several suggestions, one of which also raises the subject of enhancement of fish and wildlife resources. Contrary to the position of Puget Sound Power and Light Company, it urges that the matter of enhancement be emphasized. It cites as an example the Yuba River Project (FPC Project No. 2246) which incorporates features which will rehabilitate a significant salmon run. We believe that the language of the rule adopted will satisfactorily alert applicants to the importance of giving consideration to enhancement of fish and wildlife resources in developing the exhibit. California makes another suggestion similar to that made by the Colorado Wildlife Federation, with respect to the affect of a project upon fish and wildlife resources outside of the project area. As stated above, we have adopted this suggestion.

The California Department in its comments suggests that the potential applicants be required as part of the Exhibit S report to set forth detailed proposals considered necessary by the Department of the Interior or appropriate state fish and wildlife agencies as well as by the applicant itself. We do not believe it would be appropriate to thus convert the proposed Exhibit S to a joint proposal by the potential applicant and the appropriate Federal and State agencies or to require such applicant to include initially plans to which it does not subscribe. We have provided that the exhibit is to be prepared on the basis of studies made by the applicant after consultation and in cooperation with the appropriate Federal and State authorities and that the report contain a specific statement of the nature of this consultation and cooperation. In addition, the Exhibit S submitted by the applicant will be referred to the appropriate Federal and State agencies for their own comment pursuant to the provisions of the Fish and Wildlife Coordination Act and our rules and regulations (18 CFR 1.37, 4.31) thereby bringing the views of all concerned before the Commission for consideration. We believe that such a procedure rather than one requiring the applicants to speak for the agencies will provide the most appropriate way for achieving best results in this difficult area.

The California Department also contends that the rule as proposed leaves doubt as to whether the applicant is fully responsible for the necessary study costs and suggests a clarifying change of appropriate language to make clear that the applicant is responsible for conducting or having conducted the studies upon which the exhibit must be based. We do not believe that any hard and fast rule should be adopted on this subject. The rule places an obligation upon the applicant to insure that the exhibit is based on adequate studies and an applicant may make equitable arrangements with fish and wildlife agencies to prepare appropriate studies for it, if they are willing to make such studies. In other cases, however, the applicant may retain fish and wildlife staff or consultants to help it develop plans for this aspect of its potential project and the fish and wildlife agencies may see fit to make independent studies. We believe we would not encourage the most comprehensive planning if we attempted to prescribe a single mode of arrangement by rule.

In addition, the California Department urges that the requirement for Exhibit S be made applicable to minor projects. We believe that there may be merit to this suggestion, however, before making any determination thereon we shall solicit additional comments in a supplementary rule-making proceeding, while adopting the rule with respect to major license projects at this time.

The Forest Service, in addition to suggesting that the rule not be limited in applicability to the project area, a suggestion with which we have already indicated our concurrence, recommends that consultation with the Forest Service be required where National Forest land is involved and suggests additional language to effect this. We believe that such consultation would serve a useful purpose and we shall amend the proposed rule accordingly.

State of Colorado, Department of Game, Fish and Parks in its comments proposes that the rule be made applicable to projects of 1,000 horsepower or more. As indicated above, we shall consider this matter in a supplementary rule making proceeding. The Colorado Department further proposes that an applicant transmit a complete set of plans, included in the Exhibit S, to the State Fish and Wildlife agency one year prior to a hearing upon the application. Such a requirement, in our view, would not be feasible. The rule as proposed requires applicant to consult with state agencies in the preparation of the exhibit. Such consultation, presumably, would take place well in advance of the filing of an application and a considerable period of time before a hearing, if any, would be held upon the application. Moreover, it should be noted that this Commission, upon the filing of the application would submit the Exhibit S to the appropriate state agencies for recommendations pursuant to the Fish and Wildlife Coordination Act and our rules. We have already indicated our agreement with another suggestion by the Colorado Department with respect to the applicability of Exhibit S outside of project areas.

The Izaak Walton League of America suggests that the proposed Rule be broadened to include a requirement for detailed information about project effects on outdoor recreation resources in general. The impact of a project upon the general recreation resources of an area would more appropriately be considered by an applicant in the preparation of Exhibit R which deals with the development of recreational resources. Exhibit S is intended to apply solely to fish and wildlife resources.

In its comment the Pacific Power & Light Company recommends that it be made clear that Exhibit S contain the specific plan for conservation, including functional designs, if such plan and designs have been prepared. We believe this is made clear by the rule. However, Pacific's primary concern seems to be that a solution of all of the fish and wildlife problems may not be available prior to the filing of an application for license. The rule contemplates a reasonable attempt to solve such problems prior to the filing of the application. As for the company's suggestion that, where a preliminary permit has been issued, Exhibit S include the results of the work required to be done with regard to conservation issues by the preliminary permit, we do not believe that any distinction is required, with respect to Exhibit S, between those applicants holding preliminary permits and those who do not. In both instances the Commission would be equally concerned with the substance of the exhibit prepared in accordance with the rule.

The Commission finds:

The amendment of §§ 4.31, 4.41 and 4.50 is necessary and appropriate for the purposes of carrying out the provisions of the Federal Power Act. *The Commission*, acting pursuant to the provisions of the Federal Power Act, as amended, particularly sections 4(e), 9, 10(a), 10(i), and 309 thereof (41 Stat. 1065, 1068; 49 Stat. 858; 16 U.S.C. 797(e), 802, 803, 825h), *orders:*

(A) Part 4, Subchapter B, Chapter I, Title 18 of the Code of Federal Regulations is amended as follows:

(1) Section 4.41 is amended by adding a new *Exhibit S* to read as follows:

§ 4.41 Required Exhibits:

* * * * * * *

Exhibit S. A report on the effect, if any, of the project upon the fish and wildlife resources in the project area or in other areas affected by the project and proposals for measures considered necessary to conserve and, if practicable, to enhance fish and wildlife resources affected by the project. The exhibit shall include functional design drawings of any fish ladders proposed to be constructed in compliance with section 18 of the Federal Power Act, such other facilities or developments as may be necessary for the protection, conservation, improvement and mitigation of losses of fish and wildlife resources in accordance with section 10(a) of the Act, and cost estimates for such facilities and developments. The Applicant shall prepare this exhibit on the basis of studies made after consultation and in cooperation with the United States Fish and Wildlife Service, Department of the Interior, and appropriate state fish and wildlife agencies and in the case of public lands, advise Federal Agencies having jurisdictional responsibilities therefor of its proposed plans. The exhibit shall include a statement on the nature and extent of applicant's consultation and cooperation with the above agencies. To the extent those aspects of fish and wildlife related to recreation are covered in Exhibit R, a specific reference to Exhibit R will suffice.

(2) In order to provide an exception to the requirement for an Exhibit S with respect to applications for certain constructed projects, § 4.50 is amended by adding the following new paragraph:

§ 4.50 Contents.

* * * * * * *

Exhibit S. This exhibit shall not be required for license applications on constructed projects, except with respect to applications for licenses under section 15 of the Federal Power Act.

(Secs. 4(e), 9, 10(a), 10(i); 41 Stat. 1065, 1068; sec. 309, 49 Stat. 858; 16 U.S.C. 797(e), 802, 803, 825h)

(3) In order to conform § 4.31, Acceptance for Filing or Rejection of Applications, to the amendment of § 4.41 prescribed in sub-paragraph (1), and Order 260-A, 28 F.R. 4092, as amended by Order 292, 30 F.R. 523, the third sentence of § 4.31 is amended deleting "and O," and inserting in lieu thereof "O, R, and S,".

(B) These amendments shall become effective August 1, 1966.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PIPELINE PRODUCTION AREA RATE PROCEEDING, DOCKET NO. RP66-24

ORDER GRANTING INTERVENTION

(Issued June 17, 1966)

The Public Utilities Commission of the State of Colorado on June 6, 1966, and the Georgia Public Service Commission on June 10, 1966, filed notices of intervention in the above-designated proceeding.

The Commission finds:

Although the above notices of intervention were not timely filed, participation by those Commissions may be in the public interest.

The Commission orders:

The Public Utilities Commission of the State of Colorado and the Georgia Public Service Commission are permitted to intervene in this proceeding subject to the rules and regulations of the Commission: *Provided, however,* That the participation of these interveners shall be limited to matters affecting asserted rights and interests specifically set forth in their respective notices of intervention; *And provided further,* That the admission of these interveners shall not be construed as recognition by the Commission that they, or either of them, might be aggrieved by any order or orders entered in this proceeding.

Before Commissioners: Lee C. White, Chairman, L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

THE POTOMAC EDISON COMPANY OF VIRGINIA, PROJECT NO. 2509

ORDER ISSUING LICENSE (MINOR)

(Issued June 17, 1966)

Application was filed on March 26, 1965 by Northern Virginia Power Company[1] (Applicant) of Winchester, Virginia for a minor license under the Federal Power Act (Act) for constructed minor Project No. 2509, known as Shenandoah Hydro Station, located on the South Fork of the Shenandoah River in Page County, Virginia. No lands of the United States are affected by the project.

According to the application, the project has been completed and in operation since 1929. It does not appear that any substantial alterations have been made to the project thereafter.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned.

---

[1] Since the filing of the application for license, we have received documentary evidence that Northern Virginia Power Company has changed its name to The Potomac Edison Company of Virginia, whose address is 55 East Washington Street, Hagerstown, Maryland 21740. Hence, the word "Applicant" as used herein will refer to The Potomac Edison Company of Virginia.

The Department of the Interior, in reporting on the application, advised that the project, as currently operated, does not affect adversely fish and wildlife resources. However, the Department's Bureau of Outdoor Recreation recommended that any license for the project should contain a condition requiring Applicant to submit a recreational use plan, as provided in Article 13.

The Department of Health, Education, and Welfare has advised that since the project is a "run of the river" plant with power plant discharges approximating stream flow, the project will have no adverse effects on water quality which would be cause for denying a license for the project.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.*, (33 FPC 275) we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of those sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

In a proceeding on an application for license filed by Potomac Light and Power Company[2] for Project No. 2343 on the Shenandoah River at mile 5.6 just below Little's Falls, which is 6.5 miles above its mouth, the Commission on August 11, 1964, 32 FPC 584, found that the Shenandoah River from its confluence with the Potomac River up to at least Little's Falls is a navigable waterway of the United States. Additional research reveals that the South Fork of the Shenandoah River, from Port Republic, at river mile 156, downstream to Harper's Ferry on the Potomac, was used extensively for the transportation on flatboats of quantities of grain, flour, lumber and iron. From Harper's Ferry, the flatboats carried these products on the Chesapeake and Ohio Canal to markets in Georgetown, D.C. and Washington, D.C., The Shenandoah Hydro Station, Project No. 2509, is located on the South Fork of the Shenandoah River at river mile 127.

For the reasons set forth in our April 25, 1962 Opinion No. 357 (27 FPC 830), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The South Fork of the Shenandoah River is a navigable waterway of the United States from a point at least as far upstream as Port Republic at river mile 156, downstream to its confluence with the Potomac River.

(2) Project No. 2509 is located on navigable waters of the United States.

(3) Applicant is a corporation organized under the laws of the State of Virginia, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

---

[2] Now known as The Potomac Edison Company of West Virginia.

(5) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(6) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 1,150 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) It will be in the public interest to waive pursuant to Section 10(i) of the Act the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to The Potomac Edison Company of Virginia (Licensee), of Hagerstown, Maryland, under Sections 4(e) and 10(i) of the Act, for a period effective as of April 1, 1962 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2509, located on South Fork Shenandoah River, a navigable water of the United States, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is incorporated by reference as part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Shenandoah Hydro Station Project No. 2509 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits which are otherwise defined;

(ii) a reinforced concrete gravity type dam, approximately 495 feet long and 15 feet high, which develops a 12 foot head; and a reinforced concrete and brick powerhouse (91 feet x 38 feet in plan) which contains three 250 kw vertically-driven generators direct-connected to three 434 hp turbines, and one 112 kw vertically-driven generator direct-connected to one 193 hp turbine (862 kw, total); and

(iii) all other structures, fixtures, equipment, or facilities used or useful in the maintenance and operation of the project and located in the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L-9 (July 1, 1964) entitled, "Terms and Conditions of License for Constructed Minor Project Affecting Navigable Waters of the United States," (32 FPC 577), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions whch are set forth as additional articles:

Article 12. The Licensee shall pay to the United States the following annual charge, effective April 1, 1962:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, $57.00 per annum.

Article 13. The Licensee shall, within one year from the date of issuance of this license, submit for Commission approval an Exhibit R for this project which conforms to § 4.41 of the Commission's Regulations under the Federal Power Act.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

[LETTER-ORDER AMENDING TEMPORARY CERTIFICATE]

June 17, 1966.*

Docket No. CI66-410, Sinclair Oil & Gas Company (Operator), *et al.*

SINCLAIR OIL & GAS COMPANY
Sinclair Oil Building
Tulsa, Oklahoma 74102

Attention: P. T. Davis, Manager, FPC Activity

GENTLEMEN: Based upon the information contained in the statement filed May 25, 1966, in Docket No. CI66-410 and the response thereto of Brooks Gas Corporation dated June 6, 1966, the temporary certificate issued May 19, 1966, 35 FPC 754, in Docket No. CI66-410 is hereby amended by deleting therefrom the second paragraph thereof and substituting therefor the following:

For the reasons set forth in the separate order issued this day, a hearing on the application is required to consider *inter alia* the contentions made by the intervener, Brooks Gas Corporation. In the meantime an emergency exists since gas taken in the Eldorado Field from lines through which Brooks performs a transportation service are draining gas from leases of the applicant as well as other producers who have contracted to sell to the Applicant. Accordingly, a temporary certificate is hereby issued to Sinclair Oil & Gas Company (Operator), *et al.*, to sell gas as proposed in the application for certificate, Docket No. CI66-410, subject to the following conditions:

(1) The initial rate shall be that provided in the rate schedule accompanying the certificate application or the applicable base area rate (16.5¢ per Mcf at 14.65 psia) as adjusted for quality pursuant to ordering paragraph (B) of the Commission's Opinion No. 468, 34 FPC 159, as modified, whichever is lower.

---

*Rehearing denied August 17, 1966, 36 FPC 458.

(2) No increase in rate may be filed prior to January 1, 1968, except in compliance with a specific order of the Commission, for a rate in excess of the applicable area rate as determined pursuant to the Commission's Opinion No. 468, as modified, or pursuant to later order of the Commission.

(3) The filing, within 90 days from the date of initial delivery, of a Rate Schedule-Quality Statement as specified by ordering paragraph (F) of the Commission's Opinion No. 468, as modified, reflecting the rate determined in (1) above.

(4) If the quality of the gas delivered hereunder at any time deviates from the quality standards set forth in ordering paragraph (B) of Opinion No. 468–A, 34 FPC 1068, so as to require a downward adjustment to the existing rate, a notice of change in rate must be filed pursuant to the provisions of Section 4 of the Natural Gas Act: *Provided, however,* That adjustments reflecting changes in Btu content shall be computed by the applicable formula and charged without the filing of a notice of change in rate.

(5) In the event any amounts are collected in excess of the rate finally determined in (1) above, your company shall refund to Northern, from the date of initial delivery, with interest of 7 percent per annum, all amounts collected in excess of such finally determined rate.

(6) This temporary certificate shall not become effective until such time as Sinclair shall amend its application to request authorization for the construction and operation of any facilities necessary to transport gas produced and purchased from other producers in the Eldorado Field to the Eldorado Processing Plant, from which plant it appears that natural gas will be sold to Northern in interstate commerce.

(7) This temporary certificate, with conditions attached thereto, shall be accepted as issued within 30 days herefrom by written acceptance by a responsible official of the company (original and three copies). If reconsideration of the temporary certificate is sought, service hereunder shall not be started. If service is commenced under this temporary certificate, the conditions attached shall be effective and the service may not be discontinued without permission of the Commission issued pursuant to the provisions of the Natural Gas Act.

In all other respects, the temporary certificate issued May 19, 1966, shall remain unchanged.

By direction of the Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CITY OF TACOMA, WASHINGTON, PROJECT NO. 2016

ORDER APPROVING DRAWINGS OF FISH FACILITIES AND AMENDING LICENSE

(Issued June 17, 1966)

On May 31, 1966, the City of Tacoma, Washington, licensee for Project No. 2016, the Mayfield-Mossy Rock developments on the Cowlitz River filed for Commission approval a set of six functional drawings numbered MA–2351 through MA–2356 inclusive (FPC 2016–107 through 172) showing proposed fish facilities for construction at the project pursuant to Article 30 of the license.

In a supplementary letter to the Commission, dated June 2, 1966, the licensee described the proposed method of operation of the fish facilities which comprise a salmon hatchery, a game fish hatchery and rearing pond for game fish at Swofford Valley together with a fish barrier dam located adjacent to the salmon hatchery to replace the present upstream migrant facilities at Mayfield dam, pertinent transportation facilities, and upstream migrant facilities to be developed for operation in Mossy Rock reservoir. The proposed facilities were developed in cooperation with the State of Washington, Department of Fisheries and Department of Game as well as the United States Department of the Interior, Fish and Wildlife Service pursuant to Article 30 of the license.

While the drawings submitted generally describe the proposed facilities, continued cooperation with the fishery agencies would be desirable at the field level in developing details of design and operation of such facilities. We note further that although licensee makes reference in its letter to permanent downstream migrant traps and a fish barrier dam proposed for construction adjacent to the salmon hatchery, functional and design drawings, therefor have not been submitted.

We shall provide for continued cooperation with the fishery agencies as well as for the submission of appropriate drawings, for the permanent downstream migrant traps and the proposed fish barrier dam in a new article to be added to the license.

The Commission finds:

(1) The following described Exhibit L drawings conform to the Commission's Rules and Regulations and should be approved as part of the license for the project.

Licensee No.	FPC No.	Title
MA-2351	2016-107	Game Fish Hatchery—Vicinity Map and Site Plan.
MA-2352	2016-108	Game Fish Hatchery—Hatchery Plan.
MA-2353	2016-109	Salmon Hatchery—Site Plan.
MA-2354	2016-110	Salmon Hatchery—Plan.
MA-2355	2016-111	Salmon Hatchery—Sections.
MA-2356	2016-112	Swofford Valley Rearing Pond.

(2) It is appropriate and in the public interest to amend the license for Project No. 2016 as hereinafter provided.

The Commission orders:

(A) The exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2016.

(B) The license for Project No. 2016 is hereby amended by adding the following article:

Article 57. Licensee shall continue to cooperate with the fishery agencies in the development of details of design, operation, and maintenance of these and of other facilities needed to maintain the existing runs of anadromous fish at the project and in evaluating the degree of success of these facilities to maintain those runs. Licensee shall submit to the Commission for approval functional drawings of permanent downstream migrant fish traps and design drawings of the fish-barrier dam as proposed for construction on the Cowlitz river adjacent to the salmon hatchery, and construction thereof shall not commence prior to Commission approval.

(C) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgment of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UNION ELECTRIC COMPANY, PROJECT NO. 459

ORDER FURTHER AMENDING LICENSE (MAJOR)

(Issued June 17, 1966)

Application was filed on May 8, 1964 by Union Electric Company, licensee for Project No. 459, for amendment of license for the project to exclude therefrom the Osage—River mines (south) Lines, the Osage—Page Avenue (north) Lines, and the Osage Substation. The project is located on the Osage River in the vicinity of Bagnell, in the Counties of Miller, Morgan, Camden and Benton, Missouri.

According to the application, since 1940, certain project operational changes have caused changes in the character and operation of the two lines of such a nature that the lines and the Osage Substation now function as necessary component parts of the licensee's interconnected transmission system, and should be excluded from the license.

A Commission staff study of the function of the lines and the substation shows that while the subject transmission facilities transmit power from Project No. 459 when the Osage powerhouse is operating, they are also required, even at times of near peak load, to transmit power from other sources to Project No. 459 to the limit of their capacity to meet loads in the vicinity of and beyond the project. At all times when the project is not operating, which is most of the time since the project is a peaking plant, the subject transmission lines and substation are transmitting power to the project substation and thus serve a system rather than a project function.

No lands of the United States are affected by the subject transmission facilities.

The Commission finds:

(1) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received.

(2) The above-mentioned Osage-River mines (south) Lines, the Osage—Page Avenue (north) Lines and the Osage Substation, are not parts of a project within the meaning of Section 3(11) of the Federal Power Act.

(3) The following described exhibits filed as part of the application for amendment, showing the subject transmission facilities as excluded from the project works, conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit K–1 (FPC No. 450–167), and

Revised Exhibit M: 6 typewritten pages, entitled "Description of Osage Project" dated April 30, 1964, filed in the Commission, May 8, 1964.

(4) The following described superseded license exhibits, showing the transmission facilities as parts of the project, should be eliminated from the license:

Exhibit K–1, sheet A (FPC No. 459–31),

Exhibit J–1, sheet No. 2 (FPC No. 459–71),

Exhibit F–K, (FPC Nos. 459–72 through –147),

Exhibit L–2, (FPC No. 459–166), and

Revised Exhibit "M," Manuscript, in seven sheets, entitled "Description Osage Project," signed on February 8, 1951, Union Electric Company of Missouri by John A. Woodridge, Vice President.

The Commission orders:

(A) The license for Project No. 459 is hereby further amended, effective as of May 1, 1966, to exclude from the license the Osage-River mines (south) Lines, the Osage-Page Avenue (north) Lines, and the Osage Substation.

(B) The exhibits described in finding (3) above are hereby approved as part of the license for Project No. 459, and the exhibits described in finding (4) above are hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WESTERN MASSACHUSETTS ELECTRIC COMPANY, PROJECT NO. 1889

ORDER GRANTING PETITIONS TO INTERVENE

(Issued June 17, 1966)

Petitions to intervene in the above-entitled proceeding on application for the Turner Falls hydroelectric development were filed on May 9, 1966, by Robert B. Shearer; on May 10, 1966, by Holyoke Water Power Company; and on May 10, 1966, jointly by the Municipal Electric Association of Massachusetts, City of Chicopee, Town of Shrewsbury, and Town of Wakefield, Massachusetts.

On May 23, 1966, the applicants filed an opposition to the joint petition to intervene by the Municipal Association and the three individual Massachusetts municipalities, on grounds that their interest in the application is too remote and that the substantive questions in which the petitioners expressed an interest are not appropriate matters for the Commission's consideration of the application. Without at this time expressing any opinion on the merits of the matters in which the municipal petitioners have expressed an interest, we believe they may have substantive interests which could be affected by grant of the application and that their participation as interveners in the proceeding may be appropriate. See *Scenic Hudson Preservation Conference* v. *F.P.C.*, 354 F. 2d 608 (CA2–1965), certiorari denied, May 16, 1966; *Office of Communication of the United Church of Christ* v. *F.P.C.*, 19409 CADC, decided March 25, 1966.

The Commission finds:

The participation by the above-named petitioners in this proceeding may be in the public interest.

The Commission orders:

The petitioners are hereby permitted to intervene in this proceeding subject to the Rules and Regulations of the Commission: *Provided, however,* That participation by petitioners shall be limited to matters affecting certain rights and interests specifically set forth in their petitions for leave to intervene; *And provided further,* That the admission of the petitioners shall not be construed as recognition by the Commission that the interveners or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ALABAMA POWER COMPANY, PROJECT NO. 2537

ORDER DENYING APPLICATION FOR A PRELIMINARY PERMIT

(Issued June 20, 1966)

On August 13, 1965, the Alabama Power Company filed an application for a preliminary permit for thirty-six months to study the proposed Crooked Creek hydroelectric development, Project No. 2537, located in Clay and Randolph Counties, Alabama, on the Tallapoosa River, a tributary of the Alabama-Coosa River.

The Rivers and Harbors Act of 1945 (59 Stat. 10, 17) provides:

> Initial and ultimate development of the Alabama Coosa River and tributaries for navigation, flood control, power development, and other purposes, as outlined in House Document Numbered 414, Seventy-seventh Congress, is hereby authorized substantially in accordance with the plans being prepared by the Chief of Engineers with such modifications thereof from time to time as in the discretion of the Secretary of War and the Chief of Engineers may be advisable for the purpose of increasing the development of hydroelectric power * * *.

H.R. Doc. No. 414, submitted by the Corps of Engineers in 1941, consisted of transmitting letters recommending an appropriation for partial development of sites indicated on an attached map of the Alabama-Coosa and tributaries. Crooked Creek was one of the sites designated.

Congress in 1954 suspended the authorization insofar as it related to the Coosa River to permit non-Federal development (68 Stat. 302). The Commission thereafter issued a license to the *Alabama Power Company* for Project No. 2146, consisting of five developments on this river (18 FPC 257, 258). But the suspension, by its terms, did not affect the authorization as it related to tributaries of the Alabama-Coosa, including the Tallapoosa. We have held that if a hydroelectric site is authorized for Federal development, the Commission should not grant a preliminary permit for it. *Georgia Power Co.,* Project No. 2263, 22 FPC 827 (1959) and *Grand River Dam Authority,* 8 FPC 635 (1949). See also, *Savannah River Electric Co.* v. *F.P.C.,* 164 F. 2d 408 (1947).

The Commission finds:

The Crooked Creek hydroelectric site on the Tallapoosa River in Clay and Randolph Counties, Alabama, has been authorized for Federal development by the Rivers and Harbors Act of 1945.

The Commission orders:

The application for a preliminary permit filed by the Alabama Power Company on August 13, 1965, to study the proposed Crooked Creek hydroelectric development on the Tallapoosa River in Clay and Randolph Counties, Alabama, is hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

TOWN OF CHRISNEY, INDIANA AND MICHIGAN WISCONSIN PIPE LINE COMPANY,[1] DOCKET NO. CP66-182

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued June 20, 1966)

On December 3, 1965, as supplemented on February 10, 1966, the Town of Chrisney, Indiana (Applicant), filed in Docket No. CP66-182 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Town of Chrisney, Indiana, all as more fully set forth in the application.

Applicant proposes to construct and operate a distribution system, an odorizing and regulating station near the tap-point of Respondent's 30'' transmission line and approximately 0.7 mile of 4-inch lateral line extending from such point south to the city limits. Subsequent to the filing by Applicant Respondent indicated its willingness to construct a meter station and some 3600 feet of 4-inch lateral to connect its system with Applicant's proposed system.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	20,220	21.370	22,430
Peak day (Mcf)	282	297	313

On January 10, 1966, Respondent filed an answer to the application and stated therein it had no objection to the entry of an order requiring it to provide the requested service and, would as noted construct a meter station and approximately 3600 feet of 4-inch lateral pipeline connecting its system to the proposed facilities of the Applicant.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on December 28, 1965 (30 F.R. 16173). No protest, petition to intervene or request for hearing has been filed in this proceeding.

---

[1] Respondent in the application was American Louisiana Gas Company, which company was merged into Michigan Wisconsin Pipe Line Company on January 2, 1966 (See order issued December 23, 1965 in Docket No. CP66-65, 34 FPC 1539).

The Commission finds:

(1) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) Applicant, Town of Chrisney, Indiana, is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 313 Mcf of natural gas on a maximum day for distribution and resale as hereinbefore described.

(4) Applicant should be prepared to receive natural gas from Respondent for distribution in the Town of Chrisney and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Respondent, Michigan Wisconsin Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, as hereinbefore described, and to sell and deliver up to 313 Mcf of natural gas on a maximum day to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, for transportation, distribution and resale as hereinbefore described. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP65–102; ATLANTIC SEABOARD CORPORATION, CP65–122; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, CP65–181; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, UNITED NATURAL GAS COMPANY AND NORTH PENN GAS COMPANY, CP65–182; UNITED FUEL GAS COMPANY, CP65–198

ORDER DENYING REHEARING AND RECONSIDERATION

(Issued June 20, 1966)

On May 9, 1966, Atlantic Seaboard Corporation, United Fuel Gas Company and Columbia Gulf Transmission Company (Columbia Companies) filed a petition for rehearing and motion for reconsideration of our order of April 29, 1966, 35 FPC 642, permitting intervention, severing proceedings, and setting dates for filing of evidence and hearings.[1] That order severed from these proceedings a portion of Transcontinental Gas Pipe Line Corporation's (Transco) application in Docket No. CP65–181 for further hearing and permitted the intervention out of time of the United States Department of Health, Education, and Welfare provided that it file evidence to support contentions made in its tendered brief. The portion of Transco's application being severed (Docket No. CP65–181 (Phase II)) involves a proposal to sell and deliver to Consolidated Edison Company of New York, Inc. (Con Ed) 55,000 Mcf per day of gas under Transco's CD–3 Rate Schedule in substitution for 55,000 Mcf per day of storage service presently being rendered under Transco's GSS rate schedule. The matters remaining in these proceedings for early decision relate to systemwide expansions of the three Columbia Companies and Transco and the proposal in Docket No. CP65–182 to further develop the Wharton Storage Field. Involved in these proceedings are competing proposals by Atlantic Seaboard Corporation and Transco to serve certain of the requirements of Washington Gas Light Company (Washington) and Commonwealth Natural Gas Corporation.

The April 29, 1966, order directed the presiding examiner to issue his initial decision on those matters unrelated to the Con Ed service prior to an initial decision on the Con Ed matter. Because of this direction to the examiner Columbia Companies ask for rehearing and reconsideration of that order contending that "the Commission's decision in respect to the Consolidated Edison proposal *may* have a significant bearing upon Transco's ability to provide the competitive services proposed for Washington" and because severance "*may* thus render impossible a prompt disposition in the competitive questions * * * and result in protracted delay." (Emphasis supplied.) On May 20, 1966, Transco filed an answer to Columbia Companies' motion.

Columbia Companies agree that the service to Con Ed is a separate and distinct subject from the other matters but contend that the Commission's decision on that subject might have certain ramifications on other matters related to the contested comparative aspects of this proceeding. Columbia Companies have suggested a possibility, which apparently was not advanced by any party during the proceedings, concerning the availability of storage which could possibly, they contend connect the Con Ed service to the remaining issues in the proceedings.

The Columbia Companies' allegations depend upon the happening of an extremely unlikely result causing a situation where there might be an inadequate gas supply available to meet Transco's needs. Certainly, if either the Transco or Columbia Companies' position in this case were accepted, there would be no problem with regard to the availability of gas. It is only in the case, entirely speculative by nature, whereby some middle ground is reached, that there would be any danger whatsoever of Transco having an inadequate supply of gas to meet its anticipated market requirements. The presiding examiner's decision, issued June 13, 1966, found that Transco would have available all of the storage capacity which it needs, including either 99,515 Mcfd or 44,515 Mcfd of excess storage capacity depending upon whether or not there is a substitution for Con Ed service from the GSS storage service to year-round CD–3 service. Without at this time passing upon the validity of their contentions, there is no reason to conclude that a decision on the Transco proposal to substitute service to Con Ed would necessary have any effect on the competitive application which remains subject to decision by the presiding examiner. In any event if our subsequent consideration of any aspect of this case demonstrates that a determination of the competitive features thereof will depend upon resolution of the separated question of service to Con Ed, we can at that time take steps to defer action on the competitive features until the Con Ed service issues are also ready for resolution. To do so now would be clearly premature. Accordingly, we shall deny the petition for rehearing and motion for reconsideration.

---

[1] Transcontinental Gas Pipe Line Corporation filed an answer.

The Commission orders:

The Petition for rehearing and Motion for Reconsideration of our April 29, 1966 order in the above-named proceeding filed by Atlantic Seaboard Corporation, United Fuel Gas Company and Columbia Gulf Transmission Company on May 9, 1966, is denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

POWER AUTHORITY OF THE STATE OF NEW YORK, PROJECT NO. 2000

ORDER APPROVING AMENDED PROJECT EXHIBIT K

(Issued June 20, 1966)

On March 16, 1966, Power Authority of the State of New York, licensee for Project No. 2000, located on the St. Lawrence River, State of New York, filed for Commission approval an amended Exhibit K, Sheets 2 and 3 (FPC No. 2000–88, and –89), respectively, to show removal from the project area of a 48-acre parcel of land which had been acquired by the licensee for depositing spoil during the construction of the project.

The parcel, which is not contiguous to the remaining project boundary, has served its usefulness insofar as the project is concerned, and is not affected by fluctuations in the level of the project power pool. The parcel is not required for recreational development in connection with the project, and the Conservation Department, Thousand Islands State Park Commission has advised that it is not interested in developing the parcel for park purposes.

Our approval of amended Exhibit K, Sheet 2 (FPC No. 2000–88) is not necessary in that the elimination of the subject parcel leaves nothing remaining on Sheet 2 with respect to the project. The elimination from the license of Exhibit K, Sheet 2 (FPC No. 2000–54) is warranted for the same reason.

The Commission finds:

Amended Exhibit K, Sheet 3 (FPC No. 2000–89) conforms to the Commission's rules and regulations and should be approved as part of the license for the project, and license Exhibit K, Sheet 2 (FPC No. 2000–54), and superseded license Exhibit K, Sheet 3 (FPC No. 2000–55) should be eliminated from the license.

The Commission orders:

The amended Exhibit K designated in the above finding is hereby approved as part of the license for Project No. 2000, and Exhibit K, Sheets 2 and 3 (FPC No. 2000–54, and –55) mentioned in the same finding, are hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

UTAH POWER & LIGHT COMPANY, PROJECT NO. 1744

ORDER APPROVING AMENDED PROJECT EXHIBIT AND MODIFYING LICENSE

(Issued June 20, 1966)

On June 22, 1965, Utah Power & Light Company, licensee for major Project No. 1744, filed an application for Commission approval of an amended Exhibit K showing the relocation of a portion of the Farmington-Weber 44 kv steel tower transmission line, and the exclusion of the 2.3 kv plant service line and telephone line from Weber Plant to Weber Plant Dam. The project, known as the Weber Project, is located on Weber River in Weber, Davis and Morgan Counties, Utah, and affects lands of the United States within the Wasatch National Forest.

The changes were made necessary due to highway construction in Weber Canyon which required that the steel towers of the Weber Plant end of the 2.88 mile long Farmington-Weber transmission line be dismantled and its conductor cables rerouted and carried by the supporting structures of the Riverdale-Weber-Devil's Slide transmission line. Although that part of the latter line occupying lands of the United States is under a permit issued by the Department of the Interior following Commission letter, dated September 22, 1950, advising it had no objection to the issuance of such a permit, the entire Farmington-Weber line, including the rerouted conductor cables and insulators carried by the supporting structures of the Riverdale-Weber-Devil's Slide line, is part of the project and should be included in the license.

The above-mentioned plant service line from Weber Plant to Weber Plant Dam is to be replaced by a 7.2 kv line from Gateway, which serves as a source of power for operating the project dam, and should be included in the license. Since the new plant service line was not included in the application, we are by Article 29 herein requiring the licensee to submit for Commission approval a revised Exhibit M describing the 7.2 kv service line, as well as the rerouted portion of the Farmington-Weber transmission line to include the conductor cables and insulators rehung on the Riverdale-Weber-Devil's Slide transmission line, as parts of the project. The above-mentioned relocated telephone line from Weber Plant to Weber Plant Dam has been rehung on an existing transmission facility and is considered equipment "necessary and useful in connection with the project" within the purview of subparagraph C of Article 2 of the license.

The Chief, Forest Service, has reported favorably on the application, provided the license include the terms and conditions usually included in licenses for projects such as is herein involved. In addition to the terms and conditions already set forth in the license for this project, we are including additional Articles 30 and 31, presently included in licenses for such projects.

The Commission finds:

(1) Amended Exhibit K (FPC No. 1744–8) conforms to the Commission's rules and regulations and should be approved as part of the license for the project; license Exhibit K (FPC No. 1744–2) which has been superseded to the extent that it shows the 2.3 kv plant service line, the telephone line, and the unrelocated portion of the Farmington-Weber transmission line should be eliminated from the license; and license Exhibit K (FPC No. 1744–6) which

has been superseded to the extent that it shows the unrelocated portion of the Farmington-Weber transmission line should be eliminated from the license.

(2) The aforementioned new 7.2 kv service line from Gateway to the Weber Dam is a necessary part of the project and should be included in the license therefor.

The Commission orders:

(A) The amended Exhibit K designated in finding (1) above is hereby approved as part of the license for Project No. 1744, and the license exhibits described in the same finding as being superseded in part are hereby eliminated from the license for the project to the extent that they have been superseded.

(B) The aforementioned 2.3 kv plant service line and replaced telephone line from the Weber Plant to Weber Plant Dam are hereby eliminated from the license for the project.

(C) The license for Project No. 1744 is hereby modified to include therein the following additional articles:

Article 29. The Licensee shall submit within one year of the date of issuance of this order a revised Exhibit M describing the relocated portion of the Farmington-Weber transmission line and the 7.2 kv plant service line from Gateway.

Article 30. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of three years, or refuse to neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address of the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 31. Upon abandonment of the project the Licensee shall remove all buildings, equipment, and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7292

ORDER DISMISSING APPLICATION

(Issued June 21, 1966)

Montana-Dakota Utilities Co. (Applicant), a corporation organized under the laws of the State of Delaware and doing business in the States of Minnesota, Montana, North Dakota, South Dakota, and Wyoming, filed an application with the Federal Power Commission on May 12, 1966, seeking an order pursuant to Section 204 of the Federal Power Act authorizing it to issue $10,000,000 of Promissory Notes due not more than one year after the dates of their respective issue.

In its application, the Applicant stated that it proposed to issue these Notes only if satisfactory bids were not received for the $10,000,000 of First Mortgage Sinking Fund Bonds, with respect to which an application was at that time pending in Docket No. E–7281. On June 2, 1966, the Applicant advised the Commission that it had received a satisfactory bid for the above-mentioned Bonds, and by an order issued on that same date the Commission approved the acceptance by the Applicant of the bid which it chose to accept for the sale of the $10,000,000 of First Mortgage Sinking Fund Bonds.

By a letter dated June 6, 1966, Applicant requested that its application for authority to issue the aforementioned Promissory Notes be withdrawn. Under these circumstances, it is appropriate and in the public interest that the application filed in Docket No. E–7292 be dismissed.

The Commission orders:

The application herein to issue short-term Promissory Notes is hereby dismissed.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ATLANTIC SEABOARD CORPORATION, DOCKET NO. RP65–49; UNITED FUEL GAS COMPANY, RP66–2; COLUMBIA GULF TRANSMISSION COMPANY, RP66–22

ORDER DENYING MOTION OF ELECTRIC COMPANIES TO REJECT WINTER SERVICE RATE SCHEDULES

(Issued June 22, 1966)*

The Electric Companies (Movants),[1] interveners herein, on May 6, 1966, filed a motion to "dismiss" the proposed Winter Service (WS) Rate Schedules of the Respondents, Seaboard and United Fuel[2] which were filed on March 31, 1965, and on July 20, 1965, respectively, as parts of Respondents' proposed restructured FPC Gas Tariffs. The proposed tariffs became effective, subject to hearing and refund on May 16, 1965, and November 1, 1965, respectively, in the above proceedings.[3]

In their motion, Movants assert United Fuel and Seaboard have filed under Section 4 of the Natural Gas Act, a comprehensive revision of their tariffs, a part of which is the institution of "a new class of service * * * identified as Winter Service (WS), to meet customers' peaking requirements"[4] from storage capacity. They also assert that whenever a company seeks to construct new facilities or "institute a new service," it must apply for a certificate of public convenience and necessity, pursuant to Section 7 of the Act authorizing the rendition of the "new service." They contend, therefore, that for the Commission to permit Respondents to institute the new Winter Service without first obtaining a certificate "contravenes" the law.

---

*Reconsideration denied by order issued July 29, 1966, 36 FPC 322.

[1] Appalachian Power Company, Wheeling Electric Company, Ohio Power Company, and Kentucky Power Company (Movants).

[2] Atlantic Seaboard Corporation (Seaboard) and United Fuel Company (United Fuel).

[3] Columbia Gulf Transmission Company's FPC Gas Tariff was made subject to investigation and hearing as a cost-of-service form of rate, and its proceeding does not directly involve the WS rate issues.

[4] Movants' quote is from Commission suspension order issued May 13, 1965 in RP65–49.

In support of these contentions, Movants cite certificate orders issued to other pipeline companies in which new winter services have been proposed and authorized pursuant to Section 7 of the Act.[5] Movants contend that they are denied the opportunity to contest the adequacy and need for the facilities proposed to render the WS service as well as the opportunity to present evidence upon competition between electric and gas as energy sources. They claim that in being denied the opportunity to contest the "new service" on these grounds *before* the WS rates became effective, they have suffered competitive injury without due process of law.

The Respondents, Seaboard and United Fuel filed an answer to the motion to dismiss on May 23, 1966. Answers opposing the motion were also filed by Cincinnati Gas & Electric Company, Union Light, Heat and Power Company, jointly (Cincinnati), Dayton Power and Light Company (Dayton), Washington Gas Light Company (Washington), and the Commission Staff. On June 2, 1966, Movants filed a request for oral argument, or in the alternative, for permission to file an attached reply to all answers in opposition to their motion to dismiss. We have considered that reply in reaching our determination herein.

The Respondents deny that in the circumstances pertinent to their filing of the restructured tariffs, the Section 7 requirement that a certificate be obtained from the Commission before filing the new Winter Service Rate Schedules and commencing billing thereunder is applicable. They make several arguments but principally rely upon the contentions that "no new service is provided by the restructuring of the tariffs," and that the proposed tariffs, insofar as the Winter Service Rate Schedules are concerned, are "merely a new rate classification which enables * * * customers to purchase their *certificated* volumes at a substantially lower price under a combination of the applicable Contract Demand Rate Schedule and the Winter Service Rate Schedule."

In support of these contentions, Respondents assert that with respect to the service performed under the restructured tariffs, the deliveries are out of existing certificated transmission and storage facilities, and the volumes are no different from what they would be, had the proposed tariffs not been filed—thus, only the rates and charges are proposed to be altered.[6] Additionally, the Respondents assert that the only limitations contained in the certificates of public convenience and necessity issued to them relate to the firm maximum daily deliveries and such certificates do not prescribe service to customers under any specific rate schedules. The firm maximum daily deliveries, they state, are not proposed to be changed by the proposed tariff filings.

Respondents also contend that the Movants seek to fragmentize the proposed tariffs, each of which was offered as a "total package" in which the WS and

---

[5] *Transcontinental Gas Pipe Line Corporation*, 13 FPC 992; 18 FPC 698, 710; 20 FPC 264; 27 FPC 859. *Texas Eastern Transmission Corporation*, 13 FPC 567, 992; 24 FPC 364. *Tennessee Gas Transmission Company*, 9 FPC 271; 15 FPC 414; 19 FPC 568; 32 FPC 1552. *New York State Natural Gas Corporation* (now *Consolidated Gas Supply Corporation*) 27 FPC 859. *Natural Gas Pipeline Company of America*, 28 FPC 542. See also *Colorado Interstate Gas Company*, proceedings in Docket No. CP66-299.

[6] In prehearing conference (Tr. 167-176), as well as in answers to the motion to dismiss, the customers stated that sales to them, both peak-day and annual, will not change as a consequence of the restructured tariffs.

CDS Rate Schedules are interdependent, and that the proposed tariffs constitute a rate reduction to *all* customers. The rejection of the WS Rate Schedules *only* would, they contend, create an "impossible" operating situation. In fact, it appears that the requested rejection would result in substantial *increases* in rates to the customers now taking both CDS and WS gas service and at the same time other customers taking CDS gas only receive lower rates.

Additionally, Respondents Cincinnati, Dayton and the staff object to the motion to dismiss on the ground that it is untimely in that it was filed one year after the Commission issued its suspension order in *Seaboard's* case, and over seven months after Appalachian Power Company was permitted to intervene in Docket No. RP65-49.

Cincinnati, Dayton, and the Commission Staff, each assert that the proposed filings subject to these consolidated proceedings involve no application for either new facilities, service to new customers, or new sales, or transportation of natural gas which would bring these filings within the purview of Section 7 of the Act. Cincinnati contends that in the circumstances pertinent herein, Section 7(c) is clearly not applicable since "the only thing under consideration * * * is a different method of billing * * *."

Upon full consideration of the motion to dismiss the WS Rate Schedules and all of the pleadings filed herein, including Movants' motion, filed June 2, 1966, for leave to file a reply to answers opposing their motion to dismiss, we are unable to find any adequate basis in either fact or law for either reversing or rescinding our suspension orders issued herein and for rejecting the WS Rate Schedules, as Movants request. Our action in providing for hearing and suspending the proposed tariffs, as we said in our order of May 13, 1965, affords all parties the opportunity to present evidence upon all contentions which they might raise to show that the tariffs should be rejected. This would include the contentions raised by Movants here as to whether the establishment of a separate rate for service from storage is in the public interest or is otherwise just and reasonable.

The cases cited by Movants, unlike these proceedings, involve proposed changes in underground storage and transmission facilities, increases in capacity and sales volumes, as well as intercorporate exchanges and mergers, all of which obviously require certificate authorizations, in addition to approval of proposed new winter service or peaking service rate schedules. *Supra*, f.n.[6] In contrast, the proposed WS Rate Schedules herein relate to storage facilities and storage operations which have been certificated. If in the future additional storage facilities or changes in demand are proposed, such proposals will be subject to Section 7 proceedings.

In our order issued May 13, 1965, suspending Seaboard's restructured tariff we noted that the filing raised a number of issues which could be resolved only on a record made during hearing. We there concluded that since a rate reduction was being made available to the customers it was in the public interest to enable the customers "desiring to take the new 'package' to have the benefit of such rate reduction as quickly as possible." We also stated:

> In taking this action we do not of course express any opinion that the proposed reduction is sufficient to render Seaboard's rates just and reasonable *or that the manner of such reduction is a reasonable one.*

The dismissal of the WS Rate Schedule as requested in the Electric Companies' motion would deprive the consumers of these benefits,[7] or delay them for a considerable period. We are of the view that the narrow technical question raised by that motion does not warrant reversal of the procedures we have prescribed in these dockets for determining the justness and reasonableness of the rates proposed and whether the manner of the reduction is a reasonable one.[8]

---

[7] Cincinnati's answer indicates that its retail rate *decreases* have already been implemented to reflect the restructured tariff rates.

Furthermore, we are of the view that the motion is untimely in that it was not filed until more than seven months after Movants were permitted to intervene herein and it is outside the scope of the allegations contained in Movants' petitions for leave to intervene and of our orders permitting such intervention.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the Electric Companies' motion to dismiss the WS Rate Schedules present no new facts or principles, or law, which were not considered by the Commission when it issued its hearing and suspension orders on May 13, 1965 and September 14, 1965, respectively, in Docket Nos. RP65-49 and RP66-2, or which having now been considered, warrant any change or modification of said orders.

(2) The Electric Companies' motion to dismiss the WS Rate Schedules should be denied.

The Commission orders:

The Electric Companies' motion filed May 6, 1966, to dismiss the Winter Service (WS) Rate Schedules proposed by Respondents Seaboard and United Fuel, is hereby denied.

Commissioner Ross *dissenting.*

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY AND NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP66-334

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 22, 1966)

On April 25, 1966, Central Illinois Public Service Company (Applicant) filed in Docket No. CP66-334 an application, as supplemented on May 2, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Natural Gas Pipeline Company of America (Respondent) to establish physical connection of its transportation facilities with the facilities to be constructed by Applicant and to sell and deliver to Applicant up to 538 Mcf of natural gas per day for resale and distribution in the Village of Edgewood and the Town of Mason, Effingham County, Illinois, and their environs, all as more fully set forth in the application.

The Village of Edgewood and the Town of Mason are located in the southern part of Effingham County, approximately 8 and 9½ miles, respectively, east of the gas transmission pipeline of Respondent. The physical connection proposed will require Respondent to construct, own and operate a pipeline tap and a metering and regulating station on its transmission pipeline at a point approximately eight miles west of the Village of Edgewood.

---

[8] See *F.P.C.* v. *Tennessee Gas Transmission Company*, 371 U.S. 145, 155, wherein the Supreme Court citing *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 364 U.S. 137, 147 (1960) states: "It is, therefore, the duty of the Commission to look at 'the backdrop of the practical consequences [resulting] * * * and the purposes of the Act' * * *."

Applicant will construct, operate and maintain the following facilities:

(a) Approximately 8 miles of 2-inch natural gas transmission pipeline extending from the proposed metering and regulating station of Respondent to a point near the west corporate limits of the Village of Edgewood,

(b) approximately 2½ miles of 2-inch pipeline extending from a point near the west corporate limits of the Village of Edgewood along Illinois Route 37 to a point near the west corporate limits of the Town of Mason, and

(c) natural gas distribution systems in the Village of Edgewood and the Town of Mason and their environs.

The total estimated natural gas requirements of Applicant during the initial three years of proposed operations are as follows:

Mcf (at 14.65 psia and 1,000 Btu per cubic foot)

	First year	Second year	Third year
Peak day:			
Mason	129	190	226
Edgewood	199	281	312
Total	328	471	538
Annual:			
Mason	13,387	19,626	23,233
Edgewood	22,688	31,296	34,377
Total	36,075	50,922	57,610

These volumes will be sold to Applicant pursuant to Respondent's G–1 Rate Schedule.

The estimated total cost of the facilities to be constructed by Applicant is $200,212, which will be financed from internal funds.

On June 7, 1965, Applicant was granted franchises by both Edgewood and Mason. Applicant accepted the franchises on June 15, 1965.

On March 8, 1966, the Illinois Commerce Commission issued to Applicant a certificate of public convenience and necessity authorizing the proposed service.

Respondent filed an answer to the application on May 5, 1966, and supplemented the answer by a filing on May 16, 1966. Respondent has no objection to the proposal.

Due notice of the filing of the application was published in the Federal Register on May 7, 1966 (31 F.R. 6843). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Natural Gas Pipeline Company of America, a Delaware corporation with its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order issued October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) Applicant is a public utility company in the State of Illinois and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to establish a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver up to 538 Mcf of natural gas per day to Applicant, under Respondent's G–1 Rate Schedule, for resale and distribution in the Village of Edgewood and the Town of Mason, Illinois, and environs, as hereinbefore described and as more fully described in the application, as hereinafter ordered and conditioned.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to establish a physical connection of its natural gas transmission system with the facilities to be constructed by Applicant and to sell and deliver up to 538 Mcf of natural gas per day to Applicant, under Respondent's G–1 Rate Schedule, for resale and distribution in the Village of Edgewood and the Town of Mason, Illinois, and environs, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the proposed new connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

A. J. INDUSTRIES, INC., PROJECT NO. 2307

ORDER ADJUSTING PORTION OF PROJECT MAINTENANCE SCHEDULE REQUIRED BY LICENSE

(Issued June 23, 1966)

On May 9, 1966, A. J. Industries, Inc., licensee for Project No. 2307, requested further modification of Article 35 of its license (30 FPC 1064) for the project insofar as it requires the repair during the *Third Year* (1966) of the saddle dams at the Upper Annex Creek Lake development of the project. The project is located on Salmon and Annex Creeks, First Judicial Division, Alaska, and affects lands of the United States within the Tongass National Forest and other lands of the United States.

The licensee proposes to repair or replace the timber dam at the Annex Creek development and that such repair or replacement, in addition to such repair of the saddle dams as may be necessary as now scheduled for 1966, would require more than one construction season, including the time required to prepare designs and obtain construction bids for the timber dam. The licensee points out that work on either the saddle dams or the timber dam would require lowering the water level of the reservoir if such work were done separately, with a resultant substantial increase in the cost of same. In the circumstances, the licensee requests that Item 1 for the *Third Year* (1966) of Article 35 of the license be deleted and Item 1 be added to the maintenance schedule for the *Fourth Year* (1967) along with the requirement for repair or replacement of the timber dam. The licensee advises that pending recommendation by its consulting engineers concerning the saddle and timber dams, the licensee will make necessary immediate repairs to such structures.

Commission staff has made a field investigation of the project and has recommended approval of the licensee's request.

Inasmuch as the maintenance work required by Article 35 of the license to be performed during the first (1964) and second (1965) years have been completed, we are by this order deleting such requirements from the article.

The Commission finds:

It is appropriate and consistent with the public interest that Article 35 of the license be further modified as hereinafter ordered.

The Commission orders:

(A) Article 35 of the license for Project No. 2307, as modified by our orders of December 23, 1963, 30 FPC 1570, and August 26, 1965, 34 FPC 588, respectively, is hereby further modified to read as follows:

Article 35. The Licensee shall continue to repair and modify the Salmon Creek and Annex Creek developments to make the structures safe and restore the project to a satisfactory operating condition in accordance with the following schedule:

1966

1. Replacement of supports for Salmon Creek penstock No. 1.
2. Continuation of the rehabilitation of the Salmon Creek flume.
3. Clean and paint valves of outlets of Salmon Creek and Annex Creek dams.
4. Continuation of the repair and modification of generating equipment.

1967

1. Repair or replace saddle dams and timber dams at Upper Annex Creek Lake.
2. Drill and grout Salmon Creek dam.
3. Gunite and waterproof upstream face of Salmon Creek dam.
4. Continuation of the rehabilitation of the Salmon Creek flume.
5. Check the plate thickness of all penstocks.
6. Continuation of the program for the repair and modification of generating equipment.

1968

1. Repair tailrace concrete at Annex Creek power plant.
2. Completion of the rehabilitation of the Salmon Creek flume.
3. Completion of the repairs and modifications to the generating equipment and appurtenant facilities of the project.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

INTERSTATE POWER COMPANY, PROJECT NO. 2340

ORDER ISSUING LICENSE (MINOR)

(Issued June 23, 1966)

Application was filed on February 11, 1963 by Interstate Power Company (Applicant) of Dubuque, Iowa, for a minor license under Section 4(e) of the Federal Power Act (Act) for constructed Project No. 2340, known as the Delhi Hydroelectric Generating Station, located on the Maquoketa River, a tributary of the Mississippi River, in Delaware County, Iowa, near the town of Delhi.

The project has two generators with total nameplate rating of 1,500 kilowatts. The project was constructed and has been in operation since 1928 with no substantial changes since that time.

The Delhi plant is operated to supply power to Applicant's interconnected transmission system. The transmission lines comprising the interconnected system cross the state lines of Iowa and Minnesota and Illinois.

The Department of the Interior, in reporting on the application, advised that any license for the project should contain the terms and conditions usually included in licenses for the type of project herein under consideration in the interests of fish and wildlife and recreation, all as set forth in attached Form L-12, and special Article 13.

The Secretary of the Army and the Chief of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interest of navigation is concerned.

The Department of Health, Education, and Welfare has advised that it does not foresee any adverse effects from the project on matters within the Department's responsibilities.

The license herein granted shall have an effective date of May 1, 1965, the first day of the month in which the Supreme Court of the United States affirmed the Commission's findings and order asserting licensing authority over Taum Sauk Project No. 2277 by virtue of the effect of the project on the interests of interstate commerce by its utilization of headwaters of a navigable stream to generate electric energy for an interstate power system (381 U.S. 90), and a termination date of December 31, 1993.

In our order on rehearing issued February 17, 1965, in *Wisconsin Power & Light Company, Project No. 2347, et al.* (33 FPC 275), we stated that we would have no objection to the issuance of licenses for minor projects without waiving Sections 14 and 15 of the Federal Power Act and the other provisions of the Act necessary to the effectuation of these sections, provided the minor project applications are timely supplemented pursuant to Section 4.50 of our Regulations under the Act (18 CFR § 4.50), which relates to applications for major projects. In the event the Applicant herein wishes a license in which those provisions of the Act are not waived it should so advise us within 30 days from the date of issuance of this order and file its supplemental application within 30 additional days thereafter.

The Commission finds:

(1) The project affects the interests of interstate commerce.

(2) Applicant is a corporation organized under the laws of the State of Delaware, and has submitted satisfactory evidence of compliance with the

requirements of all applicable State laws insofar as necessary to effectuate the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests or petitions to intervene have been received. No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) Subject to the terms and conditions hereinafter imposed, the project will be best adapted to a comprehensive plan for improving or developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public use, including recreational purposes.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 2,000 horsepower, and the amount of annual charges, based on such capacity, to be paid under the license for the project, for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) It will be in the public interest to waive pursuant to Section 10(i) of the Act, the terms and conditions contained in the following sections of Part I of the Federal Power Act:

> Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This license is hereby issued to Interstate Power Company (Licensee) of Dubuque, Iowa, under Sections 4(e) and 10(i) of the Federal Power Act (Act) for a period effective as of May 1, 1965 and terminating December 31, 1993, for the continued operation and maintenance of Delhi Hydroelectric Generating Station, Project No. 2340, located on the Maquoketa River, in Delaware County, Iowa, and affecting the interests of interstate commerce, subject to the terms and conditions of the Act insofar as not expressly waived herein, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Delhi Hydroelectric Generating Station Project No. 2340 consists of:

(i) all lands constituting the project area and enclosed by the project boundary or limits of which are otherwise defined.

(ii) a dam consisting of: a 45.2-foot concrete intake section, an 83-foot concrete spillway section, and a 425-foot earth fill section; a fishway; a 538 acre reservoir; a two story brick powerhouse housing two generators with nameplate of 1500 kw; a substation; and other necessary appurtenances.

(iii) all other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance or operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–12 (May 1, 1966) entitled "Terms and Conditions of License for Constructed Minor Project Affecting the Interests of Interstate or Foreign Commerce" (*supra*, p. 875), which terms and conditions, designated as Articles 1 through 11, are attached hereto and made a part hereof, and subject to the following special conditions set forth herein as additional articles.

Article 12. The Licensee shall pay to the United States the following annual charge effective May 1, 1965:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Act, $100.00 per annum.

Article 13. The Licensee shall, for the conservation and development of fish, wildlife and recreation resources, construct, maintain, and operate, or arrange for the construction, maintenance, and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be prescribed by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Iowa State Conservation Commission, after notice and opportunity for hearing and upon a finding based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

(D) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

SUN OIL COMPANY, DOCKET NO. G–8288, ET AL; SUNRAY DX OIL COMPANY, G–6822, ET AL.; MARATHON OIL COMPANY, RI64–549; TRIBUNE OIL CORPORATION, G–4335, ET AL.; J. R. FRANKEL, ET AL., G–17671, ET AL.; GAS GATHERING CORPORATION, RP65–11; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, RP65–31

ORDER RELEASING REFUNDS

(Issued June 23, 1966)

Pursuant to the provisions of the Commission's orders approving the settlements in the producer proceedings listed above, the producers are presently retaining refunds pending further order of the Commission. In each of those proceedings, substantial amounts are refundable to Transcontinental Gas Pipe Line Corporation (Transco).[1] With the exception of amounts being held by The Atlantic Refining Company, which are being released by separate order, the proceedings listed above include all cases in which amounts refundable to Transco are being retained pending further Commission order.

---

[1] The refunds being retained by J. R. Frankel, *et al.* are actually refundable to Gas Gathering Corporation. By letter dated February 16, 1966, however, Gas Gathering stated its intention to flow through to Transco all amounts received from Frankel.

By letter filed May 11, 1966, Transco presented a summary of its disposition of supplier refunds received in the past, and requested the release of refunds being held in certain of the proceedings listed above. Transco's letter shows that of $18,335,000 in supplier refunds received, it has refunded or will refund $18,053,000 to its customers. Transco indicates further that of the $1,535,000 being held in four proceedings referred to in that letter,[2] it proposes to flow-through $1,505,000. In summary Transco sets forth that out of a total amount of $19,870,000 comprising amounts heretofore released to it, and those involved in this order, it is obligated to flow-through $19,558,000 and would retain $312,000 or less than 2 percent of the aggregate amount.

Because of Transco's broad flow-through obligations, the minor percentage it claims a right to retain, and the number of suppliers to which a portion of such percentage would be applicable, we think in these circumstances it is appropriate to release to Transco all the amounts presently being retained by its suppliers. We recognize that Transco claims that it is not obligated to flow-through certain amounts received out of the proceedings covered by its letters, and that it may take a similar position with respect to amounts received out of the other two proceedings listed above.[3] We are, therefore, directing Transco to retain subject to further Commission order all amounts attributable to jurisdictional sales which it claims it is not obligated to flow through.

We are also directing Transco to retain pending further Commission order amounts which would be flowed through to those customers of Transco which are natural gas companies subject to the Commission's jurisdiction.

The Commission orders:

(A) Sun Oil Company, Sunray DX Oil Company, Tribune Oil Corporation (and the Escrow Agents listed in the attached appendix) and Marathon Oil Company are directed to release and pay over to Transcontinental Gas Pipe Line Corporation (Transco) within 45 days after the date of this order the amounts shown to be refundable to Transco in the reports filed by such companies pursuant to the provisions of the respective orders listed in the appendix attached hereto, together with the net escrow earnings or interest applicable to such amounts.

(B) J. R. Frankel, *et al.* and the First City National Bank of Houston are directed to release and pay over to Gas Gathering Corporation within 45 days after the date of this order, the amount shown in the report filed October 7, 1965 in Docket No. G–17671, *et al.*, together with the net escrow earnings of such amount.

(C) Gas Gathering Corporation is directed to refund to Transco the amounts received pursuant to paragraph (B) above, within 15 days after such amounts are received, in accordance with Gas Gathering's letter dated February 16, 1966.

(D) Each company making refunds in accordance with paragraphs (A), (B) and (C) above shall submit a report to the Commission showing the details of the refund within 15 days after the refund is made. The principal sums (principal and interest accrued prior to settlement) and the net escrow earnings or interest accrued since the settlement shall be shown separately.

---

[2] Sun Oil Company, Docket No. G–8288, *et al.;* The Atlantic Refining Company, Docket No. G–9283, *et al.;* Sunray DX Oil Company, Docket No. G–6822, *et al.;* and Marathon Oil Company, Docket No. RI64–549.

[3] Tribune Oil Corporation, Docket No. G–4335, *et al.;* J. R. Frankel, *et al.*, Docket No. G–17671, *et al.*

(E) Within 30 days after receipt of the refunds to be made pursuant to paragraphs (A) and (C) above, Transco shall file a report of its intended disposition of the amounts received. The report shall describe in detail the amount payable to each jurisdictional customer, the bases used in computing the amounts payable, the periods involved, and the relevant docket numbers. The report shall also show clearly the amounts attributable to jurisdictional sales which Transco claims it is not obligated to flow-through to its jurisdictional customers. The report shall be accompanied by a brief statement of the reasons for Transco's claim, if any, that it is not obligated to flow-through such jurisdictional amounts to its customers. Copies of the report shall be served by Transco on its customers and interested state commissions. Except as provided hereinafter, and unless notified to the contrary by the Secretary within 30 days after the report is filed, Transco may distribute the amounts shown in its report in the manner provided in relevant settlement agreements and orders after the time for such notice from the Secretary has expired.

(F) Transco shall retain subject to further order of the Commission, in accordance with the provisions of paragraph (H) below, those portions of the refunds received pursuant to paragraphs (A) and (C) above which are attributable to purchases from Transco by:

1. Atlantic Seaboard Corporation.
2. Eastern Shore Natural Gas Company.
3. Manufacturers Light and Heat Company, The.
4. New York State Natural Gas Corporation (now Consolidated Gas Supply Corporation).
5. North Penn Gas Company.
6. United Natural Gas Company.

(G) Transco shall also retain subject to further order of the Commission, in accordance with the provisions of paragraph (H) below, any and all portions of the refunds received pursuant to paragraphs (A) and (C) above which are attributable to jurisdictional sales by Transco which Transco claims it is not obligated to flow-through to its jurisdictional customers.

(H) The amounts ordered to be retained in paragraphs (F) and (G) above shall be retained by Transco in accordance with the provisions of paragraph (H) of the order issued April 6, 1966 in *Placid Oil Company, et al.*, Docket No. G-13183, *et al.*, 35 FPC 477.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP64-5 AND CP65-85

ORDER AMENDING ORDERS ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 23, 1966)

On April 6, 1966, Texas Eastern Transmission Corporation (Petitioner), filed in Docket Nos. CP64-5 and CP65-85 a petition to amend the order of the Commission issued in Docket No. CP65-85 on January 19, 1965, 33 FPC 92, and the order of the Commission issued in Docket No. CP64-5 on December 19, 1963, 30 FPC 1559, as amended, issuing certificates of public convenience and necessity to Petitioner. Petitioner proposes to transfer the present allocation of natural gas under its Rate Schedules GS-D and WS from City Gas Company of New Jersey (City Gas) to Elizabethtown Gas Company (Elizabethtown), an existing customer of Petitioner, all as more fully set forth in the petition to amend.

Petitioner states that it is authorized to sell and deliver 1,285 Mcf of gas per day under Rate Schedule GS-D and 857 Mcf of gas per day under Rate Schedule WS to City Gas by the Commission's order issued January 19, 1965, in Docket No. CP65-85. An additional 500 Mcf per day under Rate Schedule GS-D was authorized to be sold to City Gas by an amendment, granted on August 24, 1965 to the Commission's order in Docket No. CP64-5, 34 FPC 572.

Petitioner has been advised by Northwest Jersey Natural Gas, Inc. (Northwest Jersey) that on September 30, 1965, City Gas was consolidated into Northwest Jersey, a wholly-owned subsidiary company of Elizabethtown. Northwest Jersey and Elizabethtown have embarked upon a program of integrating the gas supplies of Northwest Jersey with those of Elizabethtown for the stated purpose of obtaining maximum system flexibility, fullest utilization of pipeline supplies, and the lowest system cost. Pursuant to this program, Northwest Jersey has requested Petitioner to transfer the present allocations of gas under Rate Schedules GS-D and WS from City Gas to Elizabethtown.

Upon transfer of the allocations, Petitioner will continue to make deliveries of such gas to Elizabethtown at its Measuring Station 584 and the requirements of Northwest Jersey in the area supplied by this delivery point will be supplied by Elizabethtown.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publications in the Federal Register on April 20, 1966 (31 F.R. 6074) in Docket Nos. CP64-5 and CP65-85. No protest, petition to intervene or notice of intervention has been filed herein.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's orders issued January 19, 1965 in Docket No. CP65-85 and December 19, 1963, as amended, in Docket No. CP64-5 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's orders issued January 19, 1965 in Docket No. CP65-85 and December 19, 1963 in Docket No. CP64-5 as amended August 24, 1965, are amended so as to transfer the present allocation of natural gas under Petitioner's Rate Schedules GS–D and WS from City Gas Company of New Jersey to Elizabethtown Gas Company, an existing customer of Petitioner.

(B) Petitioner shall file with the Commission within 30 days after the issuance of this order a revised service agreement reflecting the requested transfer of gas authorization under Rate Schedules GS–D and WS from City Gas of New Jersey to Elizabethtown Gas Company.

(C) In all other respects said orders shall remain in full force and effect.

(D) The amendment authorized by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with applicable Commission Regulations under the Natural Gas Act and particularly the conditions set forth in Section 157.20 of such Regulations.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CONSUMERS POWER COMPANY, DOCKET NO. E–7289

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BOND

(Issued June 24, 1966)

Consumers Power Company (Applicant), filed an application on May 5, 1966, with the Federal Power Commission pursuant to Section 204 of the Federal Power Act seeking authority to issue and sell at competitive bidding First Mortgage Bonds in the aggregate principal amount of $65,000,000. Applicant is incorporated under the laws of the State of Maine and is qualified to do business in Michigan with its principal place of business at Jackson, Michigan, and is engaged in the generation, purchase, distribution and sale of electricity in 1,522 communities and townships including rural areas, and in the purchase, distribution and sale of natural gas in 658 communities and townships all in the State of Michigan.

The New Bonds which Applicant proposes to issue on or about July 20, 1966 will mature on July 1, 1996. The New Bonds will constitute an additional series of First Mortgage Bonds to be issued under the Applicant's indenture dated as of September 1, 1945, and to be supplemented by all indentures supplemental thereto, including a thirteenth supplemental to be dated as of July 1, 1966. The company proposes to sell the New Bonds at competitive bidding in accordance with the applicable requirements of the Commission's Regulations under the Federal Power Act. The interest rate of the Bonds will be determined by the successful bidder in the bids submitted by such bidder upon competitive bidding.

The Applicant intends on or about July 1, 1966, to invite sealed, written proposals for the purchase from it of the $65,000,000 new Bonds. The Public Invitation for Proposals contains the following principal provisions:

Each proposal must be for the purchase of all the Bonds and may be made by a single bidder or by a group of bidders. No bidder may submit or participate in more than one proposal. Each proposal must be presented to the Applicant at the office of Messrs. Winthrop, Stimson, Putnam & Roberts, 40 Wall Street, New York, N.Y., on July 12, 1966 before 11:30 a.m., EDST, and be accompanied by a deposit of $1,300,000.

Each proposal shall specify the rate of interest to be borne by the Bonds, which rate shall be a multiple of 1/8 of 1%; and shall also specify the price (exclusive of accrued interest) to be paid to the Applicant, which price shall not be less than 100% nor more than 102¾% of the principal amount. Each proposal shall provide that the purchaser or purchasers of the Bonds shall pay to the Applicant accrued interest on the Bonds from July 1, 1966, to the date of payment therefor and delivery thereof.

Unless the Applicant shall reject all proposals or exclude a proposal or proposals for reasons set forth in the Public Invitation for Proposals, it will accept the proposal which provides for the lowest cost of money.

According to the Applicant the net proceeds from the sale of the New Bonds will be used first to discharge short-term bank loans to be incurred prior to the sale of the New Bonds to secure funds for construction purposes (which at April 30, 1966, amounted to $14,000,000), and second to provide a portion of the funds required for the construction or acquisition of permanent improvements, extensions and additions to the Applicant's property. The plans call for the expenditure of approximately $141.7 million in 1966 for the construction or acquisition of property additions. The 1966 expenditure includes an estimated $30.5 million on generating stations, including (1) an estimated $29 million on the second unit of 385 mw rated capacity of the James H. Campbell plant, located 10 miles north of Holland, Michigan, (2) an estimated $381,500 on the circulating Water Intake Jetty improvements at the James H. Campbell Plant, (3) an estimated $4,400,000 on the proposed Palisades Generating Plant, to be located 5 miles south of South Haven, Michigan, (4) an estimated $4,482,600 on the proposed Gaylord Generating Plant, to be located 1 mile west of Gaylord, Michigan, and (5) $1,210,800 for miscellaneous generation; $16,787,900 for electric transmission line and substation additions; $24,003,700 for electric distribution line and substation additions; $54,205,500 for gas properties; and $7,147,200 for general and miscellaneous.

Written notice of the application has been given to the Michigan Public Service Commission and the Governor of that State. Notice has also been published in the Federal Register on May 18, 1966 (31 F.R. 7263), stating that any person desiring to be heard or to make any protest with reference to the application shall file petitions or protests on or before June 8, 1966 with the Federal Power Commission, Washington, D.C. 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) The Applicant owns and operates facilities which may be facilities for the transmission of electric energy in interstate commerce and it may be a public utility within the meaning of that term as used in Section 204 of the Federal Power Act.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EASTERN SHORE NATURAL GAS COMPANY, DOCKET NO. CP66-234 AND TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP66-278

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING SERVICE AGREEMENT FOR FILING

(Issued June 24, 1966)

Eastern Shore Natural Gas Company (Eastern Shore), filed in Docket No. CP66-234 an application on January 19, 1966, supplements thereto on February 8, April 19, April 21, and an amendment thereto on May 20, 1966, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities and the sale and delivery of additional volumes of natural gas to one of its existing customers, all as more fully set forth in the application, supplements and amendment thereto.

Eastern Shore proposes to construct 14.5 miles of 10-inch pipeline extending from a point of interconnection with facilities of Transcontinental Gas Pipe Line Corporation at Hockessin, Delaware, to a point on Applicant's system near Wilmington, Delaware. Eastern Shore states that these additional facilities will function as a loop on the northern end of its system. Eastern Shore further proposes to increase its firm deliveries to Stauffer Chemical Company by 1,350 Mcf of gas per day. The facilities proposed are needed to render this additional service and to provide a greater measure of operating flexibility.

The total estimated cost of Eastern Shore's proposed facility is $700,000, and will be financed through funds generated internally and by the sale of short-term notes, with permanent financing to be arranged at a later date.

On February 24, 1966, Transcontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP66–278 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain natural gas facilities, all as more fully set forth in the application.

Transco seeks authority to construct and operate a sales meter and appurtenant equipment to be located within the building housing the existing Hockessin delivery point to Delaware Power and Light Company on Transco's 16-inch transmission sales lateral near the Pennsylvania-Delaware state line in Chester County, Pennsylvania. The application states that said sales meter will be utilized as an additional point of delivery for natural gas service to Eastern Shore Natural Gas Company (Eastern Shore), an existing customer, for resale.

Transco states that Eastern Shore has requested the proposed new delivery point in order to tie into the 14.5 miles of 10-inch pipeline for which Eastern Shore seeks authorization in its application filed in Docket No. CP66–234 on January 19, 1966. Eastern Shore has advised Transco that the estimated peak day volume of natural gas to be delivered at this point in the third year of proposed operations is 10,600 Mcf and that volumes of gas purchased by Eastern Shore from Transco at this point will be out of allocations previously authorized by the Commission.

The total estimated cost of Transco's proposed facilities is $47,000, which cost will be financed from general funds.

On April 7, 1966, Transco filed an amended service agreement with Eastern Shore and requested an effective date of May 1, 1966. The present agreement, dated November 1, 1965, provides for an increase in contract demand from 17,550 Mcf to 18,200 Mcf per day commencing May 1, 1965. Inasmuch as the increased volumes cannot be utilized until the authorizations requested herein are granted and the facilities constructed, Transco proposes that increased deliveries be postponed until July 1, 1966. Waiver of notice requirements are requested.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 23, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, Eastern Shore Natural Gas Company, a Delaware corporation having its principal place of business in Salisbury, Maryland, is a "natural-gas

company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 29, 1957, in Docket No. G–12059, *et al.* (18 FPC 710).

(2) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 29, 1948, in Docket No. G–704 (7 FPC 24).

(3) The proposed transportation, construction and operation of facilities by Eastern Shore and Transco and sale and delivery of natural gas by Transco as hereinbefore described, and as more fully described in the applications, supplements and amendment filed in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) The aforesaid construction and operation of facilities by Eastern Shore and Transco and sale and delivery of natural gas by Transco are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Eastern Shore and Transco are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Eastern Shore's and Transco's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(7) It is appropriate in the administration of the Natural Gas Act and in the public interest to accept for filing the Revised Service Agreement filed by Transco on April 7, 1966, and with respect thereto to waive the notice requirements of the Commission's Rules and Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Eastern Shore in Docket No. CP66–234, authorizing the construction and operation of facilities and the transportation and delivery of natural gas as hereinbefore described and to Transco authorizing the construction and operation of facilities for the sale of natural gas in Docket No. CP66–278 all as more fully described in the applications and exhibits in these proceedings, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Eastern Shore's and Transco's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 6 months of the date on which this order issues.

(D) Additional firm deliveries of natural gas by Eastern Shore in Docket No. CP66–234 shall be limited to 1,350 daily to Stauffer (total of 6,550 Mcf daily).

(E) The certificate issued Eastern Shore in Docket No. CP66–234 shall not entitle the industrial customer to whom firm deliveries are authorized herein to any priorities or rights to additional gas for meeting any future increases in their requirements at the expense of firm resale customers desiring to acquire additional gas to meet any future increases in their requirements.

(F) The Revised Service Agreement filed by Transco on April 7, 1966, is accepted for filing effective May 1, 1966, and the notice requirements of the Commission's Regulations with respect thereto are waived.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

HAMILTON NATURAL GAS COMPANY, INC., AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-87

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 24, 1966)

On September 29, 1965, Hamilton Natural Gas Company, Inc. (Applicant), filed in Docket No. CP66-87 an application and supplemental information on March 16, 1966, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission requiring Panhandle Eastern Pipe Line Company (Respondent) to make a physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant its natural gas requirements for the Town of Sheridan, Hamilton County, Indiana, and its environs, all as more fully stated in the application.

Applicant proposes the connection between a 6-inch lateral line, which Applicant will own and operate as an integral part of the distribution system with the facilities of Respondent at a point approximately 10.5 miles southeast of Sheridan in Hamilton County.

The estimated cost of construction of the lateral and the distribution system is $500,000, which will be financed with First Mortgage Bonds of $325,000 and equity capital for the balance.

The estimated natural gas requirements during the first three years of operations are as follows:

	First year	Second year	Third year
Annual (Mcf)	94,060	109,662	125,264
Peak day (Mcf)	990	1,161	1,331

On October 1, 1965, Respondent was duly advised of the application filed in this proceeding, and due notice of the filing and opportunity for hearing thereon has been given by publication in the Federal Register on March 9, 1966 (31 F.R. 4174). No protest, petition to intervene or request for hearing has been filed in this proceeding.

On July 27, 1965, the Town of Sheridan, Indiana, granted Applicant a franchise to construct and operate the necessary facilities and to sell gas to the public in Sheridan.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas

company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) Applicant is legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 1,331 Mcf per day of natural gas for distribution and resale as hereinbefore described and as more fully described in the application in this proceeding.

(4) The requirement that Respondent serve Applicant as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Respondent for distribution in the Town of Sheridan and environs in Hamilton County, Indiana, within one year from the date of issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Hamilton Natural Gas Company, Inc. as herein described, and to sell and deliver up to 1,331 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations. Such service shall be rendered pursuant to Panhandle Eastern's currently filed appropriate rate schedule.

(B) Respondent shall report to the Commission in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MISSOURI UTILITIES COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-230

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 24, 1966)

On January 19, 1966, Missouri Utilities Company (Applicant) filed in Docket No. CP66-230 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to sell and deliver to Applicant up to 4,897 Mcf of natural gas per day for resale and distribution in the Cities of Eldon and Olean, Miller County, Missouri; the Cities of Versailles and Stover, Morgan County, Missouri; and the unincorporated Village of High Point, Moniteau County, Missouri, all as more fully set forth in the application.

Respondent presently supplies Applicant with natural gas for resale in the City of California, Moniteau County, Missouri, from an existing tap on Respondent's Jefferson City lateral pipeline four miles north of the City of California on Missouri Highway 87.

Applicant will construct approximately 52 miles of 6-inch transmission pipeline extending from the above-mentioned tap to the distribution systems to be constructed by it in each of the communities to be served. Panhandle will expand its existing California meter station to handle the increased volumes.

The total estimated volumes of natural gas necessary to meet Applicant's annual and maximum day requirements during the first three years of proposed operations in the aforementioned cities and village are as follows:

	First year	Second year	Third year
Annual (Mcf)	126,039	319,209	432,789
Peak day (Mcf)	2,612	4,119	4,897

Respondent will sell the the proposed volumes of natural gas to Applicant pursuant to its present Rate Schedule G–2.

The total estimated cost of the transmission facilities and the distribution systems to be constructed by Applicant is $1,183,250, which will be financed from cash on hand and from proceeds from unsecured short-term bank loans. The unsecured bank loans will subsequently be financed with some form of permanent financing such as stock or mortgage bonds. Applicant will also reimburse Respondent approximately $9,000, which is the estimated cost of enlarging Respondent's California meter station.

The Public Service Commission of the State of Missouri issued a certificate of convenience and necessity authorizing the proposed construction and service. The effective date of the state certificate is December 28, 1965.

Franchises covering the proposed operations have been granted to Applicant by each of the incorporated communities to be served.

On February 3, 1966, Respondent filed an answer to the application and stated that it has no objection to the proposal.

Due notice of the filing of the application was published in the Federal Register on February 8, 1966 (31 F.R. 2501). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Respondent, Panhandle Eastern Pipe Line Company, a Delaware corporation with its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 23, 1942, in Docket Nos. G–200 and G–207 (3 FPC 273).

(2) Applicant is a public utility company in the State of Missouri and is authorized to construct and operate facilities to distribute and sell natural gas to inhabitants of the communities along its system.

(3) It is necessary and desirable in the public interest that Respondent be directed to sell and deliver up to 4,897 Mcf of natural gas per day to Applicant for resale and distribution in the communities of Eldon, Olean,

Versailles, Stover and High Point, Missouri, all as hereinbefore described and as more fully described in the application.

(4) The requirement that Respondent serve Applicant, as requested, will not place an undue burden upon Respondent nor impair its ability to render adequate service to existing customers.

The Commission orders:

(A) Respondent is directed to sell and deliver up to 4,897 Mcf of natural gas per day for resale and distribution in the communities of Eldon, Olean, Versailles, Stover and High Point, Missouri, all as hereinbefore described and as more fully described in the application.

(B) Applicant shall be prepared to receive natural gas from Respondent at the California connection within one year from the date of this order.

(C) Respondent shall notify the Commission of the commencement of service within 10 days thereof.

(D) Respondent shall execute and file with the Commission a superseding service agreement with Applicant in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

NORTHWESTERN PUBLIC SERVICE COMPANY, DOCKET NO. E-7293

ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued June 24, 1966)

Northwestern Public Service Company (Applicant) filed an application on May 19, 1966, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of $3,500,000 principal amount of First Mortgage Bonds, due 1966.

The Applicant, a Delaware corporation, authorized to do business in North Dakota, South Dakota, and Nebraska, is engaged in generating, transmitting, distributing and selling electric energy in the east central portion of South Dakota, where it furnishes electric service in 108 communities.

The $3,500,000 First Mortgage Bonds are to be dated July 1, 1966, and are to mature on July 1, 1996. The interest rate will be determined by the most favorable bid received and accepted.

The new Bonds are to be issued under an Indenture of the Applicant, dated August 1, 1940, to The Chase Manhattan Bank (National Association) and J. J. O'Connel, as Trustee, successor to the original Trustees, as supplemented by seventeen Supplemental Indentures, and as to be further supplemented by a Supplemental Indenture dated July 1, 1966.

The Applicant intends on a date in the latter part of June to invite written bids for the purchase of the $3,500,000 new Bonds. The Statement of Terms and Conditions Relating to Bids will contain the following principal provisions:

Each bid, which may be made by a single bidder or by a group of bidders, must be for the purchase of all the Bonds. No bidder or group of bidders may submit or participate in more than one bid. Bids must be presented to the Applicant at Room 1705, 231 South La Salle Street, Chicago, Illinois, before 10 A.M., CDST, on July 13, 1966, and must be accompanied by deposits of $105,000.

Each bid shall specify the coupon rate to be borne by the Bonds, which rate shall be a multiple of ⅛ of 1%; and shall specify the price, exclusive of accrued interest, to be paid to the Applicant, which bid shall not be less than 99% or more than 102¾% of principal amount, and shall provide that accrued interest from July 1, 1966 to the date of payment therefor and delivery thereof will be paid by the purchaser or purchasers to the Applicant.

Unless the Applicant shall reject all bids or exclude a bid or bids for reasons set forth in the Statement of Terms and Conditions, it will accept the bid which provides for the lowest annual cost of money.

Proceeds from the issuance and sale of the Bonds will be used to retire $1,300,000 in bank loans and to finance in part Applicant's 1966 construction program which is presently estimated at $5,300,000, of which approximately $2,375,000, is for routine extensions and additions to its existing electric system in South Dakota.

The principal items of the 1966 program are construction of new 115 kv lines and substations and conversion of existing 69 kv lines to 115 kv operation.

Written notice of the application has been given to the Nebraska State Railway Commission, the North Dakota Public Service Commission, the South Dakota Public Utilities Commission and to the Governors of these states. Notice of the application was also published in the Federal Register on June 4, 1966, (31 F.R. 7987), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before June 20, 1966, file petitions or protests with the Federal Power Commission, Washington, D.C. 20426. No protest or petition has been filed.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued September 19, 1958, *In the Matter of Northwestern Public Service Company*, Docket No. E-6838 (20 FPC 373).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Federal Power Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the applications, as described above, are authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal

Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h)(1) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ANNUAL REPORTS OF CLASSES A, B, C AND D NATURAL GAS COMPANIES SUBJECT TO THE NATURAL GAS ACT—MISCELLANEOUS AMENDMENTS TO F.P.C. FORMS NO. 2 AND NO. 2-A, DOCKET NO. R-283

ORDER NO. 310-A

AMENDING §§ 260.1(c) AND 260.2(c) OF THE COMMISSION'S REGULATIONS

(Issued June 24, 1966)*

Order No. 310, issued in this proceeding on December 8, 1965 (34 FPC 1436, 30 F.R. 15465), amended the Annual Report FPC Forms Nos. 2 and 2-A by, among other things, deleting certain schedules and changing the "Verification" page to an "Attestation." The lists of schedules contained in the forms which appear in paragraph (c) of both §§ 260.1 and 260.2 of the regulations should have been amended so as to corerctly list the current contents of the report forms. We are here supplying the inadvertent omission.

The Commission finds:

Notice of these amendments prior to adoption is unnecessary and good cause exists for making them effective immediately.

The Commission, acting pursuant to the provisions of the Natural Gas Act, as amended, particularly sections 10 and 16 thereof (52 Stat. 826, 830; 15 U.S.C. 717i, 717o), *orders:*

(A) Part 260, Subchapter G, Chapter I of Title 18 of the Code of Federal Regulations, is amended by revising §§ 260.1 and 260.2 as follows:

(1) In paragraph (c) of § 260.1, the fourth schedule titles "Special Funds," "Special Deposits," "Notes Receivable" and "Accounts Receivable" are deleted and the last title, "Verification," is changed to "Attestation."

---

*Published in the Federal Register on July 1, 1966 (31 F.R. 9062).

(2) In paragraph (c) of § 260.2, the last title, "Verification," is changed to "Attestation."

(B) The amendments here adopted shall be effective upon the issuance of this order.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

WISCONSIN MICHIGAN POWER COMPANY, PROJECT NO. 2394

ORDER APPROVING REVISED PROJECT EXHIBIT M

(Issued June 24, 1966)

On March 16, 1966, Wisconsin Michigan Power Company, licensee for Project No. 2394, filed for Commission approval a revised Exhibit M showing the project facilities as they now exist and describing equipment to be installed during 1966. The project, known as the Chalk Hill Project, is located on the Menominee River in Menominee County, Michigan, and Marinette County, Wisconsin, in the vicinity of Amburg, Wisconsin, and the Village of Stephenson, Michigan.

The licensee proposes to remove the existing switchboard in the powerhouse and to install a complete local and remote control system with the supervisory control master station to be located approximately three miles downstream at the licensee's licensed White Rapids Plant, designated as Project No. 2357, Commission staff concurs with the licensee that the new system will improve the protection of plant equipment, insure more economical operation, and provide automatic voltage regulation.

The Commission finds:

(1) Revised Exhibit M (March 16, 1966) consisting of three typewritten pages entitled "General Descriptions of Project and Equipment" conforms to the Commission's rules and regulations and should be approved as part of the license for the project.

(2) Exhibit M (August 12, 1963) consisting of three typewritten pages entitled "General Descriptions of Project and Equipment," now part of the license and which is superseded, should be eliminated from the license for the project.

The Commission orders:

The revised exhibit described in finding (1) above is hereby approved as part of the license for Project No. 2394, and the exhibit described in finding (2) above as superseded is hereby eliminated from the license for the project.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

DECLARATORY ORDER WITH RESPECT TO QUALITY STATEMENTS

(Issued June 27, 1966)

The producers listed in the Appendix have submitted quality statements reflecting the quality of gas under rate schedules pertaining to sales of gas to West Texas Gathering Company (West Texas) in the Permian Basin Area. West Texas gathers, transports and resells the gas to El Paso Natural Gas Company (El Paso) at El Paso's Keystone Treating Plant.[1] These quality statements were required under paragraph (F)(1) of Opinion No. 468, 34 FPC 159, as amended.[2]

The quality statements submitted by the producers show that the gas does not meet the standards prescribed in Opinion No. 468 with respect to sulphur and water content. Each quality statement, with the exception of the one submitted by Socony Mobil, reflects an agreed upon treating cost of 0.11¢ per Mcf. Such treating costs relate to the treating operations of El Paso and are the same as those utilized by El Paso in determining the price adjustments for quality deviations with respect to gas purchased directly by it in Permian. These methods were approved by the Commission in its June 13, 1966 order in Docket No. AR61-1, *et al.*, *supra*, p. 960.

The producers, except for Socony Mobil, claim an offsetting credit for Btu content between 1000 and 1050 against the agreed upon 0.11¢ treating cost. Such an adjustment is not permissible under our *Permian* opinion.[3] We shall therefore require these producers to submit new quality statements reflecting only the agreed upon downward adjustment of 0.11¢ per Mcf.

Socony concedes that the gas sold by it to West Texas contains the same quality deficiencies with respect to sulphur and water content that are found in gas sold by the other producers involved here. It apparently believes, however, that West Texas, as the buyer, should properly bear such treating cost. This is not correct. Under Opinion No. 468 a producer, such as Socony, which sells non-pipeline quality gas should make a downward price adjustment for any quality deficiencies. Where the purchaser from a producer is also a producer, such purchaser should reflect a downward price adjustment for any quality deficiencies contained in the gas it resells, but this does not relieve the initial producer of its obligation with respect to quality deficiencies. Nor is the producer relieved of its obligation in this regard when the immediate pipeline purchaser does not treat the gas but the secondary pipeline purchaser does treat it. It thus makes no difference whether West Texas is treated as a producer or a pipeline for the purpose of deciding the question raised by Socony Mobil.[4] In any event, Socony Mobil is required to make the necessary adjustment. We shall therefore require Socony Mobil to file a new quality statement reflecting a downward price adjustment for the quality deficiencies in gas sold by it to West Texas.

---

[1] The gas is not treated by West Texas prior to delivery to El Paso, but is treated by El Paso at the Keystone Plant.

[2] By order issued June 13, 1966, in Docket No. AR61-1, *et al.*, the Commission took action with respect to quality statements relating to sales to El Paso, Northern Natural and Transwestern which reflected full agreement between the producer and purchaser.

[3] Order issued March 23, 1966, in Area Rate Proceeding, Docket No. AR61-1, 35 FPC 411 (Phillips Petroleum Company, Docket No. G-20405); and order issued on June 13, 1966, in Docket No. AR61-1, *et al.*

The Commission orders:

(A) The quality statement submitted by Socony Mobil for sales under its FPC Gas Rate Schedule No. 201 is rejected.

(B) The quality statements listed in the Appendix, except for the one submitted by Socony Mobil, are accepted except insofar as upward adjustments are proposed for gas delivered with a Btu content between 1000 and 1050. The quality statements insofar as they propose such upward adjustments are rejected.

(C) The producers listed in the Appendix, including Socony Mobil, shall submit within 30 days of the date of issuance of this order a new quality statement for each sale covered therein reflecting a downward price adjustment of 0.11¢ per Mcf for sulphur and water content. Such quality statements shall not reflect any offsetting credit for Btu content between 1000 and 1050 and shall comply with the requirements of paragraph (F)(1) of Opinion No. 468, as amended.

(D) Any producer filing a new quality statement, as provided in paragraph (C) above, shall also file a new refund report within 45 days of the date of issuance of this order to reflect any changes that may be necessary if the sale related to such quality statement is involved in a Section 4(e) suspension proceeding consolidated in Opinion No. 468. Such refund report shall comply with the provisions of paragraph (I) of Opinion No. 468.

[4] By Commission letter-order issued June 27, 1966, in Docket No. G–14302, West Texas was classified as a pipeline under the Commission's Regulations under the Natural Gas Act, and a quality statement is therefore not required.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

ARIZONA PUBLIC SERVICE COMPANY, DOCKET NO. E-7265

ORDER AUTHORIZING LEASE OF ELECTRIC FACILITIES

(Issued June 27, 1966)

Arizona Public Service Company (Applicant), filed an application on January 13, 1966, with the Federal Power Commission, seeking an order pursuant to Section 203 of the Federal Power Act authorizing it to lease for a period of 25 years the electric distribution system of the City of Williams, Arizona (Williams).

Applicant is incorporated under the laws of the State of Arizona, is qualified to do business in Arizona and New Mexico, and is engaged in the generation, purchase, interchange, transmission, sale at wholesale, and distribution of electric energy in ten of Arizona's 14 counties.

Williams is a municipal corporation of the State of Arizona which owns and operates an electric distribution system. It purchases energy to meet its requirements from the Applicant and in 1964 served approximately 965 customers.

According to the application, Applicant proposes to pay a rental of $130,000 per year, on a monthly basis of $10,833.33 per month, plus 2½% of gross revenues received within Williams in excess of $325,000 per year. A franchise to serve Williams pursuant to the lease has been approved by the electors of Williams. Applicant estimates that the depreciated original cost of the facilities to be leased is $190,000.

Basically the proposed transaction is an acquisition of facilities and based on the estimated depreciated original cost of the facilities involved ($190,000), the average annual cost for depreciation, return, and income taxes on the return, over the 25-year lease period, is $19,000 compared to the proposed annual rental payment of $130,000. Total costs over the 25 years, computed on the basis of an acquisition, are $475,000 compared to lease rental payments of $3,250,000 over the same period.

After the consummation of the proposed transaction, Applicant will place in effect its rate schedules presently applicable to the Flagstaff area. According to the Applicant, this will result in an immediate reduction of rates for 862 of the 978 customers presently served by Williams including all of the 761 residential customers of Williams. One hundred three commercial and industrial customers will have a rate increase ranging from 0.1% to 34.1%. Of this group 36 will have an increase of up to 10%; 45 will have an increase between 10 and 20%; and 22 will have an increase between 20 to 34.1%.

The appropriate retail rate structure of a public utility is not a matter subject to this Commission's jurisdiction. The Arizona Corporation Commission, however, held a hearing on this matter on February 17, 1966, in the Town of Williams and on February 28, 1966, that Commission issued a certificate of public convenience and necessity and approved the proposed rate schedules.

Applicant represents that with its larger organization and inventory of material it will be able to provide better services to the customers of Williams. Applicant proposes to make available to Williams the services of its Area Development Department to promote the growth of local business and industry.

Written notice of the application has been given to the Arizona Corporation Commission and the Governor of that State. Notice was also published in the Federal Register on January 29, 1966 (31 F.R. 1218), stating that any person desiring to be heard or to make any protest with reference to said application should on or before February 14, 1966, file petitions or protests in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10), with the Federal Power Commission, Washington, D.C. 20426. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is generated outside Arizona as heretofore described and set forth in the Commission's order issued July 20, 1965, *Arizona Public Service Company*, Docket No. E-7226, 34 FPC 78. Applicant, therefore, is a public utility within the meaning of that term as used in Section 203 of the Federal Power Act.

(2) By the proposed transaction, Applicant will indirectly merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Williams, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed lease of facilities by Applicant as described above, upon the terms and conditions set forth in the application, and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act.

The Commission orders:

(A) The proposed lease by Applicant of the aforementioned electric facilities, all as described above, is authorized and approved upon the terms and conditions and for the purposes set forth in the application subject to the provisions of this order.

(B) Applicant shall account for the transaction by charging the annual payments under the lease to Account 426, Other Income Deductions, as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transaction herein authorized and approved is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determination of cost, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–99

FINDINGS AND ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 27, 1966)

On April 20, 1966, El Paso Natural Gas Company (Petitioner) filed in Docket No. CP64–99 a petition to amend further the order of the Commission issued in said docket on February 18, 1964, 31 FPC 422, as amended on August 7, 1964, October 21, 1964, December 15, 1964, 32 FPC 539, 1152, 1424, and June 2, 1965, 33 FPC 1160, by authorizing Petitioner to continue to participate, as to its one-third interest, in certain additional testing activities of the Jackson Prairie Storage Unit, including an increase in the volumetric limitation on the inventory of gas in said storage reservoir from 2,000,000 Mcf (14.73 psia) to 3,000,000 Mcf (14.73 psia), for a period continuing through June 30, 1967, or until divestiture of Petitioner's Northwest Division System, whichever first occurs and to construct and operate certain facilities to be owned solely by Petitioner, all as more fully set forth in the petition to amend in this proceeding.

The order of February 18, 1964, as amended, authorized Petitioner to construct and operate certain facilities; to sell and deliver natural gas to Washington Natural Gas Company (Washington Natural) and Washington Water Power Company (Water Power) and, with respect to Petitioner's one-third interest therein, to share in the cost of facilities to be constructed and operated by Water Power, all solely for the purpose of testing the Jackson Prairie Storage Unit, Lewis County, Washington. Further the total estimated cost, which is to be shared by the three participants, of the project was $3,579,000. The order, as amended, also limited the gas inventory in the storage reservoir to 2,000,000 Mcf (14.73 psia) and terminated the authorization upon the divestiture of Petitioner's Northwest Division System, but not beyond June 30, 1966.

Petitioner, Washington Natural, and Water Power, the latter continuing as Storage Unit Operator, have agreed to increase their individual commitments from $1,200,000 to $2,000,000 to finance the proposed expanded testing program. The proposed continued testing will require (a) work-over of three existing wells and drilling of nine additional wells, (b) replacement of two existing 150 horsepower compressor units in the storage field with two 1,068 horsepower units, and (c) installation of a portable-type dehydration unit. The estimated cost of these additional facilities is $2,514,800. Through December 31, 1965, $3,374,200 has been jointly expended on the testing of the storage field. Petitioner also proposes to modify an existing mainline tap, owned solely by itself, through enlargement and replacement of metering facilities at an estimated cost of $47,900. Petitioner requests that it be authorized to continue to participate in the testing program and to expend up to $2,000,000 as its share of said program, exclusive of the cost of the proposed metering facilities.

Petitioner states that the continued testing of the storage field is required in order to test further pressure performance and water encroachment characteristics of the present gas storage zone and in order to determine the feasibility of storage utilization of two lower zones.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 7, 1966 (31 F.R. 6846). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued February 18, 1964, in Docket No. CP64–99, as amended, be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued February 18, 1965, in Docket No. CP64–99, as amended, is further amended by authorizing:

(1) With respect to Petitioner as an undivided one-third interest participant, the extension of the period for joint testing of the Jackson Prairie Storage Reservoir through June 30, 1967, or until divestiture of Petitioner's Northwest Division System, whichever first occurs;

(2) The increase in the volumetric limitation on the inventory of gas in the storage reservoir from 2,000,000 Mcf (14.73 psia) to 3,000,000 Mcf (14.73 psia);

(3) The expansion of the testing facilities and activities of the Jackson Prairie Storage Reservoir as proposed with Petitioner increasing its one-third commitment to $2,000,000, exclusive of the amount of $47,900 for Petitioner's proposed metering facilities; and

(4) The modification, as proposed in the subject petition to amend, of an existing mainline tap, owned solely by Petitioner, through enlargement and replacement of metering facilities.

(B) The authorization hereinabove granted is conditioned upon Petitioner's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly paragraph (f) of Section 157.20 of such Regulations.

(C) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

KODIAK ELECTRIC ASSOCIATION, INC., PROJECT NO. 2434

ORDER EXTENDING PERIOD OF PRELIMINARY PERMIT

(Issued June 27, 1966)

Application was filed on May 20, 1966 by Kodiak Electric Association, Inc., permittee for proposed Project No. 2434, for a one-year extension of the period of the permit. The preliminary permit was issued by the Commission on June 19, 1964, 31 FPC 1571, for a period of 24 months, effective June 1, 1964. The project is proposed to be located on Terror River at the outlet of Terror Lake, in the Falls Creek and Shotgun Creek drainage basins, and Kizhuyak Canyon, Borough of Kodiak Island, Alaska, affecting lands of the United States within the Kodiak National Wildlife Refuge and other lands of the United States.

The permittee states that it had hoped to apply for license prior to the expiration of its 24-month permit, but it became necessary to use supplemental financing for the final phases of engineering on the definite project report. A request was made to REA, the permittee adds, for permission for supplemental financing, but permission has not been, nor is it likely to be received in time to complete the application for license prior to the present expiration date of the permit.

Weather conditions have restricted field work to the summer and fall months. It appears that the permittee has proceeded diligently with the investigations under the permit.

The Commission finds:

It is not inconsistent with the public interest to extend the period of the permit as applied for.

The Commission orders:

The period of the preliminary permit for proposed Project No. 2434 is hereby extended through May 31, 1967.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G-13018; EL PASO NATURAL GAS COMPANY, G-13019; EL PASO NATURAL GAS COMPANY, CP66-27; NORTHWEST PIPELINE CORPORATION, CP66-28; NORTHWEST PIPELINE CORPORATION, CP66-29; NORTHWEST PIPELINE CORPORATION, CP66-30

ORDER GRANTING MOTION FOR CONTINUANCE

(Issued June 27, 1966)

On May 26, 1966, the presiding examiner certified to the Commission a motion made by the Commission's staff at a prehearing conference held on May 24, 1966, seeking to continue these proceedings until after the United States Supreme Court has ruled on appeals now pending before it in the matters of the *People of the State of California, et al.* v. *El Paso Natural Gas Company*. On January 17, 1966, the Supreme Court noted probable jurisdiction in those matters. Answers in opposition to the Staff's motion were filed by El Paso Natural Gas Company (El Paso), Northwest Pipeline Corporation (Northwest), the Public Utility Commissioner of Oregon and Southern California Gas Company and Southern Counties Gas Company of California. Southern California Edison Company filed a response to those answers, but took a neutral position on the question of a continuance.

This matter is pending before the Commission on applications filed pursuant to an order of the District Court of the Southern District of Utah, approving a decree requiring, *inter alia*, divestiture by El Paso of its Pacific northwest properties. As a result of that decree, Northwest was created to acquire and operate the facilities of El Paso used in its northwest division, El Paso having been ordered by the Supreme Court to be divested without delay of the properties acquired by merger with Pacific Northwest Pipeline Corporation. Following that order, issued April 6, 1964, El Paso proposed a plan for divestiture to the Utah District Court. Upon agreement between El Paso and the U.S. Department of Justice, that Court entered its decree of divestiture. Appeals were taken by Southern California Edison Company, Cascade Natural Gas Company and the People of the State of California from actions of the District Court denying their intervention in the court proceedings. The Supreme Court on January 17, 1966, noted probable jurisdiction.

In its decision in *People of the State of California* v. *F.P.C.*, 369 U.S. 482 (1962), the Supreme Court found that pending a determination of the anti-trust proceedings brought by the Department of Justice against El Paso, this Commission should have stayed action.[1] Having noted probable jurisdiction in the pending appeals, it is possible that the Supreme Court will remand this matter to the District Court for further proceedings. To continue with the pending proceeding before this Commission while the matter is before the Supreme Court could have unfortunate results. First, it could result in a total waste of time, effort and money on behalf of the parties to the proceeding and the Commission's Staff, for, if the matter is remanded to the District Court and a different decree results, it is clear that any proceeding before this Commission involving Northwest would be in vain. It is impossible to predict what new decree of divestiture would result. Second, in its 1962 decision the Court made clear that the processing of this matter by the Federal Power Commission could prejudice the outcome of a Court matter on the anti-trust question. 369 U.S. at 489.

El Paso and others suggest that the mere processing of this case would not be prejudicial because a decision by the Commission might not be arrived at prior to the time of the Court's decision. This may or may not be true. If this case were ripe for decision prior to the time the Court's action were taken, it is apparent El Paso would have us at that time stay any action by the Commission pending a Court action, thus the ultimate decision in this matter could conceivably be made upon a thoroughly stale record.

While we recognize that the Court did order divestiture without delay, we cannot perceive that any real harm would be occasioned by postponing this proceeding until after a Supreme Court's determination of the pending appeals. We must attempt to balance the waste of manpower, time, money and effort by those involved in trying the divestiture proceeding and the possibility of ruling upon an outdated record against the delay that would be occasioned by our holding off further proceedings in this matter pending disposition by the Supreme Court. We feel that the preferable course would be to delay any further proceedings. We recognize that considerable monies have already been expended by the parties in gathering and preparing material and exhibits. However, it seems to us that further such expenditures would not now be justified.

All in all, it would appear that the consumer will not be substantially affected by the delay which we feel is necessary because of the posture of the Supreme Court appeals and that, on balance, all parties would be benefited by the postponement of further proceedings in this divestiture case.

Accordingly, we shall grant the staff motion to continue the proceedings in this case until the Supreme Court has acted.

The Commission orders:

The proceedings in the above-named dockets shall be continued until further notice of this Commission.

---

[1] The Court stated: "The orderly procedure is for the Commission to await decision in the antitrust suit before taking action."

THE JUPITER CORPORATION, DOCKET NOS. RI63-212, AND G-16679; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. CP65-58

ORDER APPROVING RATE SETTLEMENT, PRESCRIBING REFUNDS, ISSUING CERTIFICATE AND TERMINATING PROCEEDINGS

(Issued June 28, 1966)*

Syllabus

In proceedings initiated under Sections 5(a) and 7 of the Natural Gas Act, Commission *approves* rate settlement; *prescribes* refunds; *issues* certificate of public convenience and necessity; *denies* application for certificate and *terminates* proceedings.

Howard R. Koven, Justin R. Wolf, Eugene E. Threadgill and *William W. Brackett* for The Jupiter Corporation.

William C. Braden, Jr. and *B. J. Williamson* for Tennessee Gas Transmission Company.

J. Harry Mulhern, Edward S. Kirby and *James R. Lacey* for Public Service Electric & Gas Company.

Edward M. Barrett, Bertram D. Moll and *Morton L. Simons* for Long Island Lighting Company.

Kenneth Heady, John R. Rebman and *Stanley L. Cunningham* for Phillips Petroleum Company.

Lynn Adams for Kerr-McGee Oil Industries, Inc.

Kent H. Brown and *Charles J. Cox* for New York State Public Service Commission.

Francis J. McShalley for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

The Jupiter Corporation (Jupiter), on May 25, 1966, filed an amended offer of settlement in Docket Nos. RI63-212, and G-16679.[1] The proceeding in Docket No. RI63-212 was initiated pursuant to Section 5 of the Natural Gas Act,[2] and involves an investigation of the rates and charges of Jupiter for the transportation and sale of natural gas in the Rollover Field, South Louisiana. Jupiter transports gas produced by the Union Oil Company of California (Union) (successor to The Pure Oil Company) from Union's offshore Rollover Platform to an onshore line owned by Tennessee Gas Pipeline Company (Tennessee)[3] which purchases the gas from Union. Jupiter also purchases gas from the Phillips Petroleum Company and Kerr-McGee Corporation (Phillips-Kerr-McGee) at their offshore platforms and transports it onshore where it sells and delivers it to Tennessee.[4] Jupiter currently charges 3.4¢ per Mcf for transporting gas for Union and retains from its selling price to Tennessee, 2.4¢ per Mcf over and above the price it pays to Phillips-Kerr-McGee.

Docket No. G-16679 involves an application by Jupiter for a permanent certificate of public convenience and necessity for authority to sell and deliver to Tennessee the gas which it purchases from Phillips-Kerr-McGee in the Rollover Field. Jupiter currently makes such sale under a temporary certificate issued May 24, 1962, as amended by Commission Opinion No. 470 and order, issued August 11, 1965.[5]

---

* Initial decision appears on p. 1095. Clarified and rehearing denied by order issued August 22, 1966, 36 FPC 495.

[1] Jupiter's initial offer of settlement, filed March 28, 1966, was the subject of settlement conferences which resulted in the filing of its amended offer.

[2] By order issued December 5, 1962, 28 FPC 942.

[3] Jupiter's FPC Rate Schedule No. 7.

[4] Jupiter's FPC Rate Schedule No. 8.

Docket No. CP65-58, which was consolidated with Docket No. RI63-212,[6] involves a certificate application of Tennessee for authority to lease and operate at a cost of $1,200,000 annually, the offshore facilities in the Rollover Field and related onshore facilities now owned and operated by Jupiter.

The Examiner, in his initial decision in Docket No. RI63-212, *et al.*, issued January 5, 1966, found a just and reasonable transportation rate of .632¢ per Mcf based upon an annual cost of service of $334,859. The Examiner in lieu of providing a unit rate, prescribed a monthly charge equal to one-twelfth of the cost of service. The Examiner denied Tennessee's certificate application in Docket No. CP65-58, principally for the reason that the proposed annual rental fee was approximately four times the cost of service. Exceptions to the Examiner's decision were filed by Jupiter, Tennessee, the staff and certain of the interveners.

Jupiter's amended offer of settlement in summary proposes as follows:

(1) Jupiter will file a proposed rate schedule providing for a charge of 1.0¢ per Mcf (at 15.025 psia) for transporting gas for Union; (2) Jupiter will execute and file a supplement to its Rate Schedule No. 8 providing for a contractual sale price to Tennessee of 19.5¢ per Mcf for the remaining portion of the current pricing period and for the next four year price redetermination period; (3) the effective date of these reduced rates will be May 15, 1966; (4) Jupiter will accept a permanent certificate in Docket No. G-16679 with a condition requiring that Jupiter deposit in an escrow account an amount equal to two-thirds of the Louisiana Severance Tax reimbursement collected from Tennessee between December 1, 1958 and July 31, 1965, together with interest at 7 percent from the date of collection until the date of the Commission's order herein, it is estimated that such escrow amount will total $1,602,298.

Jupiter also states that the 19.5 cents per Mcf contractual price to Tennessee would be subject to change only in the event and to the extent that a valid action by the Federal Power Commission authorizes a price for gas sold by Phillips-Kerr-McGee at a level different from 18.5¢ per Mcf.

Jupiter further represents that the offshore pipelines owned by Jupiter interconnecting Tennessee's pipeline with the offshore platforms owned by Union Oil Company of California, Phillips Petroleum Company and Kerr-McGee Industries, Inc. together with Jupiter's separation plant, will be transferred to a new company, which will file an appropriate application pursuant to Section 7(c) of the Natural Gas Act to acquire and operate these facilities and provide jurisdictional sales and services at the settlement rates herein proposed. Jupiter makes its amended offer with an express understanding that Jupiter does not waive its rights with respect to the collection from Phillips-Kerr-McGee and Union of compensation for services Jupiter performs in transporting, separating or storing those producers' condensates and liquefiable hydrocarbons. Jupiter further states that if its amended offer of settlement is accepted and approved by the Commission, it will move to dismiss its appeal in the U.S. Court of Appeals for the 7th Circuit in *The Jupiter Corporation v. F.P.C.*, Cases Nos. 15396 and 15469.[7]

---

[5] This amendment conditioned the temporary certificate to a price of 20.9¢ per Mcf as of July 23, 1964, 34 FPC 486.

[6] Order issued October 30, 1964, unreported.

None of the customers-interveners of Tennessee nor the intervening state commissions oppose the settlement offer. Union, and Phillips-Kerr-McGee state that they do not intend to negotiate their contracts with Jupiter to reimburse Jupiter for transporting, separating or storing the producers' condensate and liquefiable hydrocarbons, alleging that this service is nonjurisdictional and not properly a part of Jupiter's settlement. Tennessee does not oppose the offer, but states that its position is without prejudice to its rates under its settlement agreement in Docket Nos. G–11980, G–17166, and G–19983.

Jupiter shows that its proposed settlement rate of 1.0¢ per Mcf would produce annual revenues of $494,075 based upon average volumes of gas transported over the three year period 1963–1965. It claims an annual jurisdictional cost of service of $575,056 which is $240,197 over and above the Examiner's cost of service. This claimed increase is due primarily to the use by Jupiter of allocations of costs to functions, different from those used by the staff and the Examiner.

While we are not here passing upon the validity of the Examiner's cost of service we note that Jupiter's proposed 1.0¢ settlement rate produces annual revenues of $159,216 in excess of the Examiner's cost of service. However, a consideration of the benefits which a settlement can effectuate militates against our outright rejection of the proposed settlement rate on this ground alone.

The proposed settlement would accomplish the following: A reduction in Jupiter's transportation rate of approximately 65 percent which would effect an immediate reduction in Tennessee's purchased gas costs of over $1,000,000 annually without further litigation; establishment of a firm transportation rate of 1.0¢ per Mcf; immediate settlement of the Louisiana severance tax issue; termination of all pending rate and certificate proceedings and court appeals involving Jupiter; realization of the maximum benefits to consumers through establishment of the lowest transportation rate, at which Jupiter claims its stockholders will be protected from severe financial loss and under which Jupiter can be preserved as an operating entity.

Having weighed these factors together with our consideration of the relationship of the revenues at the proposed settlement rate to the Examiner's cost of service, referred to above, we are of the opinion that, taken in its entirety, Jupiter's amended offer of settlement is in the public interest and should be approved. Our approval, however, does not constitute, nor should it be considered, an acceptance of or agreement with Jupiter's adjustments to the Examiner's cost of service or the allocation methods employed by Jupiter or any of the other factors which form the basis for Jupiter's adjustments.

Our approval of Jupiter's offer is without prejudice to any future investigation or consideration by the Commission of any or all of Jupiter's jurisdictional rates and charges. Thus we do not include as part of the settlement we are approving here, Jupiter's reservation that its proposed 19.5¢ per Mcf contractual price to Tennessee shall be subject to change only in the event and to the extent that the Commission validly authorizes a price for gas sold by Phillips-Kerr McGee to Jupiter at a level different from 18.5 cents per Mcf.

---

[7] Since the filing of the amended offer, the Court denied Jupiter's petition to review the Commission's order denying Jupiter's petition to intervene in the South Louisiana area rate proceeding, Docket No. AR61–2, 362 F. 2d 92 (CA7–1966). Jupiter's other appeal is from the Commission's amendment of its temporary certificate in Opinion No. 470, 34 FPC 486.

Our approval of Jupiter's settlement offer will terminate the proceeding in Docket No. RI63-212. We will affirm the Examiner's denial of Tennessee's certificate application in Docket No. CP65-58. Tennessee has indicated that it does not oppose the settlement offer. The annual lease fee proposed in the latter docket is almost 2½ times Tennessee's purchase gas costs at the settlement rate.

In Opinion No. 470, we amended Jupiter's temporary certificate in Docket No. G-16679. We shall in this order issue a permanent certificate to Jupiter in that docket with a condition requiring Jupiter to establish an escrow account as proposed in its amended offer. In addition, any amounts Jupiter receives from Phillips-Kerr-McGee, by way of refund as a result of the reduction in Phillips-Kerr McGee's in-line price in the Rollover Field, as ordered in Opinion No. 470, in Docket Nos. G-16611 and G-16718, shall be included in the escrow account.[8] The amounts placed in escrow shall be subject to further orders in Docket No. G-16679 directing disposition to the party or parties entitled thereto.

Jupiter's reservation of claimed rights with respect to the collection from Union and Phillips-Kerr McGee of compensation for transporting, separating or storing those producers' condensates and liquefiable hydrocarbons and the producers answers on that point does not present any issue to be determined at this time. Any contractual arrangements Jupiter makes with the producers for those services will be acted upon if and when they are appropriately submitted to this Commission.

The Commission finds:

(1) The settlement of the proceedings in Docket Nos. RI63-212, CP65-58, and G-16679 on the basis set forth in Jupiter's amended offer of settlement filed May 25, 1966, as above described, is reasonable and proper in the public interest in carrying out the provisions of the Natural Gas Act, and such proposed settlement should be approved and made effective, subject to the terms and conditions hereinafter provided and ordered.

(2) The proposed settlement rate of 1.0¢ per Mcf should become effective May 15, 1966, and Jupiter should make appropriate filings with the Commission to reflect the reduced rate effective as of that date, subject to the approval of the Commission.

(3) It is reasonable and proper and in the public interest that a permanent certificate of public convenience and necessity be issued to Jupiter in Docket No. G-16679, subject to the conditions as hereinafter ordered.

(4) In view of this settlement, it is necessary and appropriate in the public interest and in carrying out the provisions of the Natural Gas Act that the proceedings in Docket No. RI63-212 and Docket No. G-16679 be terminated and that the Examiner's decision in Docket No. CP65-58 be affirmed.

The Commission orders:

(A) The settlement of these proceedings on the basis of the terms contained in the settlement offer as above-described is approved and Jupiter shall make the necessary filings to reflect the reduced transportation rate of 1.0¢ per Mcf, to be effective May 15, 1966, subject to the terms and conditions as hereinafter ordered.

---

[8] We note that Jupiter, in its initial brief in Docket No. G-13221, *et al.*, filed September 30, 1964, agreed to flow-through or to refund to Tennessee any rate reductions or refunds it receives from Phillips-Kerr McGee resulting from Jupiter's operations in the Rollover Field.

(B) A permanent certificate of public convenience and necessity is issued to Jupiter in Docket No. G–16679, subject to Jupiter's placing in an escrow account, an amount equal to 2/3 of the Louisiana severance tax reimbursement collected from Tennessee between December 1, 1958, and July 31, 1965, together with interest at 7 percent from the date of collection until the date of the Commission's order herein; and an amount equal to the refunds which Jupiter receives from Phillips-Kerr-McGee, as a result of the Commission's establishment in Opinion No. 470 of an in-line price for Phillips-Kerr-McGee.

(C) Jupiter shall establish an escrow account relating to the Louisiana severance tax by immediately depositing an amount of $252,298 and monthly deposits of $27,000 for a period of fifty months. Jupiter shall also deposit in such escrow account all amounts received or to be received as a result of our Opinion No. 470.

(D) The amounts deposited in the escrow account, together with accumulated interest thereon shall be retained subject to further order in Docket No. G–16679 directing disposition to the party or parties entitled thereto.

(E) Within 15 days of the date of this order Jupiter shall file appropriate revisions to its FPC Gas Rate Schedules, reflecting the rate reductions herein approved and ordered, subject to the Commission's acceptance thereof.

(F) Upon compliance by Jupiter with the terms of this order, and subject to the disposition of the amounts referred to in paragraphs (C) and (D) above, the proceedings in Docket Nos. RI63–212, G–16679 and CP65–58 will be terminated.

(G) This order is without prejudice to any future investigation or consideration of Jupiter's rates and charges, which the Commission may hereinafter order.

(H) This order is without prejudice to any findings or orders which have been or may hereinafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, Jupiter, the Commission Staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against Jupiter or any other persons or parties affected by this order.

INITIAL DECISION

OF THE PRESIDING EXAMINER ON A RATE INVESTIGATION OF THE JUPITER CORPORATION AND ON A RELATED CERTIFICATE APPLICATION OF ITS PIPELINE BUYER

I

NATURE OF THE CASE

Ellis, *Presiding Examiner:*

Combining a certificate application and a rate investigation, this proceeding is—(a) an inquiry under Section 5 of the Natural Gas Act into the rates charged by The Jupiter Corporation for the service of transporting gas to the Louisiana shore from points 9 miles in the Gulf, (b) a like inquiry into Jupiter's sales rate for other gas it purchases at sea and resells on shore, and (c) an application of the pipeline buyer for the certification of its proposal to lease Jupiter's pipelines at a flat, monthly rental, and operate them thereafter for its own account.

The questions and objections raised include—(1) whether Jupiter's carriage of gas ashore for the account of the producer is a gathering function exempted by law from regulation; (2) whether its purchase-transportation-resale operation is in essence a gathering function likewise exempted; (3) if Jupiter is found to be subject to regulation, whether its revenues and return must be appraised on the basis of its total gas and oil business, including production activities in other areas; (4) the disposition of state severance tax reimbursement funds collected to date from the pipeline buyer but not remitted to the producer or to the state taxing authority; and (5) as to the certificate application (contemplating an assignment of the transportation activity to the pipeline buyer), whether the proposed rental price for the line is excessive.

II

PROCEDURAL RECORD

This proceeding developed according to the following schedule:

December 5, 1962: Commission order in RI63–212 instituting investigation of the gas transportation rates charged by Jupiter, 28 FPC 942.

December 17, 1962: Notice of intervention of Public Service Commission of the State of New York.

April 17, 1963: FPC order permitting intervention of: Public Service Electric & Gas Co.; The Brooklyn Union Gas Co.; and Long Island Lighting Co.

August 28, 1964: Tennessee Gas Transmission Company's application for a certificate of public convenience and necessity (CP65–58).

October 30, 1964: FPC order consolidating proceedings, providing for hearing, fixing date of prehearing conference and prescribing procedure.

November 12, 1964: Motion of Tennessee Gas for extension of time in which to submit prepared testimony and exhibits.

November 20, 1964: FPC's notice of extension of time in re Tennessee Gas Transmission Co.'s motion of November 12.

November 23, 1964: Notice of intervention of Pennsylvania Public Utility Commission.

December 2, 1964: FPC order permitting intervention of: Long Island Lighting Company; Public Service Electric and Gas Company; and Phillips Petroleum Company and Kerr-McGee Oil Industries, Inc., jointly.

December 8, 1964: Staff testimony and exhibits received.

December 8, 1964: Tennessee Gas testimony and exhibits received, also first supplement to its application.

December 16, 1964: Jupiter's motion for extension of filing dates.

December 16, 1964: Jupiter's motion to terminate, proposing a basis of settlement.

December 22, 1964: Jupiter's statement correcting motion to terminate.

December 24, 1964: Answer of Long Island Lighting Company in opposition to motions to terminate and to extend filing dates.

December 28, 1964: Answer and objection of Staff Counsel to motion to terminate proceeding.

December 29, 1964: FPC's notice of further extension of time.

January 8, 1965: Jupiter's petition for declaratory order and motion to dismiss proceedings in Docket No. RI63–212;

Motion for continuance;

Motion for oral argument;

Jupiter's alternative motion to sever and to stay.

January 11, 1965: Jupiter's addendum to petition for declaratory order.

January 18, 1965: FPC's notice of further extension of time.

January 18, 1965: FPC order denying petition to terminate proceedings, 33 FPC 82.

January 18, 1965: Joint answer by Phillips Petroleum Co. and Kerr-McGee to alternative motion to sever and to stay and to petition for declaratory order and motion to dismiss proceedings in RI63–212.

January 18, 1965: Answer of Long Island Lighting Co. to motions of The Jupiter Corporation.

January 26, 1965: Motion for continuance by Jupiter.

January 26, 1965: Petition by Jupiter for rehearing of order of January 18.

February 2, 1965: Answer and objection of Commission Staff to petition for declaratory order and alternative motion to sever and stay proceedings.

February 3, 1965: FPC order granting in part Jupiter's motion of January 26, for continuance.

February 8, 1965: Motion for continuance by Jupiter.

February 12, 1965: FPC order denying motion of February 8, 33 FPC 204.

February 12, 1965: Complaint for declaratory order or injunction filed by Jupiter against FPC in the United States Court for the Northern District of Illinois.

February 15, 1965: FPC order denying motion of January 26, for rehearing, 33 FPC 213.

February 18, 1965: FPC order deferring action on petition for declaratory order and motion to dismiss proceedings (1/8/65) in Docket No. RI63–212, and denying alternative motion to sever and stay proceedings, and motion for oral argument. Also extending filing dates, provided Jupiter wires by the next day that they will file their testimony within the 30-day period, 33 FPC 295.

February 19, 1965: Jupiter's telegram stating they will appear in the U. S. District Court on February 23.

February 23, 1965: District Judge Will dismissed Jupiter's complaint for injunction and order.

February 26, 1965: FPC order further extending time for filing and serving of evidence and for prehearing conference.

February 26, 1965: Combined motions and petitions for rehearing filed by Jupiter.

March 1, 1965: Testimony and evidence of interveners Kerr-McGee Oil Industries, Inc., and Phillips Petroleum Company received.

March 2, 1965: Telegram from Jupiter urging the Commission to rule upon petitions for rehearing.

March 10, 1965: Jupiter's motion to dismiss proceeding in Docket No. RI63-212, or else to consolidate with Southern Louisiana area rate case.

March 10, 1965: Jupiter's motion for continuance.

March 12, 1965: FPC order denying petition for reconsideration and motions for continuance, also rejecting rehearing for denial of declaratory order, 33 FPC 534.

March 23, 1965: Answer of Commission Staff to Jupiter's motion to dismiss.

March 24, 1965: Reargument before U.S. Court for Northern District of Illinois.

March 25, 1965: Testimony and evidence of Jupiter received, in part.

April 9, 1965: Jupiter filed final testimony and exhibits.

April 13, 1965: Prehearing conference before Examiner.

April 23, 1965: Complaint for injunction filed by Jupiter against FPC in the U.S. Court for the Southern Division of Texas.

April 29, 1965: FPC order denying motion to dismiss proceedings (Jupiter's motion of 3/10/65), 33 FPC 901.

May 3, 1965: Injunction complaint denied by U.S. Court for Southern Division of Texas.

May 3, 1965: Jupiter's motion to the Examiner to dismiss proceedings and terminate investigation, and to recess proceedings pending the certification of the motion to the Commission for decision.

May 11, 1965: Seven days of hearing concluded.

May 18, 1965: Exhibit J-19 received.

June 1, 1965: Exhibit J-18 received.

June 15, 1965: Joint brief of distributor interveners filed, and endorsed by New York Public Service Commission.

June 16, 1965: Initial brief of Commission Staff received.

June 17, 1965: Initial briefs of Phillips and Kerr-McGee received.

July 15, 1965: Initial briefs of Jupiter and Tennessee Gas received.

August 5, 1965: Motion of Phillips and Kerr-McGee for leave to file reply to initial brief of Jupiter.

August 5, 1965: Reply brief of Commission Staff received.

August 11, 1965: In another docket not here consolidated the sale by Phillips and Kerr-McGee to Jupiter was certificated effective July 23, 1964, the initial price not to exceed 18.5 cents and the temporary certificate for Jupiter's sale to Tennessee, issued in 1962, was amended to limit the price to 20.9 cents per Mcf effective July 23, 1964. Opinion No. 470, G-16611, G-16679, *et al.*, 34 FPC 486.

August 13, 1965: Presiding Examiner's ruling denying Phillips and Kerr-McGee's motion of August 5, 1965.

III

JUPITER'S TRANSPORTATION OF GAS FOR PURE'S ACCOUNT

1. *Jupiter's dual program:* The Jupiter Corporation owns two parallel pipelines which bring gas ashore, from platforms ten miles out in the Gulf to a point on the Louisiana shore connecting with the lines of the Tennessee Gas Transmission Company. The mechanics of the operation are explained in Chapter V below, but it is first necessary to distinguish the separate and disparate programs under which Jupiter takes gas from two producers, commingles much of it, and accomplishes the delivery from sea to shore. First—both in time and quantity—Jupiter acts as transporter for the account of one of the producers, The Pure Oil Company, which sells and delivers to Tennessee.

Jupiter's contract is with the producer (Pure), not with Tennessee, and Jupiter's function is to transport the product of the wells and collect a fee, averaging 3.4 cents per Mcf for so doing. Also, in its plant ashore, Jupiter separates out the liquid oil droplets, called condensate, for Pure. In its other program, but in part through the same facilities, Jupiter purchases gas at the platform of the other producer (Kerr-McGee Oil Industries and Phillips Petroleum Company acting jointly), brings it to shore and there separates and re-sells it to Tennessee.

So what is in issue in this "Section 5" rate investigation is two separate rates—the transportation charge in the case of the gas from Pure and the resale price in the case of the gas from Kerr-McGee and Phillips ("K–M–P"). The essence of the controversy is in these three figures: Jupiter charges Pure 3.4 cents per Mcf transported, and Jupiter's margin on the resale of the K–M–P gas is 2.4 cents, meaning the resale price to Tennessee minus Jupiter's purchase price from K–M–P. These are averages obtained from the 1962 volumes, and for that year the Commission Staff has computed a cost of service at just .518 cents per Mcf. The recommended reduction of rates—from 3.4 cents and 2.4 cents to .518 cents—would mean a reduction in net revenues per year from $1,940,000 to only $270,000, effective, of course, prospectively only. The annual difference, $1,670,000, the staff calls excess revenues; its loss Jupiter says would be drastic, indeed disastrous.

Jupiter defends on all fronts, jurisdictional, legal, accounting and otherwise, and, pointing to its losses in gas and oil exploration in other areas, responds that its over-all net revenue is reasonable and quite unexceptionable. Finally—but not said to be in confession and avoidance—Jupiter has arranged to lease their lines and plant in entirety to Tennessee for $1,200,000 per year, and Tennessee's application for a certificate to license that operation is part of this case under Docket No. CP65–58.

2. *Pioneering history of Jupiter's service:* Neither the jurisdictional nature of Jupiter's service, nor the fair rate for it, can be adjudged without an appreciation of its pioneering history, back to 1950. Jupiter is the corporate successor to Commonwealth Oil Corporation, and Commonwealth was the nominal successor to Marine Gathering Company, a small organization developed specifically as the first transporter of Gulf of Mexico gas to the mainland shore. As the Commission explained in its order on Pure's recent rate settlement (where Pure, in the special case of this sale, was allowed a rate said to exceed the area guide-line ceiling,)[1]

> * * * Pure states that it was among the first to explore for oil and gas on the Continental Shelf, offshore Louisiana. In 1949, after two wells had been drilled and abandoned on the Rollover leases, Pure brought in the discovery well. The well was ten miles offshore in forty feet of water. Pure instituted negotiations with every major transmission company in Southern Louisiana but was unable to interest any in initiating offshore operations. Pure states that at the time it was advised that the feasibility of an underwater pipeline for the necessary distance was very doubtful. After having exhausted all efforts to secure an interstate pipeline purchaser, Pure says it was approached in September, 1949, by Marine Gathering Company,[4] (Marine) then a paper corporation, which offered to purchase and transport the gas. Negotiations continued until March, 1950, when Pure executed a contract with Marine to sell it the Rollover
>
> ---
>
> [4] The name of Marine Gathering Company was changed to Commonwealth Oil Corporation, and recently Jupiter Oil Corporation succeeded to the interests of Commonwealth.

---

[1] Order dated November 27, 1962, Docket No. G–16790, 28 FPC 889, 891.

gas at an initial price of 4.5¢ per Mcf (15.025 psia) in the field. Subsequently, Tennessee extended its transmission system to a point onshore of the Rollover Field and Marine laid the underwater line to connect with Tennessee's system.

For Jupiter, testimony on the risks and ventures in this new operation came from its Vice-President, G. B. Liese, who had been president of the predecessor companies, Marine and Commonwealth. At 1T96 he said:

> In 1949 it was well known in the oil and gas community that Pure had brought in several lush gas wells from its platform in the Rollover Field about 9 miles from the Louisiana coastline. There was considerable speculation at the time about the amount of reserves which could be tapped in the general area, but most indications were that the reserves were substantial. Speculation of this character was reinforced by Pure's continuing to drill wells from its Rollover platform to determine the limits of the field even though there appeared to be no market for the gas in the foreseeable future. In any event, the existence of this shut-in gas for which there was no market was common knowledge in the trade. It was equally well established that otherwise commercial quantities of gas were worthless unless the gas could be gathered for delivery to a market. Pure was faced with just such a problem with the Rollover Field. At that time there was no such thing as an offshore gas gathering line. While the industry had some experience in laying pipelines across rivers and in shallow lakes and coastal waters, it had no experience whatsoever with unprotected, open Gulf. A line to gather gas from the Pure platform would have to be laid in water up to 50 feet deep. No one knew how best to protect the pipe from corrosion and barnacles or from boat anchors, or just what techniques or equipment would be necessary in laying and burying the pipe. In addition, it was clear that the constant wave and tidal action, strong currents, and seasonal squalls, storms, and hurricanes common to this area of the Gulf, would pose serious threats not only to a successful installation of the line but also to its maintenance and operation. In brief, then, Pure had a problem in 1949–1950 to which the industry at the time had no ready answer. The gravity of the risks involved in solving this problem is best evidenced by the fact that the well-established producing and transportation companies, with great capital and engineering resources, were unwilling at the time to attempt construction of the required gathering facilities.

Numerous trade journals are quoted: Oil and Gas Journal refers to Marine (now Jupiter) as "the world's first ocean-going gas pipeline." New methodologies were required, all obviously experimental and uncertain, both for laying the lines six feet below the ocean bottom and for permanent protection from marine organisms, tides, storms, ship anchors and other hazards to avoid which the industry had as yet no charted guides.

The operation succeeded, and deliveries began under the first arrangement contracted in 1950, when Pure sold to Marine (Jupiter) and Marine resold to Tennessee. In 1958 the resale arrangement was dropped and Pure began its direct sale to Tennessee, with Marine-Commonwealth-Jupiter acting as transporter, and Tennessee assuming the gas purchase contract with Pure.[3] Jupiter's fee was then fixed at 4 cents/Mcf for the first 62,500 Mcf per day and 3 cents for any in excess. Current (1962) average is 3.4 cents. The transportation proposal was certificated on July 25, 1958, in Docket No. G-2692, G-12583, and the contract, Jupiter's Rate Schedule No. 7, became a subject of this investigation by the Commission's order of December 5, 1962, Docket No. RI63-212, which began this case, 28 FPC 942.

---

[3] For the discussion of the "gathering" exemption in Chapter V, below, it is of interest that Pure's 1957 agreement with Marine calls for the point of delivery from Pure to Marine (really the pickup point), as to any new field discoveries, to be "at a central point in each such field." (Page 19 of contract in docket G–12583.) It is only from and beyond that "central point" that Jupiter's function—now claimed to be "gathering"—actually begins.

In the meantime Pure's final rate to Tennessee for the gas now sold by Pure direct to Tennessee, but transported to shore by Jupiter for the account of Pure, underwent considerable change, as shown in the following progression:

1950: Pure sold to Marine at 4.5 cents and Marine, after shore delivery, resold to Tennessee at 9.2263 cents.

1957: Marine's resale contract with Tennessee was assigned to Pure and Pure began its direct sale to Tennessee.

1957: Pure's new direct contract with Marine-Commonwealth-Jupiter became effective, with Pure agreeing to pay, at its own expense, a "gathering" or delivery charge which averages 3.4 cents.

1958: Pure filed an increase in its total, delivered-on-shore rate to Tennessee at 21.3333 cents, which was suspended by FPC's notice dated October 29, 1958, (G-16790), and became effective subject to refund. Thus Pure's net, after the rate increase, became 21.3333 cents minus 3.4 cents, or 17.9333. Marine's revenue at 3.4 cents was to remain steady, unaffected by Pure's sale price.

1962: Pure's tentative increase in sales rate to 21.3333 cents became the subject of a rate settlement proceeding reported in 28 FPC 889, from which the quotation on, *supra*, pp. 1099 and 1100 above is taken. Pure proposed a two-element rate, viz.: (a) 16.75 cents/Mcf plus (b) whatever transportation fee Pure is charged by Jupiter, or 3.4 cents. The rate settlement order, approving the combined and agreed-to rate of 16.75 cents plus transportation costs incurred, contains the following footnoted stipulation and understanding, taken from 28 FPC 889 at 895:

> Jupiter Oil Corporation charges Pure for transportation from the field (10 miles offshore) to Tennessee Gas Transmission Company main line on shore. The charges are 4.0 cents per Mcf (16.7 psia.) for the first 62.5 MMCFD and 3.0 cents per Mcf (16.7 psia.) for the remainder. These charges to be recouped from Tennessee as part of the rate will be only those actually paid by Pure to Jupiter, its successors or assigns. Any reduction in charges by Jupiter will thus reduce payments by Tennessee to Pure.

Thus, since the rate increase settlement, Tennessee has paid Pure 16.75 cents plus an average of 3.4 cents, or 20.15 cents, and Pure has been paying Jupiter the 3.4-cent transportation charge and retaining the balance. Hereafter, when Jupiter's rate changes on the effective date of the order below, Tennessee's cost will be affected accordingly, see Chapter IX below.

IV

JUPITER'S RESALE OF KERR-MCGEE-PHILLIPS GAS

The other rate of Jupiter under investigation in this "Section 5" case is that for its resale to Tennessee of gas Jupiter buys at the platform in the Gulf from K-M-P. It is the rate margin between its cost and selling prices that is under inquiry. The background is this:

Kerr-McGee and Phillips Petroleum Company jointly own and operate a number of gas wells 10 miles off the Louisiana shore. Through several interconnected underwater flow lines, they gather the gas at a marine platform about a mile from Pure's. At this point the two producers sell it to Jupiter, which brings it to shore, commingled with some of Pure's gas. At Jupiter's separation plant 29 miles inland, Jupiter delivers and sells it to Tennessee.[8] The arrangement began in 1953, not long after the Pure transportation service had begun, but the contract procedure has been quite different.

Except for a brief, interim sale to Tennessee by Marine (later Jupiter), for some years the resale actually was to a Canadian concern, Niagara Gas Transmission, Limited, but physical delivery by Jupiter was made on shore to Tennessee for transportation by Tennessee to the Canadian border for the account of Niagara. For that reason, the sale and resale were then treated by FPC as nonjurisdictional, and the various parties' applications for certificates and rate filings were returned without action. See Opinion No. 470 of August 11, 1965 in Phillips, G–16611, *supra*.

By 1958, Niagara had arranged for gas elsewhere and accordingly assigned the gas purchase contract to Tennessee, effective November 5. In the meantime, the various prices had escalated, and the resale price now payable by Tennessee became 21.3333 cents (plus a tax reimbursement item which is treated below in Chapter X). The certificate application for the sale to Tennessee became involved in a number of proceedings, none of which became final until the Commission's Opinion of August 11, 1965, No. 470, just cited, which (a) issued a final certificate to Phillips and Kerr-McGee for their sale to Jupiter at an initial price limited to 18.5 cents effective July 23, 1964, (formerly 21.3333 cents minus 2.4 average, or 18.9333 cents), and (b) withheld decision on a final certificate for Jupiter's resale to Tennessee, but amended the temporary certificate for that sale (order of May 24, 1962 in G–16679) to limit the resale price to 20.9 cents as of July 23, 1964 (instead of 21.3333 plus tax reimbursement). Since that decision is in a docket not here consolidated, and came after this record closed, it is not disclosed what price adjustments have been made in fact as a result of it.

Technically, what is before the forum is the reasonableness of Jupiter's price to Tennessee, *i.e.*, 21.3333 cents plus tax but now presumably 20.9 cents gross, since that is the source of Jupiter's revenues. It is the jurisdictional sale whose price is for rate control here and as such is the subject matter of Jupiter's Rate Schedule No. 8 here under investigation. Actually, however, what is really in issue is the reasonableness of the margin, now 2.4 cents, between that sale price and the price Jupiter pays to the two producers. At the hearing, the complication developed that the Commission's case is said to be wrongly addressed because, under the purchase contracts with the producers, Jupiter's purchase price moves up or down according to any change in their sale rate to Tennessee. Hence the order, it is said, will not affect Jupiter's net margin. This detail is treated in Chapter VIII below.

Physically the gas is treated alike and travels the same route as Pure's gas, see Chapter V below, which gives rise to the involved claim, really a metamorphosis, to the effect that Jupiter's is functionally only a transportation service to deliver the gas sold by the producers to the pipeline, the same as their arrangement with Pure, and should be equally free of regulation on the claim it is "gathering" exempted by the law. Jupiter wants to be known as agent for the sellers, not as an independent buyer and re-seller, a description which belies quite a number of verified rate and certificate application filings by Jupiter since 1954. All of these have been consistent in describing the resale for what it is. This new-found agency status comes also with some surprise to their alleged principals—K–M–P, who supposed all this time they were selling to Jupiter,[4] and who admit no responsibility for the gas after they deliver it to Jupiter at sea. Neither does it appear to be Tennessee's conception of the transaction (Brief, page 2).

---

[8] Eight and a half miles further inland a processing plant of the Phillips Company athwart Tennessee's line came into operation in July, 1962 and began to remove some of the hydrocarbons from the gas stream. The avails of this operation (as to the K–M–P gas) are split, with 30 percent going to Jupiter, amounting to $82,200 for an entire year, based on the figures for the rest of 1962. Exhibit S–2, Schedule 2, line 11.

This recasting of a dozen or more formal documents, to make a sale not a sale but something else, might be called for in other connections if the paper appearances were seen to be illusory *and* if they were so drafted for the very purpose of escaping Federal regulation of interstate commerce.[5] Here, rather than closing a loophole, the reformation is sought for the purpose of making one. As such it has the benefit neither of reason nor of precedent.

Anyway, as developed in Chapter V, the physical service by Jupiter is not exempt gathering but jurisdictional transportation, and the charge for it is equally subject to the law's enjoinder that it must be just and reasonable to be lawful, hence the claim is moot and irrelevant.

V

IS THE TRANSPORTATION EXEMPT FROM THE LAW AS "GATHERING"?

Jupiter makes many arguments, but none more seriously than the claim that all of its service, from beginning to end, is legally, practically, and economically a gathering service which puts it quite outside the purview of the Commission's jurisdiction. If so, this would call for dismissal of the entire case and the cancellation of its permanent certificate to transport gas for Pure. As to the resale function in the case of the K–M–P gas, if there be acceptance of Jupiter's view, rejected in Chapter IV above, that the two sales contracts should be reformed and read to comprise merely a transportation arrangement for the producers, then it would also call for cancellation of its temporary certificate to sell K–M–P gas to Tennessee, and the withdrawal of its rate schedule filings. The point made requires detailed analysis because any jurisdiction question is fundamental; also no two "gathering" cases seem to be quite alike, and the several precedents have such terminology as "central point" and "main line", which may or may not have the same meaning here.

The legal question must be noted before the facts can be appreciated. The operative portions of the Natural Gas Act, Sections 4 and 7, cover only two activities, sales and transportation of gas in interstate commerce. For the coverage of those key words the referent is Section 1(b) which delineates the two subjects as sales in interstate commerce of natural gas for resale and transportation of gas in interstate commerce (which might or might not include the transportation aspect of the gathering process); but the same sentence exempts the activity of production and the activity of gathering.[8] The remaining specific requirements of Section 1(b) are not involved since all of the gas is headed toward Tennessee's great interstate system and, as such, it is obviously "for resale" and "in interstate commerce." *Shell Oil Co.* v. *F.P.C.*, 247 F. 2d 900 (CA5–1957), cert. denied 355 U.S. 930.

---

[4] From K–M–P's Brief at page 6:

> This is a purchase and sale as much as any of the contracts of the producers in the offshore Louisiana area are purchases and sales. All the rights of ownership to the gas are transferred to Jupiter at Phillips' offshore platform * * *. Jupiter treats the transaction as a purchase and sale on its books (Tr. 424). Jupiter witnesses Davis (Tr. 592) and Liese (Tr. 732) characterized the transaction as a sale. Therefore, not only do the full rights of ownership pass to Jupiter at the offshore platform, but the parties intended the transaction to be a purchase and sale and treat it as such in their every-day operations.

[5] *Red Ball Motor Freight, Inc.* v. *Shannon*, 377 U.S. 311 (1964).

The facts of the operation: As an aid to the Commission's inquiry into the facts of their service, Jupiter favored the hearing with the testimony of their superintendent of gas gathering and processing operations, Mr. Davis, who supplied for the record the map of their system, which is reproduced herewith, both in full to show its entire length and with an enlarged detail of the seaward end. As a result, the record is clear and the facts, as outlined below, are believed to be undisputed. The contrasting claims to be considered are these: (a) the Staff's view that gathering ends at the platforms "A" 10 miles at sea, which is the point where Jupiter's service begins; (b) Jupiter's view that gathering extends 29 miles inland, beyond the end of their pipes, which stop at the shore, to the point of their separation plant's outlet. The impact of the two views is made plain by Jupiter's Exhibit 18, which is the source of the map printed herewith and shows the several segments of the total facility, as follows:

(a) *The establishment at sea:* Eight to ten miles out in the Gulf of Mexico from the shore of Louisiana there are two clusters of gas wells drilled by Pure and K–M–P, all apparently within a two-mile or so radius, about 17 wells in all. There are several satellite "platforms" or structures, and two main or central ones, one for each producer, located a mile apart. They, that is the central platforms "A", act as the two hubs of the system, and into each the individual well lines converge, not unlike the spokes of two wheels, or else the wells themselves feed directly to the platforms. Thus five wells come up directly to Pure's platform A and two well lines lead in from a little distance off.

The platforms are very substantial structures, with a quantity of equipment and evidently some personnel facilities. The platforms have separating equipment to divide out the liquid oil droplets (called condensate) from the gas as produced, also a glycol dehydrator and metering equipment.

Jupiter has two short lines in the area, an 8,111-foot line connecting a Pure sub-platform with its platform A, and the other of 5,005 feet connecting the latter with K–M–P's platform A.

(b) *The lines to shore:* Jupiter's line No. 1 is 8⅝ inches by 8.44 miles, bringing gas to the Louisiana shore from Pure's platform A. Parallel to it (400 feet apart at first and ending practically together) is Jupiter's line No. 2, which is 10¾ inches by 9.55 miles from K–M–P's platform A to the shore point.

---

[8] Note the exemption does not mention facilities for gathering, which gives point to the cases that hold that the same facility may be jurisdictional for one purpose, such as transportation or sale, but exempt insofar as it is used for another purpose, such as gathering. *Saturn Oil & Gas Co.* v. *F.P.C.*, 250 F. 2d 61 (1957), cert. denied, 355 U.S. 956.

DETAIL OF
OFFSHORE PLATFORM
AND WELL FACILITIES

FROM STRIP MAP
EXHIBIT J-18

(c) *The shore establishment:* About a thousand feet inland (in this bayou country the shore line is said to be highly indistinct), Jupiter's lines 1 and 2 join up through a common header with two lines owned by Tennessee but said to be operated in practical fact by Jupiter. Their lines are 16-inch and 8⅝-inch, and carry the gas for the next six and one-third miles, passing it into Tennessee's single 20-inch line which leads for 22 1/3 miles onward to Jupiter's separation plant, beyond which Tennessee has an 8½-mile line to Phillips' Lake Arthur processing or gasoline plant. At this point, Tennessee's supply lateral connects, leading to a compressor station and Tennessee's lines to New York and the Northeast. Note there is no compression upstream from that point, the entire operation apparently being under well pressure.

(d) *The facilities in operation:* Except for the use of Jupiter's minor line connecting a sub-platform of Pure with Pure's main platform A, all the gas is brought by the two producers from the wells up to the respective platforms A. Here they—the producers—operate facilities which dry the gas when needed and separate out the liquid condensate in order to permit the measurment of each, after which the producers re-combine the gas and condensate into a commingled gaseous mass and turn it over to Jupiter.

In the case of K–M–P, title passes to Jupiter at that point, and their gas (with condensate) passes ashore in Jupiter's line No. 2. In Pure's case, the re-combined mass comes into Jupiter's custody at Pure's platform A, most of it proceeding ashore in Jupiter's line No. 1, but some (the overflow) transferring over to K–M–P's platform A through Jupiter's line No. 4, and there it joins with Jupiter's purchased gas and passes on to shore in Jupiter's line No. 2.

From the end of Jupiter's lines on shore, the combined stream flows in the Tennessee-owned lines to Jupiter's plant, where Jupiter separates out the condensate a second time and stores it for the producers. At the same plant, 29 miles from shore, the gas may or may not go through Jupiter's dehydrators, depending on conditions. At the outlet of this plant, the gas is turned over by Jupiter to Tennessee after it is tested and measured, and title there passes. Later on, in the Phillips' processing plant added in 1962, a true processing operation occurs, meaning that some of the hydrocarbons (propane) are removed and sold as liquids.

Pure receives the producers' 30 percent share of the liquids from its gas, while Jupiter gets the same share (per its contract with the producers) from the K–M–P resale gas, amounting evidently to $82,200 in one year (Ex. S–2, Sch. 2, line 11). For reasons that are not developed or here understood, this revenue item of $82,200 is not deducted from the costs in the Staff's computation of a cost of service, with the result that Jupiter's cost-of-service revenues out of the entire operation will, in net effect, be supplemented by the additional revenues from the sale of the liquids out of the gas Jupiter buys from K–M–P. The amount of this increase in revenues which is not herein explained would appear to be the income item of $82,200 minus the associated expense items of $6,038 and $8,374 shown on Ex. S–2, Sch. 4, column 3. Neither Staff nor any intervener has proposed or recommended the reduction of Jupiter's cost of service by the amount of this related revenue item. This increment just about equals the return allowed in the cost of service.

Jupiter's claim: Referring to the specific claim with respect to the gathering exemption, Jupiter's position is that interstate jurisdictional transmission begins only at the outlet of Jupiter's plant, where Tennessee takes title, and that all physical activities upstream of that point are exempt either as production or as gathering and therefore quite outside the coverage of the law

(Brief, page 12). Of course, the sale by K-M-P to Jupiter (which Jupiter would have us regard as not a sale at all, see above) plainly is covered by the law in any event[7] and is not affected by the exemption once its contract status as a sale is accepted.

Jupiter's point, in support of the claim that gathering ends at their separator plant, results from their view that the word "gathering" in the law is supposed to refer to activities either (a) prior to the point where the gaseous stream is so processed and prepared as to be ready for interstate transmission, or else (b) prior to the point of sale to an interstate pipeline (Brief, page 7).

Taking the second point first, it obviously begs the question and proves nothing. If it be the decision here that Jupiter's service and activity between the platforms and its plant are really transportation of gas in interstate commerce, within the meaning and purpose of the law, as Staff contends, then Jupiter is itself an interstate pipeline by definition, and its activity after it takes delivery is not gathering, by their own definition number (b).

As to their first claim, notwithstanding the dozens, perhaps hundred or more of court and Commission decisions on the production and gathering exemption, Jupiter presents the novel thought that gathering means preparing the gas for interstate transmission.[8] Not a word of legislative purpose or correlation with the Congressional aim is cited in support. Instead, this new concept came from their witness, a petroleum engineering professor, who was obviously much more familiar with the oil business than with the numerous existing Gulf-to-shore establishments (3T554–561). He testified to the effect that his definition is the general business understanding of the term. On cross-examination, he felt compelled by his own logic even to apply it to two utter extremes—(a) if the gas were produced as a really dry gas, with no cleaning and separating necessary, then transmission would begin at the platforms (3T543), and (b) conceivably the gathering system could (but does not ordinarily) include as much as 300 miles of transmission to the possible location of a plant[9] (3T538, *et seq.*). Anyway, if preparing for transmission be the true test of gathering, nothing is shown here to refute the conclusion that the gas is fully ready for interstate transmission when it is separated and dehydrated the first time on the marine platforms (*cf.* 3T557). The remixing that occurs there after measurement is for the convenience and profit of the parties, to get the condensate to shore, and hardly changes the legal status of the gas.

Quite apart from those logical infirmities, and from the complete dissociation between the definition so fashioned and any evident purpose of the law, the testimony became useless on the final remark that this industry-oriented definition or usage first manifested itself "in the early 'forties or late' thirties" (3T577), which on its face disqualifies it as evidence of Congressional intent in the enactment of the Natural Gas Act of 1938.

The phrase "production or gathering" evidently first appeared in a bill introduced on March 6, 1936 (H.R. 11,662, 74th Congress), and in the resulting bill which was reported by the House Committee on May 13, 1936, H.R. 12,680, and House Report No. 2,651. The committee report does not explain the phrase, but it is significant that the analysis of the jurisdiction section re-emphasizes the purpose to establish a supplement to state regulation and not to deprive the states of any lawful authority. This, of course, is the theme of the Committee's report on the bill finally enacted (House Report No. 709 of April 28, 1937, on H.R. 6586, 75th Congress), which, again, does not define the words "production or gathering" but does add the rather cryptic explanation of the entire exemption clause: "The quoted words are not actually necessary, as the matters specified therein could not be said fairly to be covered by the language affirmatively stating the jurisdiction of the Commission * * *"

---

[7] *Saturn Oil & Gas Company* v. *F.P.C.* (CA10–1957), 250 F. 2d 61.

[8] Nearly half the gas in this country never goes into interstate transmission at all, but is used in the state of production. Is Jupiter suggesting none of this is gathered?

[9] It will be recalled this was Commissioner Buchanan's objection to the enthronement of the processor as an exempt gatherer, in his dissent in the original Phillips case, 10 FPC 246, 294, n. 11.

Staff applies FPC decisions: The Staff presentation is that gathering ends at the two main platforms A and transmission there begins. Since that is where Jupiter takes possession, its activity is transmission and therefore is subject to regulation. Their conclusion is, "if Jupiter is engaged in any gathering at all, it is completed at Pure's and Phillips-Kerr-McGee's platform A."[10] (Brief, page 19.)

For this, Staff quotes the leading case, *Barnes Transportation Company* (1957), 18 FPC 369, 372, whose language has often been cited and undertaken to be followed with its definition of "gathering" as "the collecting of gas from various wells and bringing it by separate and several individual lines to a central point where it is delivered into a single line." The Commission adds that gathering ends at that point, also that transmission facilities subject to the law are those downstream from the point of "final commingling." For cases applying that rule, there are cited *Texas Gas Corp.*, 18 FPC 397; *Medina Gathering Corp.*, 30 FPC 227, and *Ben Bolt Gathering Corp.*, 26 FPC 825, affirmed, 323 F. 2d 610.

Conceding a certain amount of vagueness in the key terms, "central point" and "final commingling" (*cf.* 30 FPC 227 at page 233), it can hardly be denied that the two platforms "A" literally fit the definition. Both are "central" in the sense that well lines there converge (Exs. J-18 and S-4-A), both are the points of origin of Jupiter's two "single lines", and both are the points of "final commingling" so far as the two producers are concerned. The fact that various comminglings occur on down the line—either at the shore connection, or six miles inland, when for the first time all the gas gets into one pipe (Tennessee's), or at Jupiter's plant outlet—proves little or nothing because other comminglings occur still later on; indeed, so far as known, the literally "final" one does not happen until Tennessee's line crosses northwestern Pennsylvania. (30 FPC at page 245.)

Rather, as in Ben Bolt, Jupiter's lines are but an extension of Tennessee's supply lateral to take the gas gathered by the two producers, brought by them to their respective central points, and there commingled for transportation by Jupiter in interstate commerce, continuing the movement whch does not cease until the gas reaches the point of consumption in the far Northeastern states.[11]

---

[10] It may be this concedes gathering status for the 15,000 Mcf moved up to Pure's platform A from their platform or sub-platform B in Jupiter's mile and one-half line No. 3 (see map). This would be relevant but hardly material.

[11] Note the factual similarity to Tennessee's gathering and transmission system in the Bastian Bay, Louisiana field and that of its producer, Pan American Petroleum. It is the conclusion of the initial decision that gathering has been accomplished at the central point in the field where all the gas going to the interstate lines has been assembled and commingled and that the lines extending from that point to the pipeline's platform are jurisdictional transportation functions. *Tennessee Gas Transmission Co.* (1963), 30 FPC 1477, 1496. The resulting Commission Opinion No. 413 found it unnecessary at that time to pass upon the jurisdictional status of the facilities (page 1481).

Jupiter relies on several early decisions of the Commission where gathering was discussed and more or less defined, but (a) the correlation of those cases with Jupiter's is not evident, (b) in none was it held that gathering means preparing pipeline quality gas ready for transmission and (c) all of them were pre-*Phillips* (1954), which makes them patently inapt to the present day and to the Commission's post-1954 program.

Far preferable to this verbalistic approach, the only rational search for the meaning of the word "gathering" is that which discerns and carries forward the legislative purpose, *viz.:*

(a) *The words of exemption:* The Court has often explained that the three words, "production or gathering" were meant to preserve to the states their responsibility to regulate those two activities.[12] That also is to be adduced from the Committee report cited. The states do not, of course, regulate gathering rates, but they do regulate well spacing, which (as suggested by Mr. Justice Douglas[13]) is evidently the state activity which was in mind. This only confirms the Staff's solution, which confines the gathering in this case to the well lines leading up to the platforms "A". At the same time, it adds no support for Jupiter's view that their "main" line is also gathering.

(b) *The total purpose:* Roughly once a year for the past 25 years, the Court has had occasion to enjoin upon the Commission, the profession, and the industry that the over-riding, all-important legislative purpose in the enactment of the law in 1938 was to provide a comprehensive system of regulation supplementing that of the states, that no element of the famed "Attleboro gap" was to survive, that "Congress intended to impose a comprehensive regulatory system on the transportation, production, and sale of this valuable natural resource."[14]

Jupiter is rather put to it to assure the Commission that a decree in its favor will not create a gap of non-regulation, indeed, open such a gap 38-miles wide. In Chapter VII below, there is quite fully answered their point that the area rate case, AR61-2, should give the Commission all the controls it needs to keep this element of cost within bounds through its control over the price level that Tennessee pays. As shown below, the fact is that if area rate applies at the platform this intermediate cost of Jupiter's service becomes a direct cost payable dollar for dollar by the consumers, while if area rate comes to the sale on shore, this cost of bringing the gas in necessarily will be one of the costs affecting the area rate level and equally will be borne by the consumers. Anyway, as of right *now*, no more graphic evidence can be imagined than this very case of the effects of the gap here existing up to this date, namely the charge that has been exacted for this 38 miles of transportation in an amount about five times more than the total cost of service.

Otherwise than as stated, the usual sources of legislative history offer little aid. It is surprising that, as often as the field of legislative history of the Gas Act has been tilled and plowed, its harvest remains meager and its yield lean. In *Phillips*, it is remarked, "The legislative history is not helpful. (347 U.S. 672, 688). Neither is it of aid for Jupiter to delve into the meaning of "gathering" in the oil taxation laws, where the legislative object is a quite different one; besides, the language they quote is so ambiguous as to fit most any solution here. Nor does it help to rely on the conclusions cited from *Ben Bolt*, 26 FPC 825, since the two organizations which were found or said to be gatherers in that case actually had applied here for certificates, and in issuing the certificates their prices were weighed and approved on the basis of their cost of service evidence; the statutory exemption was not the issue (see the initial decision therein, 26 FPC 825, 829).

---

[12] *Interstate Natural Gas Co., Inc.* v. *F.P.C.*, 331 U.S. 682, *et multi al.*

[13] *Colorado Interstate Gas Co.* v. *F.P.C.*, 324 U.S. 581, 603.

[14] The particular reference quoted is *F.P.C.* v. *Transcontinental Gas Pipe Line Corporation*, 365 U.S. 1, 28.

It is concluded accordingly that the gathering in this case has ended by the time the gas reaches the platforms "A", where Jupiter's service begins, and that the statutory exemption of gathering does not avail to exempt Jupiter's service from regulation as transportation of gas in interstate commerce.

VI

DOES COST UNIT FOR REGULATION INCLUDE PRODUCTION ACTIVITY IN OTHER AREAS?

The most profound of Jupiter's many defenses is the plea the Commission's order puts the wrong unit under investigation. That is, the Company has a complete, separate division for its total oil and gas business, including some oil and gas production in Texas and elsewhere, and including its Rollover Field gas transportation function off the Louisiana shore. How and why, asks Jupiter, can the Commission select out and compartmentalize the one profitable portion of its gas business while ignoring the rest, where most of the profits have been invested (or consumed)? Their point is their gas and oil production enterprise loses much of what the transportation gains, and when the excess transportation revenues are balanced off, then only a fairly small and quite unexceptionable net return results.

It is an inadequate answer that their figures do not separate out the jurisdictional, interstate gas production from other gas and from oil, since, if their theory is correct, the technical burden to initiate the inquiry on that basis is up to the Commission and its staff.

Before the current facts are reviewed, some history is needed. The transportation service, or purchase and re-sale, began as the sole enterprise of the original firm, Marine, in 1950. As profits accrued, the exploration activities began elsewhere. Five years later the merger with Commonwealth brought it into association with many more such programs. Jupiter, since taking over in 1962, has continued and increased them.

Their current program is in evidence. They hold oil and gas leases in ten states and in Haiti, and have an interest in 122 wells, operating half of them. Some small part of it is in various Louisiana parishes, none off-shore. Production for 1964 was 115,094 barrels and 1,318,046 Mcf (at present rates, the gas is worth somewhat less than the operating cost of service for the transportation service as proposed herein). Some part of their gas goes interstate,[15] but no figures were given to show what proportion of gas, revenues, costs or return are from gas sold in interstate commerce (1T91, *et seq.*, 3T481).

Staff reported certain total figures for the "gas gathering, Oil and Gas Division" in S-3, showing oil and gas production revenues at $443,518, while direct production expenses came to $1,007,331 (apart from overhead allocations). After all deductions, current earnings remained of $362,189 for the entire division, including transportation. All of this from a total net plant capital account of $5.2 million, of which less than one million is in the Rollover transportation service (S-1, Sch. 6-A), which suggests perhaps 7 percent earnings.

---

[15] Note this case is on their rate schedules numbered 7 and 8; the first six are not in evidence.

It is evident what occurs—the earnings of the transportation function, $1.7 million in 1962, S-1, Sch. 1—have been used roughly one-half to pay "dividends" to the preferred (see Chapter VII), and the rest has gone into the gas and oil exploration and production program, leaving only the small net revenue figure stated. *If* it should appear that a substantial part of the loss is in the search for, and development of, gas for interstate, jurisdictional sale, then, the claim is, the total jurisdictional function has no excess revenues and there is no occasion to question the transportation and sale rate schedules for Rollover Field.

Thus the question is what rate or rates are subject to investigation and determination in a single inquiry under Section 5. Turning to that section of the law, it says that, whenever the Commission finds "any rate, charge," etc. is unjust and unreasonable, the "Commission shall determine the just and reasonable rate * * *" As a corollary, Section 4 puts upon each natural gas company the requirement that "all rates and charges" shall be just and reasonable. Hence, so far as the statute is concerned, the Commission is doing just exactly what the law, in so many words, seems to contemplate, and the burden rather falls upon Jupiter to show there is something illegal about the staff's proposal based upon the Commission's order, or else that the inquiry into rate schedules 7 and 8 only is somehow so arbitrary as to offend basic standards.

Jupiter does make a plausible case to show that the inquiry into these two rates, ignoring the rest of their jurisdictional business, is at least unusual and will require some justification. Turning first to the few precedents there are on independent producers, Jupiter cites a number of cases to the effect that the costing unit to weigh and appraise in justification of a rate is the cost of the entire operation (citing *Hunt Oil Co.*, 28 FPC 623, and the *Caroline Hunt Sands* order of March 18, 1965, 33 FPC 583, in RI64-356). Turning next to pipeline regulation (as a species of public utility transport control), there is cited a group of cases to the effect that the rate for a single narrow service, among many to which the utility enterprise is dedicated, is not to be justified by carving out and arbitrarily allocating costs, as distinguished from a systemwide determination. For this there are cited *Chicago Board of Trade* v. *U.S.*, 223 F. 2d 348, 351; *American Louisiana Pipe Line Company*, 21 FPC 70, 101.

The trouble is Jupiter does not fit neatly into either of the categories discussed. Jupiter does not operate like the several cross-country pipelines with investments in the hundreds of millions which have incidentally a minor production function contributing a small share to the pipeline supply. In the typical pipeline case the production operations are "rolled in" with the much larger transportation functions in arriving at fair overall rates for transportation. Neither is Jupiter like Phillips or other very large independent producers having vast investments in wells scattered over quite an area, with complete gathering systems and, quite incidentally, a few thousand feet or few miles of transmission line either leading into their processing plants or connecting their plants with the main lines of their customers.

What is more, in the cases where all the production operations are rolled together for one rate justification, or where some incidental production is rolled in with the pipeline operations, it appears to be on the premise that all are merely elements of one ultimate service to one customer or group of customers. Where the pipeline, for example, seeks new discoveries to add insurance to its own reserves, the objective is the same in the long run as that of an added investment in the pipeline itself, namely, the continued service of the customers who rely on that line.

What makes it clear that Jupiter's case does not fit any of the precedents is the entire lack of any indication that the customers served by Tennessee—who are called upon to contribute this three-quarter of a million dollars or so per year in a search for oil and gas—have any real interest in such a search or stand to benefit from it. There is no suggestion that Jupiter's gas in other areas, found or yet to be found, will be of benefit to *these* customers.

The second objection is the incongruous amount—the law says that all rates must be just and reasonable, yet the net effect of Jupiter's case is to justify a rate that is five times too high on the basis that a good part of the profits is used to find gas for other customers (or conceivably for some of the same customers). A small margin of excess is frequently offset by averaging many rates and services, but here the margin on its face is too high.

Third, the usual reason for rejecting a study of a single pipeline rate, such as that for peaking service or winter service or the like, or some of those mentioned in the cases cited by Jupiter, is the extensive and uncertain accounting allocations required to carve out the cost attributable to a particular narrow operation out of many for which the same facilities are used. That point, too, does not apply here because the two sets of facilities are many miles apart and Jupiter already records the Rollover transportation costs quite separate from its production costs—they have to, because of the way the dividends (or really interest) on the preferred are geared to the net revenues of the transportation service, regardless of gains or losses elsewhere (see Chapter VII). Hence, these costs are kept separate, only very minor allocations are required, and there is no real accounting problem in arriving at true costs for the transportation service.

It is concluded, accordingly, that the patently unfair, unjust, and unreasonable rate for the transportation service can not be justified and made legal by offsetting the undercharges and losses incurred on other types of natural gas service located in areas far away and serving evidently quite different customers.

Note this is without reference to the results of the current area rate cases, like AR61-2 that Jupiter now wants to associate with. If it results that Jupiter's gas production in the other areas is all sold at the area rates, that would seem to moot the present claim that production and transportation must be rolled together.

Postscript: Some doubt remains about whether Jupiter should be called on for a better demonstration of the genuineness of the question it raises on this subject. Their witnesses kept talking about their exploration and production, and made many references to oil and gas, with no hint as to which made money and which lost money, and no hint as to how much of the gas production expenses and revenues pertain to jurisdictional service, *i.e.*, gas destined interstate. It is assumed that Jupiter relies only on the jurisdictional business and surely does not justify a high gas transportation rate by its losses in oil or in intrastate gas. Pretermitting the technical question as to who has the burden of proof, since nothing was said or done here by Jupiter to show just how much of the excess revenues were offset by losses in interstate service, there cannot but remain a doubt whether such figures, if Jupiter chose to produce them, would show any substantial justification or offset.

VII

COSTS AND REVENUES OF PIPELINE ACTIVITY, AND ALLOWABLE RETURN

Having concluded that the cost unit for regulation is the Rollover Field transportation and resale activity, excluding Jupiter's oil and gas production in other areas, it remains only to determine what the appropriate pricing basis should be, in all the circumstances, including a fair rate of return, and to apportion that cost between the transportation activity for Pure and the resale activity on the K–M–P gas.

Staff's exhibit, S-1, has constructed a "cost of service" applicable to the transportation activity and the resale of the K–M–P gas, with allowances for all direct expenses, appropriate allocations for the indirect, a depreciation expense allowance for the test year (1962) on a plant service life basis (as taken directly from the corporate books), tax allowances, and a return at 6.5 percent of the Staff's newly-constructed rate base. The result of the Staff's exhibit is to call for an annual cost of service allowance of $274,259 (aside from the cost of purchased gas), and the point therein which is of prime significance is the contrast between that figure and the actual revenue for the year 1962 of $1,944,697. Thus, to give effect to the recommended rate will reduce the return from $1,618,281 to $43,899. On this, Jupiter does not find itself in agreement.

As to the raw figures used there is no particular controversy; they are taken from the corporate books and were agreed to. That is, the correctness of the figures—apart from whatever they may stand for—was stipulated at the hearing. 1T248, 1T264.

Is Jupiter a private contractor? First off, Jupiter generalizes that the Staff has put it in the wrong field entirely, that Jupiter is not a "traditional pipeline engaging in a public utility transportation service" (what tradition is referred to is not clear), that Jupiter is merely a delivery agent for the producers, that Jupiter's cost of service and rate of return are irrelevant, and its contracts with the producers may be modified by the Commission only upon a showing that the producers for whom they act have found their agreed prices to be confiscatory and so burdensome as to force the producers out of business.

The view is earnestly expressed but ignores the law of the land. Whether it is a public utility or not, Jupiter is unquestionably a "natural-gas company" within the definition of the Natural Gas Act; Jupiter is found above to be in the business of transportation of natural gas in interstate commerce, for the account of Pure and within the purview of Section 1(b) of the law; and Jupiter's sale to Tennessee is unquestionably a sale of natural gas for resale in interstate commerce, which the law directly applies to—the very point of *Phillips*—and as such, by the words of Section 4 of the Natural Gas Act, its rates for such transportation and sale must be just and reasonable to be lawful.

In the light of the wide disparity between the revenues resulting from the present rates and the costs attributable to the service, the present rates are patently unlawful on their face because so obviously unjust and unreasonable, and it remains for the Commission under Section 5 of the Act to determine the rate to be hereafter observed and enforced. There is simply no statutory or other basis for the asserted claim that the rate becomes unjust, unreasonable and unlawful only when it is so high as to force the customer into bankruptcy. Jupiter's arrangements with the producers[16] and with the pipeline are indeed private contracts, as they say, but as mere pieces of paper called contracts, they derive their only force from such sanctity as the law gives to them; and the applicable law, here the Natural Gas Act, brands them illegal (as to their rates) and requires them to be modified accordingly.

Jupiter misconceives *F.P.C.* v. *Sierra Pacific Power Co.*, 350 U.S. 348, in claiming that Pure's solvency or ability to pay is relevant to the Commission's action on Jupiter's contract with Pure. That puts the shoe on the wrong foot; under Sierra, it is the possibility of Jupiter's insolvency, not Pure's, which could conceivably be of concern to the Commission under Section 5. There is, to be sure, a repetition of claims in Jupiter's brief that this order will be drastic in its effect on Jupiter, indeed disastrous; but, since the rate provides for a reasonable return for the only activity it regulates, it is plain that the dire conditions apprehended would only be the result of Jupiter's continued investing its revenues in oil and gas exploration in other areas at a considerable loss. If the results continue to be drastic, it is not due to the jurisdictional transportation activity.

Test year (1962): Jupiter makes quite a plea that cost figures based on the year 1962 are quite out of date, unrepresentative, and unsuited for a current rate order. First off, this plea comes with small grace from the side which has caused so much delay in this proceeding—the case began three years ago; but many months elapsed in the Staff's unsuccessful efforts to get access to the corporate records, after which the task must have been very considerable to sort out the company's gas transportation and sale function from its diverse other activities involving oil and gas production, bakeries, trucking, plumbing, real estate, etc. Thereafter, following the final conferences with Staff, some months elapsed for Jupiter and Tennessee to prepare their alternate proposal to lease the facilities to Tennessee. Finally, in December, 1964, the Staff's testimony and exhibits were served. Four months later the pre-trial conferences convened, and even then Jupiter announced it had not yet been able to study the evidence enough to determine which witnesses would or would not be needed for cross-examination (1T192). At the same time, its own evidence served out of time was admitted over objection, and Jupiter's request for a three-week delay in beginning the hearing was granted. In the meantime Jupiter had filed 13 or 14 separate pleadings with the Commission, including about six motions for continuance, and had also filed injunction suits in two United States District Courts. Without adverting to the motivation for the delaying tactics, it is enough that the delaying party be heard to complain of the staleness in the test year figures, if any there be, which has resulted from the delays.

Secondly, Jupiter had every opportunity in rebuttal to furnish the figures from a later and better test year; but, apart from the question of volume of deliveries, such important data as there is in the record pertaining to later years would suggest a lower rate, not a higher, that is, the evidence of possibly lower expenses and of evidently a lower rate base.

---

[16] Jupiter strains at the leash to show it is not a seller to Tennessee of the gas it buys from K–M–P; that, in view of the peculiar pricing relationship, it is really an agent of K–M–P for the transportation of gas to Tennessee. The agency relationship is roundly denied and denounced by Phillips, the very principal they seek to be related to as agent; but anyway the point is irrelevant since, as shown above, Jupiter's transportation service from the central point in the Gulf to the shore connection with Tennessee constitutes transportation in interstate commerce quite as much covered by the law as its resale activity to Tennessee.

Jupiter's related argument that its transportation service for Pure cannot be included in the chain of costs to be borne by the public consumers is considered in Chapter IX below.

One item, pertaining to volumes delivered, is reserved in the above. Note, from Exhibit S–1, the Staff's recommended solution is to divide the dollar figure of its cost of service for 1962 by the Mcf volumes delivered that year, which produces its suggested rate of .518 cents per Mcf. But the volume figure varies from year to year, while the expenses are fairly constant. In round figures, the Staff used 53 million Mcf for 1962 to arrive at its recommended rate of .518 cents. For 1958, the volume was 46 million, for 1959 it was 49.4 million, and for 1960, 55.5 million (Exhibit J–11). But for 1963, the volume figure was 47 million Mcf, down 11 percent from the year before (7T1076). On the other hand, the expenses are steady—they do not vary "significantly at all" according to the volume of gas passing through the pipes (6T889).

The result is plainly to suggest that the final net rate to be prescribed should be in terms of a flat number of dollars per year or per month, or merely a dollar ceiling on the monthly invoices equal to one-twelfth of the annual cost of service. There was evidence that the operating expenses are expected to be fairly constant through 1976, but that volumes are expected to decline beginning in 1970 (6T999–1000). With expenses (excluding purchased gas) remaining steady, there is no reason to inflate or diminish the return based on the variance in the volumes, and the order here subjoined so provides.[17] With this element provided for, no substantial objection or question remains with respect to the 1962 test year.

Rate of return: The Staff's recommended rate of .518 cents is based upon a rate of return of 6.5 percent, which the Staff witness repeatedly called "illustrative only." The Staff undertook a financial analysis of the company as a basis for recommending a rate of return, but because of the intricacies of its capital structure the Staff witness found himself unable to determine the "cost of money" for Jupiter and therefore felt not in a position to recommend definitively a rate of return (1T48, 3T486).

The background is this. The original investor was Marine Gathering Company, formed specifically for the Rollover Field project. By 1955, Marine's assets were transferred to Commonwealth Oil Company, with an exchange of stock (4T693). Commonwealth was an oil exploration company with interests in Florida and elsewhere. Seven years later Commonwealth merged with Jupiter Corporation, which again involved a stock exchange. But the former owners of Commonwealth received a new preferred stock issue of Jupiter, the surviving corporation, with a very special, cumulative dividend arrangement to the effect that dividends up to a dollar and a half per year per share would accrue and be paid if, as and when the Rollover Field gas transportation activity earned that amount; and this dividend is payable regardless of the earnings or losses of the company generally, and regardless of Jupiter's Oil and gas production elsewhere. At the same time, there was fixed a redemption value on the preferred at $26.50 per share (or $25 on liquidation), which is said to be payable ahead of any contractual indebtedness of Jupiter (Exhibit S–5, Schedule 5–6). The preferred is convertible to common, but on a declining basis.

The result is that the 559,899 preferred shares (held by the former Commonwealth owners) have a dividend claim at $1.50 to the first $800 thousand plus of annual earnings of the Rollover Field gas transportation operation; and, on liquidation, they have an apparent priority over any creditors or claimants to the first $14 million of assets (Ex. S-5, Schs. 3-4-5); what is more, no new credit obligations may be assumed by Jupiter except those agreed to be junior and subordinated to the prior right of the preferred to the "gas gathering" revenues and assets on liquidation (*id*). With these figures, contrast the Staff's proposed allowance of less than $43 thousand in annual return (or five percent of the above annual dividend requirement), based on property whose actual original cost was $1.59 million (or 11 percent of the above liquidation liability). Whether this complex arrangement was dictated to segregate the Rollover Field gas transportation and resale operations from the rest of Jupiter's many activities, it is evident that the preferred stands more nearly in the relation of a purchase money mortgage, with the same priority to the transportation revenues that would attach to a revenue bond.

---

[17] Otherwise, as suggested at the hearing (6T898), it is evident that it could be some time yet before the attached order becomes effective, in which event it might not be inappropriate to reconsider the single question of rate level on the basis of figures then more current.

Actually, the gas business is the smallest of Jupiter's six separate and diverse operating departments, the corporation is otherwise a substantial concern showing assets of $39 million and a net worth of $9 million (S-1, Sch. 7). Its long-term debt of $14 million is carried at an average interest rate of 6.2 percent (S-1, Sch. 4).

In the light of this peculiar and unusual "stockholder" relationship, the Staff found it impossible to compute the cost of capital for Jupiter or to derive a rate of return to be recommended on the basis of the cost of capital (1T51). Instead, a cost of service was prepared upon the "illustrative" 6.5 percent rate of return on the basis that figure represents the highest rate allowance the Commission has made for pipeline operations (1T22).

On some obscure basis, Jupiter objects that the Commission may not conclude upon its own determination and judgment what the appropriate rate of return should be, unless some witness at the hearing has espoused the rate to be selected so that it could be cross-examined. No such rule is known (see, *e.g.*, 17 FPC 685, 703); the authorities relied on refer to evidentiary findings of basic data, concrete facts, and records of past events which are used to form the basis of a judgment figure such as rate of return, certainly not to the judgment end-process itself. If, as in the recent case of *Central Illinois Public Service Company* v. *F.P.C.*, 338 F. 2d 682 (CA7-1964), the Commission may form its own judgment and determination on the engineering capacity of a gas line from the facts in the record, it can equally produce its own judgment figure for the rate of return—after all, that is perhaps the ultimate purpose for which it was established in the first place as a specialized, expert commission. *Cf.*, *e.g.*, its opinion in *Hunt*, 28 FPC 623, 665.

Next, Jupiter objects there must be some correlation of its return with that of other enterprises with similar risks, citing such classic cases as *Bluefield Water Works Improvement Co. of West Virginia* v. *P.S.C.*, 262 U.S. 679, 692. But they rely on the wrong risk. The cases do not contemplate rating of physical hazards, marine dangers, hurricanes and acts of God—real and serious as those may be for off-shore pipe line operation. These costs can always be insured against and/or recompensed, under the Commission's standard accounting system, and amortized in the rates. What the cases do stand for is spelled out in a work under the authorship of Jupiter's witness, Dr. Paul J. Garfield (and W. F. Lovejoy), "Public Utility Economics" (1964), at page 121:

> The term "risk" is subject to several different interpretations. Technically, there is a difference between "risk" and "uncertainty," as pointed

> out by Professor Knight. Risk is susceptible to measurement and thus to predictability within the limits of probability analysis. Risks such as death, fire, illness, and so forth are readily insured against when large numbers are used. Uncertainty is not susceptible of measurement and thus cannot be predicted and insured against. It is uncertainty, in this sense, which is the basis for competitive profits. We bow to usage, however, and substitute the word *risk* for *uncertainty.* Risk in most public utility economics is of the "non-quantitative" type. See Frank H. Knight, *Risk, Uncertainty and Profit* (Boston: Houghton Mifflin Company, 1921), pp. 19 ff. and Chapter VII."

In dozens, perhaps many more, examples to numerous to require citation,[18] the Commission has allowed pipe lines from 6.0 to 6.5 percent, none apparently over the latter figure. As spelled out in the case of *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591 (1944), the economic risk is so much the less where the markets are established and the revenues quite secure. Jupiter's long-term contracts, assured market, and substantial supply reserve assure that its economic risk is at least fairly comparable to that of pipe lines generally. The allowance of the same return assures a close relation to the earnings of these comparable enterprises. At the same time, in view of the peculiar preferred stock arrangement just discussed, there seems to be no opportunity for any return on the common equity segment of the capital. Normally, for pipelines this return is about 10 percent (for a list of examples, see 28 FPC 482). A higher rate (than 6.5 percent) might have been allowable, had this case come along in 1950 when off-shore transportation was new and untried, experimental and obviously risky in the economic sense. Jupiter could have then claimed with reason a most unusual allowance for its ingenuity and resourcefulness. But that allowance by 1965 has long since been collected, see the figures above, and with the period of research and development, so to speak, long since past and well compensated, no reason remains for a future return allowance any different from that of other pipe lines.

Adjustment of rate base to normalized depreciation: One adjustment to the Staff's determination pointed out in Jupiter's brief, appears justified and required, and its net result is to increase the allowable rate from .518 cents/Mcf to a higher figure of .632 cents/Mcf. This comes about from an increase in the rate base, and consequent return, after constructing a new and normal depreciation requirement for the properties was developed. The background is this:

The first pipeline was laid in 1950, and practically all the investment was installed and put in service by 1953. Not feeling called upon to keep its records or justify its rates on a public utility basis, Jupiter and its predecessors elected to record pipeline depreciation by the several accelerated-rate methods permitted for tax purposes by the Internal Revenue Code. By the time of the test year used by the Staff, 1962, this depreciation policy resulted in a very large accrued reserve, about 58 percent, and correspondingly overreduced the net plant balance from $1,598,886 to $675,376, the figure used by the Staff as the rate base in computing its 6.5 percent return.

That is to say, the Staff's net rate base figure is $675,376, which is comprised of gross plant totaling $1,598,886 (original cost of pipeline and separation plant facilities), less book depreciation of $929,378, to which was added $10,868 of allocated general plant facilities. Exhibits S-1, Sch. 6-A.

---

[18] See Leventhal, "Rate of Return—Comparable Earnings Standard" (1965) 74 Y.L.J. 989.

The original actual cost figure of $1,598,886 used by the Staff is that remaining after eliminating a "write-up" of the plant account in the amount of $798,220. For consistency, the Staff also reduced the record depreciation in the same proportion (1T29). As to the several different write-ups claimed, surely no answer is really needed to Jupiter's plea (Brief, page 62) that various acquisition adjustments and contract evaluations which inflated its plant account several times over its true original cost, should now be reckoned as part of its rate base. It is the view that the industry has long since outgrown that sort of approach; indeed, that it leads to the very antithesis of the law's standard, "just and reasonable" rates.

The accelerated rates of depreciation used by the company to compute its income tax presumably was and is correct for that one purpose. However, the realities of regulating rates require a representative rate base which in turn is based on a normal reserve requirement. For most pipelines before this Commission this requirement has reflected straight-line depreciation related to the servce life of the property. This results in a fair allowance of return, and a consequently just and reasonable rate. The tax depreciation is simply the law's method of figuring the income tax, and its only reality is an indirect method of reducing the taxes payable in the early years of the property. It does not mean the useful life of the pipelines is any the less, and without some such relationship it has little relevance to ratemaking.

This oversized reserve was not lost on the Staff's witness; however, he announced himself "estopped" from using a normal rate base valuation. He viewed the entire book reserve as already collected from the "ratepayer" (actually mostly from Pure, the larger producer) and indicated that to construct a new and realistic depreciation reserve would be tantamount to writing up the rate base and permitting a second recoupment from the ratepayer of the same plant (2T372).

By whom or by what the witness was estopped he did not say; but as a precedent for a substantial write-down in the reserve and for normalizing upwardly the rate base, there is referred to a case known as *City of Cleveland* v. *Hope Natural Gas Company*, 3 FPC 150, 167, 203 (1942), affirmed, *sub nom. F.P.C.* v. *Hope Natural Gas Company*, 320 U.S. 591 (1944). Hope had accumulated an excessive book reserve and the Commission concluded that "where a large part of the company's business is brought under regulation for the first time and where incorrect depreciation and depletion practices have prevailed, the best procedure is to deduct the reserve requirement in computing the rate base." Accordingly, the Commission constructed the proper reserve requirement, based on straight-line service lives of the properties, and reduced the book depreciation reserve from $39,000,000 to $22,000,000. This resulted in increasing the rate base by a corresponding amount, up to nearly $30,000,000. It was the dissenting Commissioner who, like the witness here, pointed out that excessive depreciation charges had already been collected from the customers and should, in his view, not form a part of the rate base (page 193). But the Commission, since it was prescribing rates for the future, accepted the reserve study presented by the Staff, which had the effect of marking down the depreciation reserve and raising the base to the level called for by normal depreciation requirements.

The Staff's point that establishing a normal rate base would permit a second recoupment proves entirely too much. The fact is Jupiter had a 1962 net revenue from its Rollover Field transportation operation of nearly $2,000,000,[19] and since its business has been steady and its net transportation rate margin unchanged, the company, or at least its preferred stockholders, has collected back over the years prior to regulation many times more than the original invested cost (just as the stockholders in *Hope* had been collecting an excessive return during its unregulated years). If Staff's theory is that the new rate now to be fixed must not allow a second (or tenth or fifteenth) recoupment, then no return can be allowed at all![20]

---

[19] $1,944,697 computed from Exhibits S-1, Schedule 1; S-2, Schedules 1-2.

Bearing in mind that a rate order under Section 5 of the Natural Gas Act is to fix the rate for the future and not to incorporate a reparation for the past, and in view of the special circumstances discussed in the "rate of return" section above, it is concluded that the new rate to be, as the law says, "thereafter observed and in force" must be that resulting from a currently depreciated property valuation, quite unaffected by excessive rates of the past and equally unaffected by the accelerated depreciation used in figuring taxes. Both abnormalities are irrelevant to the future and to what is a just and reasonable rate for the future.

A revised computation for this purpose is set forth in the appendix and results in a normalized depreciation reserve of $431,624, and a rate base of $1,173,130 (the balance of the actual investment). After corresponding adjustments of income tax on the return, the new cost of service for the Rollover transportation function becomes $334,859. If this figure is applied to the 1962 volumes, the unit rate per Mcf would be .632 cents, or 20 percent more than the Staff's .518 cents.

Note this is not computed on the customary predicted straight-line useful life basis because it would be difficult to ascribe a useful life for this submarine line and there is no evidence on it. It seems more realistic to use the exhaustion of the gas reserves as a guide. On this question, a study as of only one month before the test year revealed that 27.08 percent of the original reserves had been withdrawn and 72.92 percent remained (6T999). Since—barring the possible chance of new discoveries—it is the total depletion of the field that will mark the certain end of the useful life of the lines, it is that proportion that has been used to normalize depreciation and arrive at a reserve requirement.

It is somewhat a coincidence that the actual dollar figure of reserve requirement is very close to what would result from the useful life basis at the customary 3 to 3.5 percent per year rate. It is indicated for this case to be $431,624, while that on a 33-year service life basis, or at the rate of 3.03 percent per year, would be $434,696; while if based on 3½ percent a year (which the Staff said is normal) would be $502,074. By way of further reference, the Commission's "FPC S-159, Depreciation Practices of Natural Gas Companies, 1961," reports that 31 pipeline companies had an accumulated provision for depreciation of 26.2 percent of their gas plant investment, which was being accumulated at the annual rate of 3.4 percent.

Conclusion: It is concluded, accordingly, that the proper unit for regulation of Jupiter's enterprise (excluding its gas production in Texas and other states which will be subject to area rate control) is its entire transportation and resale operation from the Rollover Field offshore Louisiana; that the rate base attributable to that operation is, for the reason stated, in the net amount of $1,173,130; that no recognition can be given to various write-ups, contract valuations, acquisition costs or other intangible valuations in excess of the net depreciated original investment; that the rate of return to be hereafter allowed should be computed at 6½ percent (as in the case of other pipelines);

---

[20] *Hope* had already earned back its total investment "nearly seven times." (320 U.S. at 604.)

and that the resulting cost of service allowable, not inclusive of the cost of purchase gas, is $334,859. The specific application of that costs of service (which includes the return so computed) to the resale of the K–M–P gas and to the transportation of Pure's gas is the subject of the following two chapters.

Postscript: On the general approach to the rate level, Jupiter's witness Garfield presented an extensive study (J–17) of the prices paid in quite a number of other cases for this intermediate service between the gathering point and the pipeline, many of them collecting several cents per Mcf, all for the purpose of showing Jupiter's rates are reasonable. The opposition counters that the small volumes of gas in those cases account for the high rate, and offers other examples where the price is only a fraction of a cent. The answer to these contentions is none of those was a rate case, in none has the rate been examined and found just and reasonable (5T811, 822), which makes them unacceptable here. (*P.S.C. of New York* v. *F.P.C.*, 287 F. 2d 146 (CADC–1960), cert. denied, 365 U.S. 880 (1961)). About all they prove is that many more rate inquiries, such as here, are indicated.

VIII

APPLICATION OF COST OF SERVICE TO RESALE OF K–M–P GAS

It appears to be unquestioned that Jupiter's resale to Tennessee at the outlet of the Jupiter plant, 29 miles on shore and nearly 40 miles from the point where Jupiter receives the gas, is a jurisdictional sale such as the law describes, namely, a sale of natural gas in interstate commerce for resale, as soon, at least, as it is agreed that Jupiter's tortured attempt to reform the sale into an agency relationship is denied, for the reasons stated in Chapter IV. Secondly, as a jurisdictional resale, it is irrelevant whether any of Jupiter's prior service up the line might constitute "gathering" exempt from the law,[21] although, as stated in Chapter V, no such view is here agreed to. In Chapter VI it is concluded that the cost unit for regulation of Jupiter is its total Rollover Field activity, namely the transportation for Pure and the resale of the K–M–P gas, while in Chapter VII it is concluded that the cost of service, including return, attributable to both activities is $334,859 in addition to the cost of purchased gas from K–M–P. Of the total volume for the test year, 1962, 38.48 percent is that derived from K–M–P by purchase and resold to Tennessee (Ex. S–2, Sch. 2). Hence the proportion of the cost of service applicable to the K–M–P resale arrangement comes to $128,854, based on that ratio of volumes. It remains, therefore, only to fashion an order which will have the result of reducing Jupiter's sale price to Tennessee to that amount.

It is claimed that to do so will bring on many complications, mostly resulting from the rate provisions in Jupiter's purchase contract with Kerr-McGee and Phillips, which technically are not in this case or subject to its sanction. The point is derived from the identical pricing provision contained in Kerr-McGee's Rate Schedule No. 56, for its sale to Jupiter, and Phillips Rate Schedule No. 329, for its sale to Jupiter. In each, the price to be paid by Marine-Commonwealth-Jupiter to the two producers is the "price per Mcf provided to be paid during the same period" by Jupiter's buyer (formerly Niagara Gas and now Tennessee) *minus* what is evidently the agreed charge for Jupiter's service in terms of a variable number of cents according to the average daily quantity each month, which works out, at current averages, to 2.4 cents per Mcf. Thus, as Jupiter points out, when they first started to sell to Niagara at 16.4 cents in 1953, Jupiter (then Marine) paid K–M–P 16.4 cents minus 2.4, or 14 cents. Five years later, the price to Niagara and later Tennessee went up to 21.3333 cents and Commonwealth-Jupiter continued to receive 2.4 cents, paying the balance, or 18.9333 cents, to the producers.

---

[21] *Medina Gathering Corp.*, 30 FPC 227.

The case was tried on the presentation that, as a result, any reduction by the Commission in this case in Jupiter's price to Tennessee would, because of the contract provision just cited, have no effect at all on Jupiter and would merely operate to reduce Jupiter's payment for its gas purchase by the same amount. This evidently moves the Staff to its view (Brief, page 37) that a reduction in the 2.4-cent charge would effect an increase in K–M–P's charges to Jupiter, but this the Staff counters by its concluding recommendation or recommended finding that the reduction of the 2.4-cent per Mcf charge under Jupiter's FPC Rate Schedule No. 8 (its sale to Tennessee) "results in a reduction in Tennessee's purchase gas costs." This is based on the Staff witness testimony recommending that the Commission's order shall revise Jupiter's Rate Schedule No. 8 on its sale to Tennessee to call for a price consisting of (a) Jupiter's lawful and required cost price as otherwise approved by the Commission with respect to the cited rate schedules of Kerr-McGee and Phillips, plus (b) the sum of .518 cents per Mcf.

That solution has the benefit of precedent, see the Medina Gathering Company case cited above. It also meets the approval of Kerr-McGee and Phillips, whose brief says: "The Commission may take the approach of directing Jupiter to collect from Tennessee an amount representing the just and reasonable rate for its services, in excess of the rate that the Commission sets for Phillips-Kerr-McGee * * *"[22]

The confusion caused by the understanding of Jupiter's purchase contracts, as above outlined, has resulted in frantic arguments notable mostly for the extremity of the positions. Jupiter apprehends the net effect of the Staff recommendation would be to increase K–M–P's net revenue, quoting the Staff brief at page 37, from which follows a series of legalisms to the effect that this is beyond the Commission's power. On the other hand, Kerr-McGee and Phillips appear to apprehend that the effect of the recommendation would be to decrease their revenues, and their brief is devoted mostly to a frenetic presentation to the effect that their rate schedules are not before the forum and, whatever else occurs, nothing must happen to disturb their arrangement or reduce their sale price.

The trouble with all of these complications and confutations is that they overlook another and equally important section of the producers' rate schedules under which they sell to Jupiter, both of which are in this record as items by reference. Aside from the provision mentioned, which by itself would seem to reduce the sales price whenever Jupiter's resale price reduces, Supplement No. 2 is also a part of each rate schedule, consisting of a supplementary agreement of March 18, 1953, which was filed to become effective November 5, 1958. Referring to the price provision quoted above, the supplement in each case reads:

> * * * If at any time and for any reason Marine (now Jupiter) is required to reduce the amount per Mcf specified under said item (iii) as the adjustment to be made to the applicable price [that is the credit as ex-

---

[22] The Staff testimony is at 1T44 and 2T424. The K–M–P statement is from their brief at page 8.

> plained above, resulting in a 2.4-cent charge by Jupiter] * * * then the price payable to Phillips and Kerr-McGee under said subsection (b) shall not thereby be reduced, but shall be increased by an amount per Mcf equivalent to the amount per Mcf by which such amount specified in said item (iii) or receivable by Marine is reduced, to the end that Phillips and Kerr-McGee will receive for gas delivered under said contract the applicable price per Mcf less only the amount per Mcf to which said amount specified under said item (iii) is reduced or the amount per Mcf actually received by Marine for gathering of such gas and condensate.

The result of all this contractual shuttlecock would seem to be that the two adjustments cancel out, that is, that under the first clause, Jupiter's purchase price goes down by the amount of the reduction in Jupiter's sale price, but under the second clause Jupiter's purchase price goes up by the amount of the reduction in Jupiter's net margin. With those amounts the same, it results that the producer's sale price remains unaffected by this order and by the reduction in Jupiter's sale price to Tennessee.

Of course, the hyper-technicality can be asserted that the second adjustment is not available to this case because it applies a provision of Jupiter's contracts with its producers, which were not the announced subject of today's investigation. The answer is more clear than the question—the order herewith is directed at the rate which is before the forum, namely Jupiter's Rate Schedule No. 8, and the direct incidence is only upon that sale rate. It is quite true that this order, in its present compass, cannot require a change in the two producers' rate schedules, but the answer is there is no present need to do so, nor occasion for it, and it is specifically found that the intended purpose and effect of this order is not to affect the rate level under those schedules.

Notwithstanding Kerr-McGee-Phillips' fervent plea that nothing be allowed to happen here that affects them, it is not clear how the Commission could go further than this in the present matter—the producers are sanguine indeed in asking that the Commission's order allay the possibility of vexatious litigation concerning its possible effect on their contract to Jupiter. It is, after all, not the order itself which even suggests any change in the producers' sale price to Jupiter; if that suggestion arises, the result comes instead from the two provisions of the contracts which the producers themselves signed and which seem more or less to relate their sales price to Jupiter's sale price and net revenue, both of which are very much the Commission's responsibility.

Certification status: After this record closed, the certification status on Jupiter's purchase and on its sale underwent a certain change, but in a case not here consolidated. On August 11, 1965, there issued the Commission's Opinion No. 470, in *Phillips Petroleum Company*, G-16611, *et al.*, which took the following actions:

(a) issued a permanent certificate to Phillips and Kerr-McGee for their sale to Jupiter;

(b) limited the initial price in that sale to 18.5 cents per Mcf effective July 23, 1964 (the previous price was, as stated, 21.3333 minus an average of 2.4, or 18.9333 cents);

(c) deferred decision on Jupiter's application for a certificate for its resale to Tennessee of the gas purchased from K-M-P; and

(d) conditioned the temporary certificate issued in 1962 for Jupiter's sale to Tennessee to require that "as of July 23, 1964, the price provided in the

rate schedules covering the sale to TGT of the gas obtained from Phillips and Kerr-McGee shall not exceed 20.9 cents per Mcf."
Whether in fact the adjustments and refunds called for by that decision have since August been made, this record is not aware.

Application of cost of service: In Chapter VII above it is developed that the allowable cost of service for Jupiter's two services is $334,859 per year plus, of course, the cost of purchased gas. Applying the relative volumes for the test year, 1962, as shown in Staff's Exhibit S–2, Schedule 2, lines 14 and 22, the proportion applicable to the K–M–P resale arrangement is $128,854.

The Staff proposal is to follow the customary route and compute a rate per Mcf, dividing the total cost of service by the number of Mcf carried and sold during the year. As stated, this has the effect of reducing Jupiter's return as the volume goes down when in fact the expenses are expected to remain relatively constant. Indeed, the parties themselves have proposed a flat rate in their certification application. Accordingly, in order to insure against unjustified changes in the return due to changes in the volume either way, the order here subjoined directs the revision of Jupiter's FPC Rate Schedule No. 8 to limit each monthly charge, otherwise at the contract rate, to the sum of (a) the cost incurred for purchased gas during the same month at the rate lawfully in effect for Kerr-McGee and Phillips, and (b) one-twelfth of $128,854, or $10,737.83, except that the invoice for December of each year may make up any deficiency for that year.

Postscript: K–M–P's brief complains with heat that the examiner denied their right to file a rebuttal case, citing constitutional authorities. Some rebuttal, on useful issues, was in fact admitted (7T1176), the rest was denied not out of disparagement of any one's rights, but because two of the topics are irrelevant and the other immaterial (FPC Rules 1.26). The topics were: (a) whether dehydration on the platforms prepares the gas sufficiently for long distance transmission, (b) on which measurement Tennessee pays for its purchase, and (c) testimony of a learned economist as to where the area price proposed in another docket should be applied. Neither (a) or (c) is controlling *here*, and point (b) is insignificant once it is agreed title passes at the outlet of Jupiter's plant.

IX

COST OF SERVICE APPLIED TO THE TRANSPORTATION FOR PURE

While Pure is not a party here, and may not be aware of this proceeding, its undertaking carried forward into the Commission's order on its rate settlement, as quoted on page 1101 above, is clear and undubitable that if and when Jupiter's 3.4-cent rate reduces for any reason, the benefit will pass on to Tennessee and will necessarily affect Tennessee's cost of service and have its eventual effect on Tennessee's resale price and the consumers' costs. For completeness of the record it may be appropriate to suggest that the Secretary send a copy of the order here subjoined to The Pure Oil Company at its recorded address. Finally, it hardly seems necessary also to incorporate in the order an enjoinder that Tennessee no longer continue to pay whatever price is invoiced to it (confessedly assuming it to be correct, 6T912), but shall take care to adjust its payments according to the change in Jupiter's rate.

This procedural refinement is essential if the result of the proceeding is to benefit consumers. The point is the rate being altered by the attached order is Jupiter's rate to Pure, and the rate order does not change Tennessee's costs or the consumers' burden until Pure does in fact pass the rate benefit on to its customer, Tennessee. Pure's rate to Tennessee is not technically in this case, but in view of the undertaking quoted, as cited above, there is no reason to doubt that the benefit will be transferred as soon as it occurs, nor to doubt that it will create its reaction in Tennessee's cost of service and eventually in Tennessee's rates, leading to a reduction in consumers' costs.

However, to all of this transfer of the benefit on to Tennessee for the consumers, Jupiter flatly objects, pointing out that the 1957 arrangements and contracts made Jupiter's charge purely upon Pure alone. Jupiter protests it was not a party to Pure's 1962 rate settlement, ostensibly knew nothing about it, and did not consent to Pure's transfer to Tennessee of the economic incidence of Jupiter's charge. Jupiter points to some undefined but "elementary contract law that where considerations are exchanged and relationships are established among three parties to a single contract, and ancillary two-party contracts are executed in consideration of that three-party agreement, two of the parties may not thereafter amend the basic three-party relationship without the consent of the third party." (Brief, page 30.)

The answers to this casuistry are three—

(a) No citation is given for this "elementary contract law", and this forum is not aware of it, nor of its applicability here;

(b) The 1957 contracts do not contain any restriction on the freedom of Pure and Tennessee to revise the price arrangement between them;[23] and

(c) The change is not of concern to Jupiter or harmful to it—Pure is still the contracting party bound to pay Jupiter's price. Pure has merely indemnified itself by getting agreement from Tennessee, as its customer, to pay or receive the effect of any change in this one element of Pure's costs. As such, agreements of this kind are quite common, as in the case of price adjustment clauses for changes in cost of fuel or of purchased gas, or in the many outright "cost of service" rates where the entire rate goes up or down as the costs change. It is novel, and flatly unacceptable for Jupiter to announce a new doctrine that a purveyor of service to a utility has standing to object to the utility's passing on his charges *pro tanto* to the utility's customers.

The area rate case and its application: At least understandable, if not agreed to, is Jupiter's further point, applicable mostly to the transportation rate for Pure, to the effect that the pending area-rate producer price proceeding will moot this entire rate matter (Docket No. AR61-2, on which hearings lately closed). The syllogism is this:

(a) The area rate decision, when it comes, will fix a flat price for Pure's on-shore sale to Tennessee;

(b) Since it will be a flat price, only Pure will be affected thereafter by Jupiter's transportation charge to Pure and Tennessee's costs will not escalate or descend upon a change in Jupiter's rate;

(c) Thus the premise of this proceeding fails since the ultimate charge to the public consumers will no longer be affected;

---

[23] In fact, flatly contrary to Jupiter's claim is the following express language of its own contract, the paper of January 2, 1957, entitled "Agreement Relating to Contracts" and signed in the name of Marine by President Liese, by Pure as the seller and by Tennessee as the buyer (from copy in docket file G-12583, p. 14):

During each of the additional respective periods from November 1, 1958, to November 1, 1962, November 1, 1962, to November 1, 1966, and November 1, 1966 to the expiration of the term hereof, the price per MCF to be paid shall be determined by agreement between Buyer [Tennessee] and Seller [Pure] * * *

(d) All the more would this be true if, as claimed by Jupiter, Pure's price adjustment proviso (changing its total price according to its transportation costs incurred) were invalid and ineffective.

It is a too simple answer, really an oversimplification, as made by the Staff's reply brief, to the effect that the area rate case is still in process and it need be considered only when its result unveils. Conceivably, that case might become effective before this one; anyway, with the Commission so far committed to the area price policy, it would be irresponsible indeed to ignore its incidence here.

Jupiter presupposes that the area rate will fix Pure's price to Tennessee for its delivery on shore, *ergo*, any surveillance of Jupiter's price or rate will affect only the producer and mean nothing to Tennessee or its customers down the line. In its reply brief, the Staff concludes, "It may be that as a result of the Commission's determinations with respect to area rate policy in Docket No. AR61-2, the public will no longer be affected by Jupiter's transportation charge to Pure." How that could be true is not developed, explained, or here apprehended.[24]

Perhaps it is enough that even if Jupiter were right, it is wrong. Even if, under an area on-shore flat rate, Pure were to be the only *direct* beneficiary of a reduction in Jupiter's price for transportation, still Pure is as much a part of the public as is any other recipient of the services regulated by FPC, and the law's prescription of just and reasonable rates for transportation of gas in interstate commerce does not deny producers any benefit therefrom. But more to the point, the costs incurred by producers generally are of course most significant in fixing the area rate; and, when a cost element of the producer's sale price covers the receipt of a jurisdictional service—transportation—that cost must be regulated if the purpose of the law, fair prices to consumers, is to be served.

The cost of service applied: In Chapter VII above it is developed that the allowable cost of service for Jupiter's two services is $334,859 per year. In Chapter VIII, the proportion applicable to the K–M–P resale arrangement was fixed at $128,854, based on the volumetric ratio. The balance, or $206,005, is chargeable for Jupiter's service to Pure under Jupiter's rate schedule. As in the case of the K–M–P resale, with the volumes expected to decline while the expenses remain relatively constant, there is no reason to inflict upon Jupiter a flat rate per Mcf, nor *vice versa.* Accordingly, the order here subjoined directs the revision of Jupiter's FPC rate schedule No. 7 (Item D here) to limit each monthly charge, otherwise at the contract rate, to one-twelfth of $206,005, or $17,167.08, except that the invoice for December of each year may make up any deficiency for that year.

---

[24] A much more realistic view of the forthcoming area rate appears to be the rationale of a pleading filed for the FPC in the Court of Appeals for the Seventh Circuit on October 27, 1965, in *The Jupiter Corporation* v. *F.P.C.*, where Jupiter seeks an order permitting its reintervention in the area rate proceeding. In the pleading it is pointed out that even if the area price should cover the transportation to the on-shore terminus of the pipeline and the cost of that transportation were to come out of the area rate received by the producer, in any event such jurisdictional transportation service by Jupiter, even if performed for the producer, would be for regulation by FPC on a cost of service basis. In other words, whether the area rate is offshore or on shore, Jupiter's price necessarily will affect the consumer either directly or indirectly and requires to be regulated accordingly.

X

STATE TAX REIMBURSEMENT RETAINED BY JUPITER

Of all the remarkable aspects of this case, none is more amazing than the disposition of about $2 or $3 million of an extra charge by Jupiter against its customer, Tennessee (and thus upon *their* customers down the line), for the State of Louisiana gas severance tax, but never paid over to the producers or to Louisiana or to anyone else. What is more, this question is not mentioned in the order giving rise to this case, nor is it discussed in any of the evidence filed in advance of the hearing. Instead, it developed only due to the assiduity of counsel for the different intervenors, who questioned certain figures in the tables of the Staff exhibits.

The background is this: In 1958 (3 years before Jupiter took over the operation), there was enacted by Louisiana an increase in the gas severance tax, which became effective December 1, 1958, see Order No. 210, 20 FPC 785. The tax is laid on the producer. Because of a jurisdictional dispute between the United States and the State of Louisiana as to the status of offshore production, there was *then*, at least, some question whether the State tax would apply to the Rollover field production located about nine miles from shore.

No question here arises about the 60 percent of the gas that comes from Pure's production transported by Jupiter because Pure concluded (evidently) that its production is not subject to the tax, at least they have not sought any reimbursement from their buyer, Tennessee. But for the rest, the sale and resale of K-M-P's gas, the two producers apprehended the possibility they might some time be called upon to pay the tax and, accordingly, filed increases in their rate to Jupiter of 1½ cents per Mcf, representing the share of the tax increase which their sales contract entitles them to collect over from their buyer (at least entitles them to reimbursement if and when they pay the tax). But the two producers regarded the filing as merely a protective step and (since they have not paid the tax to the State) they have not at any time invoiced Jupiter to pay the increase. Instead, the producers continued to invoice their buyer at the old rate of 18.9333 cents, not the new rate of 20.4333 cents called for by their rate filing which the Commission permitted to become effective December 1958.

In the same month of December 1958, Jupiter (then Commonwealth), assuming their seller (K-M-P) would be charging them according to their rate filing of a week before, quite justifiably filed a corresponding rate increase as a supplement to their Rate Schedule No. 8, which increased their price to Tennessee to 22.8333 cents. Note that the gross amount of 22.8333 cents is the sum of three charges, 18.9333 cents as Jupiter's cost of gas, 2.4 cents for Jupiter's transportation margin and 1.5 cents for the expected tax reimbursement. Their invoices to Tennessee carried out the rate filing.

Thus the trouble arises—Jupiter for seven years has been collecting this 1½-cent tax item from Tennessee, to the amount of about $300,000 per year, but has never actually been called upon to pay it over to the producer for whom it was collected, nor has the producer been called upon to pay it to the State. If the entire collection had been held in escrow, or set aside in a trust account in the bank, perhaps no question would now arise, at least in this case. Instead the amount has been taken up as revenue and used in operations and perhaps dividends.

There is a tax item set up as a reserve in Jupiter's books in the amount of $516,374 which Jupiter's brief, page 79 now suggests is solely attributable to the years before December 1958, when their sale was not to Tennessee but to the Canadian concern, Niagara Gas. As explained in Chapter IV above, the Commission at that time regarded the sale to Canada as nonjurisdictional and in its recent certificate decision[25] declined to reconsider or readjust that conclusion. Jupiter now claims the total amount actually involved, meaning the collection between December 1, 1958 and December 31, 1964, is $1,838,067. But its own annual report for 1964, in evidence as Ex. J–19 contains their auditor's footnotes stating, with respect to the Louisiana tax:

> The Jupiter Corporation (since March 1, 1962) and Commonwealth Oil Company prior thereto have collected certain Louisiana gas gathering and severance taxes on gas sold which was purchased and gathered from Gas wells located in the Gulf of Mexico in an area claimed by both Louisiana and the United States. In addition to the $516,374 shown in the consolidated balance sheet as provision for gas gathering and severance taxes, Jupiter and Commonwealth have collected since 1958, $2,769,309 of such taxes which, on the basis of the position taken by the Internal Revenue Service on examination of Commonwealth's tax returns, have been recorded as income in the tax returns and accounts of the companies. The ultimate liability, if any, for the amounts so collected (including the amounts taken into income) cannot be determined until the dispute between Louisiana and the United States is settled. The amount of such taxes included in revenue in 1964 is $294,555. Counsel for Jupiter is of the opinion that the ultimate liability for the taxes collected will not exceed the provision of $516,374.

The net result is that some amount in the neighborhood of $2 to $3 million has been collected by Commonwealth—Jupiter from its pipeline customer, Tennessee, by Tennessee from its distributor customers, and by them from their customers, the consumers. Yet, not one dollar of this amount has been paid over to the producers or to the State of Louisiana, or has been claimed or levied by the State of Louisiana, or billed by the producers to Jupiter; nor has it been set aside in escrow in recognition of the trust so obviously resulting. For this patently unsavory situation, it is difficult indeed to find any participant who has not his share of blame.

First, the State of Louisiana appears (K–M–P Brief, p. 11) to rely upon some sort of understanding with the Federal officials that, upon ultimate resolution of their entire litigation, the taxes would be paid, should Louisiana prevail, to which Phillips has agreed. Second, the producers have contributed their share by filing here a formal rate increase they did not intend to charge and have not charged—this notwithstanding the plain language of the law (Sec. 4) that every natural gas company shall file with the Commission schedules showing "all rates," which surely means the rates actually being charged. Instead their filing of December 24, 1958, was accepted in good faith by the Commission and given the number, Supplement No. 8, showing in plain figures the former price as stated, the tax reimbursement of 1.5 cents, and the total price of 20.43333 cents. (Phillips' filing of December 22 is Supplement No. 11.) Now, seven years later, it develops the filing does not reflect the charge in effect at all. The only explanation is the weak and ineffective one that Kerr-

---

[25] Opinion No. 470, August 11, 1965, issuing a certificate to K–M–P and a "temporary" to Jupiter, both at slightly lower prices, see Chapters IV and VIII above. On December 7, 1965, Jupiter filed for review of that opinion in the Court of Appeals for the Seventh Circuit.

McGee filed to protect themselves against the imposition of the tax, but deemed it unwise to collect the reimbursement from Jupiter. Why it was also deemed unwise to correct the rate filing here or otherwise disclose the facts to the Commission is not explained. What is more, all of the reimbursement contracts, from the producer on down the line, refer to the tax "being levied" as the basis for reimbursement, and the plain fact is not a dollar of tax in this matter has actually been levied at any time since December 1958.

Jupiter's filing of the 1½-cent rate increase in December 1958 was an appropriate reaction to the same increase filed by their suppliers, but that does not explain the continuation of the filing and the charge thereunder to Tennessee after it developed that K-M-P were not in fact collecting the amount from Jupiter. The suggestion that some sort of oral tender was made by Jupiter to Phillips and Kerr-McGee is not supported by recorded evidence. The only explanation for the continued collection is the need to protect their interest against the possibility that the producers might sometime be called upon to pay, and therefore to collect over the amount, both currently and retroactively. But this does not explain why there could not have been entire reliance on their action over against Tennessee for reimbursement for any such payment, if and when required to be made by them. Neither is there any significant explanation why the amount has been taken up as corporate income instead of being set aside as a liability and reserve.

It is equally unclear why Tennessee has consistently paid this amount unquestioningly ever since it was first billed in 1959. Their witness tells us they buy from several hundred producers in the area and are paying the tax to some of them on the understanding the producers are indeed paying it over to the State of Louisiana. Jupiter's is said to be the only case of its kind among Tennessee's gas sources in Louisiana (7T1165), in view of which Tennessee's readiness to pay the tax item included in each monthly invoice without verifying that it was a real *reimbursement* can hardly be understood in light of the specific language of Jupiter's rate filing, Supplement No. 5 to its Rate Schedule No. 8. What is more, there is certainly no agreement here with Tennessee's caveat at page 11 of their brief to the effect that if and when this $2 or $3 million is refunded to them, Tennessee is not obliged to remit the amount in specie to its customers. Their rate settlement agreement of 1962 has nothing to do with it. The fact is that the entire collection, at each successive step by the distributors from the consumers, by Tennessee from the distributors, and by Jupiter from Tennessee, was made for the special purpose of paying the tax to Louisiana and upon the implied representation it was needed for that purpose. With that purpose failing, there arises, under ordinary principles, a constructive trust,[26] unrelated to and unaffected by any other revenues or expenses, profits or losses in the respective gas sales, and as and when any refunds are achieved they will be for payment over accordingly.

Now that the entire question has been brought out at the hearing, the Staff's brief has joined in the recommendation that the increase under the supplement just mentioned should cease to be collected and that the amount heretofore collected should be set aside in an escrow account.

Finally, Jupiter cautions that this is a Section 5 rate investigation which means that it may not encompass a retroactive reparation order. However, that does not affect an accounting order by the Commission, made under Sections 4, 5, 8, 16 or other provisions of the law, and requiring that the funds collected be truly shown on the books for what they are, namely, a reserve liability.

---

[26] Restatement, Restitution, Ch. 9.

The order also amends Supplement No. 5 to Jupiter's Rate Schedule No. 8 so as to cancel that increase and cease its collection henceforth. The point is there is now only the faintest, most far-fetched basis for apprehension of any tax liability at all—the Supreme Court has since held in so many words: "We decide now only that Louisiana is entitled to submerged-land rights to a distance no greater than three geographical miles from its coastlines, wherever those lines may ultimately be shown to be."[27] While the Court has retained jurisdiction to settle any dispute as to the actual location of the coast, see its order of December 13, 1965 in No. 9 original, there has not been explained to this record why any possibility is foreseen of a Louisiana tax here since all the wells are about nine miles offshore.

In any event, if and when it ever comes to pass that Louisiana should assess its tax and attempt to levy it upon the producers, it will be time enough to reconsider what reimbursements are thereafter in order. As to the past years, dating back to 1958, any attempt to levy the state tax up to eight years or more retroactively would obviously be subject to the most serious question of validity as an undue burden on interstate commerce. As of right now, the producers have not paid it or been called upon to pay it, and no reimbursement is called for, due, or required.

Finally, if there be any problem or lack of agreement in any of these connections, it is called to attention that this entire sale is still under a temporary certificate, see Opinion No. 470 cited above, and the Commission is free, in deciding whether *any* permanent certificate is here *required* in the public interest, to attach an appropriate condition equally required in the public interest. *United Gas Improvement Co.* v. *Callery Properties, Inc.* (December 7, 1965), 382 U.S. 223.

XI

TENNESSEE'S CERTIFICATE APPLICATION

It remains only to pass upon Tennessee's application in CP65-58 for a certificate to license their proposed lease of Jupiter's lines and facilities, which was consolidated with the Section 5 investigation by the Commission's order of October 30, 1964. Parenthetically, both Tennessee and Jupiter object mightily to the consolidation, but on no discernible ground except that it is a very unusual practice, which is something short of a showing of illegality.

Tennessee's proposal contemplates leasing the facilities outright for a rental fee of $100,000 per month, less operation and maintenance expenses incurred. Since Jupiter would then be eliminated from the operation, the proposal also is for Tennessee to take over Jupiter's contract with the two producers, accept delivery and title to the gas as the respective offshore platforms, pay to K-M-P Jupiter's present purchase cost, and pay to Pure the net rate settlement price of 16.75 cents, eliminating the 3.4 cents reimbursement for transportation charges now being paid by Pure to Jupiter. Jupiter has agreed to the tentative arrangements and endorses the application. K-M-P take no position; Pure is not here.

The first advantage cited by Tennessee in proof of the public convenience and necessity of the new arrangement is the immediate savings of $200,000 per year, since their cost will be $1,200,000 per year instead of the amounts now being paid out, as explained in Chapter VII. Realizing the obvious and invidious comparison between that cost, $1,200,000, and the cost of service as developed in the staff's evidence filed six months ahead of this application, Tennessee cites a number of other advantages, *i.e.*—

---

[27] *U.S.* v. *Louisiana* (1960) 363 U.S. 1, 79, *cf.* the *Submerged Lands Act of 1953*, 43 U.S.C. 1301.

(a) The larger reductions proposed by the staff take place when and if its proposed order under Section 5 becomes final, whereas the $200,000 per year savings becomes effective immediately upon consummation of the arrangement with the Commission's approval of the certificate.

(b) There is available an unused capacity in the lines amounting to 43,000 Mcf per day which Tennessee could use as lessee; provided, however, some one discovers, develops, and produces the new gas to make use of that potential.

(c) There are operating advantages in balancing their purchases from the producers without considering intermediate commitments to Jupiter.

(d) In later years, after 1974, Tennessee as lessee will be in a better position to renew the purchase contract with K–M–P.

Advantage (a) is now mooted with the consolidation. The other three advantages are useful and significant and would go to establish the law's standard, "public convenience and necessity" if the remaining condition or circumstances, namely the price, equally meet that standard. It is the staff's conclusion that the excessive price far outweighs the advantages, which is plainly correct. Recalling the Supreme Court's enjoinder in CATCO that the Commission's certificate function must exercise a responsible reaction to the price, and since the operating advantages cited by Tennessee are the sort of thing that should appear in any case even at a reasonable price, it would be hard to imagine how the price proposed could be thought to justify the Commission's approval of a lease of facilities at a cost roughly four times the amount that has been concluded to be the fair overall price for their service.

There was some suggestion that the certificate should issue nevertheless, but on condition reducing the price for rental to equal the cost of service concluded upon. Two difficulties arise which would first want to be resolved—Jupiter has announced that a decision in their case limiting them to the cost of service would be so drastic as possibly to require the liquidation of the entire enterprise, hence it is not clear that a lease would be satisfactory or in the public interest with the lessor so minded. Secondly, it was testified that at various times three of the prominent stockholders of the original organization, Marine, were top officials of Tennessee, the proposed lessee, although it was believed they were not stockholders at the time Tennessee's contracts were made with Pure. Further, it was the understanding their shares have since been disposed of. Accordingly, any resumption of the lease proposal would require some appropriate certification on both points, *i.e.*, (a) that the lessor is in business and expects to continue, and (b) that there is no interlocking ownership of the sort stated and the arrangement proposed can be approved as indeed an arm's length transaction.

Accordingly, it is the conclusion that the lease as proposed does not meet the standards required by the law and that the application for the certificate must be denied.

XII

FINDINGS AND ORDER

Based on the evidence herein it is specifically found that:

(1) Jupiter is engaged in the transportation of natural gas in interstate commerce for The Pure Oil Company in the Rollover Field, subject to the jurisdiction of the Commission under the Natural Gas Act.

(2) Phillips-Kerr-McGee make a sale of natural gas in the Rollover Field to Jupiter in interstate commerce for resale, and Jupiter makes a sale of such gas to Tennessee in interstate commerce for resale, subject to the jurisdiction of the Commission under the Natural Gas Act.

(3) Jupiter's transportation of gas in the Rollover Field and the performance of related services does not constitute a gathering service and is not exempt from the Commission's jurisdiction under the Natural Gas Act.

(4) To the extent that Jupiter performs any gathering at all in the Rollover Field it is completed at Pure's Platform "A" and Phillips-Kerr-McGee's Platform "A," and such gathering does not exempt Jupiter's Rollover Field operations from the Commission's jurisdiction.

(5) Jupiter's current contractual charges for the transportation of gas in the Rollover Field and for the sale of gas to Tennessee are unjust and unreasonable.

(6) The just and reasonable annual cost of service for the transportation of gas by Jupiter in the Rollover Field is $334,859, and the respective rates should be adjusted pro rata within that total.

(7) Jupiter should cease collection from Tennessee of the 1.5 cents per Mcf severance tax reimbursement.

(8) Jupiter should place in an escrow account the amounts accumulated by Commonwealth and Jupiter representing the 1.5 cents per Mcf tax reimbursement, since November 5, 1958, subject to refund if the State of Louisiana severance tax is declared inapplicable.

(9) Jupiter's motion to dismiss the proceedings should be denied.

(10) The issuance of a certificate of public convenience and necessity to Tennessee in Docket No. CP65-58 is not in the public interest and Tennessee's certificate application should be denied.

ACCORDINGLY, *It is ordered*, subject to review by the Commission, that:

(A) From and after the effective date of this order, the total charge by Jupiter for its transportation service for The Pure Oil Company under FPC Rate Schedule No. 7 and for the services therein described may not for any month exceed the sum of $17,167.08, except that the invoice for December of each year may provide for any adjustment needed in that calendar year resulting from an annual limitation in the amount of $206,005 for such transportation.

(B) From and after the effective date of this order the total rates and charges made by Jupiter to the Tennessee Gas Transmission Company for the sale of gas under Jupiter's FPC Rate Schedule No. 8 may not, for any month, exceed the sum of the following:

(1) The cost of gas for that month purchased for resale to Tennessee by Jupiter under Kerr-McGee's FPC Rate Schedule No. 56 and under Phillips Petroleum Company's FPC Rate Schedule No. 329 at rates lawfully in effect for the sale of gas to Jupiter by the two producers, respectively, plus

(2) The flat monthly sum of $10,737.83, except that the invoice for December of each year may provide for any adjustment needed in that calendar year resulting from an annual limitation in the amount of $128,854 in its total selling price (less the total cost of purchased gas in that calendar year).

(C) From and after the effective date of this order Jupiter shall no longer continue to invoice and charge Tennessee, its buyer under Rate Schedule No. 8, the 1.5 cents tax "reimbursement" charge referred to in Supplement No. 5 to Jupiter's Rate Schedule No. 8, but this is without prejudice to any new filing that may hereafter be made to reflect any change hereafter in the status of the Louisiana severance tax or in Jupiter's reimbursement obligation to the two producers.

(D) Upon the effective date of this order, Jupiter shall journalize and give full effect to an accounting entry in its corporate books of account charging the retained earnings account and crediting an appropriate reserve entitled "Provision for Reimbursement of Louisiana Severance Tax" in the entire amount of the tax reimbursement portion of its sale price which Jupiter has collected since November 5, 1958, under Supplement No. 5 to its Rate Schedule No. 8, and shall furnish to the Commission full report of such action under oath, showing the basis for the computation of the amount of the entry, subject to the further order of the Commission.

(E) For the reasons stated severally herein, there is hereby denied Jupiter's motion to dismiss the proceeding and terminate the investigation as filed on May 3, 1965, 2T286.

(F) The application of Tennessee in CP65-58 for a certificate of convenience and necessity licensing the leasing and operation of Jupiter's lines and plant is denied, without prejudice to its resubmission in proper terms.

WILLIAM L. ELLIS,
Presiding Examiner.

APPENDIX

Cost of Service Revision to Reflect Depreciation on Recoverable Gas Reserves Basis

The Staff's cost-of-service study (Ex. S-1) for Jupiter's transportation function (*i.e.*, excluding cost of purchased gas), allowing return at 6½%, develops an annual cost of $274,259, on the basis that a net plant of $664,508 remains after a depreciation reserve of $929,378, that being the "per books" figure resulting from the accelerated depreciation allowable under the Internal Revenue Code. Adjustment of this cost of service to reflect a more normal reserve for depreciation as related to plant in service is as follows:

1. Adjusted Net Plant:

	Per examiner	Staff Exhibit S-1
Average gross plant, 1962	$1,593,886	$1,593,886
Depreciation reserve (Note A)	431,624	929,378
Net transportation plant account	1,162,262	664,508
Allocation of net general plant	10,868	10,868
Adjusted average net plant	1,173,130	675,376
Working capital		
Total transportation rate base	1,173,130	675,376
Return at 6½%	76,253	43,899

Note A: When Jupiter bought up the Commonwealth-Marine properties at the end of 1961, it was on the basis of a study showing that the gas transportation function in the Rollover (Louisiana offshore) field had total recoverable gas reserves of 1,337,419 MMCF, of which 362,133 MMCF (or 27.08%) had been recovered by December 1, 1961 (6T999). Computing depreciation in that proportion for 1962, there results a reserve of $431,624, or less than half the amount accrued "per books."

By way of verification, if there were to be found applicable, a rather normal pipeline service life of 33 years (3.03% annual rate), and a depreciation reserve were computed on the customary straightline basis (ignoring salvage), the accumulated reserve as of January 1, 1963, after nine years service, comes close to the same amount, *i.e.*, $434,696.

2. Income Tax Adjustment on Allowable Return:

Increasing the net return from $43,899 to $76,253 requires a corresponding change in the income tax allowance, as follows:

	Examiner	Staff Exhibit S-1
Gross income from return allowance	$76, 253	$43, 899
Expense deductions for taxable net income:		
Allocation of interest expense (Note B)	4, 760	3, 006
Statutory rate adjustment	13, 542	13, 542
Total deductions	18, 302	16, 548
Taxable income base	57, 951	27, 351
Federal income tax on above base	53, 493	25, 247

Note B: The increase in the depreciated net plant in transportation service (par. 1 above) results in a small increase in the allocation of general firm interest expense and reduces to that extent the taxable income base.

3. Cost of Service as Adjusted:

Total cost of service per Staff Exhibit S-1		$4, 146, 911
Less cost of purchased gas		3, 872, 652
Staff's net cost of service for transportation (S-2)		274, 259
Return allowed in par. 1 above	$76, 253	
Return allowed in Staff Exhibit S-1	43, 899	32, 354
Income tax allowance in par. 2 above:	53, 493	
Income tax allowed in Staff Exhibit S-1	25, 247	28, 246
New transportation cost of service as adjusted by Examiner		334, 859

Cost applied to 1962 volumes: $334,859÷52,995,852 Mcf=0.632¢/Mcf (compared with 0.518¢ in Staff Exhibit S-2, Sch. 4).

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. RP66-14

ORDER APPROVING SETTLEMENT, ACCEPTING REVISED TARIFF SHEETS FOR FILING AND TERMINATING PROCEEDING

(Issued June 28, 1966)

Montana-Dakota Utilities Co. (Montana-Dakota), on June 13, 1966, submitted for filing a proposed settlement agreement in this proceeding, together with a motion that the interim decision procedure be dispensed with herein and that the attached tariff sheets be allowed to take effect as of June 15, 1966.

The proposed settlement provides for a rate of 29¢ per Mcf for sales of natural gas on a firm basis and a rate of 26¢ per Mcf for interruptible sales. Additionally, the company agrees that it will not file for any rate increase for a period of 3 years from the effective date of the proposed rate schedule.

This proceeding was initiated by a tariff filing made by Montana-Dakota on October 28, 1965, wherein it proposed: (1) an increase in rates for firm service for entire requirements and partial requirements customers from 22¢ per Mcf to 41.5¢ per Mcf; (2) initiation of an interruptible service under a rate schedule providing for a rate of 32.5¢ per Mcf; and (3) elimination of its existing specific contractual form of rate schedules and substitution of the tariff form of rate schedule. Montana Dakota requested that its proposed tariff filing be made effective as of December 15, 1965.

By order issued December 14, 1965, the Commission suspended the aforementioned filing until May 15, 1966.[1] That order also prescribed the dates for filing of testimony and exhibits and for convening of a prehearing conference thereon on May 10, 1966. In the interim, discussions were initiated among the parties to the proceeding, looking toward resolution of the issues and settlement. On June 9, 1966, the aforementioned settlement agreement was made a matter of record at a pre-hearing conference before the presiding examiner, and the conference was recessed to reconvene on June 16, 1966, to afford the parties an opportunity to respond to that settlement proposal.

On June 10, 1966, the Public Service Commission of Wyoming filed a Notice of Withdrawal of its intervention, conditioned upon the Commission's approval of the settlement agreement. On June 14, 1966, the Wyoming Gas Company, an intervener, advised that it joined in Montana-Dakota's proposal, subject to concurrence therein by Magnet Cove Barium Corporation, its largest industrial customer and an intervener in the proceeding. The concurrence of that industrial customer was made a matter of record at the reconvened prehearing conference on June 16, 1966.

The Commission staff on May 16, 1966, served its testimony and exhibits in this proceeding, wherein it proposed a rate of 30¢ per Mcf for firm service and 26¢ per Mcf for interruptible service. Accordingly, the Commission staff concurs in the proposed settlement.

The Commission finds:

(1) The settlement of this proceeding on the basis of the proposal herein summarized and as more fully set forth on the record as reasonable, proper and in the public interest in carrying out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter provided.

(2) The tariff sheets submitted by Montana-Dakota should be allowed to become effective as of June 15, 1966.

The Commission orders:

(A) The settlement of this proceeding on the basis of the agreement set forth on the record and in the motion filed by Montana-Dakota on June 13, 1966, hereby is approved and accepted.

(B) The tariff sheets submitted for filing by Montana-Dakota with its motion: Original Sheets Nos. 5C, 5D, 5E, 17B, 20B; First Revised Sheets Nos. 5, 5A, 5B, 6, 17, 17A, 18, 20 and 20A; and Second Revised Sheets Nos. 1 and 4 to Montana Dakota's FPC Gas Tariff, Original Volume No. 4, are accepted for filing, to be effective as of June 15, 1966.

(C) The proceeding in this docket hereby is terminated.

---

[1] The increased rates proposed by Montana-Dakota in its October 28, 1965 filing were not made effective or collected by the company.

CITY AND COUNTY OF DENVER, COLORADO, PROJECT NO. 2204

ORDER ADOPTING PRESIDING EXAMINER'S INITIAL DECISION

(Issued June 29, 1966)*

Syllabus

1. Where there is no difference with respect to facts, and parties and Examiner agree, matter may be submitted for decision on stipulated set of facts without taking testimony. P. 1137.
2. Ultimate responsibility for issuance of a license which would assure operation of hydroelectric project in best interest of public has been delegated by Congress to the Commission. P. 1140.
3. Section 10(a) of the Federal Power Act confers authority on Commission to impose such license terms and conditions as in its judgment best adapts project for "public beneficial uses," including recreational and fish and wildlife conservation. P. 1141.
4. Argument that failure to delete Article 25 and substitute fish and wildlife agreement would subject licensee to dual regulation by Federal Power Commission and Interior Department is rejected—clearly licensee's primary responsibility, insofar as project operation is concerned, is to the Commission. P. 1141.
5. Special conditions are inserted in license to assure maintenance of minimum fishery pool and release of sufficient water to support fish habitat below dam, not subject to contingencies of fish and wildlife agreement. P. 1141.
6. Inclusion of Article 25 and special conditions will enable Commission to discharge its duty under Section 10(a) of the Act by retaining authority sufficient to protect fishery resource. P. 1142.
7. Article 25 may never be invoked; imposes no present obligation on licensee beyond that contained in license as originally issued; and no additional obligation may be imposed without notice and opportunity for hearing. P. 1142.
8. Whether power generated at Williams Fork Project is incidental is not germane—Section 23(b) of the Act requires a municipality, among others, to obtain a license where hydroelectric power is to be developed on, and by utilization of, lands of the United States. P. 1143.
9. Obvious purpose of Section 10(c) of the Act and Article 14 is to insure operation of project in best interests of the public. P. 1143.
10. Municipalities are specifically exempted from recapture provisions of Section 14 of the Federal Power Act. P. 1144.
11. Section 8 of the Act specifically delegates to Commission right to require that no voluntary transfer of license or rights thereunder be made without Commission's written approval. P. 1145.
12. Under Article 30 Denver has right and duty to deny public access to dam and power plant, or to any "precipitous or dangerous" roads, should public interest require. P. 1146.
13. Reasonable fee may be charged for use by public of recreational facilities furnished or constructed by Licensee or its concessionaires. P. 1147.

---

*Initial decision appears on p 1136.

14. Upon rehearing, Commission *amends* prior order issuing license under Section 4(e) of the Federal Power Act.

Glenn G. Saunders and *Willard S. Snyder* for City and County of Denver, Colorado.

David A. Watts for the Secretary of the Interior.

Robert Delaney for Middle Park Water Conservancy District.

John D. Lane and *William J. Madden* for the Staff of the Federal Power Commission.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

This proceeding arises from an application for license filed by the City and County of Denver, Colorado for certain project works constructed and to be constructed on the Williams River, a tributary of the Colorado River. By order of January 31, 1963, the Commission issued a license to Denver, 29 FPC 192. Denver and the Middle Park Water Conservancy District have filed applications for rehearing.

The issues in the proceeding were principally concerned with conditions in the license relating to the operation of the project in connection with other projects on tributaries of the Upper Colorado River and in connection with conservation of fishery resources.

The decision issued March 17, 1966, by Presiding Examiner Martin E. Rendelman discusses the facts at length, rejects certain of the arguments made by the parties, accepts others and amends the license in certain particulars.

No exceptions have been filed to the examiner's initial decision by any of the parties to these proceedings. We have examined the evidence of record, the briefs filed and the examiner's decision, and we are of the opinion that the examiner's decision should be adopted as our order.

The Commission orders:

The initial decision of the presiding examiner issued herein on March 17, 1966, is hereby adopted and such decision shall become effective as the decision of the Commission as of the date of issuance of this order.

INITIAL DECISION
OF THE PRESIDING EXAMINER ON APPLICATION FOR AMENDMENT OF THE LICENSE

(Issued March 17, 1966)

RENDELMAN, *Presiding Examiner:* The original application for a license under the Federal Power Act for certain project works constructed and to be constructed on the Williams River, also known as the Williams Fork River in Colorado, designated as Project No. 2204, was filed by the City and County of Denver (Denver) on May 11, 1956, and supplemented at various times thereafter.

As reported in the Order Issuing License (Major) dated January 31, 1963:[1]

> The original dam and water supply reservoir on Williams Fork River were completed and put into use during 1941, as primarily a municipal water supply system, under a permit issued by the Bureau of Land Management of the Department of the Interior. In its application, Applicant seeks a license to authorize the then existing project works, and future

[1] 29 FPC 192.

> enlargement of the existing dam and installation of a 3,000 kilowatt generating unit in the reservoir on Williams Fork River. * * *

By order dated December 5, 1956, the Commission approved the application to intervene of the Middle Park Water Conservancy District of Granby, Grand County, Colorado (Middle Park) "limited to matters affecting asserted rights and interests specifically set forth in the petition for leave to intervene".

By letter dated December 27, 1956, Denver's Board of Water Commissioners was advised by the Federal Power Commission that no objection would be interposed to its proposal to award contracts for electrical equipment and proceed with construction at Denver's risk. It appears that the Project was thereafter completed and placed in operation on July 25, 1959.

By order dated January 31, 1963, the Commission issued a license to Denver (29 FPC 192) subject to the terms and conditions set forth in Form L-2, December 15, 1953 (17 FPC 62) with certain exceptions such as the omission of Articles 20 and 21 dealing, respectively, with the determination of the actual legitimate original cost of the project and the establishment of an amortization reserve account. These standard articles derive from Sections 4(b) and 10(d) of the Federal Power Act and are not applicable to State or Municipally-owned projects (Act of August 15, 1953, 67 Stat. 587, 16 U.S.C. 828). In addition, the license was made subject to certain special conditions, as hereinafter discussed, specifically applicable to this project.

On February 27, 1963, Denver filed an application for a rehearing with respect to several conditions of the license including those concerning fish and wildlife resources. On February 28, 1963, Middle Park also applied for a rehearing based on its claim of alleged water rights on the Williams River upstream from Project No. 2204, and its allegation that operation of Project No. 2204 is in violation of the Federal Power Act.

On March 4, 1963, the Secretary of the Interior filed a petition to intervene and a motion to set aside the license order. Additionally, on the representation that negotiations were in progress with reference to conservation matters, it was requested that all proceedings be held in abeyance until June 1, 1964. The continuance was granted and the resulting agreement as set forth in a letter from Denver dated September 30, 1964, and in letters from the Secretary of the Interior dated October 12 and 29, 1964, was submitted to the Commission. By order dated February 9, 1965, the Commission granted the petition to intervene filed by the Secretary of the Interior limited to matters affecting fish and wildlife resources, and set the hearing date for April 13, 1965. On the further representation that Denver and Middle Park were also attempting to reach agreement, the parties on April 2, 1965, filed a joint motion requesting that a prehearing conference be held no earlier than July of 1965, and that a hearing date thereafter be set by the Presiding Examiner. By order dated April 12, 1965, the Commission granted the continuance and directed that the prehearing conference be convened on July 20, 1965.

At such prehearing conference attended by the applicant, the intervenors and Commission Staff Counsel, Denver advised that it had withdrawn its objection to Article 29(ii) of the license dealing with annual charges for the use, etc., of United States lands and Article 31 dealing with the filing of the Recreational Use Plan. It was then further agreed by the parties, with the concurrence of the Presiding Examiner, that since there were no differences with respect to the facts concerned herein, the matter could be submitted for decision on a stipulated set of facts without the taking of testimony, as supplemented by the record of the prehearing conference and the briefs to be submitted by the parties. The stipulation of facts thereafter submitted is attached hereto as Appendix A.

The Williams Fork River is a tributary of the Colorado River in the region of the villages of Hot Sulphur Springs and Parshall in Grand County, Colorado and affects lands of the United States. It is the middle river of three rivers which flow westerly into the Colorado River from the Continental Divide. Upstream is the Fraser River from which Denver diverts water to the eastern slope by means of the Moffat Tunnel. Downstream is the Blue River supplying the Dillon Reservoir from which water is similarily diverted for Denver's use through the Roberts Tunnel. (Appendix B)

The Williams Fork Project was constructed for, and is intended to serve several purposes including irrigation, power generation, fish and wildlife conservation, recreation, and replacement storage for municipal water supply. By means of the Jones Pass Tunnel, Denver diverts water from the Williams Fork River to the eastern slope of the Continental Divide for municipal water supply use in the Denver metropolitan area. Storage from the Williams Fork Project does not reach the eastern slope but enables Denver to replace water diverted through the Continental Divide tunnels during periods when such diversion would conflict with downstream senior water rights on the Colorado River. The project also enables Denver to store water on the eastern slope of the Continental Divide, City and County of Denver, 10 FPC 766 (February 27, 1951) and 10 FPC 1411 (October 2, 1951), Project No. 2035. Water is also exchanged by means of this project with the Bureau of Reclamation, which has a replacement reservoir on the Blue River, the downstream tributary of the Colorado River. In accordance with a federal court consent decree, *United States of America* v. *Northern Colorado Water Conservancy District*, Civil No. 2782, 5016, 5017, Denver, *inter alia*, is required to replace power that the Bureau of Reclamation would have generated on the Blue River at its Green Mountain Project had Denver not diverted the water required for operation of the Williams Fork Project.

The principle point of contention among the parties is Article 25[2] of the license which concerns fish conservation facilities and structures and reads as follows:

> The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such fishways including fish traps, or other fish handling facilities or fish protective devices and supporting facilities for artificial propogation and comply with such reasonable modifications of the project structures, and operation in the interest of fish life as may be prescribed hereafter by the Federal Power Commission upon its own motion or upon the recommendations of the Secretary of the Interior, or the Colorado Department of Fish and Game, after notice and opportunity for hearing and upon a finding based on substantial evidence that modifications are necessary and desirable, and consistent with the provisions of the Act.

Denver and Interior urge the deletion of Article 25 and that the fish and wildlife agreement (Appendix C) between them be substituted. Denver contends that the Fish and Wildlife Service of the Department of Interior is the agency of the Government primarily charged with fish and wildlife conservation, and that when detailed provisions for fish and wildlife conservation specifically applicable to the particular project have been negotiated between the operator of the project and the agency charged with the responsibility therefor, the Federal Power Commission should not superimpose thereon its own standard general provisions which are of general application and may in large measure be entirely inappropriate. Moreover, argues Denver, it should not be put in a position where it must deal with two different Government agencies under different terms with regard to the same subject matter.

---

[2] The Commission's order of January 31, 1963, 29 FPC 192 subjected the license issued therein to the terms and conditions set forth in Form L–2, December 15, 1953 (17 FPC 62). Article 25 of the instant license with some language changes is now Standard Article 10 Form L–2 (31 FPC 528, 530) (1964).

Interior initially concurs in the position taken by Denver but concludes with the caveat that "in retrospect it is quite apparent that the exact language of the agreement cannot be incorporated into the license." Other suggested provisions are then presented for inclusion in the license in lieu of Article 25.

The fish and wildlife agreement between Denver and Interior provides in Section 1 that Denver will maintain a minimum fishery pool of 1,000 acre feet in the Williams Fork reservoir which may be drawn down from this level for the repair of project facilities or increased benefit to the fishery resource. Section 2 requires that Denver permit public access and use of the land and water areas of the project for public recreational projects including boating. These areas, however, may be closed or public use limited if such use will endanger health or life, or interfere with the efficient operation of the reservoir.

Section 3 requires Denver to designate certain areas around the reservoir for camping, parking and related uses by the public pursuant to agreement with the State of Colorado Game, Fish and Park Commission for the operation and maintenance of these facilities.

Section 4a of the agreement provides that Denver will at all times release from the reservoir not less than 15 cfs of water, or inflow, whichever is less, except during an emergency or during repair of project facilities. The purpose of this section is the replacement of water diverted from the Blue and Fraser Rivers for municipal use in Denver, approximately 70 percent for replacement of the Blue River diversions and 20 percent for diversions from Fraser River. Replacement of the waters thus diverted is intended to satisfy the senior rights of downstream water users on the Williams Fork, Blue and Colorado Rivers and to replace the loss in generating power at Interior's Green Mountain Dam. Inasmuch as Denver has little if any diversion facilities at the head waters of the Williams Fork River, the required flow of "15 cfs or inflow whichever is less" would appear to be adequate for this purpose. Limitation of the release of reservoir inflow water for the benefit of the fishery when such inflow is less than 15 cfs is required to protect Denver against dry years when the demands for municipal water is heaviest.

Section 4b of the agreement requires Denver to continue to release through the dam 15 cfs during the irrigation season when downstream users having senior water rights divert water below the dam, in addition to the releases necessary to satisfy such senior water rights. However, should the inflow not be sufficient to meet the 15 cfs release schedule plus the water demands of irrigators with senior water rights, then only the inflow will then be passed through the dam for the benefit of the fishery resource. This section is then made subject to Section 4b(1) which requires that the Colorado Commission of Game, Fish and Parks obtain separate agreements with each of the downstream diverters guaranteeing that the water released, in addition to the water released for irrigation purposes, will not be diverted but will be passed for the benefit of the fishery resources. The operation of Section 4b is thus made contingent upon the procurement of these agreements.

Section 4b(2) permits discontinuance of the additional releases to maintain fishery habitat, as delineated in Section 4b, if it is found by officials of the State of Colorado that downstream users are in fact diverting such water.

Section 4c provides for consultation between the licensee and the Colorado Game, Fish and Parks Commission for a revision of the release schedule in the event the amount of water and storage in the Williams Fork Reservoir is insufficient to meet replacement requirements. It is further provided therein that "in the absence of agreement as to said revisions the matter shall be subject to determination under applicable law without regard to these conditions."

Commission Staff Counsel objects to the verbatim inclusion of the agreement in the license in lieu of Article 25 on the ground that "the terms of the agreement * * *, standing alone, are unclear and difficult to incorporate in the license." Staff's objections run mainly to the contingency contained in paragraph 4b(1) which conditions Denver's obligation to release the water necessary for fish preservation during the irrigation season, a quantity over and above that necessary to satisfy the senior rights and needs of downstream irrigators, upon the procurement of agreements by the Colorado Game, Fish and Park Commission with downstream users not to divert such water. Staff validly points out that the Colorado Commission is not a party to the Agreement and that this Commission therefore has no authority to require procurement of these agreements by the Colorado Commission. Thus if no agreements were to result, Denver, without regard for the Federal Power Commission, could discontinue releases of water for fish preservation during the irrigation season in the event of diversion of the extra water by irrigators below the dam.

Staff additionally calls attention to the fact that, despite the mandatory language in paragraph 4c which requires that the "Colorado Game, Fish and Parks Commission shall, upon notice, by the Licensee, consult with the licensee for the purpose of reviewing the aforesaid release schedule and making revisions thereon for the duration of said shortage," if such a shortage occurred there is no authority in this Commission to compel such consultation, or maintenance of the releases necessary for fish habitation during and after consultation, if no mutually satisfactory revision derived therefrom. The proviso in this section, that in the absence of agreement as to the revision of release schedules that "the matter shall be subject to determination under applicable law * * *", is furthermore much too vague and provides something less than a definitive solution to the problem. What is the applicable law? At what point is such law to be invoked? Must both parties consent before resort is made thereto? These and similar questions remain unanswered by the agreement.

It is undisputed, as argued by Denver, that the Fish and Wildlife Coordination Act (16 U.S.C.A. Sec. 662(a)) requires consultation with the United States Fish and Wildlife Service of the Department of Interior and the agency of the state exercising administration over wildlife resources prior to construction which would alter the natural course of a "stream or other body of water." However, the ultimate responsibility for the issuance of a license which would assure the operation of a hydroelectric project in the best interests of the public has been delegated by Congress to the Federal Power

Commission. Assuming, as suggested by Denver, that the fish and wildlife agreement is the recommendation resulting from the "consultation" required by Sec. 662(a), this Commission, in the absence of any cited authority making inclusion of such recommendation in the license mandatory, would be remiss in its duty to the public, if it unqualifiedly accepted such recommendation despite its cognizance, as related to the public interest, of the infirmities and defects contained therein.

This conclusion is, moreover, confirmed by Section 10(a) of the Federal Power Act, 41 Stat. 1068 (1920) as amended, 16 U.S.C. Section 803(a) (1964), which confers upon this Commission authority to incorporate into the license for a hydroelectric project such terms and conditions as in its judgment best adapt the project "for the public beneficial uses", including recreational uses and fish and wildlife conservation. *State of Iowa, et al.* v. *Federal Power Commission*, 178 F. 2d 421, 428 (CA8–1949); *Namekagon Hydro Company* v. *Federal Power Commission*, 216 F. 2d 509 (CA7–1954); *Pacific Power & Light Company, et al.* v. *Federal Power Commission*, 333 F. 2d 689 (CA9–1964); *State of California, et al.* v. *Federal Power Commission*, 345 F. 2d 917 (CA9–1965); *Department of Water Resources of the State of California, Project No. 2100*, 17 FPC 262 (1957); *Duke Power Company, Project No. 2232*, 20 FPC 360; *Turlock Irrigation District, Project No. 2299*, 31 FPC 510; and *Public Utility District No. 1, Skamania County, Washington, Project No. 2199*, 32 FPC 444. *Cf., Pacific Northwest Power Company, Project No. 2243*, 31 FPC 247.

As recently reiterated by the Court in *Northwest Paper Company* v. *Federal Power Commission*, 344 F. 2d 47, 51 (1965):

> * * * The various Acts of Congress forming the background for the Federal Water Power Act of 1920, as amended by the 1935 Act, are indicative not only of an intention to fully develop the water resources, and to protect the national interest, but of an intention to centralize the authority over such resources in one Government agency. * * *

Denver's argument that failure to delete standard Article 25 and substitute the fish and wildlife agreement would subject Denver to dual regulation is thus not well taken. From the authorities hereinabove cited it is clear that, as licensee of the instant project, Denver's primary responsibility insofar as operation of the project is concerned, is to the Federal Power Commission.

It is therefore found that the maintenance of a minimum fishery pool and the release of a quantity of water sufficient to support fish habitat below the dam, not subject to the contingencies of the fish and wildlife agreement, should be assured. Accordingly, in addition to Article 25, the following special conditions should be included in the license:

Article 32. The Licensee shall maintain a minimum fishery pool of 1,000 acre feet in Williams Fork Reservoir below which the reservoir shall not be drawn except under the following conditions:

(a) when such drawdown is necessary to make repairs to protect facilities, or

(b) when it is mutually agreed upon between the Licensee and the Colorado Department of Game, Fish and Parks that draining below this level is beneficial to fish management.

Article 33. For conservation of the fishery in the Williams Fork River below the project dam and integral powerhouse the Licensee shall release from Williams Fork Reservoir not less than 15 cfs of water on the inflow, whichever is less, at all times except during an emergency beyond the control of the Licensee, or as may be necessary during temporary periods of time involving maintenance or repairs on the water facilities involved.

Article 34. During the irrigation season, when downstream users are diverting water from the Williams Fork River below Williams Fork Dam pursuant to water rights senior to those of the Licensee, the Licensee shall pass not less than 15 cfs of water through said reservoir in addition to the water being diverted for use by these downstream rights. If the inflow into Williams Fork Reservoir is insufficient to provide these combined flows, only the inflow will be passed.

Article 35. The Commission reserves the right to require the Licensee to adjust the water releases to maintain fish habitat, provided for in Articles 33 and 34, upon petition by the Secretary of the Interior, the Colorado Game, Fish and Parks Commission or the Licensee, and after notice and opportunity for hearing.

That, as claimed by Denver, the type of structures referred to in Article 25 such as fishways and fishtraps, etc., may be unsuited to this particular project does not, in any case, defeat the purpose for which it is included. Section 10(a) of the Federal Power Act charges this Commission with, the duty of issuing licenses "best adapted * * * for beneficial public uses * * *". Inclusion of Article 25 and the proposed special conditions will enable the Commission to discharge that duty by retaining authority sufficient to protect the fishery resource.

It might also be pointed out that Article 25 may never be invoked and imposes no present obligation on Denver beyond that contained in the license as originally issued. Nor can any additional obligation be imposed without notice and opportunity for hearing "and upon a finding based on substantial evidence that modifications are necessary and desirable, and consistent with the provisions of the Act." *Portland General Electric Company* v. *Federal Power Commission*, 328 F. 2d 165, 175–176.

ADDITIONAL ARTICLE OF THE LICENSE TO WHICH EXCEPTION IS TAKEN

Denver requests deletion of standard Article 14,[3] Form L–2, 17 FPC 62, 65 (1953) from the license, claiming that its primary purpose is to provide, pursuant to rules and regulations prescribed by the Federal Power Commission, for the conservation and utilization of natural waters for power generation, whereas the primary purpose of the Williams Fork Project is to provide water for municipal purposes, the generation of power from this project being a merely incidental function. It is argued that Denver owns its own water works system controlled by its own Board of Water Commissioners, which Board has the responsibility of providing an adequate supply of water to the inhabitants of the City and County of Denver. Since Article 14 of the license, says Denver, vests control of the Williams Fork Project in the Federal Power

---

[3] Article 14, Form L–2 (1953) is as follows: "The operations of the Licensee so far as they affect the use, storage, and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Commission may prescribe for the purposes hereinbefore mentioned."

Article 14 appears in the 1964 revision of Form L–2, without change in language, as Article 5. See 31 FPC 528, 529 (1964).

Commission which does not have that responsibility the assumption of such control therefore constitutes a taking of property without due process of law.

Whether the power generated at the Williams Fork Project is incidental, while debatable, is really not germane to the issue. The fact is that Section 23(b) of the Federal Power Act requires a municipality, among others, to obtain a license from the Federal Power Commission where hydroelectric power is to be developed on, and by utilization of, lands of the United States. In connection with such projects Section 10(c) of the Act delegates to this Commission the right to prescribe guidelines so that the project is operated with regard "for the protection of life, health, and property". It is by means of Article 14 of the license that the Commission retains the authority necessary to prescribe such rules, when and if necessary. Since the Commission has as yet prescribed no such rules or regulations Denver's protest is in any case premature and would seem to be directed more to the mandatory procurement of a license, and to the possible restrictions that could be imposed thereunder, than to Article 14 in and of itself.

Denver, moreover, cites no authority to support its view that the language of Article 14 is directed primarily to the conservation and utilization of "such waters for power purposes". The language of Article 14 makes it quite clear that in accordance with the duty delegated to the Commission by Section 10(c) of the Act, such regulations as may be promulgated are concerned, first, with operation of the project so as to protect life, health and property; second, to prevent the waste of water which could be used for power generation; and third, for "other beneficial public uses." The obvious purpose of Section 10(c) of the Act and of Article 14 is to insure operation of the project in the best interests of the public.

Denver's argument that the issuance of regulations by the Federal Power Commission governing the operation of this project would constitute a taking of property without due process of law is novel, if not convincing. The short answer is that the lands concerned "are lands of the United States". That, as pointed out by Denver, the Commission saw fit to exclude standard Article 14 from the license issued in connection with Denver's Gross Reservoir, Project No. 2035, does not in the absence of any showing that the situations are parallel compel such action here. There is nothing in the record in this case to indicate what the circumstances may have been in connection with Gross Reservoir which justified exclusion of Article 14 from the license. On the facts in this proceeding its retention appears warranted.

Standard Article 15,[4] as presently included by reference in the license, requires Denver to take no action which would restrict use of water from this project for fire suppression, or for sanitary or domestic purposes, by the United States or its agents. Denver proposes amendment of this article limiting its obligation to supply water for the suppression of "existing" fires only, and relieving it entirely from the requirement, to furnish water for sanitary and domestic purposes. Denver, while acknowledging the necessity for supplying water to combat existing fires, sees no purpose to the storage of water for general fire fighting purposes, or for permitting use of the water for sanitary or domestic uses by others when the reason for construction of the project in the first place was to augment the admittedly limited supply of water available for municipal use.

---

[4] Article 15, Form L-2 (1953) is as follows: "The Licensee shall interpose no objection to, and shall in no way prevent, the use by the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for fire suppression from any stream, conduit or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license, or to the use by said parties of water for sanitary and domestic purposes from any stream or body of water, natural or artificial, used by the Licensee in the operation of the project works covered by the license."

Article 15 appears in the 1964 revision of Form L-2 (31 FPC 528, 532), without substantial change, as Article 23.

Staff's objection to the suggested amendment runs not to the merits of the proposal but stresses the fact that under the authority contained in Section 10(g) of the Federal Power Act the Commission is empowered to include in the license "such other conditions not inconsistent with the provisions of this Act * * *".

It is hardly necessary for the Commission to demonstrate that as "guardian of the public domain", *Federal Power Commission* v. *Idaho Power Co.*, 344 U.S. 16, 23, it has undeniable authority to include reasonable conditions in a project license, *United States* v. *City and County of San Francisco*, 310 U.S. 16. Insistence upon inclusion of Article 15 as is, and for no other reason, would constitute nothing more than an exercise of authority, a tactic which should be foreign to Commission policy. The courts have voiced disapproval of a Commission response to a valid argument urging deletion of an article in a license consisting of nothing more than an "assertion that the article is within its powers and in the public interest." *Rumford Falls Power Company* v. *Federal Power Commission*, 355 F. 2d 683 (CA1–1966). Accordingly, no valid objection to the merits of the suggested amendment having been offered, and it appearing that inclusion thereof in its original form could contribute substantially to frustration of the intended purpose of this project, it is found that Article 15 of the license should be amended to read as follows:

> *Article 15.* The Licensee shall interpose no objection to, and shall in no way prevent, the use by the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for suppression of an existing fire from any stream, conduit, or body of water, natural or artificial, used by Licensee in the operation of the project work covered by the license.

The first sentence of Article 23 of the license deals with the retention of project property. The second sentence then defines the responsibilities and obligations of the Licensee "in the event the project is taken over by the United States, upon termination of the license * * *". Denver correctly points out that municipalities are specifically exempted from the recapture provision of Section 14 of the Federal Power Act, 67 Stat. 587 (1953), 73 Stat. 271 (1959), 16 U.S.C. 828, and that such provision, included in the license, insofar as it may refer to Denver, is therefore inapplicable.

Without citation of any authority which supports its position, however, Denver also objects to inclusion of the initial sentence of Article 23 on the ground that it conflicts with Section 27 of the Federal Power Act, 16 U.S.C. 821, which reads as follows:

> SEC. 27. That nothing herein contained shall be construed as affecting or intending to affect or in any way to interfere with the laws of the respective States relating to the control, appropriation, use, or distribution of water used in irrigation or for municipal or other uses, or any vested right acquired therein. [41 Stat. 1077; 16 U.S.C. 821]

It is clear that this section applies to a conflict between Federal and State law only with respect to the use of, and vested rights to, the water concerned in the project. It is not concerned with the transfer or disposition of other project property.

Section 8 of the Federal Power Act, moreover, specifically delegates to the Commission the right to require that "no voluntary transfer of any license or the rights thereunder granted, should be made without the written approval of the Commission; * * *". In view of the regulatory responsibility conferred by this section of the statute, it is essential that the Commission keep itself informed as to the status of project property. Inclusion of the first sentence of Article 23 in the license makes it possible for the Commission to perform this function.

Accordingly, Article 23 of the license will be modified by deletion of the second sentence. Similar action was taken by the Commission in the *Turlock Irrigation District and Modesto District, Project No. 2299*, 31 FPC 510, 525.

Articles 27 and 28[5] deal with the coordination of project operations electrically and hydraulically with other power systems, and with the installation of additional capacity, respectively, as the Commission may direct after notice and opportunity for hearing. Both Denver and Interior urge deletion of Articles 27 and 28 based on a showing that the operation of the Williams Fork Project is already coordinated both by court decree and by the existing working arrangement between Interior's Bureau of Reclamation and Denver.

As part of its overall domestic waterworks system Denver owns and operates the Dillon Reservoir on the headwaters of the Blue River. Located downstream on the same river is the Bureau of Reclamation's Green Mountain Reservoir, operated as part of its Colorado-Big Thompson Project. Competition for the waters of the Blue River led to extensive litigation, *United States v. Northern Colorado Water Conservancy District, et al.*, Civil Nos. 2782, 5016, 5017, U.S.D.C. Colorado (the Blue River Case), which resulted in a court decree which was incorporated by Congress in Section 11 of the Colorado River Storage Project Act of 1956, 70 Stat. 105 as amended 16 U.S.C., Section 620, 620-J 1964.

Stated simply, under the terms of the court decree Denver is permitted, subject to the consent of the Secretary of the Interior, which may not be unreasonably withheld, to replace by exchange, the waters diverted from the Blue River for storage in the Dillon Reservoir with waters stored elsewhere. The Williams Fork Project was constructed by Denver, *inter alia*, for this purpose. In practice the exchange from the Williams Fork Project is effected by replacement of the power which would have been generated at Interior's Green Mountain Reservoir by the waters diverted for Denver's Dillon Reservoir with power generated at Williams Fork and by replacement from the storage reservoir of the Williams Fork Project of the water needed at Green Mountain Reservoir to meet the needs of senior downstream water users. The court decree does not, however, specifically require that the replacement functions be accomplished by operation of the Williams Fork Project. Denver may replace the power loss at Green Mountain Reservoir, suffered by reason of the diversions at the Dillon Project, with either substitute power (*i.e.*, power generated elsewhere) or compensate the United States directly for the revenues lost by reason of the enforced reduction in generating capacity at Green Mountain. It is interesting to note that, in support of its position, Interior states that Denver contemplates no change in the existing method of performing the requiring replacement function from the Williams Fork Project. Denver, on the other hand, offers as further reason for deletion of Articles 27 and 28 the fact that it may at some future time desire to replace the water or power loss at Green Mountain from other sources because of changing conditions. Perhaps the coordination required by Article 27 with respect to Denver's and Interior's respective water and power projects should similarly have been required of their respective briefs. Both urge the same end but for inapposite reasons.

---

[5] Articles 28 and 27 are special conditions which became standard Form L-2 articles in the revision of 1964. Article 28, without change, and Article 27, with certain language changes, are now, respectively, standard Articles 8 and 9, Form L-2, 31 FPC 528, 530 (1964).

Article 27 is as follows: "The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically with such other power systems and in such manner as the Commission may direct in the interests of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination."

Article 28 is as follows: "The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing."

In any case, the public interest requires the inclusion of Articles 27 and 28 in the license. There is no indication that the failure to delete Articles 27 and 28 would have any immediate effect on the existing methods for replacement of Green Mountain Reservoir water or power by means of which the terms and conditions of the court decree and Section 11 are carried out. Nor does it appear that the Commission, pursuant to the authority delegated in Articles 27 and 28, contemplates any change in the existing methods of operation. Moreover, as with Article 25 hereinbefore discussed, Articles 27 and 28 are "open end" conditions which impose no present obligation and specifically provide that the Commission may direct the action authorized therein only after notice and opportunity for hearing. Both Articles 27 and 28 preserve the right of the Commission to take such action only when the public interest so requires. Deletion of these specific conditions would constitute a waiver by the Commission of its responsibility and duty to insure operation of the project in the public interest.

Standard Article 19 reserves "to the appropriate department or agency of the United States, or of the state or county involved, the right to take over, maintain and supervise the use of any project road as a public road after construction of the project works is completed." Denver asks that there be added at the end thereof the phrase, "to the extent such action will not impair the control of the area for waterworks purposes of the Licensee." Denver perhaps overlooks Article 30 of the license which provides generally for free public access to the project area subject to the proviso "that the Licensee may reserve from public access such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health and property * * *". It is apparent that this language already reserves to Denver the right to do that which it seeks to accomplish by the proposed modification of Article 19. Under the above-quoted portion of Article 30 Denver would not only have the right, but would be under a duty, to deny public access to the dam and power plant, or to any of the "precipitous or dangerous" project roads, should the public interest so require.

With respect to Article 30[6] it is further requested that a sentence be added at the end thereof which would permit Denver to make a reasonable charge for use by the public of recreational facilities at the project sufficient to cover the cost of general maintenance, repair and replacement. Inasmuch as Denver is required under the terms of the existing license to maintain the project waters and adjacent project lands for public recreational purposes including hunting, fishing, and boating, it is appropriate that the public should pay a reasonable fee for the use thereof. To this extent Denver's request is reasonable and Article 30 will be modified by adding at the end thereof the following sentence:

> A reasonable fee may be charged for use by the public of recreational facilities furnished or constructed on the project by the Licensee or its concessionaires.

MIDDLE PARK WATER CONSERVANCY DISTRICT

The Middle Park Water Conservancy District (Middle Park) is a conservancy district created for the purpose of representing Grand and Summit Counties, wherein the basin of the Williams Fork Reservoir is located, in all water matters concerning the Colorado River and its tributaries. Middle Park's intervention in this proceeding, as stated in the Commission's Order of December 5, 1956, is "limited to matters affecting asserted rights and interests specifically set forth in the petition for leave to intervene; * * *".

Middle Park would have included in the license special conditions which would (1) subordinate the license to the terms of the 1964 Consent Decree in the Blue River case; (2) specifically require operation of the Green Mountain Reservoir and Power Plant in coordination with the Williams Fork Reservoir Power Plant so as to prevent damage to the existing facilities such as the head-gates and diversion works near Kremling and (3) restrain simultaneous peaking for power purposes at the Green Mountain and Williams Fork Reservoir so as to prevent damage to riparian owners due to adverse fluctuations in flow.

It does not appear that any present purpose would be served by subjugating the license issued herein to the 1964 Consent Decree. Middle Park demonstrates no instance where the project, since it was placed in operation in 1959 has been operated contrary to the terms of the 1955 Court Decree or that the provisions of the license, as issued in 1963, in any way presently conflict therewith. Nor has it been shown that there is any reason to anticipate that any inconsistencies between the existing license and the 1964 Court

---

[6] Article 30 (29 FPC 192, 196) is as follows: "The Licensee shall so far as is consistent with proper operation of the project, allow the public free access, to a reasonable extent, to project-waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property, and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings and other facilities shall not without its express agreement place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that Licensee may construct and maintain as required by the license."

In the revision of Form L-2 in 1964 (31 FPC 528, 531) Article 30, without substantial change, became standard Article 13.

Decree will arise in the future. The Commission was aware of the original 1955 Court Decree when the instant license was issued[7] but did not then see fit to make the modifications which Middle Park now requests. It is no answer that such modification may not have been requested at that time. The fact is that the Commission was required to, and it is to be assumed then did, take official notice of the outstanding decree. It presently thus appears that in the absence of any showing of a change in circumstances since the Williams Fork Project was placed in operation, there is no more reason to now make the license subject to the 1964 Consent Decree than there was to make the license subject to the 1955 Court Decree when the license was originally issued.

Insofar as the requested requirement for coordination of power generation at Williams Fork and Green Mountain for protection of riparian owners from the possible effects of adverse flows and simultaneous peaking is concerned, it similarly does not appear that there is any present necessity for inclusion of such a condition in the license. The Williams Fork Project has been in operation since 1959 and the Green Mountain Project for 11 years prior to that. If there were any evidence in this record of a specific instance, or instances, where a riparian land owner had suffered damage during the years when both projects were in operation because of a lack of coordination in the operation of the projects, or because of simultaneous peaking, some provision in the license to prevent the occurrence of such damage in the future would perhaps be appropriate.

Although Staff Counsel's statement that "In its application for rehearing of the license order, Middle Park stated that Denver's operation of the project was not presently injurious and did not claim present injury at the prehearing conference * * *", is refuted by Middle Park's statement in the aforementioned petition for rehearing that "at no time did the District advise, state, intimate or suggest that the matters not complained of by its Petition to Intervene do not presently occur.", on the evidence at hand, and in the absence of any convincing showing that the predicted contingencies are likely to occur in the future, the inclusion of the suggested provision in the license would be unwarranted.

The disposition hereinbefore made of the contentions of the parties with respect to the Fish and Wildlife Agreement between Denver and Interior eliminates the need for discussion, at this point, of Middle Park's position with respect thereto, or the arguments presented concerning the scope of Middle Park's intervention.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceedings, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions heretofore stated, that:

It is in the public interest that the license issued herein on January 31, 1963, 29 FPC 192, be modified and amended as hereinafter directed.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission, that:

(A) Paragraph (B) of the license order heretofore issued herein on January 31, 1963 is hereby rescinded and the following is substituted therefor:

> (B) This license is also subject to the terms and conditions set forth in Form L-2, December 15, 1953, entitled "Terms and Conditions of Li-

---

[7] The stipulation attached to the license application incorporates by reference the final judgment and decree.

cense for Unconstructed Major Project Affecting Lands of the United States" (17 FPC 62) which terms and conditions are attached hereto and made a part hereof, except for Articles 17, 20 and 21 and the last sentence of Article 23 thereof; and subject to the following special conditions set forth herein as additional articles:

(B) The following special conditions are hereby added to the aforementioned license order issued January 31, 1963, as Articles 32, 33, 34 and 35 of the license:

Article 32. The Licensee shall maintain a minimum fishery pool of 1,000 acre feet in Williams Fork Reservoir below which the reservoir shall not be drawn except under the following conditions:

(a) when such drawdown is necessary to make repairs to protect facilities, or

(b) when it is mutually agreed upon between the Licensee and the Colorado Department of Game, Fish and Parks that draining below this level is beneficial to fish management.

Article 33. For conservation of the fishery in the Williams Fork River below the project dam and integral powerhouse the Licensee shall release from Williams Fork Reservoir not less than 15 cfs of water or the inflow, whichever is less, at all times except during an emergency beyond the control of the Licensee, or as may be necessary during temporary periods of time involving maintenance or repairs on the water facilities involved.

Article 34. During the irrigation season, when downstream users are diverting water from the Williams Fork River below Williams Fork Dam pursuant to water rights senior to those of the Licensee, the Licensee shall pass not less than 15 cfs of water through said reservoir in addition to the water being diverted for use by these downstream rights. If the inflow into Williams Fork Reservoir is insufficient to provide these combined flows, only the inflow will be passed.

Article 35. The Commission reserves the right to require the Licensee to adjust the water releases to maintain fish habitat, provided for in Articles 33 and 34, upon petition by the Secretary of the Interior, the Colorado Game, Fish and Parks Commission or the Licensee, and after notice and opportunity for hearing.

(C) Articles 15 and 30 of the license order issued January 31, 1963, are here amended as follows:

Article 15. The Licensee shall interpose no objection to, and shall in no way prevent, the use by the agency of the United States having jurisdiction over the lands of the United States affected, or by persons or corporations occupying lands of the United States under permit, of water for suppression of an existing fire from any stream, conduit, or body of water, natural or artificial, used by Licensee in the operation of the project works covered by the license.

Article 30. The Licensee shall so far as is consistent with proper operation of the project, allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: Provided, that the

Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property, and Provided further, that the Licensee's consent to the construction of access roads, wharves, landings and other facilities shall not without its express agreement place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that Licensee may construct and maintain as required by the license. A reasonable fee may be charged for use by the public of recreational facilities furnished or constructed on the project by the Licensee or its concessionaires.

MARTIN E. RENDELMAN,
Presiding Examiner.

APPENDIX A (PROJECT 2204)

STIPULATION OF FACTS

1. Introduction

This stipulation is submitted in accordance with the request of the Presiding Examiner at the prehearing conference (Tr. 55) that there be submitted in writing a stipulation of facts and a statement of the position of the participants in this proceeding.

2. The Procedural Background

Application was filed on May 11, 1956, and supplemented on May 21, October 4, 5, and 29, 1956, January 18, May 31, and June 28, 1957, and April 27, 1962, by City and County of Denver (Applicant or Denver)—acting by and through and for the use of its Board of Water Commissioners—of Denver, Colorado, for a license under the Federal Power Act (Act) for certain project works, constructed and to be constructed, designated as major Project No. 2204, located on the Williams River, also known as the Williams Fork River, a tributary of the Colorado River, in the region of the Villages of Hot Sulphur Springs and Parshall in Grand County, Colorado, and affecting lands of the United States.

The original dam and water supply reservoir on Williams Fork River were completed and put into use during 1941 under a permit issued by the Bureau of Land Management of the Department of the Interior. In its application. Denver sought a license to authorize the enlargement of the then existing dam and installation of a 3,000 kilowatt generating unit in the reservoir on Williams Fork River. By letter of December 27, 1956, the Commission advised Applicant that it would interpose no objection to its proposal to award contracts for electrical equipment and to proceed with construction at the Applicant's risk. The project was completed and placed in operation by Applicant on July 25, 1959.[1]

On September 4, 1956, Middle Park Water Conservancy District (Middle Park), of Granby, Grand County, Colorado, filed a petition to intervene and protest. The Commission's order of December 5, 1956, permitted intervention "limited to matters affecting asserted rights and interests specifically set forth in the petition for leave to intervene."

---

[1] This chronology appears in the order of January 31, 1963, issuing a license. See 29 FPC 192.

A ground of the petition to intervene (*e.g.* pp. 4–5) was that Middle Park had secured appropriate rights on the Williams Fork River which it intended to utilize in the event the Parshall project should ultimately be authorized for federal construction under the Colorado River Storage Project Act.[2] An additional claim was that the operation of the power plant would of necessity affect vested rights of individuals to the use of the Williams Fork and Colorado Rivers and that one of the reasons for its existence was the protection of such rights (Petition, p. 21).

The Commission's order of January 31, 1963, issuing a license to Denver, subjected the license to the terms and conditions set forth in Form L–2, December 15, 1953 (17 FPC 62), with certain exceptions.[3] In addition the license was made subject to special conditions set forth in the order as additional articles numbered 25 to 31.

On February 27, 1963, Denver filed an application for rehearing of the order issuing a license, requesting rehearing with respect to certain conditions set forth in the order. Middle Park, on February 28, 1963, also applied for rehearing in aid of claimed water rights on the Williams Fork River upstream from Project No. 2204 and of its allegation that operation of Project No. 2204 was violative of the Federal Power Act.

Some conditions as to which Denver sought rehearing concerned conservation of fish and wildlife resources. On March 4, 1963, the Secretary of the Interior lodged a petition to intervene and protest and a motion to set aside the license order. Thereafter the Secretary and the Applicant requested that the proceedings be held in abeyance until June 1, 1964, in order to secure agreement between them and the Department of Game and Fish of the State of Colorado with reference to conservation. The continuance was granted and the resulting agreement was submitted to the Commission by letter of Applicant, dated September 30, 1964, and by letters of the Secretary of the Interior, dated October 12 and 29, 1964. See Items-by-Reference C, D, & E.

Denver, in its letter of September 30, 1964 (Item C), did not waive matters raised in its application for rehearing other than those particulars upon which agreement had been reached with the Secretary of the Interior. In view of Denver's objections to standard conditions bearing on fish and wildlife conservation, the Commission, by order of February 9, 1965, permitted the Secretary of the Interior to intervene and ordered a hearing to be held on April 13, 1965.[4]

On April 2, 1965, the Applicant and Middle Park filed a joint motion that a prehearing conference be set no earlier than July of 1965, and that a hearing date be set by the Presiding Examiner. Denver and Middle Park stated that a vigorous attempt was presently being made to reach an agreement and that there was strong likelihood that the requested postponement would result in an adjustment of long-standing differences. In accordance with this request the Commission, on April 12, 1965, ordered a prehearing conference to be held on July 20, 1965.

---

[2] 70 Stat. 105 (1956), 43 USC 620, et seq. Section 2 of the Act states: "In carrying out further investigations of projects under the Federal reclamation laws in the Upper Colorado River Basin, the Secretary shall give priority to completion of planning reports on the * * * Parshall * * * [and other] participating projects." The Parshall project is not included in the list of storage and participating projects authorized for construction in Section 1.

[3] For example, Ordering Paragraph (B) of the order issuing license (29 FPC 192, 195) excepts Articles 20 and 21 as these deal, respectively, with determining the actual legitimate original cost of the project and the establishment of an amortization reserve account. These standard articles are based on Sections 4(b) and 10(d) of the Federal Power Act which are not applicable to any project owned by a State or a municipality. See Act of Aug. 15, 1953, 67 Stat. 587, 16 USC 828.

[4] See Order Dismissing Motion, Permitting Intervention, and Fixing Hearing, Feb. 9, 1965.

A prehearing conference was held on July 20, 1965, attended by the Applicant, the Interveners (Interior and Middle Park), and the staff.

3. Special Conditions as to Which Objection Has Been Withdrawn by Denver (Article 29(ii): annual charges for use, etc. of U.S. lands; Article 31: filing of recreational use plan)

Article 29(ii) of the order issuing license imposes annual charges in the amount of $890.40 for the purpose of reimbursing the United States for the use, occupancy and enjoyment of its lands exclusive of those used for transmission line purposes. Denver's objection to this provision, which involved the amount of the charges, was withdrawn at the prehearing conference (Tr. 35).

Also withdrawn by Denver (Tr. 35) was its objection to the requirement (Article 31) that it file a recreational use plan.

4. Stipulation that Proceeding be Briefed on Record of Prehearing Conference

At the prehearing conference all participants orally stipulated that the proceeding be briefed, without the taking of testimony, on the record of the prehearing conference as amplified by Items-by-Reference A to G and by matters ancillary thereto, which are subject to official notice. See Tr. 28–29, 32, 40, 47.

5. Replacement and Exchange of Diverted Water; Energy Replacement: the Blue River Case

The Williams Fork is the middle river in a series of three rivers which flow westerly into the Colorado River from the Continental Divide. In the order in which they enter the Colorado River (from upstream down) these rivers are the Fraser River, the Williams Fork River and the Blue River. The Applicant diverts water from all three rivers to the eastern slope of the Continental Divide for use in the Denver Metropolitan Area by means of the Moffat Tunnel (Fraser River), the Jones Pass Tunnel (Williams Fork River) and the Roberts Tunnel, the outlet to Denver's Dillon Reservoir on the Blue River. See Tr. 20, 22 and Item-by-Reference F (Location Map).

Upstream from the Fraser River, near the head of the Colorado River, the Colorado-Big Thompson project, of the Bureau of Reclamation, diverts water of the Upper Colorado Basin to the eastern slope of the Continental Divide for irrigation and other purposes. A unit of this project is the Green Mountain Dam, Reservoir and Power Plant, downstream from Dillon Reservoir on the Blue River. See Tr. 22 and Item-by-Reference F.

The Interior Department Appropriation Act, 1938 (50 Stat. 564, 595), appropriated funds for the Colorado-Big Thompson project for construction in accordance with the plan described in Senate Document No. 80, 75th Cong. 1st Sess. (1937).[5] Among the features required to accomplish the Colorado-Big Thompson diversion, Senate Document 80 listed the following:

> (1) Storage on the Blue River in what is called Green Mountain Reservoir located about 16 miles southeast of Kremmling, Colo., where the

---

[5] S. Doc. No. 80 is incorporated, in part, by reference in Items-by-Reference A (consent decree of 1964) as well as in the prior proceedings in the *Blue River* case. See pages 1153, 1154, *infra*.

> Blue enters the Colorado River. This reservoir is to be used to replace water diverted to the eastern slope that would be required by prior rights along the Colorado River.

Id. at 1. Senate Document 80 contains a section entitled "Manner of Operation of Project Facilities and Auxiliary Features". *Id.* at 2–5. This section, the document indicates, was approved by those interested in irrigation and other uses of water both on the western and eastern slopes of the Continental Divide in Colorado, but the Applicant was not a user to which the document was submitted and neither approved or disapproved of it.

Among the project works included in the instant proceeding is a transmission line from the powerhouse to the United States Government line near Parshall, Colorado.[6] In its application for license, May 11, 1956, Denver noted that it was obligated to construct this transmission line to a place or places "designated by the Secretary of the Interior * * * as provided in the Stipulation", attached to the license application as Exhibit P, in the *Blue River* case. Application for License, p. 3.

Obligations under the *Blue River* settlement were approved by the Congress in the Colorado River Storage Project Act, 70 Stat. 105 (1956), 43 USC 620, *et seq.* Section 11 of that Act provides: "The Final Judgment, Final Decree and stipulations incorporated therein in the consolidated cases of the *United States of America* v. *Northern Colorado Water Conservancy District, et al.*, Civil Nos. 2782, 5016 and 5017, in the United States District Court for the District of Colorado, are approved, shall become effective immediately, and the proper agencies of the United States shall act in accordance therewith."[7]

The stipulation, attached to the license application as Exhibit P, incorporated by reference and approved the Final Judgment and Decree quieting rights of the United States to use waters of the Blue River pursuant to its appropriations in connection with the Colorado-Big Thompson project (Civil No. 2782). See Tr. 18. The stipulation also dealt, among other things, with Denver's rights to the use of waters in the Williams Fork River. Denver's delivery of electric energy to the Bureau of Reclamation, under the stipulation (p. 4), was to make up for what would "have been generated by the Green Mountain Plant" had it not been for the diversion of water by Denver from the Blue River. Among other things, the stipulation provided (p. 2, *et seq.*):

> 4. Notwithstanding their priority dates, the parties hereto further stipulate and agree that the parties to this cause will recognize the right to divert Blue River water by the City and County of Denver and the City of Colorado Springs for municipal purposes only, including domestic, industrial, yard, ground and park care, storage, fire, sewage, military and governmental, excluding, however, water for purposes of irrigation for agriculture, their rights as set forth in the decrees entered by the District Court of Summit County, Colorado, Water District No. 36, Civil Actions Nos. 1805 and 1806, which are part of the record in consolidated Cases Nos. 5016 and 5017; subject nevertheless to the following limitations:
>
> (a) The rights of the City and County of Denver and the City of Colorado Springs are limited solely to municipal purposes as herein described and subject to the rights of the United States of America to fill each year the Green Mountain Reservoir to a capacity of 154,645 acre feet for utilization

---

[6] A contract, whereby the Bureau of Reclamation wheels power and energy from Project 2204 to the Public Service Company of Colorado was introduced as Item-by-Reference G.

[7] For Middle Park's interest in the Parshall project under the Colorado River Storage Project Act, see footnotes 2, 8 and text.

by the United States of America in accordance with the "Manner of Operation of Project Facilities and Auxiliary Features", contained in Senate Document No. 80, 75th Congress, 1st Session.

This right to fill the reservoir as herein provided requires an amount of water (after provision for all prior rights) which added to the water in the storage in said Green Mountain Reservoir on a date between April 1st and May 15, to be fixed by the Secretary of the Interior each year in accordance with the plan of operation, would equal 154,645 acre feet had there been no releases from the storage in Green Mountain Reservoir. Provided, however, subject to the decision of the Secretary of the Interior that it will not adversely affect the ability of the Green Mountain Reservoir to fulfill its functions as set forth in the "Manner of Operation of Project Facilities and Auxiliary Features", contained in Senate Document No. 80, 75th Congress, 1st Session, except only as to the production of power, diversions by the City and County of Denver and Colorado Springs may be made from time to time as approved by the Secretary of the Interior * * *.

(b) The City and County of Denver and the City of Colorado Springs in consideration of the agreement by the United States of America to permit the use of rights to the use of water by those municipalities as provided in this Stipulation will

(1) Deliver or cause to be delivered to the United States of America electrical energy to Green Mountain Substation or such other place or places to be designated by the Secretary of the Interior * * *.

(2) The electrical energy herein provided for will be delivered to the United States in substantially the same amounts, at approximately the same hours and at substantially the same rates of delivery that would have been generated by the Green Mountain Power Plant had it not been for the diversions of the waters by the municipalities in question * * *.

(c) The City and County of Denver and the City of Colorado Springs will at all times bypass water in quantities sufficient to meet all legal calls of downstream water rights on the Blue River, and within Colorado below the confluence of that stream with the main stream of the Colorado River, having priorities earlier than the respective priority dates of said cities. The obligation adequately to provide water for the priorities on the Blue River and the Colorado River antedating the respective priority dates of said two cities, may be fulfilled by replacement storage by and on the Blue River or on the Williams River, subject nevertheless to the requirement that the parties provide that the plans for replacement storage will first have been approved by the Secretary of the Interior or his designated representative * * *. The water to be exchanged shall be on hand and in storage when the exchange is proposed. Any exchange approved shall not relieve said cities from the obligation to deliver electrical energy for the amount of water diverted from the Blue River. * * *

The United States District Court for the District of Colorado retained jurisdiction in the *Blue River* case. At the prehearing conference there was received (Item-by-Reference A) a consent decree filed in the case April 16, 1964. Middle Park as well as Denver are signatories. Middle Park, describing the consent decree, stated (Tr. 9):

> * * * in view of the litigation in the United States District Court for the District of Colorado, which culminated in a consent decree, Denver of course being a party, dated April 16, 1964, many of the issues that otherwise would have been raised were settled and adjudicated there. Certain of the issues, as Mr. Saunders mentioned, were reserved for future determination in the event negotiations fail.[8]

6. *Agreement as to Conservation of Fish and Wildlife*

It has been seen that the Department of the Interior and the Applicant jointly propose that a special article dealing with fish and wildlife be included in the license (Items-by-Reference C, D & E). In its letter submitting the agreement (Item D), the Department of the Interior stated that its Fish and Wildlife Service considered the conditions necessary "since the construction and operation of the enlarged Williams Fork Reservoir has had a significant effect upon Williams Fork River trout habitat", and the proposed article would "protect the Williams Fork River fishery below Williams Fork Dam to a reasonable degree" and would "realize the potential of the fishery of Williams Fork Reservoir".

Dated this 24th day of September, 1965.

APPENDIX C (PROJECT 2204)

Fish and Wildlife Agreement Contained in Letter of Applicant, September 30, 1964 (Item-by-Reference C) and Letters of Dep't of the Interior (Items D & E)

1. The Licensee shall maintain a minimum fishery pool of 1,000 acre-feet in Williams Fork Reservoir below which the lake shall not be drawn except under the following conditions:

a. When such drawdown is necessary to make repairs to protect facilities, or

b. When it is mutually agreed upon between the Licensee and the Colorado Department of Game, Fish and Parks that draining below this level is beneficial to fish management.

2. The Licensee will allow public access to the land and water area of Williams Fork Reservoir located within the project boundary as shown in Exhibit K in Project No. 2204 before the Federal Power Commission and will permit the use of boats for recreational purposes provided that:

a. It shall be the right of the Licensee to close any land or water area where access to said area may endanger human health or life or hamper the efficient operation of the reservoir.

b. It shall be the right of the Licensee to impose such use limitations as may reasonably be necessary to protect life, health, and property.

3. The Licensee will designate certain areas around the perimeter of the Williams Fork Reservoir for camping, parking, and related uses subject to provisions by agreement with the Colorado Game, Fish and Parks Commission or other qualified public agency to maintain and operate said areas in a neat and orderly manner according to mutually agreeable plan for public use management including the designation of recreational access roads and facilities to be installed, maintained, and operated by the Colorado Game, Fish and Parks Commission or other qualified public agency in accordance with aforesaid plan.

4. The Licensee will release water from Williams Fork Reservoir in accordance with the following:

a. Not less than 15 cfs of water or the inflow, whichever is less, will be passed through said reservoir at all times except during an emergency or during temporary periods of time involving maintenance or repairs on the water facilities involved.

b. During the irrigation season, when downstream users are diverting water from the Williams Fork River below Williams Fork Dam pursuant to water rights senior to those of the Licensee, the Licensee will pass not less than 15 cfs of water through said reservoir in addition to the water being diverted for use by these downstream rights. If the inflow into Williams Fork Reservoir is insufficient to provide these combined flows, only the inflow will be passed. This paragraph, 4b., is subject to the following:

(1) The Colorado Department of Game, Fish and Parks securing written agreements which have been duly executed and recorded in the public records of Grand County and executed copies thereof filed with the Licensee which will guarantee that said excess of water being released in addition to water being released for irrigation, will be passed by said downstream diverters and

will not be diverted from the Williams Fork River between the Williams Fork Dam and the Colorado River for irrigation or other uses.

(2) If it is found by the administrative officials of the State of Colorado that water appropriators are diverting the water being released from Williams Fork Reservoir to maintain fishery habitat, then the additional release provided for in subparagraph b., above, may be discontinued by the Licensee.

c. If at any time the amount of water in storage in Williams Fork Reservoir is insufficient to meet the replacement requirement from said reservoir, the Colorado Game, Fish and Parks Commission shall upon notice, by the Licensee, consult with the Licensee for the purpose of reviewing the aforesaid release schedule and making revisions thereon for the duration of said shortage. In the absence of agreement as to said revisions, the matter shall be subject to determination under applicable law without regard to these conditions.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

DUKE POWER COMPANY, DOCKET NO. E-7285

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued June 29, 1966)

Duke Power Company (Duke) filed an application with the Federal Power Commission on April 18, 1966, as subsequently amended and supplemented, seeking an order, pursuant to Section 203 of the Federal Power Act, authorizing it to acquire and lease and to merge or consolidate with its own facilities all the electric facilities owned by Greenwood County, South Carolina, and operated by Greenwood County Electric Power Commission (Greenwood Commission).

Duke is incorporated under the laws of the State of North Carolina and is qualified to do business as a foreign corporation in the State of South Carolina, with its principal place of business at Charlotte, North Carolina. Duke is engaged in the generation, purchase, transmission, distribution, and sale of electric energy in 37 counties in North Carolina and 15 counties in South Carolina. Duke owns and operates 33 hydroelectric generating plants with total installed capacity of 768,138 kw and 8 steam electric generating plants with total installed capacity of 3,454,000 kw. Duke is interconnected with and exchanges electric power and energy with South Carolina Electric & Gas Company, Carolina Power & Light Company, Georgia Power Company, Appalachian Power Company, Lockhart Power Company, Yadkin, Inc., and Southeastern Power Administration (SEPA). Retail electric service is furnished by Duke to approximately 819,369 residential, commercial, industrial and street and highway lighting customers. Approximately 59 municipally-owned, cooperatively-owned and investor-owned electric utilities, including Greenwood Commission, receive wholesale electric service from Duke. As of February 28, 1966, the depreciated original cost of Duke's electric plant was $718,060,851. For the 12 months ended February 28, 1966, Duke received a total of $238,918,871 in electric operating revenues. Duke also operates transportation and water supply systems in parts of North Carolina and South Carolina.

Greenwood Commission is a political subdivision of the State of South Carolina and is authorized to do business in that state only with its principal place of business in the City of Greenwood, Greenwood County, South Carolina. Greenwood Commission is engaged in the generation, purchase, transmission, distribution, and sale of electric energy in five counties in South Carolina, namely, Greenwood, Laurens, Newberry, Abbeville, and McCormick. The territory in South Carolina wherein Duke furnishes electric service includes all these counties except McCormick. Greenwood Commission's sources of electric supply in addition to its own generation are Duke, SEPA, and Greenwood Mills, an industrial firm. The electric generation and transmission facilities owned by Greenwood County are operated by Greenwood Commission under the name of "Greenwood County Electric Power System" (Electric Power System) and the electric distribution facilities owned by Greenwood County are operated by Greenwood Commission under the name of "Greenwood County Rural Electric System" (Rural Electric System). All wholesale electric requirements of Rural Electric System are supplied by Electric Power System, which also supplies all or part of the wholesale electric requirements of the City of Greenwood, City of Ninety Six, City of Laurens, Abbeville Water and Electric Plant, and Laurens Electric Cooperative, Inc. In addition, Electric Power System makes wholesale electric sales to South Carolina Electric & Gas Company and provides retail electric service to two residential and seven industrial customers. Approximately 9,412 residential, commercial, industrial, and street and highway lighting customers receive retail electric service from Rural Electric System. These customers include about 95% of all rural customers in Greenwood County and some customers within the City of Greenwood. As of February 28, 1966, the depreciated original cost of that portion of the electric plant of Greenwood County proposed to be acquired by Duke was $6,827,099. The electric operating revenues of that portion of the electric plant of Greenwood County proposed to be acquired by Duke for the 12 months ended February 28, 1966, were $2,746,800.

The electric facilities owned by Greenwood County and situated in the State of South Carolina which Duke proposes to acquire and lease, as set forth below, include a 15,000 kw hydroelectric generating plant, together with its associated substation, dam and reservoir, located at or near Chappells in Newberry County; a 16,000 kw steam electric generating plant located adjacent to the hydro plant; one 13.8 kv transmission line extending 0.68 miles; twenty-seven 44 kv transmission lines totaling approximately 125.5 miles; one 115 kv transmission line extending 35.8 miles from Clark Hill Substation to Clark Hill Tie Station near the City of Greenwood; approximately 45 substations, including 23 located in Greenwood County, 20 located in Laurens County, one located in Newberry County, and one portable unit; a distribution system, including approximately 950 miles of wood pole distribution lines of various voltages (primarily 7.2 kv), approximately 9,350 services (mostly 3-wire), 9,300 meters, 35 line transformers, 239 incandescent lamps, and 880 Mercury vapor lamps; and an office and warehouse building located at the steam plant site.[1]

---

[1] Duke represents that it will assume the obligation of Greenwood Commission to sell to the Commissioners of Public Works of the City of Greenwood certain electric facilities owned by Greenwood County and located within the limits of the City of Greenwood, pursuant to a contract dated March 28, 1966, between Greenwood Commission and the Commissioners of Public Works of the City of Greenwood, a copy of which contract is on file with this Commission in Docket No. E-7285. These facilities presently serve approximately 1,200 retail customers.

The hydro generating plant and appurtenant substation, dam and reservoir of Greenwood County are included in its Buzzards Roost Hydroelectric Project located on the Saluda River in Greenwood, Laurens and Newberry Counties. The reservoir is known as Lake Greenwood. This project is operated under a license issued by this Commission to Greenwood County pursuant to the provisions of The Federal Water Power Act and is designated in the records of the Commission as Project No. 1267. The 115 kv transmission line of Greenwood County is also operated under a license, it having been issued by this Commission to Greenwood Commission pursuant to the provisions of Part I of the Federal Power Act. This facility, known as the Clark Hill-Greenwood 115 kv Transmission Line, is located in McCormick and Greenwood Counties and is designated in the Commission's records as Project No. 2167.

By separate order issued concurrently herewith, *Greenwood County, et al.*, Project Nos. 1267 and 2167, *infra* p. 1165, the Commission is approving the lease from Greenwood County to Duke for the period July 1, 1966 through February 10, 1985 of certain electric facilities which are presently included in licensed Project No. 1267, namely: the powerhouse and adjacent concrete spillway structure and related facilities, certain substation facilities, and the dam across the Saluda River and reservoir formed thereby. The Commission is therefore considering the application in Docket No. E-7285 as a request for authorization for Duke to acquire and merge or consolidate with its own facilities that portion of the electric facilities owned by Greenwood County which is not subject to the lease approved by the Commission's aforementioned separate order.[2]

Duke's proposal to acquire and lease all the electric facilities owned by Greenwood County was the subject of an offer tendered by Duke to the members of the legislative delegation of Greenwood County and the members of Greenwood Commission jointly by letter dated May 28, 1965, a copy of which was filed as an exhibit to the application. Subsequently, by Act approved March 11, 1966, the General Assembly of the State of South Carolina,[3] after declaring in the preamble that "the people of Greenwood County * * * should decide for themselves whether the offer of Duke * * * should be accepted or rejected", directed, in sections 1 and 2, the Greenwood County Commissioners of Election to conduct a referendum on April 12, 1966 on the following question, which the Act required to be printed on the ballots:

> Do you favor the sale of the property of Greenwood County controlled by the Greenwood County Electric Power Commission exclusive of the Lake Greenwood Reservoir and the hydro-electric generating facilities at Buzzard's Roost to Duke Power Company?

The Act provided in section 3 that "[I]f in the referendum * * * more than one-half of the total number of voters voting * * * vote in favor of the sale, the Greenwood County Finance Board shall sell and convey all properties of Greenwood County controlled by the Greenwood County Electric Power Commission, excluding the reservoir which is formed by the dam at Buzzard's Roost on the Saluda River and the hydro-electric plant * * * to Duke * * *." In the referendum, conducted on April 12, 1966 in Greenwood County pursuant to legislative direction, more than one-half of the 8,120 votes cast favored the sale of Greenwood County's property to Duke, the vote being 4,909 in favor of the sale and 3,211 opposed to the sale.

---

[2] The transfer of the license for Greenwood County's 115 kv transmission line, which comprises Project No. 2167, from Greenwood Commission to Duke is also approved by that separate order.

[3] Act No. 847 of the Acts and Joint Resolutions of South Carolina, 1966, entitled "An Act To Provide For The Sale Of Certain Property Of Greenwood County Controlled By The Greenwood County Electric Power Commission, To Provide For The Lease Of The Lake Greenwood Reservoir And Power Facilities Of Buzzard's Roost Dam If An Election Results Favorably Thereto, To Create An Advisory Board To Advise The Governing Body Of Greenwood County On The Investment Of Certain Funds And To Create The Lake Greenwood Recreation Commission."

The preamble of the Act of the South Carolina legislature approved March 11, 1966 incorporated by reference Duke's May 28, 1965 offer to acquire and lease all the electric facilities owned by Greenwood County. In addition, section 4 of the Act prescribed the terms and conditions of the proposed sale of those facilities substantially as follows:

1. Duke shall pay to Greenwood County the sum of $12,918,176 as the purchase price, subject to closing adjustments to reflect additions to and retirements of plant as well as changes in other asset and liability values from December 31, 1964 for Electric Power System and from June 30, 1964 for Rural Electric System.
2. Duke shall lease Lake Greenwood Reservoir and the hydroelectric generating facilities at Buzzards Roost from Greenwood County for an annual rental of $250,000 for 40 years payable annually in advance. The dam and hydroelectric generating facilities shall be maintained and operated by Duke.
3. The rates to be charged for electric energy for all physical connections of residences or business establishments existing at the time of consummation of the sale shall be the lower of the rates charged by Greenwood Commission and Duke, respectively. The rates to be charged for electric energy for such physical connections made after consummation of the sale shall be the applicable rates of Duke.
4. A sales agreement shall confirm Duke's offer regarding the continued employment of the present employees of Greenwood Commission and the terms and places of their employment.
5. The sale shall be consummated on July 1, 1966.

The terms and conditions of the proposed sale prescribed by the Act of the South Carolina legislature approved March 11, 1966 did not include all the terms and conditions upon which Duke made its May 28, 1965 offer "to purchase from Greenwood County all of the assets of * * * Electric Power System and * * * Rural Electric System, except the Buzzards Roost hydroelectric plant, dam and reservoir for the sum of $12,918,176 cash", although, as pointed out above, the Act incorporated Duke's offer by reference. The following are the principal terms and conditions of Duke's offer which are not expressly or fully prescribed by the Act, but which the application indicates are part and parcel of the proposed acquisition and lease of Greenwood County's electric facilities by Duke:

1. All the outstanding bonds and other indebtedness of Electric Power System and Rural Electric System, respectively, will be redeemed and discharged by Greenwood County from the cash proceeds of the sale of its electric facilities to Duke.[4]

---

[4] The outstanding long term debt of Electric Power System consists of $2,180,000 principal amount Serial Bonds, 2½%, due 1967-1986, which are publicly owned. The outstanding long term debt of Rural Electric System consists of $2,814,851 principal amount Refunding Serial Bonds, 2%, which are owned by the Rural Electrification Administration.

2. All employees of Greenwood Commission will (i) become employees of Duke, (ii) be given full credit under the Duke Power Company Employees' Retirement Plan for service with Greenwood Commission, (iii) secure greater life insurance, medical insurance, retirement and vacation benefits and other fringe benefits as employees of Duke, and (iv) receive wage increases from Duke. In addition, no Greenwood Commission employee will be transferred by Duke out of Greenwood County without his consent.

3. All municipal and cooperative wholesale customers of Greenwood Commission, which are preference customers under the Flood Control Act of 1944 with respect to the purchase of electric power generated at the Clark Hill Project and sold by SEPA to Greenwood Commission, will continue to receive SEPA power from the Clark Hill Project either as wholesale customers of Duke, at their present costs or at reduced costs,[5] or as wheeling customers of Duke.

4. All present customers of Greenwood Commission and all future applicants for electric service in the area now served by Greenwood Commission will receive electric service from Duke without being required to make any contributions in aid of construction.

The application represents that the consideration of $12,918,176 cash for that portion of Greenwood County's electric facilities which Duke proposes to purchase is based upon the asset and liability values shown in the December 31, 1964 financial statement of Electric Power System and the June 30, 1964 financial statement of Rural Electric System. As stated above, this purchase price is subject to closing adjustments. Furthermore, under the terms and conditions of Duke's May 28, 1965 offer, if Greenwood County prefers to retain its cash on hand and its investments, then in that event the proposed purchase price will be reduced by the total amount of such cash and investments. The application indicates that as of February 28, 1966, a cash payment of $11,273,000 would have been made by Duke for Greenwood County's net assets other than its cash and investments, which Duke proposes to purchase.

The assets of Greenwood County which Duke proposes to acquire and the liability of Greenwood County which Duke proposes to assume are as follows as of February 28, 1966:

Assets to be acquired

Electric plant in service at original cost	$10, 402, 000
Accumulated provision for depreciation	[1] 3, 574, 901
Net plant	6, 827, 099
Customer accounts receivable	315, 000
Fuel stock	75, 000
Plant materials and operating supplies	235, 000
Prepayments	55, 000
Total assets to be acquired	7, 507, 099

[1] The Commission staff, in its review of the accounting for the proposed acquisition, found that Duke had not given consideration to the recording on its books of $54,901 for Contributions in Aid of Construction now on the books of Rural Electric System. Duke, after being contacted by the staff, said that this amount pertains to funds received for relocation of facilities and that it will be brought over on the books of Duke. However, instead of being classified as Contributions in Aid of Construction, this amount will be added to Accumulated Provision for Depreciation. The Accumulated Provision for Depreciation of $3,574,901 includes this additional amount of $54,901.

---

[5] According to the application, Duke will offer to assume Greenwood Commission's contract with SEPA for the purchase of electric capacity and energy.

Liability to be assumed

Customer deposits	$35, 000
Net assets to be acquired	7, 472, 099

A cash payment of $11,273,000 for the above net assets of $7,472,099 would result in the creation of an electric plant acquisition adjustment of $3,800,901 on the books of Duke as of February 28, 1966. The entire amount of any acquisition adjustment created by the proposed transaction will be eliminated by a debit to Duke's earned surplus, according to the application.

The application states that the consummation of the proposed transaction will produce several benefits. Duke points out that it will make no increase in the retail rates now being charged to Greenwood Commission's customers and that there will be rate reductions totaling about $41,000 annually for approximately 30% of Greenwood Commission's retail customers. As to Greenwood Commission's wholesale customers, they will receive from Duke rates which will be as low as those presently being charged if not lower. Duke also calls attention to the fact that not only will all employees of Greenwood Commission be retained by Duke, but also they will receive higher pay and greater fringe benefits as employees of Duke than they are currently receiving. In addition, each Greenwood Commission employee will be given full credit under Duke's Employees' Retirement Plan for his period of service with Greenwood Commission. Furthermore, Duke represents that its ownership and operation of Greenwood County's electric facilities will produce annually approximately $55,700 in local property taxes payable to Greenwood County, a total of $15,300 in local property taxes payable to Laurens, Newberry and McCormick Counties, and an aggregate of $190,949 in franchise, generating, and income taxes payable to the State of South Carolina, none of which taxes are now being paid by Greenwood Commission inasmuch as it is a tax-exempt entity. Duke has sufficient generating capacity to absorb the entire load of Greenwood Commission.

Written notice of the application has been given to The Public Service Commission of South Carolina and the North Carolina Utilities Commission and to the Governor of each of those states. Notice of the application was also published in the Federal Register on April 30, 1966 (31 F.R. 6553), stating that any person desiring to be heard or to make any protest with reference to the application should on or before May 25, 1966, file with the Federal Power Commission, Washington, D.C. 20426, a petition or protest. No petition or protest or request to be heard in opposition to the granting of the application has been received.

In a letter to the Federal Power Commission dated April 15, 1966, William W. Griffith, Greenwood, South Carolina, stated that he was a rural electric consumer served by Greenwood Commission and he criticized the proposed sale of Greenwood County's electric facilities to Duke. Mr. Griffith requested that the Federal Power Commission "intervene in favor of the rural consumers and allow the rural consumers to organize a membership cooperative to purchase these electric facilities." The Commission's General Counsel wrote to Mr. Griffith on April 28, 1966, advising him of Duke's pending application for authority under Section 203 of the Federal Power Act to acquire these electric facilities and enclosing a copy of the notice of application. Mr. Griffith's attention was specifically invited to the provision in the notice designating May 25, 1966, as the final date for filing with this Commission petitions to intervene or protests in connection with Duke's application. No further communication has been received from Mr. Griffith in this matter.

The Public Service Commission of South Carolina, by order dated May 4, 1966, authorized Duke to purchase and lease the electric facilities of Greenwood County upon the terms and conditions as set forth in Duke's offer dated May 28, 1965, and the Act of the General Assembly of the State of South Carolina approved March 11, 1966, all as described above.

The Commission finds:

(1) Duke, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued February 17, 1965, *Carolina Power & Light Company and Duke Power Company*, (33 FPC 231).

(2) By the proposed acquisition of a portion of the electric facilities of Greenwood County, as described above, Duke will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of Greenwood County, another person, within the meaning and subject to the requirements of Section 203 of the Act.

(3) The proposed acquisition and merger or consolidation of a portion of the electric facilities of Greenwood County by Duke, as recited above, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Act for the reasons set forth above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of a portion of the electric facilities of Greenwood County by Duke, all as described above, is hereby authorized and approved upon the terms and conditions as set forth in the application, subject to the provisions of this order.

(B) Duke shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, particularly the provisions of Account 102, Electric Plant Purchased or Sold, Account 114, Electric Plant Acquisition Adjustments, and appropriate Electric Plant Instructions, thereof.

(C) Any acquisition adjustment created by the transaction herein authorized shall be eliminated by a debit to Account 435, Miscellaneous Debits to Surplus.

(D) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(E) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

GREENWOOD COUNTY AND GREENWOOD COUNTY ELECTRIC POWER COMMISSION, AND DUKE POWER COMPANY, PROJECT NOS. 1267 AND 2167

ORDER APPROVING LEASE OF PROJECT NO. 1267 AND TRANSFER OF LICENSE FOR PROJECT NO. 2167

(Issued June 29, 1966)

On May 23, 1966 Greenwood County and Greenwood County Electric Power Commission, licensees respectively for Project Nos. 1267 and 2167, and Duke Power Company (Duke) filed jointly and severally an application for Commission approval, effective as of July 1, 1966, of: (1) a lease by Duke of the project works comprising Greenwood County's Buzzard Roost licensed Project No. 1267, as modified herein; and (2) a transfer to Duke of the license for Greenwood County Electric Power Commission's Clark Hill-Greenwood transmission line Project No. 2167 which Duke proposes to purchase.

The license for Project No. 1267 was issued for a period of 50 years, effective as of February 11, 1935. The project is located on the Saluda River in Greenwood, Laurens, and Newberry Counties, South Carolina, and consists principally of an earth dam, a reservoir, a gated spillway, a powerhouse, and a step-up substation, excluding the 44-kv bus used in common with a steam plant.

The construction by the licensee of a steam electric generating station with resulting changes in licensee's operations has altered the function of two project transmission lines which now serve as a part of the licensee's interconnected transmission system and are no longer parts of the project. These facilities comprise a 44-kv transmission loop interconnecting the power plant at Buzzards Roost with the towns of Greenwood, Laurens, Goldville and Newberry and a 44-kv line between the Buzzards Roost plant and Goldville and the 44 kv common bus at the Buzzards Roost plant. The 4.1 kv bus, the three 4.1/44 kv transformer banks at the Buzzards Roost substation and their 44 kv connection to the common 44 kv bus and appurtenant facilities at the power plant will continue to transmit hydroelectric project power from Project No. 1267 and will remain as parts of the project. In this connection, the licensee on June 15, 1966 submitted a filing requesting: (1) deletion from the license of Exhibit K, sheets 1 through 10, entitled "Project Boundary of 44 KV Transmission Lines" (FPC No. 1267–44 through –53), which relate solely to the aforesaid 44-kv transmission lines; (2) that Commission staff be authorized to note on license Exhibit J (FPC No. 1267–54) and license Exhibit K (FPC No. 1267–55) that the 44-kv transmission lines shown thereon have been deleted from the license; and (3) requesting Commission approval of a revised Exhibit M to supersede license Exhibit M to show the above-mentioned deletion of the 44-kv transmission lines.

We are requested to approve a proposed lease to Duke Power Company of Project No. 1267 for a period of 40 years from July 1, 1966. Since the license for the project expires February 10, 1985 we are asked to approve the lease for a period of some 21 years beyond the license period. Although Greenwood County is a municipal licensee, we believe that the proposed lease of its licensed project extending beyond the period of the license would not be binding upon a successor to the license. See, *Susquehanna Power Company, et al.*, 32 FPC 826, 830. Consequently, our approval of the lease will be limited to the period of the license. Since an approval of the lease to Duke for the license period would authorize Duke to operate and maintain the project for the period of such authorization, the administrative annual charges from July 1, 1966 to February 10, 1985 are to be paid by Duke without an exemption, pursuant to Section 11.20(a) of the Commission's Regulations under the Federal Power Act.

Project No. 2167, which is located in Greenwood and McCormick Counties, South Carolina, consists of a transmission line only known as Clark Hill-Greenwood County Transmission Line, and transmits power from the United States' Clark Hill Project on the Savannah River to Greenwood County Electric Power Commission's distribution system. The license for Project No. 2167 was issued for a period of 50 years effective as of August 6, 1953.

Duke has an application before the Commission in Docket No. E–7285 proposing the acquisition of all of the electric transmission facilities of Greenwood County Electric Power Commission, including the transmission line licensed as Project No. 2167, and the two 44-kv transmission lines presently under Greenwood County's license for Buzzards Roost Project No. 1267. By our order of even date, we are approving Duke's application in Docket No. E–7285, *supra*, p. 1158.

Public notice of Duke's application in Docket No. E–7285 has been given which referred to Duke's proposed lease of certain of the project works included in the license for Project No. 1267 and to Duke's proposed acquisition of all of the electric facilities of Greenwood County Electric Power Commission, which include the two 44-kv transmission lines presently under the license for Project No. 1267.

The Commission finds:

(1) The aforementioned 44 kv transmission loop interconnecting the power plant at Buzzards Roost with the towns of Greenwood, Laurens, Goldville and Newberry, the 44 kv line between the Buzzard's Roost plant and Goldville, and the 44 kv common bus at the Buzzards Roost substation are not parts of Project No. 1267 and should be eliminated from the license for the project, and Exhibit K (FPC Nos. 1267 –44 and –53) showing these facilities should be eliminated from the license.

(2) License Exhibits J and K (FPC Nos. 1267–54 and –55), revised by Commission staff as authorized by the licensee, conform to the Commission's rules and regulations and should be reapproved as part of the license.

(3) Exhibit M entitled "General Descriptions of Mechanical, Electrical, and Transmission Equipment", filed June 15, 1966 conforms to the Commission's rules and regulations and should be approved as part of the license, and license Exhibit M, signed February 9, 1934, should be eliminated from the license.

(4) Duke Power Company, the proposed lessee of certain of the project works comprising Project No. 1267 and the proposed transferee of the license for transmission line Project No. 2167 is a corporation organized under the laws of the State of North Carolina and authorized to do business in the State of South Carolina, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws as necessary for the operation of Project Nos. 1267 and 2167.

(5) Approval of the lease of the project works comprising Project No. 1267, for the period indicated above, and approval of the transfer of the license for Project No. 2167, upon compliance with the conditions set forth herein, will not be inconsistent with the public interest.

The Commission orders:

(A) The transmission facilities described in finding (1) above are hereby eliminated from the license for Project No. 1267, and the license Exhibit K designated in the same finding are hereby eliminated from the project.

(B) The license Exhibits J and K designated in finding (2) above, revised as indicated in the finding, are hereby reapproved as part of the license for Project No. 1267.

(C) The Exhibit M mentioned in finding (3)above as having been filed June 15, 1966 is hereby approved as part of the license for Project No. 1267, and superseded license Exhibit M is hereby eliminated from the license for the project.

(D) The transfer of the minor-part transmission line license for Project No. 2167 to Duke Power Company is hereby approved effective as of July 1, 1966 subject to Section 9.3 of the Commission's Regulations under the Federal Power Act; provided that the transfer of the license for Project No. 2167 shall be subject to the terms and conditions of the license, and to all of the provisions of the Act which have not been waived, to the same extent as though Duke Power Company were the original licensee for the project.

(E) The lease of the project works of Project No. 1267 to Duke Power Company is hereby approved effective as of July 1, 1966 and terminating on February 10, 1985; provided that the lessee shall be subject to the terms and conditions of the license except that Duke Power Company shall pay administrative annual charges from July 1, 1966 through February 10, 1985 pursuant to Section 11.20(a) of the Commission's Regulations under the Act.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for Duke Power Company, and returned to the Commission not later than July 1, 1966, accompanied by a certified copy of the executed lease of Project No. 1267, together with evidence of the recording thereof.

UNITED FUEL GAS COMPANY, DOCKET NO. CP66-339

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued June 29, 1966)

On April 26, 1966, United Fuel Gas Company (Applicant), filed in Docket No. CP66-339 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain measuring and regulating facilities on its 10-inch pipeline in Boyd County, Kentucky, in order to provide a new delivery point for the sale of natural gas to Columbia Gas of Kentucky, Inc. (Columbia of Kentucky), an existing customer of Applicant, for resale to Ashland Asphalt Paving Company (Ashland), all as more fully set forth in the application.

Applicant has been advised by Columbia of Kentucky that it has concluded negotiations with Ashland for the sale of gas for industrial use and that in order to supply natural gas necessary for that purpose Columbia of Kentucky has requested Applicant to provide an additional point of delivery from Applicant's 10-inch gas transmission pipeline in Boyd County, Kentucky. The estimated annual and peak day natural gas requirements for Ashland are 84,000 Mcf and 420 Mcf, respectively. Temporary authorization was granted Applicant on May 12, 1966.

The additional requirements of Ashland will not necessitate an increase in Applicant's currently effective Contract Demand with Columbia of Kentucky.

The total estimated cost of Applicant's proposed construction is $4,900, which will be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on June 23, 1966, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought, and upon consideration of the record,

The Commission finds:

(1) Applicant, United Fuel Gas Company, a West Virginia corporation having its principal place of business in Charleston, West Virginia, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of September 9, 1958, in Docket No. G-13372 (20 FPC 347).

(2) The proposed construction and operation of facilities and sale and delivery of natural gas, as hereinbefore described and as more fully described in the application in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The aforesaid proposed construction and operation of facilities and sale and delivery of natural gas are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity is issued to Applicant authorizing the construction and operation of facilities and sale and delivery of natural gas as hereinbefore described and as more fully described in the application in this proceeding, subject to the jurisdiction of the Commission, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act, and particularly the general terms and conditions set forth in paragraphs (a), (c)(1), (c)(3), (c)(4), (e) and (f) of Section 157.20 of such Regulations.

(C) The facilities authorized shall be completed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the aforesaid Regulations within 3 months of the date on which this order issues.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-1, ET AL.

DECLARATORY ORDER WITH RESPECT TO QUALITY STATEMENTS

(Issued June 30, 1966)

The producers listed in the Appendix have submitted quality statements, as provided in paragraph (F)(1) of Opinion No. 468, 34 FPC 159 at p. 241, as amended, covering sales of gas to Phillips Petroleum Company (Phillips). Phillips processes such gas in its Permian Basin and resells the residue gas to El Paso Natural Gas Company (El Paso) and Northern Natural Gas Company (Northern).

The quality statements submitted by the producers have little or no information on the quality of the gas, and no adjustments are proposed. Attached to each quality statement is a letter signed by Phillips which states that Phillips' major supply of gas in the Permian Basin area is obtained from producers under percentage type contracts which are not filed with the Commission and that only 21 contracts are on file with the Commission covering sales to Phillips. Phillips also states that in 1964, these 21 sales represented less than 0.7% of the total volume purchased by Phillips in the Permian Basin area and that "* * * we do not believe that it is feasible, in view of the time and expense required to determine the cost and amount of quality deductions at each of Phillips' plants involved. Our cursory inspection of the conditions under which your gas is delivered to Phillips, including Btu content, indicates that your current filed rate need not be reduced to reflect deductions for quality deficiencies under Opinion No. 468. Therefore, we do not propose to compute a cost of bringing the gas up to pipeline quality. It is our intention to continue to pay you at the current filed rate".

Phillips resells the producers' gas, after processing, to El Paso under FPC Gas Rate Schedule Nos. 9, 10 and 243 and to Northern under FPC Gas Rate Schedule Nos. 18 and 381. For the three rate schedules covering sales to El Paso, Phillips has filed quality statements reflecting agreement on treating costs to bring the gas to pipeline quality and with the exception of the quality statement for FPC Gas Rate Schedule No. 9,[1] the quality statements were accepted by Commission order of June 13, 1966, subject to the recalculation of the applicable area ceiling rates because of offsetting credits for Btu's between 1000 and 1050 and delivery pressure in excess of 500 psig. As to the two rate schedules covering sales to Northern, Phillips disagrees with Northern on applicable treating costs and both parties have been requested by Commission letters to review the quality statements deductions in an attempt to negotiate agreement.

---

[1] Phillips' quality statement with respect to its FPC Gas Rate Schedule No. 9 is disposed of later in this order.

In view of the small volume of gas involved and Phillip's willingness to absorb the treating costs for the subject sales, we conclude that it would be appropriate to accept the quality statements of the producers listed in the Appendix. Since such acceptance will not affect the cost of gas purchased by El Paso or Northern, there is no need to require Phillips to compute its treating costs. Phillips, however, must bear whatever costs, if any, it would have recouped from these producers had it determined its treating costs.

Also under consideration here is the quality statement submitted by Phillips with respect to sales to El Paso under its FPC Gas Rate Schedule No. 9. The agreed upon treating costs and the methods used to determine the adjustments in such quality statement are the same as those described in our order issued June 13, 1966, in Docket No. AR61-1, *et al.*, *supra*, p. 960, relating to other quality statements filed by producers under Opinion No. 468. The adjustments proposed by Phillips are acceptable, except for the proposed upward adjustment for Btu content between 1000 and 1050, for the reasons set forth in the June 13 order. We shall therefore require Phillips to submit a new quality statement reflecting the same adjustments utilized in its present quality statement, except for the improper upward adjustment.

Gulf Oil Corporation (Gulf) submitted on June 22, 1966, a revised quality statement under its FPC Gas Rate Schedule No. 192 for the sale of gas containing carbon dioxide to Transwestern Pipeline Company (Transwestern). The originally submitted quality statement contained an offsetting upward adjustment for delivery pressure above 500 psig, which is not permissible under Opinion No. 468. The revised quality statement omits the offsetting pressure adjustment.

The revised quality statement computes the resulting rate so as to make no treating cost deduction for the permissible 3% carbon dioxide content set forth in the quality standards in Opinion No. 468. Transwestern has agreed to Gulf's method of computation. This method is consistent with the treatment El Paso used in computing deductions for carbon dioxide removal.[2] El Paso made the 3% carbon dioxide content adjustment in computing its plant treating costs, whereas Transwestern did not. Gulf has made the 3% adjustment on the quality statement.

The Commission orders:

(A) The quality statements listed in the Appendix and the revised quality statement submitted by Gulf on June 22, 1966, with respect to its FPC Gas Rate Schedule No. 192 are accepted.

(B) The quality statement relating to sales by Phillips under its FPC Gas Rate Schedule No. 9 is accepted, except insofar as an upward adjustment is proposed for Btu content between 1000 and 1050. The quality statement insofar as it proposes such upward adjustment is rejected.

(C) Phillips shall submit within 30 days of the date of issuance of this order a new quality statement with respect to sales under its FPC Gas Rate Schedule No. 9 reflecting the same adjustments utilized in its present quality statement, except for the rejected upward adjustment described in paragraph (B) above. Such quality statement shall comply with the requirements of paragraph (F) (1) of Opinion No. 468, as amended.

---

[2] See order issued June 13, 1966, in Docket No. AR61-1, *et al.*

(D) Phillips shall also file a new refund report within 45 days of the date of issuance of this order to reflect any changes that may be necessary because the sale relating to the new quality statement it is required to file under paragraph (C) above is involved in a Section 4(e) suspension proceeding consolidated in Opinion No. 468. Such refund report shall comply with the provisions of paragraph (I) of Opinion No. 468.

AREA RATE PROCEEDING, ET AL. (PERMIAN BASIN AREA), DOCKET NO. AR61-1, ET AL.

ORDER EXTENDING TIME FOR CONSIDERATION OF QUALITY STATEMENTS

(Issued June 30, 1966)

The Commission in paragraph (F)(1) of Opinion No. 468, 34 FPC 159 at p. 241, as amended, required the producer respondents to submit a quality statement with respect to each rate schedule pertaining to sales of gas from the Permian area.

The time period for filing these quality statements was extended to March 21, 1966, by the Tenth Circuit in *Skelly Oil Co.* v. *F.P.C.* (CA10 No. 8385, *et al.*) A similar time extension was authorized by the Commission for those producers not covered by the Court stay. Paragraph (F)(2) of Opinion No. 468 provided that where the quality statement reflected full agreement between seller and purchaser, it was to be deemed accepted unless the Commission within 60 days after such filing ordered otherwise. The time period for consideration of these quality statements was extended by Commission order issued April 29, 1966, to June 30, 1966, 35 FPC 639.

By order issued June 13, 1966, in Docket No. AR61-1, *et al.*, *supra*, p. 960, the Commission took action with respect to some 700 quality statements submitted by producers. However, no action was taken in that order, *inter alia*, with respect to the quality statements submitted by the producers listed in the Appendix relating to sales of natural gas to El Paso Natural Gas Company (El Paso) and Hunt Oil Company (Hunt) which is processed in the Wilshire Plant in Upton County, Texas. This plant is owned 50% by El Paso and 50% by Hunt, which is the operator of the plant.

The quality statements listed in the Appendix reflect agreement between the producer and purchaser. Action must therefore be taken on these quality statements by June 30, 1966, unless the time for consideration by the Commission is extended. In order to permit additional time for consideration of these quality statements, the period for consideration will be extended to August 31, 1966.

The Commission orders:

The time for consideration by the Commission of the quality statements listed in the Appendix is extended to August 31, 1966.

ORDER DENYING MOTIONS TO SEVER, TO OMIT INTERMEDIATE DECISION PROCEDURE, AND TO GRANT CERTIFICATES

(Issued June 30, 1966)

Arkansas Louisiana Gas Company (Arkla) and Cities Service Gas Company (Cities) filed on May 26 and 27, 1966, respectively, motions to sever Docket Nos. CP64–125, CP62–219 and CP64–131 (Arkla-Cities Project) from these consolidated proceedings, and to omit the intermediate decision procedure and to grant certificates therein. Answers in support were filed by The Gas Service Company, the Midwest Industrial and Commercial Gas Users Association, the Missouri Public Service Commission, the Corporation Commission of Oklahoma, and the City of Springfield and the Board of Public Utilities of Springfield, Missouri. Ashland Oil & Refining Company, Pan American Petroleum Corporation, Mobil Oil Corporation, and W. E. Bakke filed answers in opposition.

In support of their motions, the movants allege that the relationship between the Arkla-Cities Project and the other dockets in these consolidated proceedings is so tenuous as to be non-existent and, therefore, no reason exists for the continued consolidation. Those other dockets from which Arkla and Cities now wish to sever concern the availability and deliverability of the reserves in the Kansas-Hugoton Field, more particularly the application of Cities in Docket No. CP66–226 in which it seeks authorizations to expand its pipeline from the Kansas-Hugoton Field in order to take additional volumes from its presently contracted reserves in that field.

Completely overlooked is our holding in Opinion No. 472 in Docket No. G–20464, *et al., Transwestern Pipeline Company*, 34 FPC 659, issued August 31, 1965, in which we remanded the Arkla-Cities Project for further hearing. The Commission noted therein that Cities has substantial reserves in the Kansas-Hugoton Field but there was a question as to the extent of the deliverability of these reserves, consequently, we stated that in the remanded hearing on the Arkla-Cities Project "we anticipate that the parties will fully explore the possibility of supplying Cities' remaining gas requirements from this source"—specifically, the Kansas-Hugoton Field.

In any proceeding in which an applicant seeks to attach a substantial new gas supply, the question of the availability and deliverability of its present sources of supply are directly related to whether a need for additional gas exists and the extent of that need. The actual deliverability and availability of the Kansas-Hugoton Field have in the past been estimated at various volumes depending upon the proceeding and the party sponsoring the studies. With all the persons who have an interest in the Kansas-Hugoton Field a party to these consolidated proceedings, we believe that the availability and deliverability of that field can be realistically determined so that Cities' need for additional new supplies and the extent of that need, if any, can be properly evaluated. We must be reasonably certain that Cities' presently contracted reserves are inadequate to meet the demands of its system before we permit it to attach a substantial new supply of gas.

The consolidation in this case was granted because, as we stated in our Order Granting Motions To Consolidate, issued January 24, 1966, 35 FPC 128, in these consolidated proceedings, the interrelated nature of all of the applications is self-evident. Indeed, the consolidation removed the need for the parties to present a showing as to the availability and deliverability of the Kansas-Hugoton Field in two separate proceedings. If severance were to be granted, we would in fact be prejudging what the parties in opposition contend is one of the major issues in these proceedings—the ability of Cities' markets to absorb both the Arkla and additional Kansas-Hugoton supplies as presently proposed by Cities. In view of the interrelated nature of the applications which involve common questions of law and fact, we believe that severance should be denied.

Another ground advanced by Arkla and Cities for severance and immediate certification of the project is an alleged urgent need to provide adequate service in Cities' Springfield-Joplin market area during the coming winter season. The parties in opposition contend that Cities will have adequate supplies from several sources to meet the needs of this area in the event the Arkla supply is not forthcoming. Neither Arkla nor Cities set out with specificity in their motions any record support for the alleged urgent need in the Springfield-Joplin area this winter. However, we do not believe this argument is relevant or material to the question of whether severance should or should not be granted. If such a situation does exist, under the Natural Gas Act and our Rules of Practice and Procedure severance is not the appropriate remedy. The appropriate remedy is to request a temporary certificate to authorize facilities sufficient to meet requirements during the coming winter. If such is to be filed it should be done promptly. As pointed out above, severance must be denied because there are common questions of law and fact. Opinion No. 472 requires that the possibility of supplying Cities remaining gas needs from the Kansas-Hugoton Field must be determined in the remanded proceeding. Cities' need for the Arkla-Cities Project primarily depends upon whether its present sources of supply, particularly the Kansas-Hugoton Field, have sufficient availability and deliverability to meet Cities' market requirements.

We also are reluctant to waive the intermediate decision procedure and grant certificates when any of the parties object thereto. Especially in contested proceedings such as this, where the issues are varied and complicated, briefs and an examiner's initial decision are necessary.

The Commission orders:

For the foregoing reasons, Arkla's and Cities' Motions to Sever, To Omit Intermediate Decision Procedure, and To Grant Certificates are hereby denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY AND PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP66-340

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued June 30, 1966)

On April 27, 1966, Central Illinois Public Service Company (Applicant), filed in Docket No. CP66-340 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Respondent) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant and to sell and deliver to Applicant volumes of natural gas for resale and distribution in the Villages of New Berlin and Loami, Sangamon County, Illinois, and their environs, all as more fully set forth in the application.

Applicant proposes to construct, own, operate, and maintain approximately 8 miles of 4-inch gas transmission line extending from a proposed metering and regulating station of Respondent to be located approximately 8 miles south of New Berlin to a point near the western corporate limits of New Berlin and approximately 3½ miles of 2-inch gas transmission line extending from a point 3-2/10 miles south of New Berlin on the 4-inch gas transmission line to a point near the west corporate limits of Loami. The villages of New Berlin and Loami are located in the western part of Sangamon County, Illinois, approximately 8 and 5 miles, respectively, north of the gas transmission main of Respondent.

Applicant also proposes to construct, own, operate and maintain town border stations at or near the west corporate limits of New Berlin and the west corporate limits of Loami. From said town border stations Applicant will construct gas distribution mains for the purpose of operating and maintaining gas distribution systems to serve said villages of New Berlin and Loami and their environs.

The total estimated volumes of natural gas necessary to meet Applicant's annual and peak day requirements for the initial three year period of proposed operations are stated to be:

	First year	Second year	Third year
Annual (Mcf)	52,983	75,513	84,874
Peak day (Mcf)	503	720	811

The total estimated cost of Applicant's proposed transmission and distribution facilities is $279,330, which cost will be financed from internally generated funds.

Respondent was duly notified by letter of the Commission dated April 28, 1966, of the filing of the application by Applicant for an order directing it to provide the requested connection and service. The Respondent did not file an answer to the application within the time limits prescribed by the Commission's Regulations, and it is therefore assumed it has no objection to the rendering of the requested service.

Due notice of the filing of the subject application and opportunity for hearing thereon have been given by publication in the Federal Register on May 11, 1966 (31 F.R. 6924). No protest, petition to intervene, notice of intervention or request for hearing has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company (Respondent), a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) Applicant, Central Illinois Public Service Company, an Illinois corporation having its principal place of business in Quincy, Illinois, is a corporation legally authorized to engage in the local distribution of natural gas to the public within the meaning of Section 7(a) of the Natural Gas Act.

(3) It is necessary and desirable in the public interest to direct Respondent to establish physical connection of its transmission facilities with the facilities proposed to be constructed and operated by Applicant, and to sell and deliver to Applicant under a service agreement to be executed by Applicant with Respondent in accordance with the Commission's Regulations, up to 811 Mcf per day of natural gas for distribution and resale as hereinbefore described.

(4) The requirement that Panhandle Eastern serve Applicant, as hereinafter ordered, will not impair Respondent's ability to render adequate service to its existing customers.

(5) Applicant should be prepared to receive natural gas from Panhandle Eastern for distribution in the Villages of New Berlin and Loami, Sangamon County, Illinois, and environs within one year from the date of the issuance of this order.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company is directed to establish physical connection of its facilities with the facilities proposed to be constructed and operated by Applicant, Central Illinois Public Service Company as herein described, and to sell and deliver up to 811 Mcf of natural gas daily to Applicant under a service agreement to be executed by Applicant with Panhandle Eastern in accordance with the Commission's Regulations, for transportation, distribution and resale in the Villages of New Berlin and Loami and environs in Sangamon County, Illinois, as hereinbefore described. Such service shall be rendered pursuant to Respondent's presently filed appropriate rate schedule.

(B) Respondent shall report to the Commission, in writing the date of commencement of service to Applicant within 15 days after such service begins.

(C) Applicant shall be prepared to receive service as directed herein within one year from the date of issuance of this order.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

MIDHURST OIL CORPORATION, DOCKET NO. CS66-132 AND RILAN CORPORATION (SUCCESSOR TO H. L. MOSES), DOCKET NO. CS66-134

ORDER DENYING INTERVENTION

(Issued June 30, 1966)*

Hunt Oil Company (Hunt) on June 20, 1966, filed a petition for leave to intervene in the above-entitled proceedings, together with a protest to the applications for a small producer certificate filed by the above applicants in such proceedings for sales in the Permian Basin area. These producers sell casinghead gas under Spraberry contracts to Hunt and El Paso Natural Gas Company (El Paso) which is processed at the Wilshire Plant. Hunt thereafter resells its share of the residue gas to El Paso. Hunt and El Paso each have a 50% interest in the Wilshire Plant which is operated by Hunt.

Hunt does not contend that the applicants herein do not qualify as small producers. Hunt claims, however, that it will be caught in a cost-price squeeze if applicants receive small producer certificates because under Opinion

---

*See order issued August 22, 1966 permitting withdrawal of application for rehearing, etc.

No. 468, 34 FPC 159, as amended, it is limited to the same 14.5¢ ceiling for the resale of its purchased gas that it must pay applicants for such gas (without any price deductions for alleged quality deficiencies in the purchased gas). The effect, according to Hunt, is that it must absorb all expenses incident to gathering, processing and delivery of such purchased gas, which will cause it to operate the Wilshire Plant at a loss. In support of its position, Hunt has included certain revenue and expense data purportedly reflecting operations at the Wilshire Plant for the years 1960 and 1964.

By order issued March 4, 1966, in Lucy G. Moses, *et al.*, Docket No. CS66-6, *et al.*, 35 FPC 331, we denied a petition to intervene by Hunt similar to the one involved here. That ruling is equally applicable in this case. Under the circumstances alleged by Hunt in its petition, its remedy under our *Permian* decision is not to oppose the granting of small producer certificates, but to apply for relief on the grounds of special circumstances (Opinion No. 468, pp. 209, *et seq.* and 225, *et seq.*).

Assuming *arguendo* Hunt is entitled to relief, such relief will be granted upon application whether Hunt purchases from a small producer or not. It does not appear, therefore, that Hunt will suffer damage from the grant of the small producer applications involved here. Accordingly, Hunt's petition for leave to intervene and its protest should be denied.

The Commission orders:

Hunt's petition for leave to intervene and protest of the small producer applications in the above-entitled proceedings are denied.

Before Commissioners: Lee C. White, Chairman; L. J. O'Connor, Jr., Charles R. Ross, David S. Black and Carl E. Bagge.

OPERATING OF NATURAL GAS PIPELINE FACILITIES AT PRESSURES IN EXCESS OF DESIGN PRESSURES SPECIFIED IN CERTIFICATE APPLICATIONS—GENERAL CONDITIONS APPLICABLE TO CERTIFICATES ISSUED TO PIPELINE COMPANIES, DOCKET NO. R-290

ORDER NO. 324

PRESCRIBING A GENERAL CERTIFICATE CONDITION RESPECTING SAFE OPERATING PRESSURES

(Issued June 30, 1966)*

This order amends two sections of the regulations under the Natural Gas Act to inform the Commission of the maximum pressure at which a certificate applicant believes it may operate the proposed facilities safely and without undue risk of failure, and unmistakably to prohibit operation of certificated facilities at pressures exceeding applicant's own maximum, unless a different maximum pressure is prescribed by the Commission in the final certificate order.

The first amendment, to § 157.14(a)(9) requires that applications for a certificate of public convenience and necessity under section 7 of the Natural Gas Act state in Exhibit G-II the maximum operating pressure of each facility to be certificated by the Commission as determined by the provisions set out in the most recent edition of the American Standard Code for Pressure Piping, Gas Transmission and Distribution Piping Systems, ASA

---

*Published in the Federal Register on July 8, 1966 (31 F.R. 9347).

B31.8, or such other standard as the company may propose. A full explanation is required if the company's standard is less stringent than ASA B31.8.

The second amendment, to § 157.20, General Conditions Applicable to Certificates, prohibits operation of the facilities at pressures exceeding the maximum operating pressure as set forth by applicant itself in Exhibit G–II. The Commission, of course, may by special condition prescribe a lower maximum pressure than applicant proposes. The rule also states that it does not authorize operation of facilities in violation of any state regulations which call for a lower maximum pressure.

In response to our Notice of Proposed Rulemaking issued November 2, 1965 (30 F.R. 14110, Nov. 9, 1965), we received comments and suggestions from or on behalf of nineteen natural gas companies[1] and the Independent Natural Gas Association of America. Most of them pointed out that as originally proposed the new condition would restrict a company to operating at the pressure listed in Exhibits G, G–I, and G–II; that such pressure merely indicates the anticipated operating pressure in the particular circumstances illustrated by the exhibit; that in many cases such pressure may be below the maximum safe operating pressure for which the line was designed and tested.

The Commission agrees that our original proposal would be unnecessarily restrictive in some cases if we based it on the operating pressure now included in Exhibits G, G–I and G–II to the certificate application. We therefore require a specific indication from the applicant of the maximum safe operating pressure for the facilities to be certificated. This amendment was suggested in substance by seven of the respondents.[2] Our regulation will automatically prohibit operation of the certificated facilities at any pressure higher than that proposed by applicant itself, unless our certificate order prescribes a different condition. As a matter of general policy, we announce that any applicant proposing a maximum operating pressure which offers a lesser measure of safety than the relevant standard of the ASA B31.8 would bear a heavy burden to justify issuance of an unconditional certificate of public convenience and necessity. The rule here promulgated does not, however, compel a pipeline company to use the ASA B31.8 code as its standard and the Commission would not object to use of more stringent standards by the applicant. In the absence of a federal safety code governing interstate natural gas pipeline companies we have chosen ASA B31.8 as a guide, without preempting the states from adopting more stringent codes.

This is not the first time we have used the ASA B31.8 code as a frame of reference. We have recently issued a rule requiring the annual filing of system flow diagrams by the larger natural gas pipeline companies. These diagrams must show the maximum operating pressure allowable under the Code for (1) the discharge side of compressor stations and (2) other critical points on the company's system (18 CFR 260.8). The system flow diagrams are submitted for systems already in operation to show their peak day and average day capability. The data which we are requiring in this order will be supplied with applications to the Commission for new facilities and will set pressure limits for those facilities for the company's subsequent operations.

---

[1] Algonquin Gas Transmission Company, Colorado Interstate Gas Company, Columbia Gas System Service Corporation, Consolidated Gas Supply Corporation, El Paso Natural Gas Company, Kansas-Nebraska Natural Gas Company, Inc., Lake Shore Pipe Line Company, Lone Star Gas Company, Michigan Gas Storage Company, Natural Gas Pipeline Company of America, Northern Natural Gas Company, Panhandle Eastern Pipe Line Company and Trunkline Gas Company, Pacific Gas Transmission Company, Southern Natural Gas Company, Texas Eastern Transmission Corporation, Texas Gas Transmission Corporation, Transwestern Pipeline Company, United Gas Pipe Line Company, Washington Gas Light Company.

[2] Algonquin, Colorado Interstate, Consolidated, El Paso, Kansas-Nebraska, United Gas Pipe Line, and Washington Gas Light.

The Commission finds:

(1) The amendments herein adopted are necessary and appropriate for the purposes of the administration of the Natural Gas Act.

(2) In view of the reasons given above for the use of Exhibit G-II, it is unnecessary to comply with the notice provision of the Administrative Procedure Act with respect to the amendment to § 157.14(a)(9) here adopted.

The Commission, acting pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 7, 16 and 20 thereof (52 Stat. 825, 830, 832, 56 Stat. 84, 15 U.S.C. 717f, 717o, 717s),
orders:

(A) Part 157 of Chapter I of Title 18 of the Code of Federal Regulations is amended as follows:

(1) Section 157.14(a)(9) is amended by adding a new subdivision (vi) as follows:

§ 157.14. Exhibits

(a) *To be attached* * * *

* * * * * * *

(9) ***Exhibit G-II—Flow diagram data.***

* * * * * * *

(vi) The maximum allowable operating pressure of each proposed facility for which a certificate is requested, as permitted under the latest edition of the American Standard Code for Pressure Piping, Gas Transmission and Distribution Systems, ASA B31.8, or as otherwise proposed by the applicant. If a standard other than that of the ASA B31.8 code is used, explain the nature of such standard; whether it is more stringent than ASA B31.8 and, if not, the justification for its use; and designate by an appropriate symbol or legend. As a matter of general policy, the Commission will not normally grant a certificate authorizing operation of facilities at any pressure higher than the maximum permitted by ASA B31.8 and the burden will be on the applicant to justify any such deviation.

(2) Section 157.20 is amended by adding a new paragraph to read as follows:

§ 157.20 General Conditions * * *

* * * * * * *

(g) In the interest of safety and reliability of service, facilities authorized by the certificate shall not be operated at pressures exceeding the maximum operating pressure set forth in Exhibit G-II to the application as it may be amended prior to issuance of the certificate. In the event the applicant thereafter wishes to change such maximum operating pressure it shall file an appropriate petition for amendment of the certificate. Such petition shall include the reasons for the proposed change. Nothing contained herein authorizes a natural gas company to operate any facility at a pressure above the maximum prescribed by state law, if such law requires a lower pressure than authorized hereby.

(Secs. 7, 16, 20; 52 Stat. 825, 830, 832; 56 Stat. 84; 15 U.S.C. 717f, 717o, 717s)

(B) The amendments ordered herein shall be effective as to all applications filed on or after August 1, 1966.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.
